Special Color Paint Information

Customer demand may require special color paint. Refer to the Price & Data Pages for existing "Special Color" options and pricing. The special paint is an additional charge over the base color.

If the desired color is other than what is listed in the Price & Data Pages, determine the RAL System color number your customer requests (example: ORANGE = RAL 2011). Please visit https://www.ral-farben.de/info-ral-classic.html?&L=1 for more information on RAL colors.

Enter an order for the tractor configuration, then, contact Dealer Sales Support (877) 269-0114. Please have the RAL color your customer requires before calling into Dealer Sales Support.

New Holland will only accept retail sales orders for tractors with special colors and we reserve the right to refuse to paint tractors in colors deemed inappropriate (example: competitor paint schemes). Tractors with special color paint schemes may require additional lead times. Once a tractor order is submitted with a special color paint request, the tractor order cannot be changed to another color.

Special Color Paint Information

Customer demand may require special color paint. New Holland can supply many of the standard colors that are listed in the Classic RAL System on the exterior of T6 Series Tractors.
Please determine the RAL System color number your customer requests (example Omaha Orange = RAL 2005). Please visit https://www.ral-farben.de/info-ral-classic.html?&L=1 for more information on RAL colors.

Tractors ordered with special color paint require High Roof and opening visibility panel. The special paint is an additional charge over the base color Deluxe Cab with High Roof and opening visibility panel option, see price and data pages for pricing details. Special color paint is not available on Packet configurations.

Enter an order for the tractor configuration you desire with the High Roof and opening visibility panel and then contact Dealer Sales Support (877) 269-0114. Please have the RAL color your customer requires before calling into Dealer Sales Support.

New Holland will only accept retail sales orders for tractors with special colors and we reserve the right to refuse to paint tractors in colors deemed inappropriate (example: competitor paint schemes). Tractors with special color paint schemes may require additional lead times. Once a tractor order is submitted with a special color paint request, the tractor order cannot be changed to another color.

Special Color Scheme - Cab Tractors

Special Color:	Tractor Hood and Driveline Rear Axle, 3-Point Lift and Remote Valves Front Support and Weights
Wheels:	White

Special Feature Requests (SFR)

The Special Feature Request (SFR) process provides New Holland dealers with a method of offering features to their customers that are not addressed by the base unit and option configurations in the price book. Special features are developed as unique solutions to individual requirements.

SFR codes are not listed in the P&D pages. They are, however, factory approved custom solutions to fill the specialized needs of New Holland 4WD customers.

T9 Series tractors offer features unparalleled in the industry. In addition there are a number of P&D options that allow you to configure the tractor to suit a myriad of applications. Despite this extensive offering, there may be times when your customers have applications that are not addressed by the options in the P&D pages. The SFR process is in place to allow you to offer your customers an individualized solution to address their special applications.

The Special Feature Request Process

A SFR is normally initiated by New Holland Dealers.

Once the SFR request sheet is completed it is faxed to the NH Marketing Department who approves and forwards it to the plant. The plant then begins a sequential process of developing a bid price. The following sequence of events takes place at Fargo when SFR bids are developed:

1. A Bid/No Bid determination is made
2. If the decision is made to bid the request, a cost sheet is generated, if the decision is made to not bid the SFR the originator of the request sheet is notified
3. The costs to complete the SFR are determined and a final bid is developed
4. The final bid is reviewed for completeness and accuracy
5. The bid is approved, revised, or declined by Fargo Plant Management and the Pricing Group
6. If approved, the bid is given to the originator of the SFR request
7. The originator prices the bid to the customer

How Long Does a SFR Bid Take?
If the determination is made to bid the SFR, the completed bid price will be quoted within one week (five business days) via e-mail to the person originating the request, with a copy to the NH Marketing Department.

Ordering Deadlines
You should note that quoted prices are valid for one month beginning on the quote date. If an order is not submitted within the 30 day period the bid is considered void.

Some Notes About Costs
The cost of developing a single special feature can sometimes be quite expensive. This high cost is due to one time engineering and manufacturing costs that are recovered in the price of the SFR. Orders for multiple units with the same SFR feature decrease the cost per unit by spreading this fixed cost (development and engineering) over the multiple units. In addition, all SFRs are kept on file. If a request matches a project completed earlier the development time and cost of the SFR is reduced and the cost savings is reflected in the quote to the originator.

Special Feature Requests (SFR)

Examples of SFRs

An example of a Special Features Request completed for 4WD customers are:

- Tire sizes and brands not offered in the P&D pages

The Special Feature Request process allows you, the New Holland dealer, to better serve your customers. By developing features to address customer's individual needs you are assisting him/her in becoming more productive and profitable. Use the SFR process to assist you in selling the T9 Series tractors.

SFR Description/ Market Analysis:

Briefly describe the Special Feature Request that you are applying for:

What market need or niche does this feature satisfy that is not available today?:

How many units will you retail with this Special Feature Request over the next 30 days, and within the next year? Are these retails at risk if the SFR is denied and is the offering available on a competitive unit?:

Does this SFR address a current gap in the parts product offering - i.e. a complete cab or transmission not available through parts?:

Are their other alternatives to the SFR you are requesting - i.e. can the market need you've identified above be satisfied through other means?:

Ship by Rail Process -- Fargo 4WD Tractors

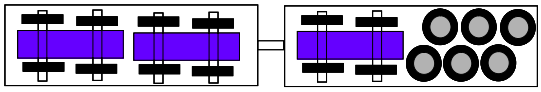
High trucking costs can be a substantial expense to your agricultural dealership. In some cases, shipping by rail can offer a cost effective alternative. The intent of this summary is to establish a set of guidelines for you to obtain a quote, and to understand the process involved with shipping 4WD tractors from the Fargo ND plant by rail.

The Fargo tractor plant is served by the BNSF Railway. BNSF's shipping area covers the US west of the Mississippi. As the originating railroad, BNSF can quote and arrange any tractor shipments from Fargo, even if it is outside their area of coverage where interconnections must be made with other railroads for the final destination. Rail shipment economies depend on geographic location, interconnecting railroads, the number of units being shipped, costs of shipping units from the final rail destination to the dealership, and rail transit times. When comparing rail costs to truck costs, keep in mind that a 4WD tractor with duals and ballast may have to ship on two trucks or require an overweight permit. Weight is not an issue for shipping by rail.

The following is the process for shipping Fargo 4WD tractors by rail:

1. Understand what will fit on train cars

Fargo tractors
- 1 wheeled unit with duals will fit on one 60 ft. car.
- 3 wheeled units and duals will fit on two 60 ft. cars.
- Dual tires are in stacks of two.
- 250,000 lbs. per car weight limit



2. Contact Sales Manager at Burlington Northern Santa Fe (BNSF)

- LaToya Benson, Industrial Products Sales, is the point of contact for dealers to arrange rail shipments from Fargo or Racine.

  Office (708) 924-6758
  Mobile (312) 316-6827
  Email LaToya.Benson@bnsf.com

- To request a shipping quote, send an email to LaToya Benson above, include the following information:
  - Dealership name, city and state.
  - Potential volume of units to be shipped by rail.
  - Is the store location rail served or not rail served?
    - If the store is not rail served, then BNSF can help locate the nearest **Team Track Ramp** or **Transloader**. See below for definitions:
    - **Team Track Ramp:** This is a rail drop off point equipped with a ramp for unloading tractors. When the train arrives a notice is sent to the receiving dealership that is responsible for unloading the tractor and any duals within a 48 hour period.
    - **Transloader:** This is full service drop off point. The Transloader is a 3rd party who can be hired to unload and store the equipment. Some Transloaders have trucking services such that they can deliver equipment to a final destination. The Transloader is independent of BNSF and CNH.
    - If your dealership is located in the US west of the Mississippi, refer to the BNSF map online showing **Team Track Ramps** and **Trans Loaders at http://domino.bnsf.com/website/bnsfpmtn.nsf/welcome.** If you are located east of the Mississippi or in Canada, contact BNSF to identify unloading locations.

Ship by Rail Process -- Fargo 4WD Tractors

- BNSF will establish a through rate, per car, from the plant to the final rail destination, a shipping pattern, and an estimated transit time. The shipping pattern contains specific instructions for the rail Bill of Lading. The rates are established using the CNH discount. Contract rates are good through the end of the calendar year (December 31st).
- BNSF will assist you to complete an application and establish an account for the dealership.

3. Place orders for tractors and notify Fargo shipping yard

- Orders must be marked to ship R (Rail Road).
- Fargo orders must have code 314 if required for mounted ballast.
- In the comments section of the order include: BNSF contract number, shipping pattern, and all the order numbers to ship by rail.
- ATS Supply Chain Solutions is the releasing yard for the plant. Send ATS a notification of the order numbers that will ship by rail.

  Phone 701-235-2101
  Fax 701-235-2161

4. The tractors are built and released to the releasing yard.

- The releasing yard will load the tractor(s) and any duals. The order will invoice and the terms will start. BNSF will pick up the rail car(s) at the next scheduled switch.

5. BNSF will bill the dealer directly.

- An invoice will be generated as soon as the load is billed out at the plant. The standard billing terms are 15 days. The bill will include the per car rate, and a fuel surcharge. During transport, BNSF Liability is limited to $25,000 (U.S. dollars) per car, and additional coverage is available through BNSF.
- Online tracking, fuel surcharge, and other tools are available at **http://www.bnsf.com**

6. Arrive final rail destination

- If the final destination is a **Team Track Ramp**, then on arrival the dealer will be notified and has a 48 hour window to unload the unit. There is a $75 (U.S. dollars) per day demurrage charge, for everyday beyond the 48 hour unloading window.
- If the final destination is a **Trans Loader,** then the unit will be unloaded and stored or per the agreement between the dealer and the Trans Loader facility.
- It is the dealer's responsibility to move the equipment from the rail destination to the dealership.

You now have a process to obtain a quote for shipping Fargo tractors via rail. You be the judge if shipping by rail is right for your business.

NEW HOLLAND SMARTTRAX™ II ORDERING GUIDE -T9.600, T9.645, T9.700

EXCLUSIVE NEWHOLLAND SMARTTRAX™ II FEATURES

- **Smart Configuration –** Industry-leading, premium, high-idler configuration
- **Low maintenance –** Check oil once a year and service after 5,000 hours
- **Guaranteed reliability –** 3 year/2500 hr. warranty.

NEWHOLLAND SMARTTRAX BENEFITS

- **Climbing ability –** A high idler allows the track module to climb over large obstacles.
- **Reliability –** Toughest belts in the industry provide uniform load and long belt life.
- **Convertibility –** Simple installation to convert from wheels to tracks in less than one day.
- **Versatility –** Use SmartTrax II track modules on your tractor for spring planting and then on your combine for harvest, or convert the tractor back to wheels for resale and install the tracks on your next machine.
- **Efficiency –** The positive drive system eliminates belt-to-drivewheel slippage while operating at low belt tension, increasing overall drive system efficiency. Belt tension is maintained with a tensioning cylinder and dual accumulators for efficient belt operation and maximum life.
- **Cost of ownership –** The total cost of ownership is lower than any other track system on the market. The modular system gives you flexibility to apply to other units. Investment in one set of modules will roll through several machine cycles.

BENEFITS OF A LARGE TRACK FOOTPRINT

- **Increased flotation and reduced soil compaction –** Leads to increased soil fertility and improved water drainage while decreasing soil runoff and erosion.
- **Less surface damage –** Due to reduced ground pressure, surface damage is reduced. Surface debris is pulled under the track, keeping the track module and the tractor on top which further improves flotation and minimizes surface damage.
- **Increased traction and reduced slippage** for optimum pulling efficiency.
- **A smooth ride** resulting from long tracks that bridge rough terrain.

DISADVANTAGES OF A TWIN TRACK TRACTOR

- **Weight distribution–** Twin tracks do a great job of distributing the weight when not loaded, but when loaded the rear wheel pressure escalates considerably.
- **Turning–** At the end of row requires stab turning to reduce berming. It is suggested to allow the drawbar to swing to allow the implement to track inside the vehicle radius.
- **Ballasting–** Additional ballasting weight may be necessary to optimize power to ground without slippage.
- **Steering–** Steering a twin track tractor also adds some additional challenges:

Reed Turner wrote about the differences between steering a rubber belt tractor and a tire tractor: Rubber tire tractors generally steer better than the rubber belt tractors. When a rubber tire tractor is steered, the tires turn and point in the direction of the turn. When a rubber belt tractor is steered, the track on the outside of the turn speeds up and the track on the inside of the turn slows down. Under moderate to heavy draft loads, a rubber tire tractor may slide sideways as it turns, but it still turns. Under similar draft loads, a rubber belt tractor may not turn at all. This is a nuisance and can present a serious problem if an operator doesn't expect it. With rubber belt tracks the draft load must be reduced before significant steering can occur. As a rubber belt tractor turns, the tracks slip sideways, pushing soil and producing ridges and depressions. A tire rolls through a turn and produces little soil disturbance. Steering a rubber belt system requires more power than steering a rubber tire. The extra power is needed to overcome the sideways slipping and to speed up the outside track. This can cause overload or stalling problems when the tractor is steered while operating near full engine load. What differentiates the T9 Series equipped with SMARTTRAX™ is the tracks turn and point in the direction the vehicle is steered. This helps to reduce the berming while turning and reduces the sideways forces placed on the tracks and their driveline components.

SMARTTRAX™ II SPECIFICATIONS

	Specs	Comments
Overall Vehicle		
Interchangeable mounting	Bar axle or flange axle	Track module replaces wheels directly on tractors or combines allowing customers interchangeability in season or when trading machines for newer models
Mobility	Aggressive approach angle	Allows tracks to climb over obstacles
Track drive	Positive	Completely positive drive that is not affected by water
Transport speed, mph	18-19	Transport speed best of all interchangeable track systems due to large-diameter drive wheel
Additional weights-ballast	None needed	Heavy-duty track systems eliminate the need for extra ballast
Module Specs		
Ground contact length, in.	78	SmartTrax II are shorter but utilize wider belts than competitive systems resulting in the same contact area but lower steering torque required
Belt ground contact width, in.	36	
Ground contact area, sq. in.	2,800	
Track module pivot angle, degrees	12-18	SmartTrax II oscillate further in the front and back for climbing over obstacles
Belt length, in.	252	A larger diameter drive wheel and larger wrap angle results in more belt drive teeth engaged for lower loading per tooth and longer belt life
Wrap area, degrees	90	
Drive wheel diameter, in.	56.3	
Number of drive teeth engaged	7-8	
Bogie wheel diameter, in.	15	Larger diameter bogie wheels than competitive systems for longer life
Belt carcass thickness, in.	1-5/8	Heavy-duty, thicker belt carcass spreads load more uniformly over soil surface
Pressure sensing on tension system	Yes	Belt tensioning pressure is visible with a simple gauge
Suspension	Cab suspension	Cab suspension is required
Self-cleaning undercarriage	Scraper on drive wheel	Scraper is standard
Alignment system	Not needed	Wheel axles are machined parallel before assembly, so no track alignment mechanism is necessary. Competitors alignment systems are prone to misalignment and wear over time
Alignment system special tools & parts	None	
Serviceability intervals	Annual	Maintenance includes annual inspection of oil level idler and bogie wheel hubs. No grease fittings
Idler and bogie wheels replacement	Yes	Idler and bogie wheels can be removed without disturbing hub and bearing setup
