Samples:

Samples of Kimball Office wood finishes and paints are available upon request. Samples are to be used as guidelines only. Slight variations within commercial tolerance may occur in color and texture. Kimball Office carefully selects all materials used in every product, ensuring a commercially acceptable color and finish.

Swatch cards and memo samples of Kimball Office fabrics are available upon request. There may be slight differences between samples and actual yardage as a result of variations in dye lots.

To order samples:

- Visit the Partner web site at www.kimballoffice.com to order materials electronically
- Contact your Kimball Office Sales Representative or the nearest Kimball Office Showroom
- For Alliance program fabrics, contact our Alliance partner directly.

Kimball Office offers a diverse collection of surface materials. Please see descriptions below to ensure that you are choosing the materials that best support your requirements.

Fabric Collection:

Our collection of fabrics offers a wide variety of materials that include both timeless classics, as well as a selection of trendy colors and patterns to keep the offering fresh and current.

The classic patterns are perfect for establishing new standard color palettes, while the trendy patterns are great for adding accents and pops of color to make a statement and to show that you are in tune with the pulse of today's fast-paced world.

The fabric collection was developed with an international flare to make it easy for global companies to standardize in all locations. It contains both standard in-line and alliance patterns. Our alliance partners are chosen with great care to give us the best selections and service in the industry.

You will find that colors were developed to coordinate very well between the in-line and alliance offerings, as well as between the seating and panel fabric offerings.

The Fabric Collection will provide options for the discerning client for many years to come.

Wood Collection:

Our wood finishes offer fresh options that provide natural-looking finishes to meet today's design expectations. From the lightest Brighton Maple to the darkness of Urban Walnut, these finishes were chosen with great attention to offer a complete range of color options making it simple to specify the look you want. You can achieve contemporary or transitional looks, or choose to update your traditional style by selecting one of the newer walnut or cherry finishes.

Kimball Office carefully selects veneers and solid woods to provide high quality wood furniture. Variations in color, grain, and texture occur naturally in all wood species, but are most apparent in lighter colored woods, and especially in natural finishes.

The wood collection offers a number of light finishes that will not hide or mask the natural characteristics of wood. Mineral streaks, pitch pockets, and color variations from piece to piece are all characteristics that occur in natural veneers and are what make each piece unique. While the finishing process is identical for all pieces, each finished piece accepts the stain differently to create its own individual beauty. These characteristics are part of the inherent natural beauty of wood and are not considered defects.

Darker finishes can be selected to hide more of the veneer's characteristics. Several beautiful coordinating woodgrain laminate options are also available for the customer who wants complete color and grain consistency throughout.

Two surfaces with grain directions that are at different angles to a light source will reflect the light differently and look a slightly different color. This natural phenomenon is called flip. This can happen within a single piece as alternating veneer leaves are placed side by side or from piece to piece. Flip is often noticed on worksurfaces installed at a 90° angle to each other.

Two premium veneers—Sapele and Zebrawood—are part of the standard offering to provide options for high impact styles without having to quote custom veneers. Premium veneers could receive extended lead times based on supplier availability at the time the order is placed.

Generations Collection:

The Generations Collection is comprised of tried and true materials that have been in the Kimball Office offering for many years. This collection is designed to support long-standing customers and to help transition you to the current offering. ➤Visit kimballoffice.com to see the Generations Collection.

IMPORTANT: Materials in this collection should not be used to set standard color palettes for new installations.

Materials in this offering can be ordered using the standard process, however, extended lead times and minimum order quantities may apply. For best results, pre-planning orders with your Customer Service Representative is recommended.

Discontinuation Policy:

Kimball Office strives to give all business partners advanced notification of surface materials that are scheduled for discontinuation. Efforts will be made to support discontinued materials as specified in the deletion announcement. Pricing cannot be guaranteed. Extended leadtimes and minimum order requirements may apply.

Disclaimer:

Kimball Office will make every reasonable effort to maintain our commitments. If surface material changes must occur due to unforeseen circumstances, we will work with you on an alternative recommendation. Kimball Office reserves the right to cancel or make changes to standard products and surface materials.

Warranty:

Fabrics and leathers are not warranted against fading and wear, discoloration from contact with liquids, or change in color or texture caused by application of finishes (flame proofing, stain resistance).
➤See page 245 for complete warranty information.

Kimball Office is known as the wood leader in the office furniture industry. Exceeding our customer expectations has always been our goal.

It is important to educate your customers on what to expect from the wood furniture they order. If they require a specific characteristic or look, please contact By Design to review veneer options and discuss special quotes.

➤See page 210 for program overview.
➤See page 214 for wood finish characteristics, care and maintenance.

STD2 = Group 2 (20% upcharge)

Special Wood Finishes

Standard Finishes on Alternate Wood Species

Wood Finishes	➤See page 211
Laminate	215
Paint	217
Fabrics	219

Standard finish colors on alternate wood species are available.

Applicability of special finish colors depends on the wood species to which they are applied. Priority is available in:

- Cherry (price group 1)
- Maple (price group 1)
- Walnut (price group 1)
- Sapele (price group 2)

Note: Priority is also standard in Zebrawood, Canyon Oak, Monterey Oak, or Tuscan Walnut veneers; however, special finishes are not available on these veneers.

If one of our standard finishes is not appropriate, Kimball Office also has a library of previously developed special finishes, which may be an acceptable match for your application. A custom finish can also be developed to meet specific needs.
➤See next page for previously developed and custom finishes.

Upcharges:

A **10%** upcharge per line item (model) for special wood finishes applies. Upcharge is calculated on the base price, before other option upcharges are added.

Special Finish Designators:

	Wood Species		
Color	*Cherry*	*Maple*	*Walnut*
Amber	Standard/MC	MA00174KOG	WA02905KOG
Espresso	×	×	Standard/ES
Mocha	Standard/MH	×	WA02920KOG

× = Not feasible on wood species

Note: We have not yet developed special finish designators for standard finishes on alternate wood species for other wood finishes.

How to Specify

① Model:
Build the complete model specification by following the How to Specify steps on the pricing page for the product that is to receive the special finish.

② Finish type:
For the “Finish type” step, insert a special code (in place of STD):
ZCHY1 = Special cherry finish
ZMAP1 = Special maple finish
ZWAL1 = Special walnut finish
ZSAP1 = Special sapele finish

③ Finish designator:
For the “Finish designator” step, insert the designator from the table at left.

Special Wood Finishes

Application Guidelines

Previously Developed and Custom Finishes

Wood Finishes	➤See page 211
Laminate	215
Paint	217
Fabrics	219

Previously developed and custom finishes are available for special requirements. Kimball Office has an extensive library of previously developed special finishes which may be an acceptable match for your application. If not, a custom finish can be developed to meet specific needs.

Samples of previously developed special finishes are available from Customer Service upon request.

Applicability of special finish colors depends on the wood species to which they are applied. Priority is available in:

- Cherry (price group 1)
- Maple (price group 1)
- Walnut (price group 1)
- Sapele (price group 2)

Note: Priority is also standard in Zebrawood, Canyon Oak, Monterey Oak, or Tuscan Walnut veneers; however, special finishes are not available on these veneers.

IMPORTANT: Kimball Office reserves the right to decline the opportunity to match a finish color.

Approval Process:

① Send desired finish sample (no smaller than 3" x 5"), along with a purchase order for the $300 (net) special finish development fee, to Customer Service along with a complete list of the products and wood species to which the special custom finish is to be applied. Include dealer name, contact, and project reference.

② If a previously developed sample is found to be compatible, a sample will be sent for customer approval. Custom finishes will generally require at least a week for a matched sample. Samples sent to the customer will advise of any restrictions that may apply.

③ Customer signs off on the sample and returns the approval form to Customer Service. Approval is required prior to order entry.

Upcharges:

A one-time fee of **$300** (net) will be billed for the development of each new custom finish. This fee covers all Kimball Office product lines on which the finish may be used. Models receiving a special finish will also be assessed an upcharge.

A **10%** upcharge per line item (model number) for special wood finish is calculated on the Grade 1 upholstery price, then added to the price for the selected fabric grade, to arrive at the list price.

How to Specify

① Model:
Build the complete model specification by following the How to Specify steps on the pricing page for the product that is to receive the special finish.

② Finish type:
For the “Finish type” step, insert a special code (in place of STD):
ZCHY1 = Special cherry finish
ZMAP1 = Special maple finish
ZWAL1 = Special walnut finish
ZSAP1 = Special sapele finish

③ Finish designator:
For the “Finish designator” step, insert the designator provided to you by customer service.

Wood Finish Characteristics

Application Guidelines

Including Care and Maintenance Tips

Wood Finishes	➤See page 211
Laminate	215
Paint	217
Fabrics	219

Kimball Office's experience in wood finishing extends from past generations of craftsmen to present day state-of-the-art technology.

Our Pura® finish is a proprietary, water-based, ultra-violet (UV) wood finish that has virtually no volatile organic compounds (VOCs). It uses less energy than our conventional finishing process and meets or exceeds BIFMA Furniture Emission Standards (FES) and U.S. Green Building Council LEED requirements for indoor air quality. Pura is exceptionally clear and durable and allows the beauty of our wood to shine through. The durability, depth, clarity, and beauty of Pura meets the high expectations customers have of Kimball Office finishes.

Finish fill and sheen level for the top surfaces is appropriate for the design and wood species. If different specifications are required, contact Customer Service.

All wood products are very susceptible to darkening from age and exposure to UV rays (sunlight and other sources), especially cherry and maple. Although a special UV inhibitor is added to finishes, care in placement of furniture near light sources and elimination of prolonged covering of surfaces is necessary to reduce uneven color change of the wood.

Grain characteristics of cherry veneer such as gum streaks and gum pockets occur naturally and add to the authentic look and feel of natural veneer. These are inherent to this veneer and should not be considered defects.

Brighton maple is a clear finish for those who appreciate the inherent beauty of wood. Differences in grain character and color are natural characteristics of wood and will show through in the finished product.

Fine scratches from everyday use may be more visible on furniture with dark finishes. Darker finishes absorb more light, while fine scratches reflect the light. Therefore, scratches can be more emphasized due to this contrast. The use of a desk pad is recommended to keep scratching to a minimum.

To Maximize Longevity and Beauty of the Wood Finish:

- Clean all surfaces frequently with a water dampened soft cloth following direction of the grain.
- Dry with a separate cloth if needed.
- Avoid exposure to strong sunlight or extremes in temperature or humidity.
- Avoid exposure to harsh solvents and always remove any spilled liquids immediately.
- Use a desk pad. This will help protect against possible damage and imprinting caused by writing instruments and sharp objects.
- Pads with foam backing are not recommended.
- If using a protective glass top, always place felt spacer pads under the glass to allow the wood to breathe.
- Do not leave plastic, vinyl, or rubber items on finished wood surfaces. Sustained contact could damage the finish.

Woodgrain laminate is a commercially compatible match to the wood finish of the same name and designator with consideration for the most common application—laminate surfaces on a wood chassis. When laminate and wood are mixed in other applications, the flip that occurs naturally in veneer may influence the overall match from piece to piece.

Customer Specified Laminate

Application Guidelines

GSA Non-Contract

Wood Finishes	➤See page 211
Laminate	215
Paint	217
Fabrics	219

Customer specified laminate (CSL) is available on Priority HPL surfaces. CSL is not available for TFL surfaces.
➤Contact Customer Service to initiate approval.

Kimball Office reserves the right to decline a customer specified laminate which may not be suitable for application.

Kimball Office assumes no responsibility for the durability, consistent coloration or any other performance characteristic of a customer specified laminate.

Metal, embossed, specialty, and supplier discontinued laminates must be custom quoted.
➤Contact By Design at 800.482.1616 extension 6002.

Kimball Office orders and procures all customer specified laminates.

Laminate sheen level must not exceed 60° for maximum durability of worksurfaces.

Lead times may vary for certain laminates. Minimum order quantities may apply.

Upcharges:

A **20%** upcharge per line item (model) for CSL orders for supplier standard laminates applies. Upcharge is calculated on the base price, before other option upcharges are added.

How to Specify

① Model:
Build the complete model specification (excluding the finish type and finish designator) by following the How to Specify on the appropriate pricing page for the product that is to receive the special finish.

② Finish type: For the “Finish type” step, insert a special finish code (in place of STD).
ZFMA1 = Formica
ZLMT1 = Lamin-Art
ZLTC1 = Lamitech
ZNEV1 = Nevamar
ZPTE1 = Pionite
ZWST1 = Wilsonart

③ Finish designator: For the “Finish designator” step, insert the laminate designator (color number) of the laminate to be applied to the product.

Terratex is a registered trademark of True Textiles, Inc. Each Terratex fabric must meet these four criteria:

- Made of 100% post-consumer and/or post-industrial fiber, or compostable materials
- Made using processes that reduce waste, emissions, energy, water usage, and toxic by-products
- Meets or exceeds the same quality standards of fabrics manufactured using virgin materials and conventional processes
- Made of a single fiber type, without backcoating, so that it too can be recycled or composted.

Green-e

100% of the electricity used to make these products is matched by Green-e certified renewable energy certificates.

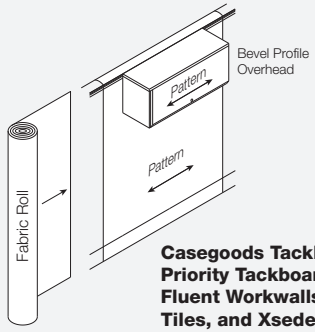
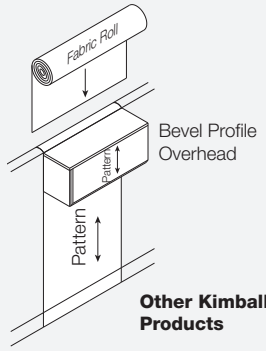
Panel Fabric Application:



Casegoods Tackboards, Priority Tackboards and Tiles, Fluent Workwalls, Xsite Tiles, and Xsede Tiles

Railroad Application



Other Kimball Office Products

Standard Panel Application

All panel fabrics will be applied in railroad (horizontal) style to tackboards, tiles and workwalls. When viewing swatch cards or memo samples, turn 90° to get an accurate indication of how the fabric will appear.

Key:
= Terratex = Green-e

Price Grade C

No fabrics available in price grade C at this time.

Price Grade D

No fabrics available in price grade D at this time.

Price Grade E

Alliance Fabrics:

Kimball Office has formed partnerships with top textile companies in the industry to provide a broad range of design-oriented fabrics. These fabrics can be specified using our standard ordering process, eliminating the need for additional expense and efforts required for COMs.

IMPORTANT: Orders cannot be cancelled for alliance program fabrics.

Lead times for alliance fabrics are based on supplier availability. Pre-planning orders can help facilitate arrival of products as needed. Each supplier reserves the right to discontinue patterns or colors. Kimball Office will not be held responsible for supplying discontinued patterns/colors or when minimum order quantities apply.
➤Contact Customer Service for availability before finalizing orders.

The information provided in this section is the most current information available at the time this price list was printed.

Application of Alliance Program upholstery will be as depicted on the swatch card unless otherwise instructed on the order.

For memo samples of Alliance fabrics, contact our alliance partners directly.

Terratex is a registered trademark of True Textiles, Inc. Each Terratex fabric must meet these four criteria:

- Made of 100% post-consumer and/or post-industrial fiber, or compostable materials
- Made using processes that reduce waste, emissions, energy, water usage, and toxic by-products
- Meets or exceeds the same quality standards of fabrics manufactured using virgin materials and conventional processes
- Made of a single fiber type, without backcoating, so that it too can be recycled or composted.

Green-e

100% of the electricity used to make these products is matched by Green-e certified renewable energy certificates.

Cleaning Codes:

Cleaning Code B
- Cleanable with diluted bleach solution

Cleaning Code D
- Dry clean only.

Cleaning Code L
- Use a clean cloth with warm water and mild soap as soon as possible.

Cleaning Code S
- Use only mild, pure water-free cleaning solvents.
- Cleaning by a professional furniture service is recommended.

Cleaning Code W
- Use water-based cleaning agents or foam.

Cleaning Code WS
- Use water-based cleaning agents or foam. Mild water-free solvents may also be used.
- Cleaning by a professional furniture service is recommended.

Fire Retardant Fabrics
- Solvent-based fabric cleaning or dry cleaning are recommended.
- Cleaning with water or water-based cleaners could result in salt ringing.
- Test proposed cleaning procedure on a small portion of fabric before cleaning entire piece.

Leather Characteristics:

Different coverings and seating constructions will respond better than others to specific seating applications. Certain leathers are more prone to relaxing over time and may demonstrate characteristics such as wrinkling or puddling. This does not indicate that the covering or application is deficient, but is considered a normal, inherent characteristic.

Some Kimball Office leathers and faux leathers may relax over time creating a loosely upholstered appearance.

Leather is a natural product. Healed scars, scratches, cuts, and stretch marks are natural markings and are characteristic of leather.

Kimball Office will always ship a satisfactory commercial match. Because of industry dye-lot variation, colors may not match exactly.

Cleaning Leather:

Regular Cleaning

- Remove as much soil or staining as possible by carefully vacuuming or brushing.
- Dust with a dry or damp cloth.

Deep Cleaning

- Use mild non-detergent soap or cleaner. Wipe surface with a light circular motion. Repeat with clean water.
- Do not soak leather.
- Air dry.

Note: Never use furniture polishes, oils, solvents, varnishes, abrasive cleaners, ammonia, wax, or saddle soaps on leather.

Alliance Program Fabrics

Overview

For Use on Cushion-Top Pedestals and Low Storage Cushions

Maharam ➤See page 229
Momentum 234

Kimball Office has formed partnerships with five of the top textile companies in the industry to provide a broad range of design-oriented fabrics. These fabrics can be specified using our standard ordering process, eliminating the need for additional expense and efforts required for COMs.

Patterns from Carnegie, KnollTextiles, Maharam, Mayer Fabrics, and Momentum are available in a variety of design aesthetics and price points to meet all of your fabric needs. Select carded Maharam and Momentum fabrics are listed in this price list.
➤See Surface Materials at www.kimballoffice.com for a wide variety of additional graded-in fabrics from Carnegie, KnollTextiles, Maharam, Mayer Fabrics, and Momentum.

IMPORTANT: Orders cannot be cancelled for alliance program upholstery.

Application of Alliance Program upholstery will be as depicted on the website or memo sample unless otherwise instructed on the order.

Directional upholstery, such as stripes, patterns, and plaids, may not be suitable for chairs with contoured shapes, tufting, or decorative stitching. Every effort is made to upholster all chairs as expertly as possible; however such orders are not subject to return.

Fabric that requires non-stock special treatments such as flame proofing, anti-microbial treatment, electrical conductive backing, water repellent, stain repellent, or acrylic backing are not part of this program. Such orders should be specified as a COM.

Alliance graded pricing includes the cost of the material. Repeat is also accounted for and no additional upcharge is required.

Different fabrics and seating constructions will respond better than others to specific seating applications. Certain fabric constructions are more prone to relaxing over time and may demonstrate characteristics such as wrinkling, pilling, fuzzing, or puddling. This does not indicate that the fabric or application is deficient, but is considered normal behavior as an inherent characteristic of the fabric.

IMPORTANT: The information provided in this section of the price list is the most current information available at the time this price list was published. Contact Customer Service before finalizing any orders to check availability.

Lead Time:

Lead times for alliance fabrics are based on supplier availability.
Pre-planning orders can help facilitate arrival of products as needed. Each supplier reserves the right to discontinue patterns or colors. Kimball Office will not be held responsible for supplying discontinued patterns/colors or when minimum order quantities apply. Contact Customer Service for availability before finalizing orders.

TB133:

Contact Customer Service about TB133 requirements.
Note: Many of these fabrics may pass additional flammability tests. Please inquire about compliance with specific regulations.

Samples:

For memo samples, contact our alliance partners directly.

Program Overview	➤See page 210
Cut Yardage	220
Seating Upholstery	223
Cleaning Codes	222

Customer's Own Material (COM) Policy:

While Kimball Office inspects fabrics for mill imperfections, some are difficult to recognize. Kimball Office is solely responsible for upholstery workmanship and cannot assume responsibility or liability for the durability, tailoring, appearance, or other qualities such as color inaccuracies, dye lot variations, and other such flaws or defects of customer furnished coverings.

Customers are responsible for ordering COM/COL and expediting delivery of the material, sent prepaid, to Kimball Office.

IMPORTANT: Kimball Office reserves the right to decline a fabric that may not be suitable for application to product.

COM Application Testing:

Application testing on product for non-preapproved fabrics is required.
➤Contact your Customer Service Team for the appropriate forms to initiate application testing.

The application test will render your fabric either:
- Approved
- Not recommended
- Restricted

A "not recommended" result is usually due to questionable construction of the material or pattern that is difficult to align. You will be required to sign a waiver to use any "not recommended" COM.

U.L. Listing/Flammability:

COM must be U.L. listed for use on tiles for benching stanchions before Kimball Office accepts and enters an order which will have COM fabrics. All COM testing and processing costs are the responsibility of the customer. A minimum of 2 yards of production run yardage is required for U.L. testing and flammability testing. Approval of a COM fabric may result in extended lead times. For cost estimates, yardage requirements and project lead times, consult your Customer Service Team.

Customer is responsible for fabric meeting the appropriate Cal. TB133.

Customer's Own Leather (COL)

Customer's Own Leather (COL) is available for use on pedestal and low storage cushions.

Leather is a natural product and variations in texture is a pleasing quality belong exclusively to high grade, full top-grain leathers.

Yardage/Sq. Footage Requirements:

➤See the product's pricing pages for COM yardage and COL square footage requirements.

Shipment of COM/COL:

After the fabric has passed the approval process described, Kimball Office will enter the product order and send an acknowledgement of the tentative ship date. A notification will be sent giving the date the COM must be received. If it is not received by the specified date, your ship date will be reassigned.

For Priority tackboards:
Kimball Office
COM Department
Dock 11
1620 Cherry Street
Jasper, IN 47549

For Priority tiles for benching stanchions:
Kimball Office
COM Department—Kimball Office
1881 West Seltice Way
Post Falls, ID 83854

For Priority mobile pedestal cushion and low storage cushions:
Kimball Office
COM Department
340 East 11th Avenue
Jasper, IN 47549-1001

IMPORTANT: Tag all materials with the Kimball Office dealer name and the purchase order number.

Production of Order:

When COM production yardage is received, COM is cut for the order and inspected for flaws. If flaws are found, you will be notified of the additional fabric required.

A return tag (e.g. COD shipment, UPS call tag) is required from the specifier within 45 days of the acknowledged ship date or all excess COM yardage will be discarded.

Preapproved COM:

➤Contact your Customer Service Team to obtain information on preapproved COMs.

Repeat Fabrics:

It is Kimball Office standard process to match repeat fabrics on fabric covered Overhead and Highback Organizer doors.

Repeat fabrics will be matched in what Kimball Office deems the best possible application of the pattern.

Additional COM yardage is required for repeat fabrics.

Repeat	*Additional Yardage required per Overhead Door*
0–6"	None
6"–12"	0.166 yards
12"–18"	0.500 yards
18"–24"	0.666 yards
24" or more	1.000 yard

Note: If the customer requires that the repeat fabric be applied in a random fashion, Kimball Office requires written notification in advance of order processing to that effect.
➤Contact your Customer Service Team to obtain necessary waiver.

Checklist:

When ordering COM for Kimball Office products, please make sure you have done the following:
- Supplied vendor name, fabric name, color name and number.
- Supplied arrival date of COM to Kimball Office.
- Received application testing approval before sending purchase order (or signed waiver if not approved for application).
- Received U.L. listing before sending purchase order.

Locking Information

GSA SIN 711-8

Terms & Conditions	➤See page 243
Product Warranty	245
Operating Load Capacities	246
Filing Capabilities	247

Locking storage units can be specified as:
- Key random with a black lock core and hinged key (KRB);
- Key random with a silver (matte nickel) lock core and round-head key (KRS); or
- Key specific (KS)

Black lock cores and hinged keys are identical to the ones used with other casegoods and systems products.

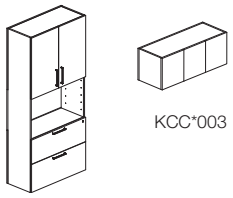
Silver lock cores and round keys are matte nickel. These lock cores and keys are identical to the ones used with Fluent and Hum. Minds at Work. series.

Key Random:

When key random option is selected, key numbers will be assigned arbitrarily at the factory with key numbers ranging from KCCB001 to KCCB300 (black) or KCCG001 to KCCG100 (silver).

Randomly numbered lock core(s) will ship standard along with your order for field installation. *Exception: Randomly numbered lock cores on Kwik Office models are shipped installed.*

KCC*001 KCC*002 KCC*001



KCC*003

KCC*001

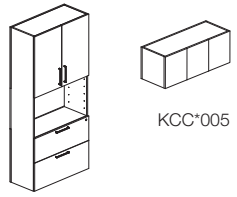
With random keying, different furniture units may or may not have the same key number. If you must have all locks keyed differently or all locks keyed the same, choose the key specific option.

Key Specific:

When key specific option is selected, the storage unit will be pre-drilled to accept a lock core; however, no lock cores will be shipped standard with the unit. If lock cores are standard on the unit, the price of the unit is reduced by the price of the lock core or cores.

You must specify lock core(s) separately for key specific option; specify any key number from KCCB001 to KCCB300 (black) or KCCG001 to KCCG100 (silver).

KCC*005 KCC*005 KCC*005



KCC*005

KCC*005

To key all the furniture units in a workstation or department alike, choose the key specific option and order the quantity of locks needed for your installation.

Installing Locks:

Standard key that ships with the lock core can be used for the initial installation of the lock core in the field.

Changing Locks:

IMPORTANT: A change key, specified separately, is required to remove lock cores in the field.

Change key model KCCB1CK allows removal of keys within these ranges:
KCCB001–KCCB300
KCCG001–KCCG100

Master Keys:

Master key model KC2GMK will unlock any lock within these key ranges:
KCCB001–KCCB300
KCCG001–KCCG100

Model/Key Range *Price*

Black Lock Cores & Hinged Key

KCCB001 to KCCB300 $21

Silver (Matte Nickel) Lock Cores & Round Key

KCCG001 to KCCG100 $21

Change Key

KCCB1CK $5

Master Key

KC2GMK $11

How to Specify

❶ Specify exact key number for lock cores or model number for change or master key

Operating Load Capacities

Locking Information	➤See page 242
Terms & Conditions	243
Product Warranty	245
Filing Capabilities	247

Component	*Operating Load Capacity (Functional Loads)*	*Example*
Desks and worksurfaces <45"W	200 lbs. over 12" diameter area, concentrated loading	
Desks and worksurfaces 45"W–72"W	200 lbs. over 12" diameter area, concentrated loading 1.5 lbs. per inch of perimeter, distributive loading	24"D x 72"W = 288 lbs.
Desks and worksurfaces >72"W	Two 200 lb. loads over two 12" diameter areas, concentrated loading 1.5 lbs. per inch of perimeter, distributive loading	24"D x 84"W = 324 lbs.
Transaction counter, shelf, or secondary surface <16"D	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	12"D x 60"W = 147 lbs. t.w.
Extendible elements (pedestal drawer, shelves, etc.)	.017 lb. per cubic inch of drawer interior filing space, distributive loading *Note: File drawers are to support hanging files only; they are not intended for bottom loading.*	24"D x 15"W x 12"H = 73 lbs.
Center/pencil drawers	5 lbs., distributive loading	
Freestanding storage or bookcase top <38"H	200 lbs. concentrated loading .26 lb. per square inch of surface area, distributive loading	24"D x 36"W = 225 lbs.
Freestanding storage or bookcase top 38"H–72"H	.26 lb. per square inch of surface area, distributive loading	24"D x 36"W = 225 lbs.
Freestanding storage or bookcase top >72"H	.09 lb. per square inch of surface area, distributive loading	24"D x 36"W = 78 lbs.
Storage or bookcase bottom	.017 lb. per cubic inch above surface, distributive loading (not more than 18" in height)	24"D x 36"W x 18"H = 264 lbs.
Storage or hutch bottom <60"H	.20 lb. per square inch of surface area, distributive loading	
Storage or hutch bottom >60"H	.09 lb. per square inch of surface area, distributive loading	

Square inches should be calculated using this formula: Surface depth x surface width of available storage

Cubic inches should be calculated using this formula: Surface length x surface depth x height of available storage above the surface (limited to 18 inches above the surface)

The table at left lists the operating load capacities of various Kimball Office components. All components meet or exceed the ANSI/BIFMA Functional and Proof Loading requirements X5.5 (2008 Desk and Table Products Tests) and X5.9 (2004 Storage Units Tests). The Operating Load Capacities listed represent the BIFMA functional loads which are equivalent to loads that can be expected in normal use of the component.

	24"	30"	15"	26⅜"	9"	Legal, letter, and EDP	Legal and letter
	24"	36"	15"	32⅜"	9"	Legal, letter, and EDP	Legal and letter
Center Drawers	22"	18"	17"	14½"	1½"	—	—
	22"	30"	17"	26⅜"	1½"	—	—
	22"	36"	17"	32⅜"	1½"	—	—

**For built-up units, such as desks, returns, and credenzas, please reference the applicable pricing page for width (letter or legal) of the pedestal.*

Filing Reference:

- Legal size paper is 8½" x 14".
- Letter size paper is 8½" x 11".
- EDP size paper is 8½" x 14⅞".

IMPORTANT: For all pedestals where legal front-to-back filing is standard, letter front-to-back filing is possible by specifying universal file bars separately.

PRIORITY PRICE LIST

Revision Summary

April 2014

This document provides a summary of revisions made to the Priority Price List since December 2, 2013.
These revisions are effective April 15, 2014.

Additions

New Maharam upholstery fabrics are now available.
➤See page 229.

New Momentum upholstery fabrics are now available.
➤See page 234.

Changes

Maharam Medium and Messenger fabrics have been moved from price grade D to B.
➤See page 229.

Clarifications

Classic mid-support end panels feature a chamfered corner at the top back edge to allow cable routing below the worksurface.
➤See page 159.

Kimball Office panel fabric restrictions added:
- Crossroards is not available on Perks tackboards
- Sprite is not available on fabric-covered overheads
- Basket is not available on fabric-covered overheads

➤See pages 219–220.

Kimball Office upholstery fabric restrictions added:
- Ezra not available on fabric-covered overheads

➤See page 226.

Corrections

Option upcharge for KS option oon 30"D vertical storage towers with side-access wardrobe has been corrected to "+$42." All sizes of side-access wardrobes feature a coat hook.
➤See page 193.

Disperse seating upholstery abrasion test rating has been corrected to 100,000 double rubs.
➤See page 223.

Phone number for Maharam has been corrected.
➤See page 228.

Corrections to Maharam and Momentum colorways and specifications have been made to conform to current information from the alliance partner.
➤See pages 229–236.

Deletions

Maharam Milestone fabric is no longer available.

Kimball® Office

PRIORITY PRICE LIST

June 2014

Revision Summary

This document provides a summary of revisions made to the Priority Price List since April 15, 2014.
These revisions are effective June 23, 2014.

Additions

Center-mount storage can be mounted to Xsede accessory rails. Xsede stanchion kit has been added.
➤See page 56 for planning information.
➤See page 120 for pricing information.

Three new wood veneers and woodgrain laminates have been added:
- Canyon Oak
- Monterey Oak
- Tuscan Walnut

➤See pages 211 and 215.

Silver pearl paint is now available on a variety of components, including legs, bases, stanchions, grommets, brackets, and pulls.
➤See page 217.

Changes

Overhead/shelf brackets, mitred shelf brackets, and shelf dividers have been moved to a new page.
➤See page 120.

Price for Classic laminate work-surface mid-support has been lowered to $168.
➤See page 158.

Updates to the Finishes and Materials chapter have been made to reflect the current offering.
➤See page 209.

Clarifications

BIFMA/ANSI: 100% of the products manufactured by Kimball Office are level® certified.
➤See page 4.

Factory-installed grommet and cut-out option pages have been reformmated and now include the new Silver Pearl paint option.
➤See pages 100, 101, and 150.

Product warranty has been updated to reflect that Itsa and Campos seating lines have a "normal" use classification and warranted for 3-shift, 24/7 service. Itsa Mesh and Campos Mesh models have a warranty period of 3 years.
➤See page 245.

Corrections

None.

Deletions

None.

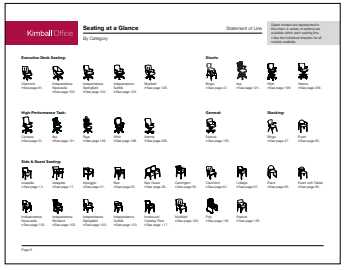
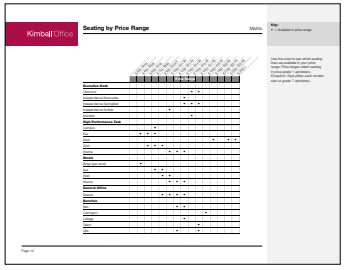
How to Specify Our Products 3
Sustainability 5

Kimball Office has made every effort to make this price list accurate and complete with all of the information you need to specify our products.

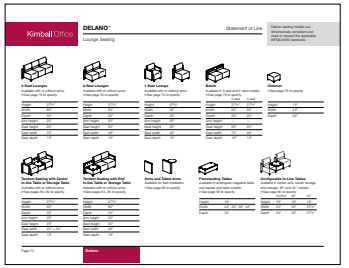
We suggest that you become familiar with the format of this price list. You'll find information about the product line, planning guidelines, pricing, and how to specify the product.



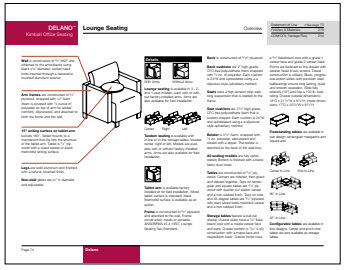
Seating at a Glance matrices provide a quick reference of Kimball Office Seating and Kimball Office | Interstuhl Seating by category.



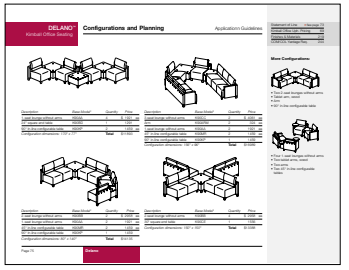
Seating by Price Range provides a quick reference to help you find the right chair for your application.



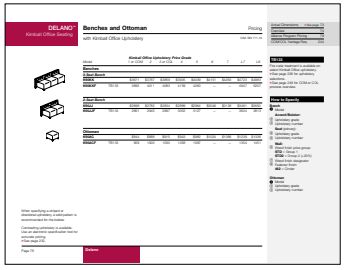
Statement of Line provides a snapshot of the entire product line. We've included an illustration and page cross references to the applicable pricing and how to specify pages.



Overviews offer a quick look at the distinguishing features of the product line.



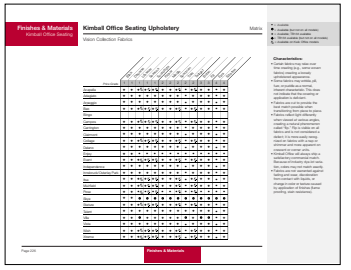
Product Information and Application Guidelines pages provide detailed information about the product, connections that can be made with other models, and planning factors.



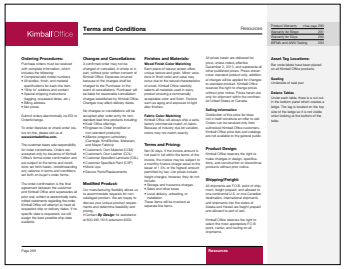
Pricing pages list each model individually along with its list prices. How to Specify steps instruct you how to build a complete model that includes all of its options and materials.

icon indicates models that are available for quick shipment.
➤See the Kwik Office Price List.

(FSC) icon indicates models available with the FSC option (3% upcharge) at standard leadtime to meet FSC certification.



Look in the Finishes and Materials section to see what materials and finishes are available. Matrices for wood finishes, laminate, paint, fabrics, and other surface materials offer a quick reference by product.



Use the Resources in the back of the price list. This repository of useful information includes Terms and Conditions, Warranty, Operating Load Capacities. You'll also find a model number index with references to the appropriate pricing page.

Dimensions provided in this price list are nominal. Products are manufactured to meet standard industry tolerances.

Illustrations and specifications contained in this price list are based on the latest product information at time of publication. Kimball Office reserves the right to make changes at any time without notice.

Items listed herein are considered by Kimball Office as portable furniture and as such are subject to local fire, electrical, and building codes applicable to portable furniture.

Only Underwriters' Laboratory (U.L.) or Canadian Standards Association (C.S.A.) listed electrical components are used in electrical devices and are so labeled.

The customer is responsible for the proper application of products to the local codes under which installation must be made. Further specifications are available on request.

How to Specify Our Products

Kwik Office Program ➤See page 4
How to Use this Price List 2
Sustainability 5

Complete specifications are built by following a set of steps. These "How to Specify" steps are located in the far right column of each pricing page and are specific to the models found on that page. These steps will guide you in the proper order to specify the base model, materials, finishes, options, etc.

Base model numbers may be comprised of two or more steps. For concise presentation, some models numbers have been truncated within the pricing table.

- The steps numbered using a solid circle with a white number inside (e.g., ❶, ❷, or ❸) make up of the base model number.
- Steps numbered using an outlined circle with black number inside (e.g., ④, ⑦, or ⑨) are required to complete the specification.

Kimball Office promotes the use of electronic drawing and specification tools to automate the furniture sales, design, and specification process. We provide our symbol and product information to industry leading design and specification software companies. We work closely with 20-20 Technologies Inc. to develop additional automation routines for our products; these are available in CAP and Giza software tools. We also partner with KISP and all of our products are available in The KITS *collaborator*™. As noted in our Terms and Conditions, the customer bears the responsibility for order correctness.

- Poly
- Pose
- Stature
- Wish

Model Numbers:

Models and finishes that are available on Kwik Office have been marked with a K icon in this price list.

Kwik Office model numbers are different from standard model numbers. Base model numbers for Kwik Office products include all options and finish designators.

The K icon on standard lead-time pricing pages indicates availability; it does not provide the correct model numbers and option designators for specifying. You must use the complete model numbers listed i the Kwik Office Price List.

Include only Kwik Office models on your order. Any orders containing non-Kwik Office products will be treated as such and entered at standard lead times. Indicate clearly at the top of your order “Kwik Office.”

Changes and Cancellations:

No changes or cancellations will be accepted after order entry for Kwik Office products.

Order Size:

The Kwik Office program has a limited weekly volume capacity, with orders being entered on a first come, first served basis. Contact Customer Service for availability.

How to Specify Our Products 3

At Kimball Office, we are proud of our environmental stewardship. We are committed to sustainable business practices and continuous improvement. It's part of our heritage to take initiative, to reduce waste, to conserve energy, to commit fully, and to lead by example. It's not enough to simply sustain. We strive to enhance our world.

Throughout our more than 40 years of documented environmental actions, we've made perpetual progress as a responsible steward of resources and an agent of sustainable change in our industry.

In the end, we're just beginning. Yes, the efforts we've made have the clear intention of minimizing our impacts on the planet in order to preserve a healthy world for future generations. Ultimately, the more we do in the area of sustainability, the more it helps you to achieve your environmental aims. Let us show you just how easy it is with Kimball Office.

➤Find more specific details regarding the environmental aspects of our product offerings at: **www.kimballoffice.com**

ANSI/BIFMA level™
100% of the products manufactured by Kimball Office are level® certified. We offer the most sustainable portfolio in the industry, which includes systems, casegoods, tables, and seating. Our product testing team evaluates all Kimball Office products, ensuring they meet and exceed ANSI/BIFMA Standards. Our team members regularly participate on BIFMA and USGBC committees to contribute to industry-wide standards.

ecoScorecard℠

Through this free online tool, you have quick, simple, 24/7 access to the environmental attributes of our products. By partnering with ecoScorecard, we are enabling speed and accuracy in the calculation of environmental credits, like LEED®, as well as saving you time and ultimately, money.
➤See how easy it is at kimballoffice.ecoscorecard.com.

ecoScorecard contains credit and other information for the following environmental rating systems:
- LEED for New Construction
- LEED for Commercial Interiors
- LEED for Existing Buildings
- CHPS
- LABS21
- Green Guide for Healthcare

LEED® Certification
Kimball Office offers furniture solutions which may contribute toward achieving U.S. Green Building Council certification status in your facilities. The LEED® Green Building Rating System™ is the nationally accepted benchmark for design, construction, and operation of high performance green buildings. Kimball Office has sought and received LEED certification for several of its facilities across the country.

LEED-CI Gold:
- Jasper, IN showroom
- San Francisco, CA showroom

LEED-CI Silver:
- Atlanta, GA showroom
- Chicago, IL showroom

LEED-CI:
- Corporate Headquarters
- New York, NY showroom
- R&D Team Rooms

Surface Materials Program
As the industry's first comprehensive offering to be designed around sustainability, our offering includes environmentally friendly textiles, woods, laminates, and paint finishes.

SCScertified™ INDOOR AIR QUALITY
Indoor Advantage | Furniture

Indoor Air Quality
One of the largest contributions office furniture can make to a building's LEED certification is indoor air quality via low-emitting products. For certification of our product lines, Kimball Office uses the Indoor Advantage program from Scientific Certification Systems (SCS). Several of our Indoor Advantage Gold products also meet the more stringent CAL 01350 requirements.

Design for the Environment (DfE)
is our approach to product development to ensure the inherent sustainability of our new offerings. By considering a full continuum of environmental factors—including durable engineering, recycled and recyclable materials, indoor air quality, packaging, and beyond, we have greatly improved the life cycle performance of our furniture.
➤For environmental data, visit our website at www.kimballoffice.com.

Pura® is our proprietary wood finish that has virtually no volatile organic compounds (VOCs). Pura is a key part of our sustainability story, enabling a broader range of products to meet or exceed indoor air quality standards and help our customers achieve LEED credits.

FSC www.fsc.org FSC® C010590
The mark of responsible forestry

FSC-Certified Wood
Due to our roots in crafting fine wood furniture, we have a natural respect for responsible forestry. Several series in our offering give you the option (denoted by FSC next to the model number) to specify FSC wood. A 3% upcharge applies to FSC models and FSCW must be specified as the finish price group. The FSC option is not currently available on Sapele or Zebrawood veneers, laminate, thermofoil, or laminate with wood rim worksurfaces. Standard lead times apply to FSC orders.

ANEW

Asset Network for Education Worldwide, Inc. (ANEW) is an easy, effective way to responsibly disposition surplus furniture, fixtures and equipment (FF&E). Through our partnership with this third-party foundation, you can repurpose FF&E to benefit those in need, while diverting materials from landfills. ANEW calls it "Doing what's right with what's left." We call it smart.

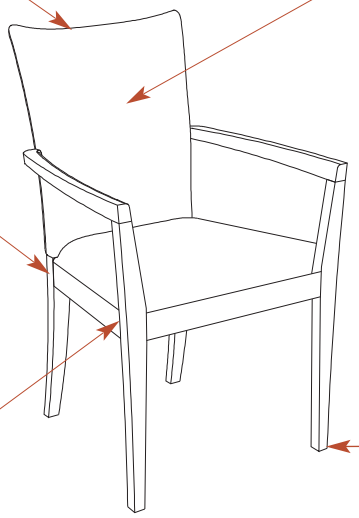
Overview

Statement of Line	➤See page 13
Kimball Office Uph. Pricing	15
COM/COL Yardage Req.	297
Finishes & Materials	269

Frame is constructed of kiln-dried maple hardwoods.

Corners are reinforced with wood corner blocks and lag bolts. Metal brackets are also used on armless models to provide additional support.

Joints are double doweled and securely glued to ensure maximum strength.



Back and seat are fully upholstered. Cushions are high resiliency, CFC-free polyurethane foam.

Nylon glides are 7⁄8" in diameter and dome shaped.

Details

High Back | Mid-Back | Wood Top Rail

Three different Acapella models are available; each has its own distinct design and is available with or without arms.

Seat suspension on high back and mid-back models is constructed of 1⁄2"-thick, 9-ply, molded plywood that is machined to form an open perimeter. Unidirectional webbing is machine stretched across the open perimeter and stapled to the edges.

Seat suspension on wood top rail model is constructed of unidirectional webbing that is machine stretched across the open frame and stapled to the side rails.

Seat cushion, applied to the flexible webbing suspension, is 1 3⁄8" thick on high back models, 1 5⁄8" thick on mid-back models, and 1 1⁄2" thick on wood top rail models.

Seat upholstery on high back and mid-back models is wrapped over the seat cushion and secured to the seat suspension with upholstery staples. The entire seat assembly is fitted into the frame with wood screws inserted into the wood corner blocks.

Seat upholstery on wood top rail model is wrapped over the seat cushion and secured to the side, front, and back rails with upholstery staples.

Back on high back and mid-back models is constructed of heavy webbing secured to the frame with staples. 1"-thick foam is applied to the webbing. Upholstery is wrapped over the foam and secured with upholstery staples.

Back on wood top rail model is constructed using 3⁄16"-thick, 3-ply, contour molded plywood. Press fit fasteners attach the back to the frame. Upholstery is wrapped over 1"-thick foam and secured with upholstery staples.

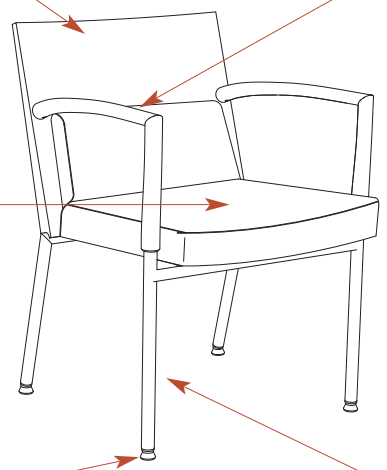
Overview

Statement of Line ➤See page 17
Kimball Office Uph. Pricing 19
COM/COL Yardage Req. 297
Finishes & Materials 269

Back features a doweled, solid-beech inner frame. 3-ply custom-contoured beech veneer is applied to the front and back surfaces. Back is bolted to a 1/4" steel bracket welded to the frame.

Seat tilts back and the back is slightly reclined so the user can assume a natural, relaxed posture.



Arms are solid beech and connected at miter with a 90° steel dowel. A black decorative bolt attaches the arms to the back. The front of the arms are inserted into the metal leg frame and fastened with a wood screw.

Black nylon glides are 1 1/8" in diameter and swivel for maximum stability on all floors.

Legs are 1" diameter, 15-gauge tubular steel. They are welded to 1"-diameter steel cross members. 1 3/8" x 1/4" flat steel stretchers, running front to back, join front and back cross members.

Details

Wood Back | Half-Height Cushion | Full-Height Cushion

Three back styles are available—wood back, half-height back cushion, and full-height back cushion.

Seat suspension is constructed of 19/32"-molded plywood that is machined to form an open perimeter. Unidirectional webbing is machine stretched across the open perimeter and stapled to the edges to form a suspension.

Seat cushion is 2"-thick, high resiliency, CFC-free molded polyurethane foam. Cushion is attached to the steel stretchers with wood screws.

Seat upholstery features a wrap-around upholstery method and 2 1/2" boxing with top stitching.

Back cushion, on applicable models, is constructed of 3/4"-thick foam applied to a 3/16" hardboard panel. Cushion upholstery with 1" boxing is wrapped over the foam and secured with upholstery staples. Half-height cushion attaches with press-fit fasteners. Full-height cushion attaches with keyhole slot at the top of the cushion and press-fit fasteners at the bottom of the cushion.

Contrasting upholstery is available on half-height and full-height back cushion models. Use an electronic specification tool for accurate pricing.

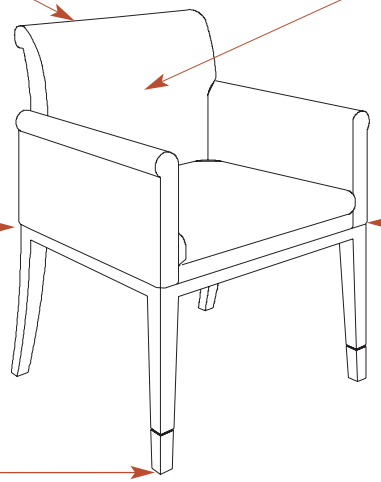
Frame is constructed of kiln-dried maple hardwoods.

Corners are reinforced with wood corner blocks and tie screws.

Nylon glides are 7⁄8" in diameter.



Back and seat are fully upholstered. Cushions are high-resiliency, CFC-free polyurethane foam.

Joints are double doweled and securely glued to ensure maximum strength.

Details

Rolled Back

Pillow Back

Two different Arpeggio models are available; each has its own distinct design.

Seat suspension is constructed of 3⁄4" thick molded plywood that is machined to form an open perimeter. Unidirectional webbing is machine stretched across the open perimeter and stapled to the edges to form a suspension.

Seat cushion, applied to the flexible webbing suspension, is 2" thick.

Seat upholstery is wrapped over the seat cushion and secured to the seat suspension with upholstery staples. The entire seat assembly is fitted into the frame with wood screws inserted into the wood corner blocks.

Back is constructed using 9⁄16"-thick, 9-ply molded plywood. Machine screws and T-nuts attach the back to the frame. Upholstery is wrapped over 3"-thick sculpted foam and secured with upholstery staples.

Back of pillow back model is topped with 1 1⁄4 ounces of low melt conjugate fiber wrap for added comfort.

Outer back is constructed with 3⁄16" thick 3-ply molded plywood and 1⁄4" thick foam. Outer back is attached with press fit fasteners.

Contrasting piping is available in any Kimball Office fabric or leather.

Contrasting back is available on pillow back model with Kimball Office upholstery, COM, COL, or Alliance Program upholstery. Use an electronic specification tool for accurate pricing.

Alliance Program Pricing 30
COM/COL Yardage Req. 297

Steam-bent frame is constructed of kiln-dried European beech to supports the body's curves.

Joints are securely fastened with mortise and tenon joinery or double-doweled construction to ensure long-term use.

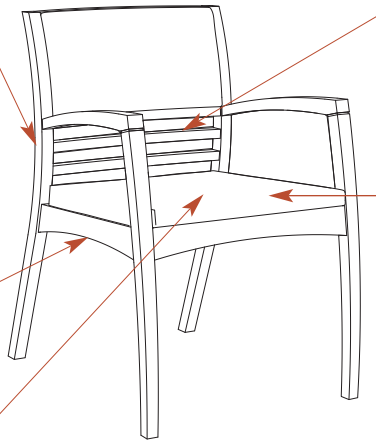
Seat rails are reinforced with wood corner blocks and cleats attached with glue and wood screws.

Seat suspension is constructed of 9/32" thick molded plywood that is machined to form an open perimeter. Unidirectional webbing is machine stretched across the open perimeter and stapled to the edges to form a secure suspension.

Seat assembly is attached with wood screws to wood cleats on the frame.

Seat upholstery is wrapped over the seat cushion and secured to the seat suspension with upholstery staples.

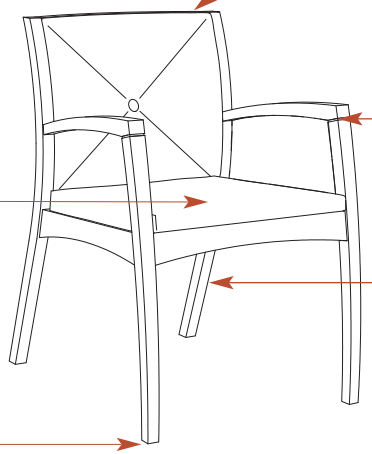
Nylon glides are 7/8" in diameter.



Horizontal back slats on applicable models are individually shaped for optimal comfort. Slats are secured using mortise and tenon joinery.

Seat cushions are made of 1¼" thin-profile, high-resiliency, CFC-free foam for maximum comfort and durability.

Curved top rail is visible. It separates the front and back upholstery panels and adds to Beo's aesthetics.



Decorative reveal detail at the arm/leg joint. Reveal is 2mm deep by 4mm wide.

Wall-saver back legs flare slightly so they contact the baseboard first, saving the wall's finish and protecting the chair back.

Details

Half Back

¾ Back

Ladder-back

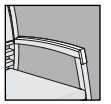
Vertical Insert Back

Full Back

Button Back

Six different back styles are available for Beo side seating.

Upholstered back on applicable models is constructed of two panels that are sandwiched together. Each panel features a contoured 3-ply cross-banded plywood inner panel. Inner panels are covered with high-resiliency, CFC-free foam (1/2" on the front and 1/4" on the back). Upholstery is wrapped around the inner panels and secured with upholstery staples. Both front and back upholstery panels are securely attached to the top wood rail and cleats with Christmas-tree fasteners.

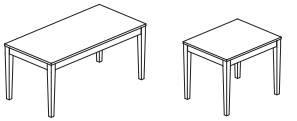


Black polyurethane arm caps are available as an option on Beo side chairs.

Contrasting upholstery on backs and seats is available on Beo side chairs. If different price grades are selected, use an electronic specification tool for accurate pricing. ➤See page 282.

Contrasting button upholstery is available on the button-back model. *Note: Contrasting button must be specified in Kimball Office fabric of leather.*

Related Products



Freestanding Beo occasional tables are available in magazine and end models. Tables cannot be ganged to Beo side chairs.

Ganging tables are not applicable for side seating models.

Overview

Pricing	➤See page 34
Alliance Program Pricing	35
COM/COL Yardage Req.	297
Finishes & Materials	269

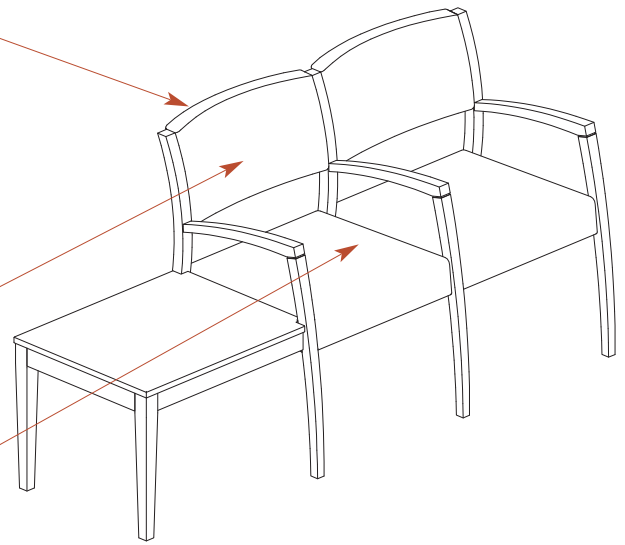
Frame is constructed of kiln-dried European beech. While similar to Beo side chairs, guest seating models are designed to accept add-on kits and ganging tables.

Joints are securely fastened with mortise and tenon joinery or double-doweled construction to ensure long-term use.

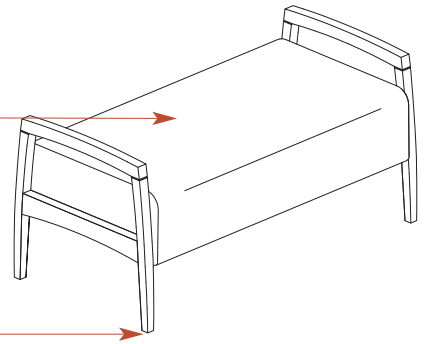
Backs feature a high-tension, sheet webbing suspension that is stapled to the frame, over which upholstery is placed.

Seats feature a high-tension, strip webbing suspension that is stapled to the frame. Seat upholstery features a wrap-around upholstery method and is stapled into place.

Wall-saver back legs flare slightly so they contact the baseboard first, saving the wall's finish and protecting the chair back.



Cushions are made of of high grade, high resiliency, CFC-free, laminated polyurethane foam. Seat cushions are 1" thick. Back cushions are ½" thick.

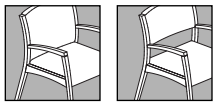


Nylon glides are ⅞" in diameter.

Details

Fully Assembled | Starter Kit | Add-On Kit

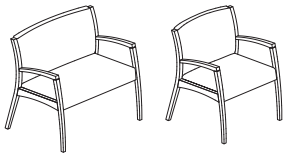
Guest seating is available as fully assembled one-, two, and three-seat runs; ready-to-assemble one-seat starter and one-seat add-on models are available to create seating runs of any length.



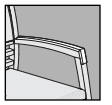
Full Back | Half Back

All guest and bariatric models are available with a fully upholstered back or half upholstered back.

Bench is available to provide accessible seating from both sides. It is intended for freestanding use only.



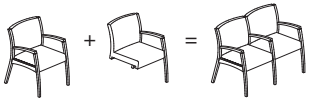
Bariatric chairs fit specialized requirements in a variety of settings. Full-size models are 36"W with a more robust frame that supports up to 500 pounds. Mid-size models are 25¼". They can be ganged to tables.



Black polyurethane arm caps are available on Beo guest one-seat, tandem, and bariatric models. They are not available on benches.

Contrasting upholstery on backs and seats is available on Beo guest chairs.
➤See page 282.

Connections



To build a tandem guest seating run, specify one starter kit and any number of add-on kits. Knocked down units include upholstered seat, upholstered back, and hardware. Starter kits include two arms, one left and one right; add-on kits include one center arm. Arms included with the starter kit will be used at the far left and right ends of the seating run. *Note: One starter kit and one add-on kit will create an identical model to the fully assembled tandem two-seat model.*

Related Products

Ganging tables attach to guest models at the end of seating runs, in-line between seats, or at a corner in a 90° configuration. Ganging tables do not attach to bench, lounge or side seating models.

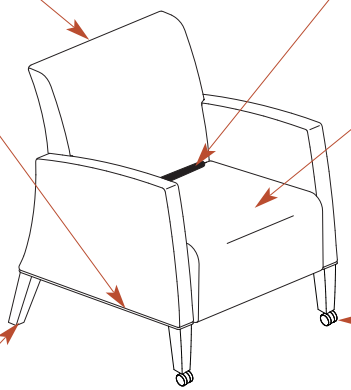
Frame is constructed of ¾" plywood, utilizing lap-joint construction that is glued and screwed.

Legs and base rails are kiln-dried European beech. Legs and rail joints are double doweled, securely glued, and reinforced with corner blocks that are glued and screwed to the base rails. The base frame is attached to the seat frame with wood screws through the rails.

Wall-saver back legs flare slightly so they contact the baseboard first, saving the wall's finish and protecting the chair back.



Clean-out option makes cleaning of seat easier by allowing dirt to exit the chair to the floor where it can be swept up.

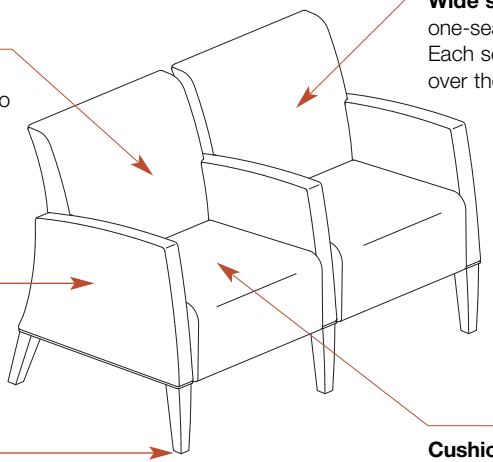
Seats feature a high-tension, strip webbing suspension that is stapled to the frame. Seat upholstery features a wrap-around upholstery method and is stapled into place.

Mobile option, available on one-seaters, provides casters on the front legs and a black handle on the back.

Backs feature a high-tension, sheet webbing suspension that is stapled to the frame, over which upholstery is placed.

Armrest tops and outside panels have ½" thick, high-grade polyurethane foam.

Non-skid, adjustable glides are ¾" in diameter.



Wide seat models are available in one-seat and tandem two-seat styles. Each seat width is increased by 3" over the standard model.

Cushions are made of high grade, high resiliency, CFC-free, laminated polyurethane foam. Seat and back cushions are 3" thick.

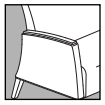
Tablet arms are available. Tablet arms may be specified for the right, left, or center arm (one per model), and are available with a thermofoil, phenolic-core laminate, or wood surface.
Note: Arm location is defined from the user's perspective when seated in the chair.

If more than one tablet arm is desired on a particular model, specify a tablet grommet, and order a tablet model separately.
➤See page 45.



Arm caps are applicable to arms without a tablet. When specified together on a lounge model, tablet and arm cap materials are paired: Wood arm caps with a wood tablet; black polyurethane arm caps with a thermofoil or laminate tablet.

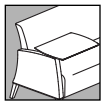
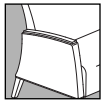
COM/COL Yardage Req. 298
Finishes & Materials 269



Tablet arms are available. Tablet arms may be specified for the right, left, or center arm (one per model), and are available with a thermofoil, phenolic-core laminate, or wood surface.
Note: Arm location is defined from the user's perspective when seated in the chair.

Center tablet option on tandem three-seater provides one tablet and two grommets, one in each of the center arms.

If more than one tablet arm is desired on a particular model, specify a tablet grommet, and order a tablet model separately.
➤See page 45.



Arm caps are applicable to arms without a tablet. Tablet and arm cap materials on the same lounge model will always match: wood arm caps match wood tablets; polyurethane arm caps match thermofoil or laminate tablets.

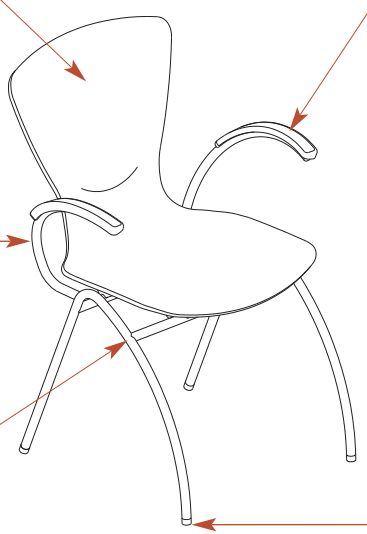
Stacking Side Chairs and Stools

Shell is beech wood that has been custom molded and contoured for comfort and support.

Arm supports, legs, and cross members are 25⁄32" x 3⁄32" hot rolled, welded, chrome plated, tubular steel.

Joints are welded.



Arm caps are 1⅝" thick solid bentwood, finished to match the shell. Two countersunk wood screws attach each arm cap to the arm supports.

Black plastic glides fit like a cap over the ends of the tubular steel frame.

Details

With arms

Without arms

Bingo side chairs are available with arms and without arms.

Bingo stools are available with without arms.

Shell is constructed of 7⁄16"-thick, 8-ply, molded plywood that is cross banded for strength. Shell is attached to the frame with four countersunk wood screws threaded into two wood cleats that are glued to the shell.

Side chairs and stools are each stackable up to four high.

Rubber stack bumpers and tube closures are standard.

Side chairs are shipped four per carton when applicable.

Stools are shipped two per carton.
IMPORTANT: Stools are ordered in sets of 2.

Connections

Side chairs may be ganged with ganging devices that snap onto the legs. Armless models or alternating armless and armchair models may be connected.
Note: Two armchair models cannot be ganged side by side.

Black ganging devices, ordered separately, are sold in packages of 5 pairs. One pair is required to gang two chairs. Two pairs will gang three chairs.

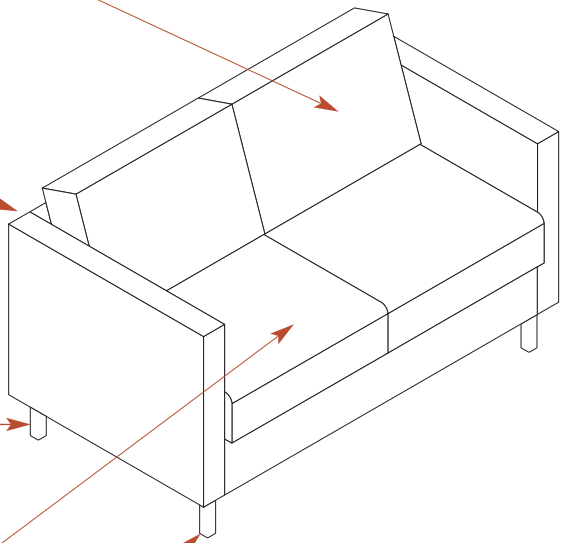
COM/COL Yardage Req. 298

Back cushion contains 4¾"-thick high-density, high-resiliency, CFC-free, laminated polyurethane foam. Select standard cushion or sewn-tufted cushion.

Frame is constructed of ¾" plywood, utilizing lap joint construction that is glued and screwed.



6"H legs are platinum metallic powder-coated steel and available in either square or round profile.

Attached seat cushion is 6"-thick thick and made of high-grade, high-resiliency, CFC-free, laminated polyurethane.

Non-skid, nylon glides are 7/8" in diameter.

Details

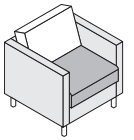
Boyd is offered in one-, two-, and three-seat lounge models. Models meet or exceed the applicable BIFMA/ANSI standards.

Leg and rail joints are double doweled, securely glued, and reinforced with corner blocks that are then glued and screwed to the base rails. The base frame is attached to the seat frame with wood screws through the rails.

Back cushions consist of high-density, high-resiliency foam over a non-stretch woven suspension that is stapled to the frame.

Seat is designed for comfort, giving you a residential feel. Wrinkles in the seat cushion are adherent to the design and should be expected.

Arms feature a sewn slipcover over top ½"-thick, high-grade polyurethane foam.



Contrasting fabric may be specified on the outer frame (back, arms, front kick-rail), back cushion, and seat cushion.

Desk Chairs

Overview

Pricing	➤See page 59
Alliance Program Pricing	60
COM/COL Yardage Req.	298
Finishes & Materials	269

Mesh-back models incorporate a mesh design perfectly proportioned to give ergonomically correct, flexible support in all upright or reclined positions. Available in three colors. The mesh is pulled over a structural, black metal tubular frame.

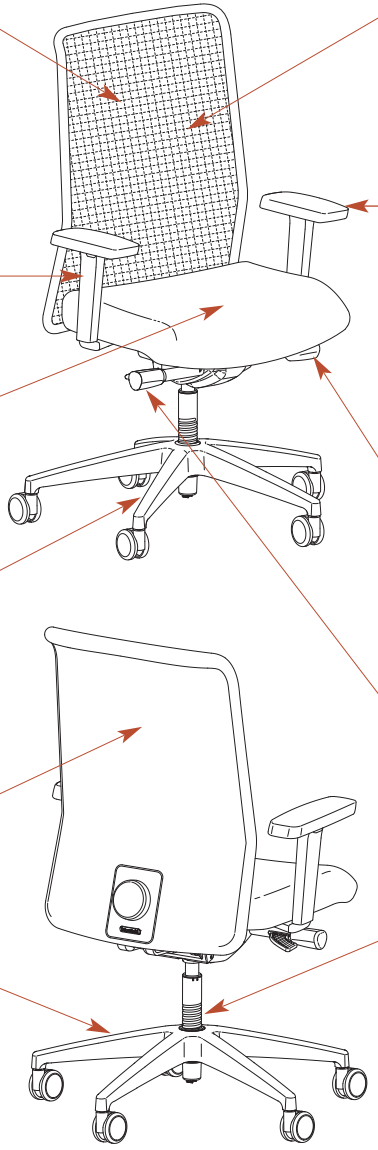
Arm structure consists of a steel upright covered in black nylon.

Seat cushions are 2 1/8" thick—1 3/4" CFC- and CHC-free molded foam, over a seven-layer molded plywood shell.

Black, dual-wheel casters on desk chairs are 65mm in diameter. Specify hard casters (802) for use on carpet (standard) or soft casters (801) for use on hard floors (upcharge applies).

Upholstered-back models feature a nine-layer molded plywood shell surrounded by molded, CFC- and CHC-free foam and upholstery.

Standard five-star base is 30% glass-filled nylon, textured, black plastic. Cast aluminum base with a polished finish is available as an option (upcharge applies).



Back features a three-position lock with release mechanism.

T-shaped arm rests are standard with 2D adjustability. User can adjust the arm vertically within a 4 1/4" range (11 positions) and horizontally within a 2 1/2" range. Arm caps are black polyurethane.

Seat slider is available as an option to adjust the seat depth for comfort. Seat depth is adjusted by grasping the left lever below the seat, pulling upward, and sliding forward or rearward; locks within a 2" range.

Synchro mechanism provides fully synchronized seat-to-back movement. Allows user to lock the chair in multiple positions within the range of movement using a single lever.

Seat height adjusts from 15 7/8"–23" via a patented twist/threaded column adjustment feature and pneumatic (gas) cylinder.

Details

Two back styles are available:
- Mesh back
- Upholstered back

Optional adjustable lumbar support on mesh-back chairs utilizes air-pressure technology integrated into the mesh back.

Optional adjustable lumbar support on upholstered-back chairs features a molded polyurethane lumbar pad that can be manually adjusted by turning a small knob.

Chair is shipped knocked down in four parts and can be assembled without tools.
➤See assembly instructions at www.kimballoffice.com

Campos desk chairs are user rated up to 275 lbs.

Campos is warranted for three-shift (24/7) service.

Adjustability Features

Synchro-tilt	•
Pneumatic height	•
Swivel	•
Lumbar	○
Seat slider	○
Anti-kick back	•
Tilt tension	•
Back tilt lock	•
2-D arms	•
4-D arms	○

• = standard ○ = option

Anti-kick back feature controls forward movement of the back rest when the lock is disengaged.

Tilt tension control adjusts the amount of resistance the user feels when leaning back.

4-D arm option enables the user to make front-to-back adjustment within a 2" range (6 positions), side-to-side adjustment (5 positions), and pivots inward and outward 10° with two stops.

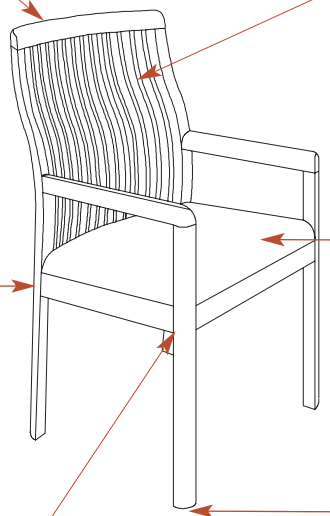
Kimball Office Uph. Pricing	63
Finishes & Materials	269
COM/COL Yardage Req.	298

Frame is constructed of kiln-dried cherry or maple hardwoods. *Note: Cherry models use cherry and other select hardwoods.*

Joints are double doweled and securely glued to ensure maximum strength.

Corners are reinforced with wood corner blocks and tie screws.



Slats on slat back models are individually shaped and hand set using mortise and tenon joints to prevent twisting.

Cushions are high-resiliency, CFC-free polyurethane foam.

Nylon glides are ⅞" in diameter.

Details

Slat Back

Upholstered Back

Two different back styles are available on Carrington side chairs; each is available as a high back or mid-back. Two-seat bench is available with slat back.

Seat suspension is constructed of molded plywood that is machined to form an open perimeter. Unidirectional webbing is machine stretched across the open perimeter and stapled to the edges to form a suspension.

Seat cushion, applied to the flexible webbing suspension, is 3¾" thick on high back and mid-back chairs and 4" thick on two-seat bench.

Seat upholstery is wrapped over the seat cushion and secured to the seat suspension with upholstery staples. The entire seat assembly is fitted into the frame with wood screws inserted into the wood corner blocks.

Back on upholstered back model is constructed using molded plywood that is secured to the frame with wood dowels and screws.1⅝" thick foam is applied to the plywood panel on the inside back of high-back models (foam is 1¼" on mid-back models); ⅜" thick foam is applied to the outside back. Upholstery is wrapped over the foam and secured with upholstery staples.

Arms on upholstered back chairs have upholstered wood inserts shaped to fit the inner arm of the chair frame. ¼" thick foam covers both sides of the 1½" thick panels. Arm inserts are held in place with wood dowels and screws.

Side Chairs and Bench

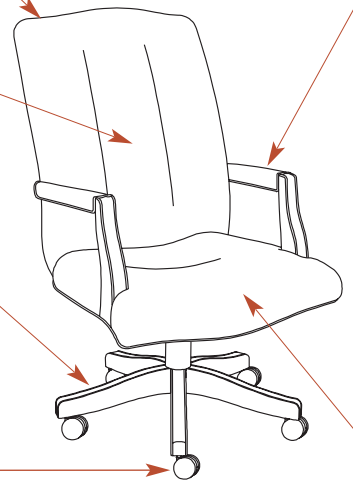
Overview

Statement of Line	➤See page 67
Kimball Office Uph. Pricing	69
Finishes & Materials	269
COM/COL Yardage Req.	298

Outer back is upholstered.

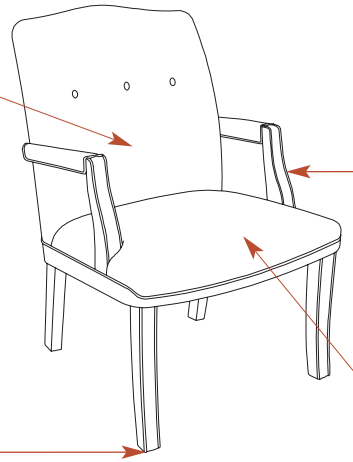
Cushions are CFC-free, contoured polyurethane foam.

5-prong base on desk chairs has a rigid, steel understructure. Maple hardwood base caps have a sloped profile.



Black, hard dual-wheel casters for use on carpeted floors are standard.

Back on side chairs is constructed of webbing that is stretched and stapled to the chair frame. A 2" thick cushion, plus an additional inch of foam in the lumbar area, is applied to the flexible webbing suspension.



Nickel-plated glides on side chairs are ⅞" in diameter.

Open arms are upholstered separately and attached to the frame with metal brackets, T-nuts, and ¼"-diameter machine screws.

Enclosed arms on desk chairs are constructed with wood interior members. Arms are attached to the frame with metal brackets, T-nuts, and ¼"-diameter machine screws.

Waterfall front edge slopes forward to reduce pressure and increase a in the user's legs.

Front of arms are maple hardwoods with detailing to match the wood base caps.

Seat cushion on side chair is 3¼" thick and is applied to the flexible webbing suspension.

Details

Two different upholstery details are available on Clairmont; both are available high back or mid-back models.

Two different arm styles are available on Clairmont desk chairs: enclosed arm and open arm.

Shell on desk chairs is single-shell construction fabricated with 9-ply molded plywood.

Frame on side chairs is kiln-dried maple hardwoods. Joints of back legs are double doweled and securely glued. Front legs use mortise and tenon joinery. For added strength, wood corner blocks and screws are used in conjunction with tie screws to reinforce frame corners.

Seat suspension on side chairs is constructed of unidirectional webbing that is machine stretched across the open frame and stapled to the side rails.

Cushions on desk chairs are 3" thick on the seat and inside back and ¼" thick on the outside back.

Upholstery is wrapped over cushions and secured with upholstery staples.

Controls are attached to the frame with T-nuts and machine screws.

Soft, black, dual-wheel casters are available as an option and should be specified for use on hard floors; upcharge applies.

Antique English hooded ball casters for use on hard floors are available as an option; upcharge applies.

Adjustability Features

	High Back	*Mid-back*
Knee tilt and upright back lock	•	•
Tilt tension	•	•
Swivel	•	•
Pneu. height	•	•

• standard

Knee tilt control provides minimal rise of the front seat edge when reclining, allowing the user's feet to remain firmly on the floor. Back may be locked in a full upright position by pushing in pneumatic height adjustment lever. Recommended for users weighing 225 lbs. or less.

Tilt tension control adjusts the amount of resistance the user feels when leaning back.

Pneumatic height adjustment allows user to raise or lower the seat height with a control lever while seated. Upward movement of lever located beneath the seat activates a gas cylinder to quickly adjust the chair.

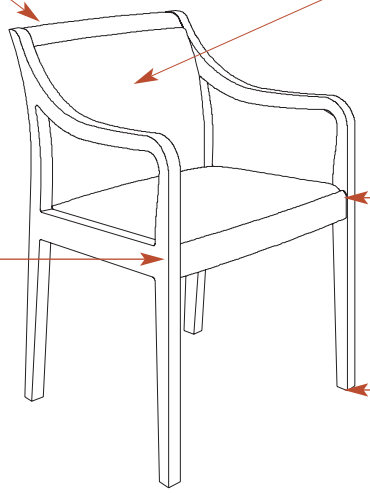
Kimball Office Uph. Pricing	75
Finishes & Materials	269
COM/COL Yardage Req.	299

Frame is constructed of kiln-dried maple hardwoods.

Joints are double doweled and securely glued to ensure maximum strength.



Cushions are high-resiliency, CFC-free polyurethane foam.

Corners are reinforced with wood corner blocks and tie screws on all models.

Nylon glides are ⅞" in diameter.

Details

Four different arm shapes are available on Collage side chairs: arched, sloped, rolled, and angular. Each has its own distinct design. Armless side chair is also available.

Wood Top Rail

Fully Upholstered

Top rail styles include fully upholstered and wood.

Back shapes include square, arched, and slat back.
➤See Statement of Line or pricing pages for arm and back combinations.

Two-seat bench is available with arched arms and fully upholstered back.

Bariatric bench is available with arched arms and fully upholstered back; rated to hold up to 500 lbs.

Seat suspension is constructed of ½"-thick, 5-ply molded plywood that is machined to form an open perimeter. Unidirectional webbing is machine stretched across the open perimeter and stapled to the edges to form a suspension.

Seat cushion is applied to the flexible webbing suspension. Foam is 1¾" thick on chairs and 2½" thick on two-seat bench.

Seat upholstery is wrapped over cushion and secured to the seat suspension with upholstery staples. The entire seat assembly is attached to wood cleats on the chair frame with wood screws. Piping trims the front edge of the seat.

Back on fully upholstered models is constructed of 1"-thick foam applied to ⅜"-thick, 5-ply contoured plywood. Back is attached to the frame with press fit fasteners.

Back on wood top rail models is constructed of 1"-thick foam applied to ⅜"-thick, 5-ply contoured plywood. Back is attached to the frame with T-nuts, machine screws, and metal brackets.

Back on slat back chair is constructed of ¼"-thick, 5-ply molded plywood slats that are machined to shape and glued individually into slots in the frame.

Back upholstery is wrapped in place and secured with upholstery staples.

Outer back panel is constructed of ⅜"-thick foam applied to 3/16"-thick, 3-ply contoured plywood. Press fit fasteners attach outer back panel to the inner back.

Lounge Seating

Overview

Statement of Line ➤See page 79
Finishes & Materials 269
COM/COL Yardage Req. 299

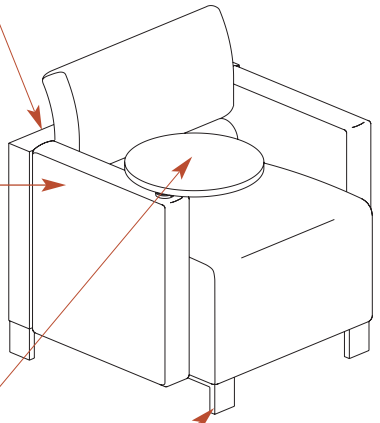
Wall is constructed of ¾" MDF and attached to the arms/backs using black 5⁄16" diameter, socket head bolts inserted through a decorative brushed aluminum washer.

Arm frames are constructed of ¾" plywood, wrapped with ¼" foam (foam is covered with ½ ounce of polyester on top of arm for added comfort), slipcovered, and attached to both the frame and the wall.

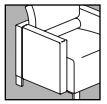
15" writing surface on tablet arm swivels 180°. Tablet mounts to a mechanism that fits into the structure of the tablet arm. Tablet is ¾" plywood with a wood veneer or black thermofoil writing surface.

Legs are solid aluminum and finished with a natural, brushed finish.

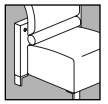
Non-skid glides are ¾" in diameter and adjustable.



Details



With Arms

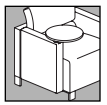


Without Arms

Lounge seating is available in 3-, 2-, and 1-seat models, each with or without factory-installed arms. Arms are also available for field installation.

Center Right Left

Tandem seating is available with in-line or in-line storage tables, located center, right or left. Models are available with or without factory-installed arms. Arms are also available for field installation.



Tablet arm is available factory installed or for field installation. Wood tablet surface is standard; black thermofoil surface is available as an option.

Frame is constructed of ¾" plywood and attached to the wall. Frame construction meets or exceeds ANSI/BIFMA x5.4-1997, Lounge Seating Test Standard.

Back is constructed of 9⁄16" plywood.

Back cushions are 2" high-grade, CFC-free polyurethane foam wrapped with ½ oz. of polyester. Each cushion is 24"W and upholstered using a slipcover-style upholstery method.

Seats have a high-tension strip webbing suspension that is stapled to the frame.

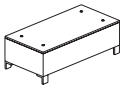
Seat cushions are 3½" high-grade, CFC-free polyurethane foam that is custom shaped. Each cushion is 24"W and upholstered using a slipcover-style upholstery method.

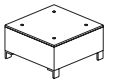
Bolster is 4½" foam, wrapped with ½ oz. polyester, slipcovered and closed with a zipper. The bolster is attached to the back of the seat box.

All seating models are fully upholstered. Bottom is finished with a black fabric dust cover.

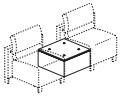
Tables are constructed of ¾" plywood. Corners are mitered, then glued and cleated together. Tops on rectangular and square tables are ¾" plywood with quarter-cut sketch veneer and a non-rubbed finish. Tops on side and 45-degree tables are ¾" plywood with plain-sliced book-matched veneer and a non-rubbed finish.

Storage tables feature a pull-out drawer. Drawer sides have a ½" flakeboard core with a maple veneer face and back. Drawer bottom is 7⁄32" 5-ply construction with a maple face and maple/birch back. Drawer fronts have a ¾" flakeboard core with a grade 1 veneer face and grade 2 veneer back. Fronts are fastened to the drawer with washer head (truss) screws. Dowel construction is utilized. Black, progressive-action slides with precision steel ballbearings ensure long lasting, quiet and smooth operation. Slide fully extends (19") and has a 100 lb. load rating. Drawer outside dimensions: 18"D x 21½"W x 8½"H; inside dimensions 17"D x 20½"W x 8¼"H.

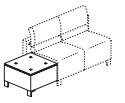




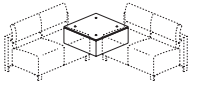
Freestanding tables are available in two design: rectangular magazine and square end.



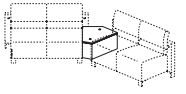
Center In-Line



End In-Line



90° In-Line



45° In-Line

Configurable tables are available in four designs. Center and end in-line tables are also available as storage tables.

Lounge Seating

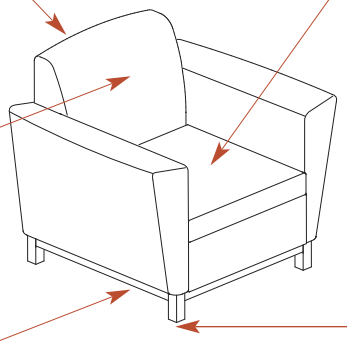
Overview

Statement of Line ➤See page 97
Finishes & Materials 269
COM/COL Yardage Req. 299

Frame is constructed of ¾" plywood, utilizing lap-joint construction that is glued and screwed.

Back cushions contain 4" high-density, high-resiliency, CFC-free, laminated polyurethane foam.



Legs and base rails are maple and available in a variety of finishes.

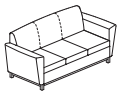
Seat cushions are 5" thick, removable, reversible, and replaceable. Seat cushions are made of high-grade, high-resiliency, CFC-free, laminated polyurethane.

Non-skid, nylon glides are ⅞" in diameter.

Details

One-seat

Two-seat



Three-seat

Enjoy is offered in one-, two-, and three-seat lounge models. Models meet or exceed the applicable BIFMA/ANSI standards and meets Kimball Heavy Duty testing requirements as follows:

One-seat model (K431A)	350 lbs.
Two-seat model (K432A)	700 lbs.
Three-seat model (K433A)	1050 lbs.

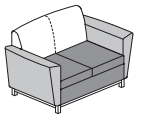
Two- and three-seat lounge models also exceed Bariatric testing requirements.

Legs and rail joints are double doweled, securely glued, and reinforced with corner blocks that are the glued and screwed to the base rails. The base frame is attached to the seat frame with wood screws through the rails.

Backs feature a high-tension, strip webbing suspension that is stapled to the frame, over which upholstery is placed.

Arms and outside panels have 1¼"-thick, high-grade polyurethane foam on the inner and top of the arm and ¼"-thick, high-grade polyurethane foam on the outer arm. Upholstery has ¼" sewn-in foam with slipcover, stapled into place.

Seats feature high-tension strip webbing that is stapled to the frame. Seat cushions are upholstered using a slipcover method that is finished with double-needle stitch detailing.



Contrasting fabric may be specified on the back, base/seat, and arms. Use electronic specification tool for accurate pricing if specifying fabrics in different price grades.

Side Chairs

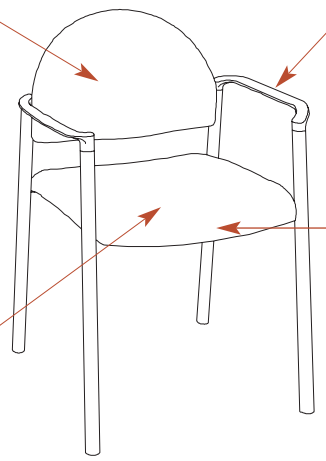
Overview

Statement of Line	➤See page 101
Alliance Program Pricing	107
Finishes & Materials	269
COM/COL Yardage Req.	299

Back and seat are fully upholstered. Seat is tilted back, and the back is slightly reclined to allow the user to assume a more natural, relaxed posture.

Back upholstery, including ¾"-thick foam for the inside back and ¼" thick foam for the outside back, is applied to the back as a slipcover and secured with upholstery staples.

Seat upholstery is wrapped over the seat cushion and secured to the seat suspension with upholstery staples.

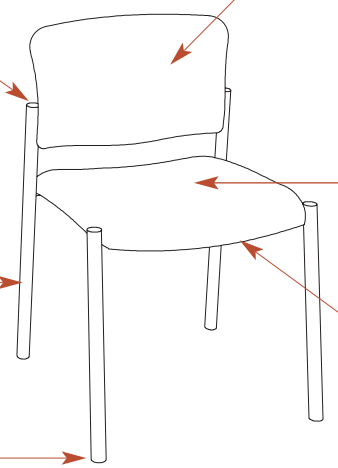


Arm caps are injection molded nylon and attached to the frame with a pressure fit. They are color matched to the frame; 501 Platinum metallic finish receives black armcaps.

Waterfall front edge slopes forward to reduce pressure and increase circulation in the user's legs.

Backs are secured to the frame with 4 countersunk flat-head screws, 11-gauge steel plates, and T-nuts. Round back models are constructed using an injection molded polypropylene panel. Flair back models are constructed using ⅜"-thick, 7-ply, molded plywood.

End caps are fitted into the frames of armless models; they are plastic on Cinder (black) frames and metal (color coordinated to the frame) on platinum metallic frames.



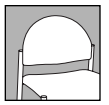
Cushions are high resilience, CFC-free polyurethane foam. Seat cushion is 1¼" thick.

Legs are angled for stability and available in textured powdercoat finish or smooth platinum metallic paint.

Seat pan is contoured, blow-molded polyethylene. Channels within the seat pan fit over the cross members. Seat pan is attached to the seat frame with four machine screws and T-nuts.

Black nylon ball glides are standard on static 4-leg models. Hard casters are standard on mobile models.

Details

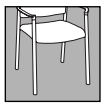


Round

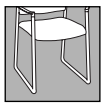
Flair

Two open back shapes are available on all Event models:
- Round (shown at left, top)
- Flair (shown at left, bottom)

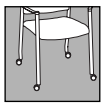
Three arm styles are available: with arms, without arms, and with tablet arm (4-leg non-mobile models only). Tablet arm, ½" x 12¼" x 22¼", is hinged for easy access. It has a black phenolic core with radius edge and black laminate top and bottom surfaces. Mounted on the right.



4-Leg



Sled Base



Mobile

Three unique leg frames are available 4-leg, sled base, and mobile. Frames are ⅞" diameter, 14-gauge tubular steel. Cross members are ¾" diameter, 14-gauge steel. Leg frames are joined to the cross members with metal inert gas (MIG) welds.

4-leg models and mobile models without arms stack up to 6 chairs high; mobile models with arms stack up to 4 chairs high.

Sled base, 4-leg with tablet arm, and bariatric models are non-stacking.

Bariatric 4-leg with arms is available to accommodate up to 500 lbs.

Contrasting upholstery on backs and seats is available on Event side chairs. If different price grades are selected, use an electronic specification tool for accurate pricing.
➤See page 282.

Flat glides are available on 4-leg models for use on textured, soft, or wood surfaces. Glide has a silver-plated top with white nylon pad. Upcharge applies.

Soft casters for use on hard floors are available on mobile models. Upcharge applies.
Note: Sled base should not be used on hard floors for stability reasons and to prevent surface damage.

Chairs are shipped three to a carton when applicable.

Related Products

Ganging devices, ordered separately in sets of 5 pairs, are available to gang like models. The 2½" x 5¾" polypropylene devices snap onto chair legs. One pair is required to gang two chairs.

Transport dolly is available to move up to six 4-leg chairs at a time. Dolly has a tubular steel frame, green powdercoat finish, and 8" semi-pneumatic ball-bearing wheels. Removable handle allows for storage.

SUFFOLK™ Desk and Side Chairs

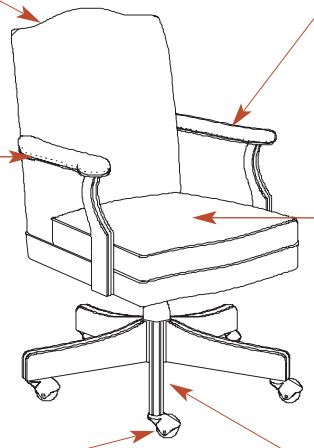
Overview

Statement of Line ➤See page 109
Finishes & Materials 269
COM/COL Yardage Req. 299

Frame is kiln-dried hackberry.

Brass trim nails, standard on all models, are individually driven head to head around the bottom edge of the upholstered arm caps.

Antique English hooded ball casters are standard on desk chair with casters.



Arm caps are upholstered.

Cushions are high-resiliency, CFC-free polyurethane foam.

5-prong base has a rigid steel understructure and hardwood caps with radius ends.

Details

Mid-Back Desk Chair

Mid-Back Side Chair

Open Back Side Chair

Three models are available: mid-back desk, mid-back side, and a complementary open-back side chair.

Joints are double doweled and securely glued to ensure maximum strength. Tie screws are added for strength. Seat is reinforced with corner blocks and four screws.

Side-to-side rails on desk chair provide strength and a secure place to mount the swivel tilt mechanism.

Seat suspension is constructed of unidirectional webbing that is machine stretched across the open frame and stapled to the side rails.

3" thick seat cushion is applied to the flexible webbing suspension.

1½" thick back cushion is bonded to the hardwood back panel.

Upholstery is wrapped over the cushions and secured with upholstery staples.

Swivel tilt mechanism on desk chair is attached with T-nuts and machine screws.

Nickel-plated glides on side chairs are ⅞" in diameter.

Adjustability Features

Desk Chair	
Swivel tilt	•
Pneumatic height	•

• = standard

Swivel tilt control allows reclining while keeping the back-to-seat angle constant. It features a heavy-duty adjustable torsion spring.

Pneumatic height adjustment allows user to raise or lower the seat height with a control lever while seated. Up or down movement of lever located beneath the seat activates a gas cylinder to quickly adjust the chair.

SPRINGFIELD™ Desk and Side Chairs

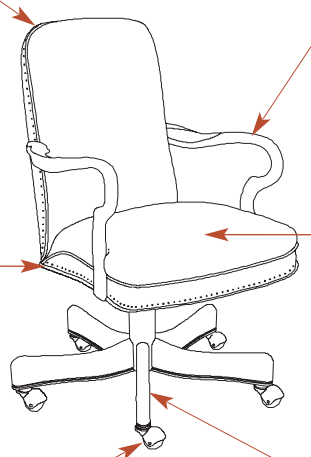
Overview

Statement of Line ➤See page 109
Finishes & Materials 269
COM/COL Yardage Req. 300

Frame is kiln-dried maple hardwoods.

Brass trim nails, if selected, are individually driven head to head around the bottom edge of seat and around back.

Antique English hooded ball casters are standard on desk chairs.



Arms are maple hardwoods.

Cushions are high-resiliency, CFC-free polyurethane foam.

5-prong base has a rigid steel understructure and curved hardwood caps.

Details

Desk chair (plain upholstery)

Side chair

Desk chair (button-tufted upholstery)

Side chair

Button tufting features hand-pleated diamond tufts on seat and inside back. Metal-prong button unit is pulled through the cover and foam, then inserted through a paperboard washer and a self-locking steel spring retainer and clinched.

Springfield desk chairs are suitable for pull-up use in conference settings.

Joints are double doweled and securely glued to ensure maximum strength. Tie screws are added for strength. Seat is reinforced with corner blocks secured with four screws.

Side-to-side rails on desk chair provide strength and a secure place to mount the swivel tilt mechanism.

Seat suspension is constructed of unidirectional webbing that is machine stretched across the open frame and stapled to the side rails.

Seat cushion is dual density foam applied to the flexible webbing suspension.

Back suspension is constructed of four weaves of heavy webbing secured to the frame with staples. A lighter weight webbing is then applied over the four-weave strips. Foam is applied to the suspension.

Upholstery is wrapped over the cushions and secured with upholstery staples.

Swivel tilt mechanism on desk chair is attached with T-nuts and machine screws.

Nickel-plated glides on side chairs are 7/8" in diameter.

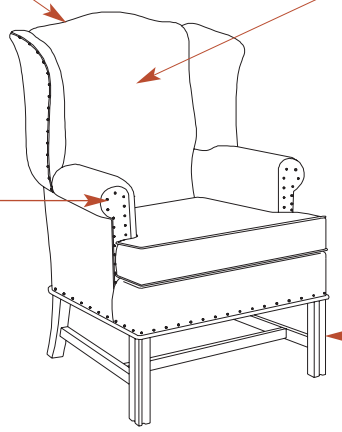
HILLSBOROUGH™ Lounge Seating

Overview

Statement of Line ➤See page 109
Finishes & Materials 269
COM/COL Yardage Req. 300

Frame is kiln-dried maple hardwoods.

Brass trim nails are individually driven head to head around the bottom edge of seat and on the front of rolled arm.



Cushions are high-resiliency, CFC-free polyurethane foam.

Legs are reinforced with stretchers and rails for added durability.

Details

Side Chair

2-Seat Lounge

3-Seat Lounge

Joints are double doweled and securely glued to ensure maximum strength. Tie screws are added for strength. Seat is reinforced with support rails and corner blocks secured with four screws for extreme rigidity and strength.

Seat suspension is constructed with pre-assembled high carbon, high tensile, hand drawn drop-in coil spring units, covered with a high-quality woven webbing. A ¼" insulator pad is applied over the seat suspension. Denim material is upholstered over the pad.

Removable seat cushions have 4¼" of bonded foam on side chair, 4" of bonded foam on 2-seat and 3-seat lounge.

Back suspension is constructed of five 11" gauge sinuous springs that are suspended from the frame by metal clips. Springs are tied together with a strong steel-resistant wrapping.

Back cushion is 3" thick and is supported with a layer of high-quality woven webbing covering the back suspension. Rails are padded with foam for additional cushioning.

Upholstery is wrapped over the cushions and secured with upholstery staples.

Nickel-plated glides are ⅞" in diameter.

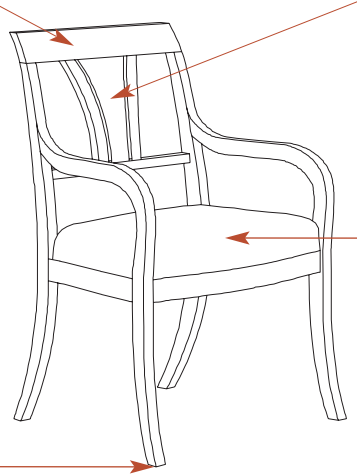
Overview

Statement of Line ➤See page 123
Finishes & Materials 269
COM/COL Yardage Req. 300

Frame is kiln-dried maple hardwoods.



Detailing on veneered, eyes, and scroll splat back has a contrasting Ebony finish. All three splats on triple splat back model have an Ebony finish.

Cushions are high-resiliency, CFC-free polyurethane foam.

Plastic glides are 5⁄8" in diameter.

Details

Uph. Back | Veneered Splat Back | Eyes Splat Back

Three different arched arm models are available: upholstered back, veneered splat back, and eyes splat back.

Uph. Back | Triple Splat Back | Scroll Splat Back

Three different scrolled arm models are available: upholstered back, triple splat back, and scroll splat back.

Joints are double doweled and securely glued to ensure maximum strength. Wood corner blocks, wood screws, and glue reinforce adjacent seat rails.

Seat rails are faced with vertical, straight-cut veneer for grain uniformity throughout the entire chair.

Seat suspension is constructed of unidirectional webbing that is machine stretched across the open frame and stapled to the side rails.

Back on upholstered back models has a contoured interior frame of 5⁄8" thick dimensioned plywood, covered with a solid webbing. 1" thick foam is applied to the webbing. Frame is attached to the chair with steel pins and wood screws.

Top rail on scrolled arm models is white ash burl veneer.

Center splat on veneered splat back model utilizes white ash burl veneer.

Upholstery is wrapped over the cushion, secured with upholstery staples, and finished with upholstery gimp.

COM/COL Yardage Req. 300

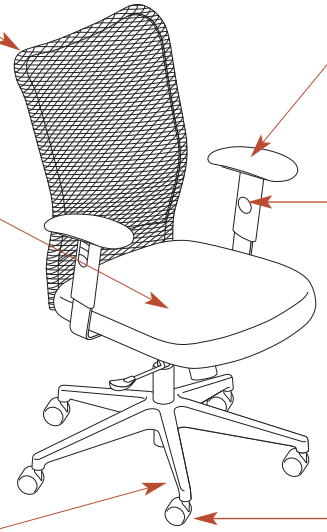
Mesh back, available in seven colors, is 84% texturized polyester and 16% elastin. The mesh is pulled over a metal frame and stapled into a plastic insert at the bottom.

Seat cushions feature a seamless, pull-over style upholstery. 1.0 models have 2½" of molded, CFC-free, urethane foam applied over a recycled plastic seat shell. 2.0 models (shown) have 1" slab foam with a ½" foam overlay topper and a ½" foam bottom (to give contour to seat) applied over a plywood seat shell.

5-prong base on 1.0 and 2.0 task chairs is constructed of extremely rigid, glass-filled nylon. Black surface is textured for scuff resistance.



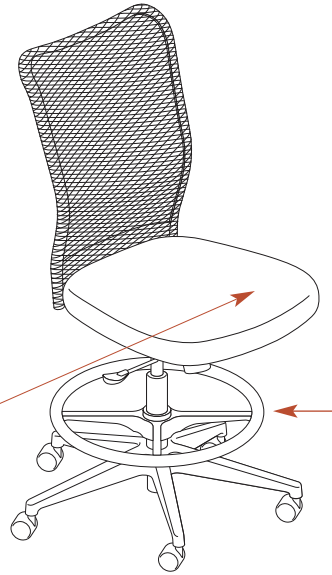
Contoured "sit spot" and waterfall front edge provides optimal seated support and prevents undue pressure in the lower thigh/knee area.

Arm caps are soft, self-skinning polyurethane foam molded over a steel core for strength.

Arms are height adjustable within a 2½" range by the push of a button. 1.0 models (shown) lock into one of 7 positions. 2.0 models lock into one of 5 positions.

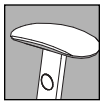
Height- and width-adjustable arms on 1.0 models also have a width adjustable range of 4¼".

Black, hard dual-wheel casters are standard. Soft dual-wheel casters are available as an option on 1.0 and 2.0 task chairs and stools; upcharge applies.

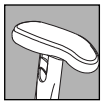


Footring is standard on stools.

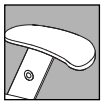
Details



Itsa 1.0



1.0 with TB133



Itsa 2.0

Itsa 1.0

Itsa 2.0

Seat cushion and armrest design on 1.0 models make it ideal for users of all sizes. Seat cushion and armrest design on 2.0 models, along with a lower seat height range, make it is ideal for users of smaller stature.

Itsa 1.0 task 300 base is constructed of aluminum with a black, powdercoat finish. Task 300 chairs are rated to seat individuals weighing up to 300 lbs.

Seat slider option is available on all models to adjust the seat depth, providing additional comfort for users with long legs. Seat depth is adjusted via a single lever and locks in one of 6 positions within a 2½" range. Upcharge applies.

TB133 is available. 1.0 models with TB133 will feature a different armcap profile than the standard model.
➤See above.

Itsa seating is warranted for three-shift (24/7) service.
➤See Product Warranty, page 340.

Arm width	•	•	

• = standard ○ = option

Knee-tilt control provides minimal rise of the front seat edge when reclining, allowing the user's feet to remain firmly on the floor. Back may be locked in a full upright position by pushing in pneumatic height adjustment lever.

Synchro-tilt control provides fully synchronized seat-to-back movement, plus:
• Free-float movement allows user to lock the chair in one of multiple positions within the range of movement using a single lever.
• Anti-kickback clutch controls forward movement of backrest when the lock is disengaged.
• Reclining tension adjustment is user friendly and accommodates a wide range of weights via a single lever on the left side of the chair (as seated).

Pneumatic height adjustment allows user to raise or lower the seat while seated. Upward movement of control lever located beneath the seat activates a gas cylinder to quickly adjust the chair.

Desk and Side Chairs

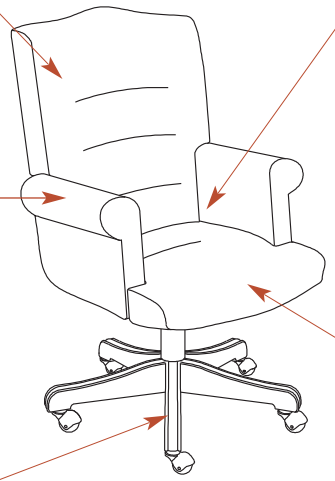
Statement of Line ➤See page 135
Finishes & Materials 269
COM/COL Yardage Req. 299

Outer back has ¼" foam and is fully upholstered.

Arms have rigid, molded-urethane inserts, wrapped with ½"-thick foam (1" thick on arm tops), and secured to the seat and back with metal L-brackets, T-nuts, and machine screws.

5-prong base on desk chairs has a rigid, steel understructure. Maple hardwood radius-end base caps (B75) with Antique English hooded-ball casters are standard.



Cushions are 2¼"-thick, high-resiliency, CFC-free polyurethane foam.

Waterfall front edge slopes forward to reduce pressure and increase circulation in the user's legs.

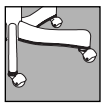
Details

Horizontal Stitching

Vertical Stitching

Button Detailing

Three different upholstery details are available on both high-back or mid-back models: vertical stitching, horizontal stitching, or button detailing.



Curved base caps (B31) with Antique English hooded-ball casters are available on desk chairs; upcharge applies.

Shell on desk chair is a one-piece, 9-ply molded plywood panel.

Frame on side chairs is kiln-dried maple hardwoods. Joints on back legs are double doweled and glued. Front legs use mortise and tenon joinery. Wood corner blocks, screws, and tie screws reinforce frame corners.

Seat suspension on side chair is constructed of unidirectional webbing that is machine stretched across the frame and stapled to the side rails. Seat cushion is 3½" thick.

Back suspension on side chair is constructed of vertical and horizontal webbing stapled to the back frame.

Upholstery is wrapped over cushions and secured with staples.

Nickel-plated glides on side chairs are ⅞" in diameter.

Controls on desk chairs are attached to the frame with T-nuts and machine screws.

Adjustability Features

Knee tilt and upright back lock	•
Tilt tension	•
Swivel	•
Pneu. height	•

• = standard

Knee tilt control provides minimal rise of the front seat edge when reclining, allowing the user's feet to remain firmly on the floor. Back may be locked in a full upright position by pushing in pneumatic height adjustment lever. Recommended for users weighing 225 lbs. or less.

Tilt tension control adjusts the amount of resistance the user feels when leaning back.

Pneumatic height adjustment allows user to raise or lower the seat height with a control lever while seated.

Finishes & Materials 269

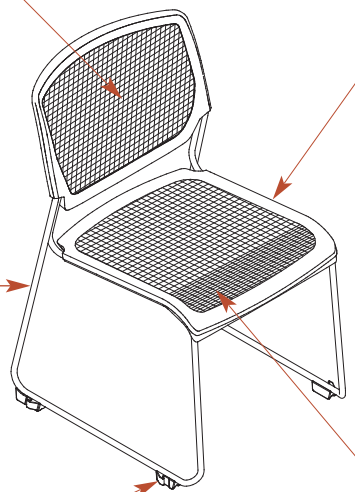
100% polyester mesh back and seat is available in five colors:
- Big Sky
- Black Tie
- Crimson
- Tangerine
- Kiwi



Back and seat frame is black plastic.

Legs have a polished chrome finish.

Mesh on the front of the seat features a tighter weave for additional support.

Black plastic glides are standard and can be used to gang adjacent chairs.

Details

Compact stacking sled-base design enables chairs to be stacked up to 30 high on a dolly or up to 10 high on the floor.

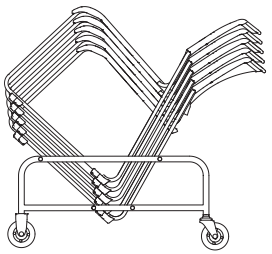
TB133 approved as standard. There are no separate models or pricing.

Chairs are available singly or in sets of four chairs. Sets of four are available under one model number; all chairs in the set will have the same mesh color.

Chairs are shipped four to a carton when applicable.

Poly chairs accommodate up to 253 lbs.

Related Products



Transport dolly is available to move up to 30 chairs. Dolly has a tubular steel frame, gray powdercoat finish, and four 8" semi-pneumatic ball-bearing wheels. Poly chairs stacked 30 high on the dolly will have an overall height of 70" and overall width of 37".

Ganging devices are not required. The black plastic glides that are standard also serve as a ganging bracket.

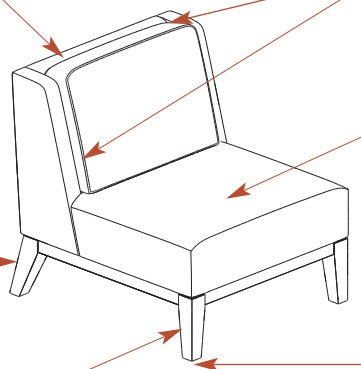
Lounge Seating

Overview

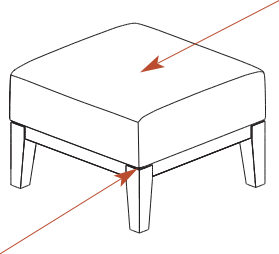
Statement of Line	➤See page 145
Configurations	148
Finishes & Materials	269
COM/COL Yardage Req.	300

Frame is constructed of ¾" plywood, utilizing lap joint construction that is glued and screwed. All upholstered models are standard in kiln-dried maple hardwoods.



Lounge units feature a wall-saver back leg.

Legs and rails of base frames are constructed using double dowel and glue constructions with corner blocks which are also glued and screwed to base rails. The base frame is then attached to the seat frame with wood screws through the corner blocks. Units over 48"L feature additional screws to provide extra support.



Rails and top of the legs are accented with a decorative reveal.

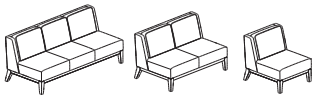
Piping is standard around the entire edge of both the front and back of the back cushion.

Cushions are high-resiliency, CFC-free, polyurethane foam. Seat cushions, specifically, are 5"-thick, high-grade, laminated polyurethane foam that is custom shaped.

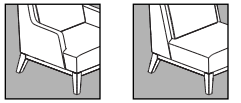
Non-skid glides are ¾" in diameter and adjustable.

Ottoman and bench frame are constructed of 5½"-thick, high-grade polyurethane foam applied to a ¾" plywood frame using lap joint construction that is glued and screwed. A sewn slipcover is applied over the foam and attached with upholstery staples. Benches feature a sewn seam in the center. Legs and rails of base frames are constructed using double dowel and glue construction with corner blocks, which are also glued and screwed to the base rails. The rails feature a ¼" set back when attached to the legs. Tops of the legs are accented with ¼" decorative reveal. The base frame is then attached to the seat frame with wood screws through the corner blocks.

Details



Three-Seat Two-Seat One-Seat



With Arms Without Arms

Lounge seating is available in three-, two-, and one-seat models, each with or without arms.

Seats have a high-tension strip webbing suspension that is stapled to the frame. Seat upholstery features a wrap-around upholstery method and is stapled into place.

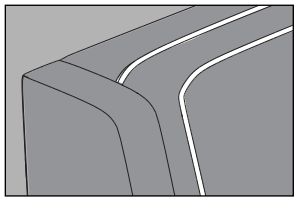
Back features a non-stretch woven suspension that is stapled to the frame, over which upholstery is placed.

Back cushions are 5½"-thick, high-grade polyurethane foam wrapped with ¾ oz. bonded polyester, which is slipcovered and closed with a zipper.

Armrest tops and outside panels are ½"-thick, high-grade polyurethane foam. The interior arm used 1"-thick, high-grade polyurethane foam. Upholstery is a sewn slipcover that is stapled into place.

Pose lounge, ottomans, and benches meet or exceed the applicable BIFMA/ANSI standards and meet Kimball Heavy Duty testing requirements of 350 lbs.

Contrasting upholstery may be selected for the back cushion; use electronic specification tool for accurate pricing.
Note: Seat and outer back/frame upholstery will be the same.



Contrasting piping may be specified in Kimball Office fabric or leather.
Note: Piping appears on the back cushion only and not on the seat cushion or the outer back/frame.

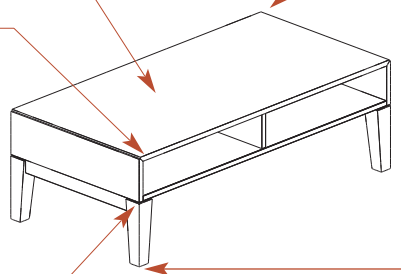
All models are fully upholstered. Bottom is finished with a black, fabric dust cover prior to the wood frame being attached.

Freestanding Tables

Statement of Line	➤See page 145
Configurations	148
Finishes & Materials	269
COM/COL Yardage Req.	300

Tops feature a 1/4" x 1/4" reveal and are 3/4" veneered plywood.

Corners are mitered utilizing double biscuit joinery which is glued and cleated together.



Corners are mitered utilizing double biscuit joinery which is glued and cleated together.

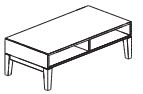
3/4" non-skid, adjustable glides are standard on all Pose tables.

Legs and rails of base frames are constructed using double dowel and glue constructions with corner blocks which are also glued and screwed to base rails. Tops of the legs and rails feature a 1/4" decorative reveal. The base frame is then attached to the table frame with wood screws through cleats.

Details

Freestanding tables are available in three designs.

End and corner tables are constructed of 3/4" veneered plywood. Tops are attached to the table frame with metal brackets and screws.



Magazine table tops feature mitered corners with 1/4" x 1/4" reveal are 3/4" veneered plywood utilizing biscuit joinery that is glued and cleated together. End panels are 3/4" veneered plywood; attachment of bottom shelf utilizes joints which are securely fastened with screws, dowels, and concealed fasteners to ensure maximum strength. The center divider is constructed of 3/4" veneered plywood that is attached to the bottom panel with glue and screws. The side rails feature a 1/4" setback of 5 3/4" and are attached to the underside of the bottom shelf with screws through the corner blocks.

Metal ganging brackets are spaced evenly over the wood base frame of the adjoining models and tightened. All models are capable of ganging, dependent upon user preference and needs.

Depth	25¾"
Arm height*	7⅛"– 11½"
Seat height	16¾"–21¾"
Seat width	20"
Seat depth	15½"–17¼"
Kneespace	20"

Headrest not included in height. Seat height measurements are for chairs with standard pneumatic cylinder and casters. Large, hard dual-wheel casters will add 1¼" to the seat height.

For P2 pneumatic cylinder, deduct 1¼" from the low end of the seat height measurement and ¾" from the high end.

* Arm height measurements for high performance task seating are made from upper seat surface to upper arm surface with a BIFMA sanctioned CMD.

Desk Chairs

Overview

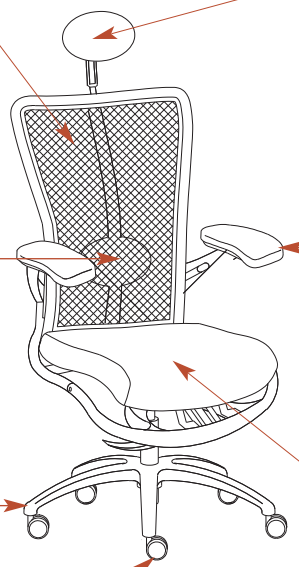
Statement of Line ➤See page 155
Finishes & Materials 269
COM/COL Yardage Req. 300

Integrated stretch webbing, on web back models, functions as a fluid back support and suspension.

Adjustable lumbar support, ergonomically designed, is integrated into all models and travels on the back center "spine" structure.

Standard cast aluminum base features a high profile aesthetic, available in black, platinum metallic, or polished aluminum.

Black, hard dual-wheel casters for use on carpeted floors are standard.



Headrest, on applicable models, is height adjustable over a range of 3½", depth adjustable over a range of 3", and tilts 35°.

Arms are height adjustable over a 4" range. Push button mechanism allows arm to be moved then locked into place.

Cushions are CFC-free, molded polyurethane foam.

Details

Back frame is black and constructed of injection molded 30% glass-filled nylon. The two-part frame is joined together by twelve 4mm Torx head screws and attached to the seat carriage frame with four 6mm and two 8mm Torx head screws.

Pillow back model features ⅜" thick foam with leather slipcover-style upholstery attached over the top of the back webbing with snap fasteners.

Lumbar support is adjustable over a range of 4" in height (from 6" to 10" above the seat) and ¾" in depth, and is covered with a 1" thick polyurethane foam pad. Height is adjusted by sliding the lumbar support up and down the spine. Depth is adjusted by turning the knob at the left end of the lumbar support (as seated).

Seat carriage frame consists of 3 die-cast aluminum support rails. Front support is attached to the two side support rails at a hinge point with an 8 mm Allen head bolt and fastener. Side support rails provide the arm attachment channels.

Seat and arms are constructed of 30% glass-filled injection molded nylon. The arms are secured to the chair with steel brackets and 6mm Torx head fasteners.

Seat cushions are 2" thick. Seamed slipcover type upholstery is sewn to plastic attachment clips that are snapped into slots located underneath the seat panel. Integrated attachment system allows for a clean transition.

Large (75mm), hard dual-wheel casters are available for use on carpeted floors. Casters are black. Upcharge applies.

Soft dual-wheel casters should be specified for use on hard floors. Casters are black. Upcharge applies.

P2 pneumatic telescoping cylinder is available as an option for lower seat height requirements. P2 cylinder utilizes a lower profile base. Upcharge applies.

Arm caps are available in soft self-skinning molded urethane on webbed back models or leather wrapped with ⅜" thick urethane foam on pillow-back models. They are width adjustable in 3 positions over a 2.4" range and have a 46° pivot range. A locking push-button release allows arm caps to be adjusted side to side or pivot 23° inward or outward.

Desk Chairs

Overview

continued

Statement of Line ➤See page 155
Finishes & Materials 269
COM/COL Yardage Req. 300

Patented synchro-tilt control offers fully synchronized seat-to-back recline with a 3:1 ratio. For every 3 degrees of back recline, the seat reclines 1 degree up to a maximum of 40 degrees of back recline and 13.3 degrees of seat recline.

Headrest is upholstered in 3679 Raven on web back models and in leather to match seat on leather pillow back models. It is height adjustable over a range of 3½", depth adjustable over a range of 3", and tilts 35°.

Adjustability Features	
Synchro-tilt	•
Four-zone tension	•
Seat depth	•
Forward seat tilt	•
Infinite position back lock	•
Lumbar support	•
Pneu. height	•

• = standard

Recline tension can be adjusted to one of 4 settings via a simple rotating knob located on the left-side of the chair (as seated in chair). While momentarily removing weight from the chair, simply turn the knob to the desired setting for instantaneous change of recline tension. The range accommodates users weighing from 110 to 265 lbs.

Adjustment graphics are easily read and easily understood.

Seat depth can be adjusted to one of 4 positions within a 2" range with a simple lever located under the front left side of the seat (as seated in chair).

Forward seat tilt can be adjusted into one of two positions within a 4 degree range independent of the synchro-tilt mechanism via a simple lever located under the front right side of the seat (as seated in chair).

Back lock adjusts infinitely via a lever located on the left side of the seat (as seated in the chair).

Seat height is adjusted pneumatically over a range of 5" from 16¾" to 21¾" or 15½" to 21" (with an optional low height cylinder) via a lever located beneath the right front edge of the seat carriage frame.

Desk and Side Chairs

Overview

Statement of Line ➤See page 161
Finishes & Materials 269
COM/COL Yardage Req. 300

Outer back is fully upholstered.

Back cushion is high resiliency, CFC-free, polyurethane foam.

Hardwood base caps are kiln-dried maple supported by a rigid steel substructure.

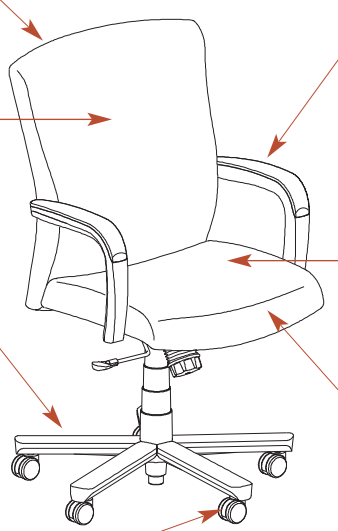
Black, glass-filled nylon base is textured for scuff resistance.

Hard, black, dual-wheel casters for use on carpeted floors are standard.

Soft dual-wheel casters are available and should be specified for use on hard floors. Casters are black. Upcharge applies.

Glides on wood frame side chair are dome-shaped plastic and 7⁄8" in diameter.

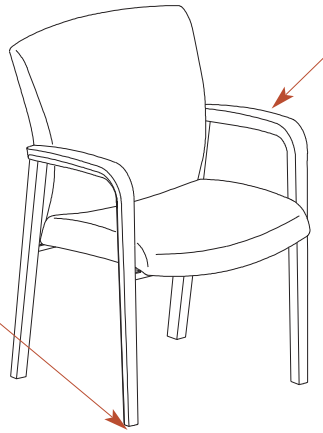
Glides on metal frame side chair are nylon ball inserts and 1⅛" in diameter.



Arms on desk chairs are offered in kiln-dried maple with black urethane caps on models with wood bases, or soft urethane insert-molded over a steel core on models with a black nylon base.

Seat cushion is CFC-free molded urethane foam.

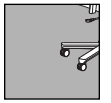
Waterfall front edge slopes forward to reduce pressure and increase circulation for the user's legs.



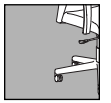
Hardwood-frame side chairs are kiln-dried maple. Joints are double doweled and glued to ensure maximum strength. Frame assembly is mounted in holes bored into the leg and secured with steel brackets and wood screws.

Metal-frame side chairs use 1⅛" diameter, 13 gauge steel tubing and feature a black, textured powdercoat. Frame components are welded together using a precision weld fixture to ensure accuracy and rigidity. Arms have black urethane caps.

Details



Wood base and arms



Black base and arms

Two arm/base styles are available on desk chairs: wood or black urethane. Shroud and controls are black.

Accent/header is available on all Stature desk and side chairs. Contrasting upholstery is an option.

Contoured back shell is blow-molded polyethylene.

Seat rails on side chairs are ¾" diameter (outside), 14-gauge tubular steel.

Back is upholstered using a slipcover-style upholstery technique.

Seat pan is contoured, blow-molded polyethylene. Channels within the seat pan fit over the metal seat rails on side chair frame and the control mechanism of desk chair.

Seat is upholstered using a pull-around upholstery technique.

Cushions are 2" thick on the seat and 1½" thick on the back.

Arms of desk chairs are attached to the seat with a steel support bracket and ¼" diameter machine screws.

Adjustability Features

	Desk Chair
Knee tilt and upright back lock	•
Tilt tension	•
Swivel	•
Pneu. height	•

• = standard

Knee-tilt control provides minimal rise of the front edge of the seat when reclining. Back may be locked in a full upright position by pushing pneumatic height adjustment lever inward. Recommended for users weighing 225 lbs. or less.

Tilt tension control adjusts the amount of resistance the user feels when leaning back.

Pneumatic height adjustment allows user to raise or lower the seat height with a control lever while seated. Upward movement of lever located beneath the seat activates a gas cylinder to quickly adjust the chair.

Note: Tailstock bracket allows the back upright to fasten directly to the control mechanism for added support and rigidity. Back upright mounting plate is 10-gauge metal.

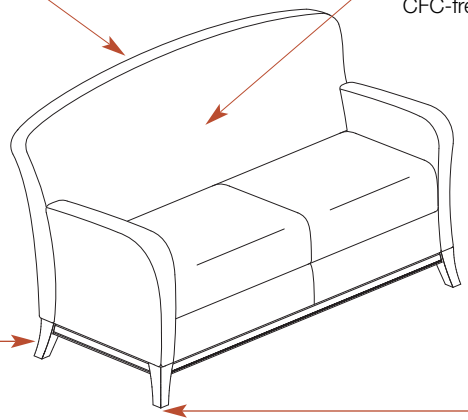
COM/COL Yardage Req. 301

Frame is constructed of ¾" plywood, utilizing lap joint construction that is glued and screwed. All upholstered models are standard in kiln-dried maple hardwoods.

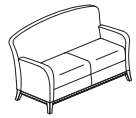
Cushions are high-grade resiliency, CFC-free polyurethane foam.



Legs are flared and accented with a decorative base rail.

Non-skid glides are ¾" in diameter and adjustable.

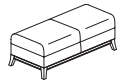
Details



2½-Seat

1-Seat

Lounge seating is available in two-and-half-seat and one-seat models with arms.



Bench is 53"W.

Ottoman is 25"W.

Wood base on all models is available in all Kimball Office standard wood finishes.

Back and seats feature high-tension, strip-webbing suspensions that are stapled to the frame.

Back cushions are 1½"-thick, high-grade, laminated polyurethane foam. Back upholstery features ¼" sewn-in foam and uses a slipcover upholstery method that is stapled into place.

Seat cushions are 6"-thick high-grade laminated polyurethane foam that is custom shaped. Seat upholstery uses a wrap-around upholstery method that is stapled into place.

All models are fully upholstered. Bottom is finished with a black fabric dust cover.

Armrest tops and outside panels are constructed with ¼"-thick, high-grade polyurethane foam. Upholstery features an additional ¼" sewn-in foam and uses a slipcover upholstery method that is stapled into place.

Legs and rails of base frames are constructed using double dowel and glue constructions with corner blocks that are also glued and screwed to the base rails. The base frame is attached to the seat frame with wood screws through the rails. Two-and-a-half seat and bench models have additional screws to provide extra support.

Talent lounge seating and bench meet or exceed the applicable BIFMA/ANSI standards and meet Kimball Heavy Duty testing requirements of 350 lbs.

Lounge Seating

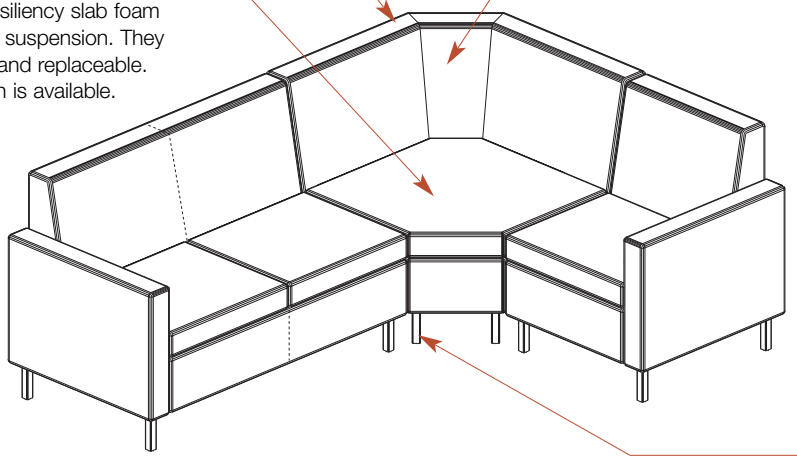
Actual Dimensions ➤See page 179
Finishes & Materials 269

Frame is constructed of ¾" plywood, using a lap-joint construction method. The frame is glued and screwed together.

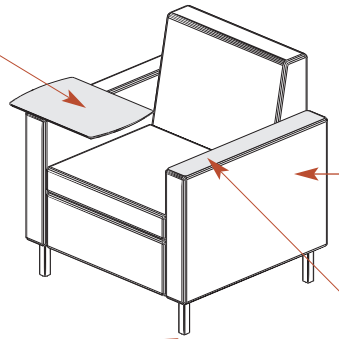
Back cushions contain 2½" high-density, high-resiliency foam over a non-stretch woven suspension that is stapled to the frame.

Seat cushions contain 3½" high-density, high-resiliency slab foam over a webbed suspension. They are removable and replaceable. Soft seat option is available.



Square legs are steel with a platinum powdercoat finish. They are attached with wood screws through the frame's corner blocks.

Wood or laminate tablet arms are available on models with 4" arms. Tablet arms may be specified for the right (shown), left, or both left and right arms. Models with 4" arms on both sides may be specified with a tablet arm on one side and an armcap on the other. *Note: Location is defined from the user's perspective when seated in the chair.*



Arm tops and outside panels feature ¾"-thick, high-grade polyurethane foam.

Wood or laminate arm caps are available for 4"-arm models.

Non-skid, adjustable glides are 2" in diameter.

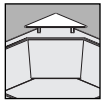
Details

All Villa lounge models are fully upholstered. Bottoms are finished with a black fabric dust cover. Legs are attached after upholstery is applied.

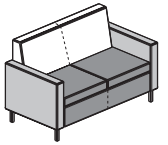
Villa seat and back cushions are upholstered using a slipcover method and finished with single and double French seams.

Arms feature a sewn slipcover with French seams that is stapled into place.

Soft seat cushion option is available on all Villa models, except youth lounge. Provides 10 lb. Visco foam layer atop HR45 foam to provide comfort and support. Certain upholsteries might wrinkle over time with soft seat option.

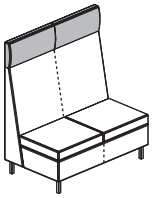


Wood or laminate floating top is available on Villa plateau corner.



Contrasting fabric may be specified on the back, base/seat, arms, and headrest (privacy-back models).

Mobile one-seat lounge features 5" arms on both sides and includes cupholders in both arms, non-handed tablet arm, front casters, and black handle.



Privacy back is available in armless one-seat, armless two-seat, and 90° corner models. Luan material is added for flexibility, support, and overall comfort. Leather is not available on backs of privacy-back models, but may be selected for the headrest and seat.

Tables are available with HPL laminate or wood top; round tables are also available with a white matte glass top. Legs are the same as those featured on lounge seating models; square steel with a platinum powdercoat finish. All tables, except round models can gang to any lounge unit. Grommets are available; see next page.

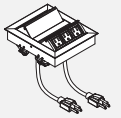
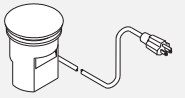
G21/G22



G23/G24/G25

G21 and G22 grommets feature a single-sided, pneumatic pop-up design and 6' cord for 4" x 5" cutouts: anodized aluminum

G23, G24, and G25 grommets feature a double-sided, pneumatic pop-up design and 6' cord for 7¹¹⁄₁₆" x 6½" cutout: anodized aluminum



G10 grommet includes two power outlets, one data port (RJ45), 6' grounded cord with 15-amp plug: matte black

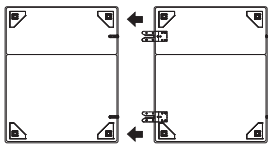
How to Specify

① **Insert the grommet designator and cut-out location designator** in step ⑦ in the table's model number sequence.

Note: Specify the grommet and location designators together. For example, G21RL.

Overview ➤See page 174
Actual Dimensions 179
Finishes & Materials 269

The configurations shown on this page are just a few examples of those possible with Villa components.
Note: Prices shown at right for upholstered models reflect the Kimball Office grade 1 prices.



Units may be ganged together. |Two ganging brackets are required to join two units together. Pre-drilled holes in the base accept the ganging bracket or its small mating piece. Once brackets are installed, units slide together for a secure connection. To disconnect, lift up and pull outward on the unit with the mating pieces.
➤See page 198 to specify.

Ganging devices
➤See page 198.

Certain upholsteries might wrinkle over time with soft seat option.

Use an electronic specification tool for accurate pricing when specifying contrasting fabrics.

IMPORTANT: Fabrics reflect light differently when viewed at various angles, creating a natural phenomenon called “flip.” Flip is visible on all fabrics and is not considered a defect; it is more easily recognized on fabrics with a nap or shimmer and more apparent on crescent or corner units.

Certain upholsteries might wrinkle over time with soft seat option.

Use an electronic specification tool for accurate pricing when specifying contrasting fabrics.

IMPORTANT: Fabrics reflect light differently when viewed at various angles, creating a natural phenomenon called “flip.” Flip is visible on all fabrics and is not considered a defect; it is more easily recognized on fabrics with a nap or shimmer and more apparent on crescent or corner units.

Fabrics with a distinct pattern do not lend themselves to the curved design of crescent models and are not recommended for use on these units.

Pricing

GSA SIN 711-16

Overview ➤See page 174
Finishes & Materials 269

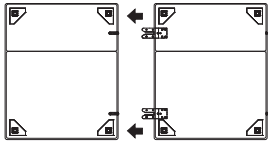
Model	*Price*
Two-Piece Ganging Device	
K60GB	$32

How to Specify

❶ Model



Two ganging brackets are required to join two units together; specify two K60GB models to gang two units together. Pre-drilled holes in the base accept the ganging bracket or its small mating piece. Once brackets are installed, units slide together for a secure connection. To disconnect, lift up and pull outward on the unit with the mating pieces.

➤Assembly instructions and video available at: www.kimballoffice.com

Vista seating models are dimensionally consistent and meet or exceed the applicable BIFMA/ANSI standards.

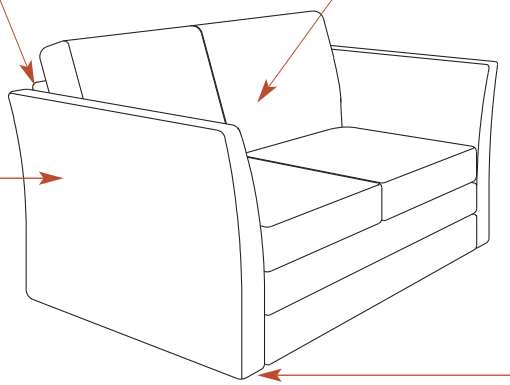
Lounge Seating

Statement of Line ➤See page 199
Finishes & Materials 269
COM/COL Yardage Req. 302

Frame is constructed of ⅞" plywood.

Cushions are high-resiliency, CFC-free polyurethane foam.

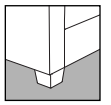


All models are fully upholstered. Bottom is finished with a black fabric dust cover.

Non-skid glides are 1¾" in diameter and adjustable.

Details

Vista is available in three-, two-, and one-seat models and with or without piping.



Models with legs are available on all sizes. Wood finishes are standard.

Seats have a high resiliency sheet webbing suspension that is stapled to the frame. Frame construction meets or exceeds GSA Heavy Duty Testing requirements.

Seat cushions are removable and feature 7" of dual-density, custom-shaped foam. Each cushion is 22"W, slipcovered, and closed with zippers.

Back features a non-stretch woven suspension that is stapled to the frame.

Back cushions are attached and feature 5½" of dual-density, custom-shaped foam.

Armrest frames are wrapped with ½" high-density foam, slipcovered, and attached to units with three 7/16" carriage bolts per arm.

Legs, on applicable models, are kiln-dried select hardwoods and are attached using three wood screws. Each leg contains a non-skid adjustable glide.

Contrasting upholstery is available on models without piping. Back and seat upholstery applies to the cushions; arms and frame upholstery applies to remainder of the lounge model.

Contrasting piping may be specified on applicable models in Kimball Office fabric or leather.

IMPORTANT: Orders cannot be cancelled for chairs specified with Alliance Program upholstery.

Contrasting upholstery is available. Use an electronic specification tool for accurate pricing.
➤See page 282.

TB133

TB133 fire code treatment is available on select Alliance Program upholstery.
➤See page 303 for process and pricing overview.

How to Specify

❶ Model

Back and seat upholstery:
② Alliance partner designator and upholstery grade:
CAR[grade] = Carnegie
KNL[grade] = KnollTextiles
MHM[grade] = Maharam
MAF[grade] = Mayer Fabrics
MOM[grade] = Momentum
③ Upholstery number

Arm/frame upholstery (primary):
④ Alliance partner designator and upholstery grade (see above)
⑤ Upholstery number

Finish (Include for LW models only):
⑥ Finish price group:
STD = Group 1
⑦ Finish designator

Seating

Overview

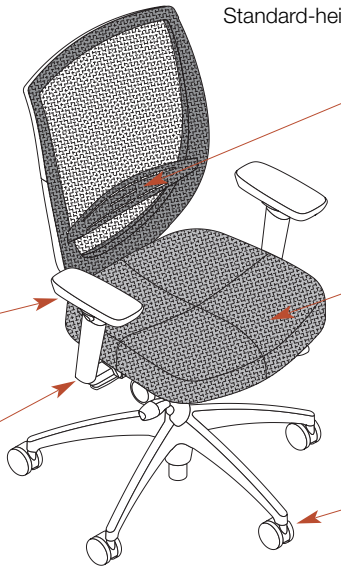
High-Performance Task, Sit-to-Stand, and Stools

Statement of Line	➤See page 205
Adjustability Features	210
Typical Configurations	211
Finishes & Materials	269

High-performance task chairs, sit-to-stand seating, and stools are options-rich, making them customizable for any setting, user, or task; select from three performance mesh/upholstery combinations:

- Mesh-back with mesh-upholstered seat
- Mesh-back and upholstered seat
- Upholstered seat and back

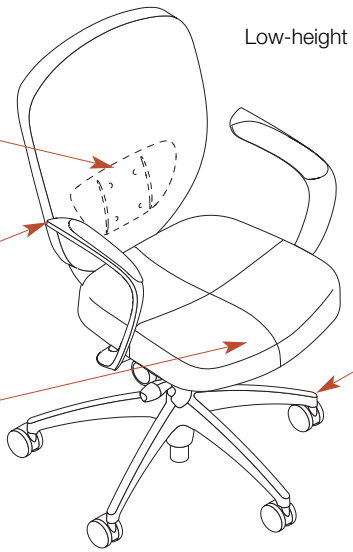
Standard-height task



Arm caps are soft, black, self-skinning polyurethane foam, insert-molded over a steel core.

Arm supports on all height-adjustable arms are glass-filled nylon insert-molded over a steel core for superior support.

Low-height task



Lumbar support pad, standard on upholstered-back models, is made of polypropylene and moves 2½" for optimal comfort and support. Neoprene covers the foam in the lumbar area and facilitates movement of the lumbar pad.

Conference arms are available with or without armcaps.

Contoured seat cushions provide a waterfall front edge to enhance short- and long-term comfort.

Optional lumbar support on mesh-back models is made of high-performance polyurethane elastomer. Position of the lumbar support is adjusted by sliding it up and down on a track within a range of 2¾".

Seat cushion is 2⅛" thick and consists of 1¾" of CFC- and CHC-free molded foam over a seven-layer molded plywood shell. Select performance mesh-covered (shown) or upholstered seat cushions.

5-prong base plastic base is standard on standard-height task chairs and stools. Plastic base is constructed of rigid, glass-filled nylon, features a black textured surface for scuff resistance; aluminum base in platinum metallic or polished finish is available (upcharge applies).

65mm hard dual-wheeled casters (C40) are standard-height task chairs and stools; soft dual-wheeled casters (C41) for use on hard floors are available (upcharge applies).

5-prong base aluminum base is standard on low-height task and sit-to-stand models.

55mm hard dual-wheeled casters (C3) are standard on low-height task chairs and sit-to-stand seating; soft dual-wheeled casters (C4) for use on hard floors are available (upcharge applies).

Details

Six arm styles are available on Wish. ➤See page 210 for details.

Wishbone back is standard in plastic (injection-molded, glass-filled nylon) on all models; polished die-cast aluminum is also available as standard on mesh-back models.

Inner back panel on upholstered-back model is injection molded polypropylene, designed with a reinforcing pattern to ensure rigidity.

Inner seat panel is molded 9/16"-thick, 7-ply, single-shell construction with a waterfall front edge.

All bases and models with height-adjustable arms meet 300 lb. weight and three-shift work requirements.

Metal footring is standard on sit-to-stand and stool models; 462 cinder.

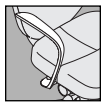
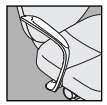
Height- & Width Adj. 4D



Conference



Conference with Arm Pad

Six arm styles are available on Wish seating.

Hiehgt-adjustable arms adjust up and down via a push button to one of 9 positions.

Height- and width-adjustable arms adjust up and down via a push button to one of 11 positions and side to side via lever adjustment bracket.

4-D adjustable arm caps on height- and width-adjustable arms adjust in 6 directions: left and right (width), forward and backward (depth), and in and out (pivot).

Width adjustment	
– Number of positions	5
– Range	1"
Depth adjustment

Back tilt lock	•	•	•	•
Seat slider	○	○		

• = standard ○ = option

Synchro-tilt mechanism provides fully synchronized seat-to-back movement with a 2:1 ratio. For every 2 degrees the back moves, the seat angle changes 1 degree. Other features:

- Free-float movement allows user to lock the chair in multiple positions within the range of movement using a single lever.
- Anti-kickback clutch controls forward movement of backrest when the lock is disengaged.
- Reclining tension adjustment is user friendly and accommodates a wide range of weights via a single lever on the left side of the chair (as seated)
- Control is standard in cinder paint, but may be specified with a polished shroud to go with polished aluminum wishbone (upcharge applies)

Pneumatic height adjustment allows user to raise or lower the seat while seated. Upward movement of control lever located beneath the seat activates a gas cylinder to quickly adjust the chair.

Lumbar support position is adjusted by sliding it up and down on a track within a range of 2¾".

➤See page 251 for additional actual dimensions, including kneespace, arm support width, arm cap distance, seat slider and low-seat options.

** Arm height measurements for high performance task seating are made from upper seat surface to upper arm surface with a BIFMA sanctioned CMD.*

Task Chairs and Stools

Statement of Line ➤See page 249
Finishes & Materials 269
COM/COL Yardage Req. 300

Lumbar support pad, made of polypropylene, moves 2½" for optimal comfort and support. Neoprene covers the foam in the lumbar area and facilitates movement of the lumbar pad.

Height-adjustable arms adjust with a push button to one of 5 positions within a range of 2¼" and can be specified with fixed or 3-D adjustable arm caps.

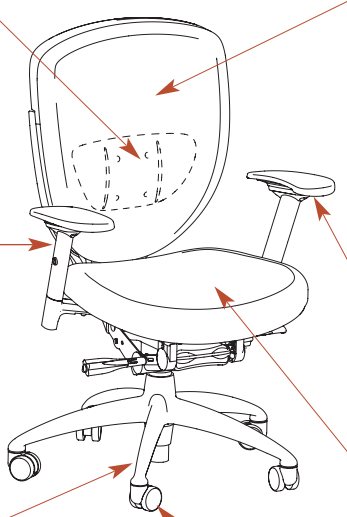
Arm supports are glass filed nylon, insert molded over a steel core for superior support.

5-prong base is constructed of rigid, glass-filled nylon. Black surface is textured for scuff resistance.

5-prong, 27" black aluminum base on Task 300 chairs was tested using 450 lbs. of force.

Seat slider option is available on task chairs to adjust the seat depth for comfort. Seat depth is adjusted via a single lever and locks in one of 6 positions within a 2" range. Upcharge applies. Seat slider is not available on stools.

Low seat-height option, compatible with the BIFMA recommended minimum of 15", is available. The seat height adjustment range is 3". Upcharge applies. Not available on Task 300.



Contoured CFC-free polyurethane foam provides comfort consistency and proper ergonomic support.

Back cushions have 1¾" CFC-free polyurethane foam to enhance comfort and reduce fatigue. Edges of foam used on seat and back are wrapped with ⅜" of higher density foam for cleaner edges and contours.

Arm caps are soft, black, self-skinning polyurethane foam, insert molded over a steel core for strength.

Seat cushions have 2" base foam, plus a ½" soft topper pad to enhance comfort and reduce fatigue. Base foam includes ½" filler centered on the bottom of the cushion for added support. Seat cushions feature a waterfall front edge.

Hard dual-wheel casters (C1) are standard.

Soft dual-wheel casters are available for use on hard floors. Casters are black. Upcharge applies. Not available on Task 300.

Foot ring on stools is height adjustable with a total range of 3½". Foot ring is black tubular steel.

Details

Fixed 3-D Conference

Task chairs are available with adjustable-height arms with fixed or 3-D adjustable arms caps, conference arms, or without arms.

Stools are available with adjustable height arms and fixed arm caps or without arms.

Wishbone back frame is injection molded, glass-filled nylon. Frame is attached with 2 high-tensile M10-1.5 x 35mm Allen-head bolts with grade 8 heavy steel flat washers.

Inner back panel is injection molded polypropylene, designed with a reinforcing pattern to ensure rigidity.

Inner seat panel is molded 9⁄16"-thick, 9-ply (1⁄16" poplar per ply), single-shell construction with a waterfall front edge.

Seamed slipcover-style upholstery on the back and seat accommodates a wide variety of fabrics and leather.

Task 300 chairs are rated to seat individuals weighing up to 300 lbs.

Adjustability Features

Synchro-tilt	•
Swivel	•
Pneumatic height	•
Side tension	•
Lumbar	•
Seat slider	○
Back tilt lock	•
Arm height	○
3-D arm caps	○

• = standard ○ = option

Synchro-tilt mechanism provides fully synchronized seat-to-back movement with a 2:1 ratio. For every 2 degrees the back moves, the seat angle changes 1 degree. Other features:

- Free-float movement allows user to lock the chair in multiple positions within the range of movement using a single lever.
- Anti-kickback clutch controls forward movement of backrest when the lock is disengaged.
- Reclining tension adjustment is user friendly and accommodates a wide range of weights via a single lever on the left side of the chair (as seated).

Pneumatic height adjustment allows user to raise or lower the seat while seated. Upward movement of control lever located beneath the seat activates a gas cylinder to quickly adjust the chair.

Adjustable-arm models are available with choice of:

- Height-adjustable arms
- Height- and width-adjustable arms
- Fully adjustable arms.

➤See page 261 for additional actual dimensions, including kneespace, arm support width, arm cap distance, seat slider and telescoping pneumatic options.

Desk Chairs and Stools

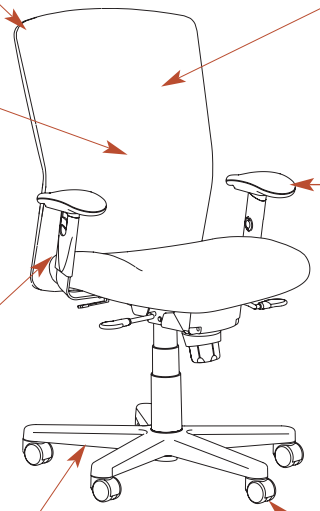
Overview

Statement of Line ➤See page 259
Finishes & Materials 269
COM/COL Yardage Req. 302

Outer back is fully upholstered.

Adjustable-height back, standard on all models, allows proper positioning of lumbar, helping prevent lower back fatigue and ensure comfort. Back adjusts through 6 positions over a 3¼" range.

Arms have a structural metal upright encased in an injection molded, glass-filled nylon shroud. Arms are secured to the chair with metal brackets and ¼" fasteners.



Black, glass-filled base, is available on high and mid-back chairs, is textured for scuff resistance.

Base on stool has a metal understructure and a two-piece polypropylene overlay and lower shroud.

Two densities of CFC-free urethane foam provide seat and back with consistent comfort and appropriate contours for superior ergonomic support.

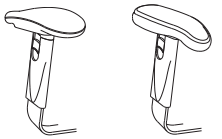
Adjustable arms adjust in width via a lever to one of 4 positions within a 3" range. Push button allows arm height to be adjusted and locked into one of 7 positions within a 2½" range.

Fully adjustable arms combine the standard height and width adjustments with the added benefit of a pivot adjustment. Pivot adjustment allows arm caps to rotate inward or outward to one of 3 different positions over a 30° range.

Black, dual-wheel casters for use on carpeted floors are standard.

Soft, black, dual-wheel casters are available as an option and should be specified for use on hard floors. Upcharge applies.

Details



Standard TB133 compliant

Arms caps on TB133 models have a different profile than those on standard models.

Outer shell is injection-molded polypropylene.

Inner shell is blow-molded polypropylene, designed with a deep ribbing pattern to ensure rigidity.

Seat cushions have 2¼" base foam, plus a ¼" soft topper pad to enhance comfort and reduce fatigue.

Back cushions have 2¾" contoured base foam to enhance comfort and reduce fatigue.

Seamed slipcover-style upholstery on both the back and seat accommodates a wide variety of fabrics and leather.

Seat slider models allow the user to set the depth of the seat to match their physical requirements. Seat depth is adjusted via a single lever and locks in one of 7 positions within a 1¾" range.

Adjustability Features

Synchro-tilt	•
Swivel	•
Pneumatic height	•

• = standard ○ = option

Synchro-tilt mechanism provides fully synchronized seat-to-back movement with a 2:1 ratio. For every 2 degrees the back moves, the seat angle changes 1 degree. Other features:

- Free-float movement allows user to lock the chair in multiple positions within the range of movement using a single lever.
- Anti-kickback clutch controls forward movement of backrest when the lock is disengaged.
- Reclining tension adjustment is user friendly and accommodates a wide range of weights via a single lever on the left side of the chair (as seated).

Seat height is adjusted pneumatically. Range varies with model and choice of options from 15¼"–20½" to 17½"–22¼".
➤See page 261.

Telescoping pneumatic cylinder (P3) is available on desk chairs for lower seat-height requirements. Upcharge applies.

Foot ring on stools is height adjustable in 1" increments with a total range of 4". Foot ring is tubular and wire steel.

Actual Dimensions

Statement of Line ➤See page 259
Finishes & Materials 269
COM/COL Yardage Req. 302

Notes

Samples:

Samples of Kimball Office wood finishes and paints are available upon request. Samples are to be used as guidelines only. Slight variations within commercial tolerance may occur in color and texture. Kimball Office carefully selects all materials used in every product, ensuring a commercially acceptable color and finish.

Swatch cards and memo samples of Kimball Office fabrics are available upon request. There may be slight differences between samples and actual yardage as a result of variations in dye lots.

To order samples:

- Visit the Partner web site at www.kimballoffice.com to order materials electronically
- Contact your Kimball Office Sales Representative or the nearest Kimball Office Showroom
- For Alliance program fabrics, contact our Alliance partner directly.

Kimball Office Upholstery 274
Alliance Program Uphol. 283
COM & COL 294

Kimball Office offers a diverse collection of surface materials. Please see descriptions below to ensure that you are choosing the materials that best support your requirements.

Fabric Collection:

Our collection of fabrics offers a wide variety of materials that include both timeless classics, as well as a selection of trendy colors and patterns to keep the offering fresh and current.

The classic patterns are perfect for establishing new standard color palettes, while the trendy patterns are great for adding accents and pops of color to make a statement and to show that you are in tune with the pulse of today's fast-paced world.

The fabric collection was developed with an international flare to make it easy for global companies to standardize in all locations. It contains both standard in-line and alliance patterns. Our alliance partners are chosen with great care to give us the best selections and service in the industry.

You will find that colors were developed to coordinate very well between the in-line and alliance offerings, as well as between the seating and panel fabric offerings.

The fabric collection will provide options for the discerning client for many years to come.

Wood Collection:

Our wood finishes offer fresh options that provide natural-looking finishes to meet today's design expectations. From the lightest Brighton Maple to the darkness of Urban Walnut, these finishes were chosen with great attention to offer a complete range of color options making it simple to specify the look you want. You can achieve contemporary or transitional looks, or choose to update your traditional style by selecting one of the newer walnut or cherry finishes.

Kimball Office carefully selects veneers and solid woods to provide high quality wood furniture. Variations in color, grain, and texture occur naturally in all wood species, but are most apparent in lighter colored woods, and especially in natural finishes.

The wood collection offers a number of light finishes that will not hide or mask the natural characteristics of wood. Mineral streaks, pitch pockets, and color variations from piece to piece are all characteristics that occur in natural veneers and are what make each piece unique. While the finishing process is identical for all pieces, each finished piece accepts the stain differently to create its own individual beauty. These characteristics are part of the inherent natural beauty of wood and are not considered defects.

Darker finishes can be selected to hide more of the veneer's characteristics. Several beautiful coordinating woodgrain laminate options are also available for the customer who wants complete color and grain consistency throughout.

Two surfaces with grain directions that are at different angles to a light source will reflect the light differently and look a slightly different color. This natural phenomenon is called flip. This can happen within a single piece as alternating veneer leaves are placed side by side or from piece to piece. Flip is often noticed on worksurfaces installed at a 90° angle to each other.

Two premium veneers—Sapele and Zebrawood—are part of the standard offering to provide options for high impact styles without having to quote custom veneers. Premium veneers could receive extended lead times based on supplier availability at the time the order is placed.

Generations Collection:

The Generations Collection is comprised of tried and true materials that have been in the Kimball Office offering for many years. This collection is designed to support long-standing customers and to help transition you to the current offering.
➤Visit kimballoffice.com to see the Generations Collection.

IMPORTANT: Materials in this collection should not be used to set standard color palettes for new installations.

Materials in this offering can be ordered using the standard process, however, extended lead times and minimum order quantities may apply. For best results, pre-planning orders with your Customer Service Representative is recommended.

Discontinuation Policy:

Kimball Office strives to give all business partners advanced notification of surface materials that are scheduled for discontinuation. Efforts will be made to support discontinued materials as specified in the deletion announcement. Pricing cannot be guaranteed. Extended leadtimes and minimum order requirements may apply.

Disclaimer:

Kimball Office will make every reasonable effort to maintain our commitments. If surface material changes must occur due to unforeseen circumstances, we will work with you on an alternative recommendation. Kimball Office reserves the right to cancel or make changes to standard products and surface materials.

Warranty:

Fabrics and leathers are not warranted against fading and wear, discoloration from contact with liquids, or change in color or texture caused by application of finishes (flame proofing, stain resistance).
➤See page 340 for complete warranty information.

† Adagiato and Beo are constructed of beech wood. Brighton and Monterey wood finishes on Beech is complimentary to Brighton on maple and Monterey on oak, but are not a direct match. Brighton and Monterey wood finishes are not available on Beo guest seating or Beo tables.

Note: Bingo is available in Amber, Ebony, Honey, and White. Bingo model numbers incorporate the finish designators. Event, Itsa, Skye, Wish, and Xtreme are non-wood series.

Key:
- ● = Available
- Ⓚ = Available on Kwik Office models
- † = Exceptions apply (see below)

Price Group Designators:

STD = Group 1 (list price)
STD2 = Group 2 (20% upcharge)

Characteristics:

Each piece of natural wood offers unique texture and grain. Minor variations in finish color and value may occur due to the natural characteristics of wood. Kimball Office carefully selects all materials used in every product ensuring a commercially acceptable color and finish. Factors such as aging and exposure to light alter finishes.

Brighton (IM) is a clear finish. Differences in grain character and color are natural characteristics of wood and will show through in the finished product.

All woods are susceptible to darkening from exposure to UV rays (sunlight and other sources), especially cherry and maple. Care in placement of furniture near light sources and elimination of prolonged covering of surfaces is necessary to reduce uneven color change.

The wood species on seating may vary from the wood species on the casegood or system. Different wood species offer unique texture and grain which provide more variation in finish color; however seating finishes are compatible with casegoods and systems finishes.
➤For Casegoods or Systems products, please see the appropriate price list for finish or paint designators and product application.

Wood Finishes

Matrix

Special Wood Finishes

Previously developed and custom finishes are available for special requirements. Kimball Office has an extensive library of previously developed special finishes which may be an acceptable match for your application. If not, a custom finish can be developed to meet specific needs.

Samples of previously developed special finishes are available from Customer Service upon request.

Applicability of special finish colors depends on the wood species to which they are applied. The matrix at right shows the types of woods used for each series.

IMPORTANT: Kimball Office reserves the right to decline the opportunity to match a finish color.

Approval Process:

① Send desired finish sample (no smaller than 3" x 5"), along with a purchase order for the $300 (net) special finish development fee, to Customer Service along with a complete list of the products and wood species to which the special custom finish is to be applied. Include dealer name, contact, and project reference.

② If a previously developed sample is found to be compatible, a sample will be sent for customer approval. Custom finishes will generally require at least a week for a matched sample. Samples sent to the customer will advise of any restrictions that may apply.

③ Customer signs off on the sample and returns the approval form to Customer Service. Approval is required prior to order entry.

Upcharges:

A one-time fee of $300 (net) will be billed for the development of each new custom finish. This fee covers all Kimball Office product lines on which the finish may be used. Models receiving a special finish will also be assessed an upcharge.

A 10% upcharge per line item (model number) for special wood finish is calculated on the Grade 1 upholstery price, then added to the price for the selected fabric grade, to arrive at the list price.

Example:
Collage model 4605 in grade 5 upholstery and special wood finish—

Grade 1 upholstery price	$ 922.00
	x .10
Upcharge for special finish	$ 92.20
Grade 5 upholstery price	+1051.00
List price	$1143.20

Wood Species by Series:

Note: Delano and Bingo are not available in special finishes. Special finishes are not available on Zebrawood. Independence Suffolk is constructed of hackberry.

Key:
• = standard wood species
○ = standard wood species on most models in series.

How to Specify

① Build the complete model specification by following the "How to Specify" on the appropriate pricing page for the product that is to receive the special finish.

② For the "finish price group" step, insert special finish code (in place of STD):
ZBECH1 = Special beech finish
ZCHY1 = Special cherry finish
ZMAP1 = Special maple finish
ZWAL1 = Special walnut finish
ZSAP1 = Special sapele finish
Note: Choose the special finish code based on the wood species used in the seating model.
➤See chart at left.

③ For the "Finish designator" step, insert the designator provided to you by Customer Service.

Stature								• Ⓚ
Villa			•					
Wish	•		$					
Wish Classic	• Ⓚ		$ Ⓚ					
Xtreme								•

Note: Only series that are available in paint, non-paint finishes, and laminate are listed here.

Upcharges:

10% upcharge applies for metallic paint on Event. Upcharge is calculated on the Grade 1 upholstery price, then added to the price for the selected fabric grade, to arrive at the list price.

Example:
Event model 95-2D in grade 5 fabric and metallic paint—

Grade 1 uph. price	$313.00
	x .10
Upcharge for metallic	$ 31.30
Grade 5 fabric price	+396.00
List price	$427.30

Flat upcharge applies for metallic paint on Wish.

➤See individual pricing pages.

Characteristics:

- Metallic paint finishes may appear to have variations in color due to its reflective qualities.
- Woodgrain laminates are matched to wood finishes with consideration for the most common application—laminate surfaces on a wood chassis. When laminate and wood are mixed in other applications, the flip that occurs naturally in veneer may influence the overall match from piece to piece.

ACT Performance Icons

Wood Finishes ➤See page 271
Alliance Program Uphol. 283
COM & COL 294

All Kimball Office fabrics meet, and in most cases exceed, the minimum requirements set up by ACT. For the purpose of uniformity in the industry, Kimball Office will be utilizing the ACT icons on swatchcards and related materials.

The Association for Contract Textiles (ACT) has developed voluntary performance guidelines to make fabric specification easier. The five symbols give architects, designers, and end-users a vast amount of performance information in a succinct visual way. Look for these symbols on ACT member company sampling to assure that the fabrics you specify perform up to contract standards and pass all applicable testing.

These categories describe a material's performance features as measured by specified methods under standard laboratory conditions. All tests referenced here are intended to represent the most current version of a test method. Note: Individual ACT member product information may represent a different version of a test method depending on the date the product was introduced to the market.

IMPORTANT: These tests represent minimum requirements which are subject to change without notice and may not reflect requirements or laws in all locations.

Flammability:

The measurement of a fabric's performance when it is exposed to specific sources of ignition. Note: ACT guidelines specify different flammability tests dictated by the intended end use for the fabric.

Upholstery
California Technical Bulletin #117
Section E—Class 1 (Pass)

Wrapped Panels and Upholstered Walls
ASTM E 84 (Unadhered Mounting Method)—Class A or Class 1

Wet & Dry Crocking:

Transfer of dye from the surface of a dyed or printed fabric onto another surface by rubbing.

Upholstery
AATCC 8—
Dry Crocking, Grade 4 minimum
Wet Crocking, Grade 3 minimum

Wrapped Panels and Upholstered Walls
AATCC 8—
Dry Crocking, Grade 3 minimum
Wet Crocking, Grade 3 minimum

Colorfastness to Light:

A material's degree of resistance to the fading effect of light.

Upholstery
AATCC 16—Option 1 or 3
Grade 4 minimum at 40 hours

Wrapped Panels and Upholstered Walls
AATCC 16—Option 1 or 3
Grade 4 minimum at 40 hours

Physical Properties:

Pilling is the formation of fuzzy balls of fiber on the surface of a fabric that remain attached to the fabric. Breaking strength is the measurement of stress exerted to pull a fabric apart under tension. Seam slippage is the movement of yarns in a fabric that occurs when it is pulled apart at a seam.

Upholstery
Brush pill—ASTM D3511, Class 3 minimum or Martindale Tester ASTM D4970, Class 3 minimum

Breaking strength ASTM D5034 (Grab Test)—50 lbs. minimum in warp and weft

Seam slippage ASTM D4034—
25 lbs. minimum in warp and weft

Wrapped Panels and Upholstered Walls
Breaking strength ASTM D5034 (Grab Test)—35 lbs. minimum in warp and weft

Abrasion Resistance:

The surface wear of a fabric caused by rubbing and contact with another fabric.

General Contract Upholstery
ASTM D4157 (ACT approved #10 Cotton Duck)—15,000 double rubs Wyzenbeek method

ASTM D4966 (12 KPa pressure)—20,000 cycles Martindale method

Heavy Duty Upholstery
ASTM D4157 (ACT approved #10 Cotton Duck)—30,000 double rubs Wyzenbeek method

ASTM D4966 (12 KPa pressure)—40,000 cycles Martindale method

End use examples of heavy-duty installations where upholstery fabrics rated at 30,000 double rubs should be appropriate are single shift corporate, hotel rooms/suites, conference rooms and dining area usage.

ACT acknowledges that there are extreme wear situations that may require higher levels of abrasion resistance. End use examples that may require higher than 30,000 double rubs include: 24 hour transportation terminals, 24 hour telemarketing, 24 hour healthcare emergency rooms, 24 hour casino gambling areas, and such public gathering places as theatres, stadiums, lecture halls and fast food restaurants.

It is strongly suggested that double rubs exceeding 100,000 are not meaningful in providing additional value in use. Higher abrasion resistance does not necessarily indicate a significant extension of the service life of the fabric.

The Wyzenbeek and Martindale tests are the two methods commonly used to predict wear-ability. Actual performance is determined by many factors such as fiber content, weaves, finishes, furniture design, maintenance, cleaning, and usage. Durability of an upholstery fabric is a complex interaction (combination) of a number of performance tests that, in addition to abrasion, includes seam slippage, pilling, tensile strength, and usage.

There is no correlation between the Wyzenbeek and Martindale tests so it is not possible to estimate the number of cycles that would be achieved on one test if the results from the other test were known.

Kimball Office Seating Fabric

Application Guidelines

Fire Codes & Flammability:

TB117
California Flammability Regulation #117 is a set of minimum allowable standards of flammability to which all upholstered furniture sold in the State of California must comply. It relates primarily to fabric coverings and resilient fillings. All shipments of Kimball Office upholstery comply with Regulation #117 and our invoices and law labels for such goods bear certification that our upholstered products comply.

UFAC
All Kimball Office seating is made in accordance with the Upholstered Furniture Action Council (UFAC) criteria to reduce chance of ignition by burning cigarettes.

TB133 Factor
TB133 factor is a full-scale fire test for furniture manufactured for public use in which an entire piece of furniture is tested as a unit. Kimball Office offers a wide variety of seating products that can be manufactured to meet TB133.

Double Upholstery Method
Kimball Office products are first upholstered with a fire barrier, the upholstery is then applied over the barrier. The addition of this barrier may slightly alter the comfort and/or aesthetics of the seating product.

Advisory
Purchaser must consult local fire and code official to determine the suitability of product being selected for any particular application.

Certain jurisdictions may require the use of additional fire retardants of composite flammability testing. Kimball Office assumes no responsibility for composite testing or for compliance with any particular code or other flammability standards different than as contained in applicable catalog information unless such requirements are specified in writing by purchaser to Kimball Office prior to confirmation of order. Cost of additional flammability treatments or testing needs of purchaser shall be borne by purchaser.

Characteristics:

- Certain fabrics may relax over time (e.g., some woven fabrics) creating a loosely upholstered appearance.
- Some fabrics may wrinkle, pill, fuzz, or puddle as a normal, inherent characteristic. This does not indicate that the covering or application is deficient.
- Fabrics are cut to provide the best match possible when transitioning from piece to piece.
- Fabrics reflect light differently when viewed at various angles, creating a natural phenomenon called “flip.” Flip is visible on all fabrics and is not considered a defect; it is more easily recognized on fabrics with a nap or shimmer and more apparent on crescent or corner units.
- Kimball Office will always ship a satisfactory commercial match. Because of industry dye-lot variation, colors may not match exactly.
- Fabrics are not warranted against fading and wear, discoloration from contact with liquids, or change in color or texture caused by application of finishes (flame proofing, stain resistance).

Terratex is a registered trademark of True Textiles, Inc. Each Terratex fabric must meet these four criteria:
- Made of 100% post-consumer and/or post-industrial fiber, or compostable materials
- Made using processes that reduce waste, emissions, energy, water usage, and toxic by-products
- Meets or exceeds the same quality standards of fabrics manufactured using virgin materials and conventional processes
- Made of a single fiber type, without backcoating, so that it too can be recycled or composted.

Green-e
100% of the electricity used to make these products is matched by Green-e certified renewable energy certificates.

Cleaning Fabrics:

Cleaning Code B
- Cleanable with diluted bleach solution

Cleaning Code D
- Dry clean only.

Cleaning Code L
- Use a clean cloth with warm water and mild soap as soon as possible.

Cleaning Code S
- Use only mild, pure water-free cleaning solvents.
- Cleaning by a professional furniture service is recommended.

Cleaning Code W
- Use water-based cleaning agents or foam.

Cleaning Code WS
- Use water-based cleaning agents or foam. Mild water-free solvents may also be used.
- Cleaning by a professional furniture service is recommended.

Fire Retardant Fabrics
- Solvent-based fabric cleaning or dry cleaning are recommended.
- Cleaning with water or water-based cleaners could result in salt ringing.
- Test proposed cleaning procedure on a small portion of fabric before cleaning entire piece.

Cleaning Leather:

Regular Cleaning

- Remove as much soil or staining as possible by carefully vacuuming or brushing.
- Dust with a dry or damp cloth.

Deep Cleaning

- Use mild non-detergent soap or cleaner. Wipe surface with a light circular motion. Repeat with clean water.
- Do not soak leather.
- Air dry.

Note: Never use furniture polishes, oils, solvents, varnishes, abrasive cleaners, ammonia, wax, or saddle soaps on leather.

Characteristics:

- Leather is a natural product. Healed scars, scratches, cuts, and stretch marks are natural markings and are characteristic of leather.

Contrasting Upholstery and Piping Options

Overview ➤See page 270
Vision Collection Matrix 276
Faux Leather & Leather 277

Contrasting Upholstery:

Contrasting upholstery is defined by entire back and seat upholstery application. Contrasting upholstery is available on the following seating series:

- Adagiato (half- and full-height back cushion models)
- Beo
- Boyd (all models)
- Delano (lounge and tandem models)
- Enjoy (all models)
- Event (all models)
- Pose (lounge models)
- Villa (lounge, corner, and wedge models)
- Wish (upholstered-back models)
- Wish Classic (all models)
- Xtreme (all models)

Select any contrasting Kimball Office, Alliance Program, COM, or COL upholstery.

IMPORTANT: When specifying contrasting fabric, use an electronic specification tools for pricing. If one is not available, you may contact Customer Service.

Special Applications:

- Arpeggio pillow back models—Back upholstery applies to pillow back only. Remainder of the chair (seat, arms, outer shell) is contrasting.
- Delano back upholstery applies to back; bolster applies to pillow; seat and arms applies to remainder of chair. The bolster and seat/arms can both be contrasting.
- Vista (models without piping)—Back and seat upholstery applies to cushions. Remainder of the chair (arms and frame) is contrasting.
- Pose contrasting back upholstery applies to the cushion back only. Remainder of the chair (seat, arms, and outer shell) is contrasting.

Contrasting Button:

Contrasting button is available on the following seating series at no upcharge:

- Beo (button back model)

Kimball Office fabric or leather MUST be specified if you desire a contrasting upholstery on the button; Alliance program upholstery is not available for contrasting button.

Contrasting Piping:

Contrasting piping is available on the following Kimball Office seating at no upcharge:

- Arpeggio (all models)
- Pose (lounge models)
- Vista (models with piping)

Kimball Office fabric or leather MUST be specified; Alliance program upholstery is not available for contrasting piping.

How to Specify

① Follow the “How to Specify” steps on the appropriate pricing pages for the seating model, indicating the contrasting fabric, button, or piping information in the order outlined.

Alliance Program Fabric

Program Overview

Overview	➤See page 270
Applicability Guidelines	284
TB133 Information	303
TB133 Inquiry Form	304

Kimball Office has formed partnerships with five of the top textile companies in the industry to provide a broad range of design-oriented fabrics. These fabrics can be specified using our standard ordering process, eliminating the need for additional expense and efforts required for COMs.

Patterns from Carnegie, KnollTextiles, Maharam, Mayer Fabrics, and Momentum are available in a variety of design aesthetics and price points to meet all of your fabric needs. Select, carded, Maharam and Momentum fabrics are listed in this price list.
➤See Surface Materials at www.kimballoffice.com for a wide variety of additional graded-in fabrics from Carnegie, KnollTextiles, Maharam, Mayer Fabrics, and Momentum.

IMPORTANT: Orders cannot be cancelled for alliance program fabrics.

Application of Alliance Program fabrics will be as depicted on the website or memo sample unless otherwise instructed on the order.

Directional fabrics, such as stripes, patterns, and plaids, may not be suitable for chairs with contoured shapes, tufting, or decorative stitching. Every effort is made to upholster all chairs as expertly as possible; however such orders are not subject to return.

Fabric that requires non-stock special treatments such as flame proofing, anti-microbial treatment, electrical conductive backing, water repellent, stain repellent, or acrylic backing are not part of this program. Such orders should be specified as a COM.

Alliance graded pricing includes the cost of the material. Repeat is also accounted for and no additional upcharge is required.

Different fabrics and seating constructions will respond better than others to specific seating applications. Certain fabric constructions are more prone to relaxing over time and may demonstrate characteristics such as wrinkling, pilling, fuzzing, or puddling. This does not indicate that the fabric or application is deficient, but is considered normal behavior as an inherent characteristic of the fabric.

IMPORTANT: The information provided in this section of the price list is the most current information available at the time this price list was published. Contact Customer Service before finalizing any orders to check availability.

Lead Time:

Lead times for alliance fabrics are based on supplier availability. Pre-planning orders can help facilitate arrival of products as needed. Each supplier reserves the right to discontinue patterns or colors. Kimball Office will not be held responsible for supplying discontinued patterns/colors or when minimum order quantities apply. Contact Customer Service for availability before finalizing orders.

TB133:

Contact Customer Service about TB133 requirements.
Note: Many of these fabrics may pass additional flammability tests. Please inquire about compliance with specific regulations.

Samples:

For memo samples, contact our alliance partners directly.

How to Specify

① Follow the “How to Specify” steps listed on the alliance upholstery pricing page within each section.
② For the “upholstery grade” step, add the appropriate three-letter supplier prefix to the fabric grade:
CAR[grade] = Carnegie
KNL[grade] = KnollTextiles
MHM[grade] = Maharam
MAF[grade] = Mayer Fabrics
MOM[grade] = Momentum
③ For the “upholstery designator” use the designator for the pattern/color:

Example:

①	②	③	④	⑤
K46CC	**CARJ**	6136_10	STD	MC

Kimball® Office

Alliance Program Fabric

Matrix

Applicability by Seating Line

Kimball Office has listed general applicability guidelines for each seating frame due to application constraints or aesthetic concerns in the matrix at right.

Appearance guidelines indicate characteristics that may be apparent when certain types of fabrics are applied; these are not restrictions, but are intended to educate customers on the potential appearance of their product. Guidelines 1 through 4 are explanations of what you may see on your chair. We can still upholster fabrics associated with these guidelines, but you may see some of the characteristics described.

Restrictions indicate types of fabrics that cannot be used on the indicated seating line. Fabrics associated with guidelines 5 and 6 prevent us from upholstering them on the applicable chair series.
Note: Specific seating and fabric combinations that are not possible are noted for applicable graded-in Alliance fabrics on the following pages.

IMPORTANT: These guidelines do not constitute any responsibility nor any warranty on the part of Kimball Office as to appearance, behavior, or durability of a material.

Key:
- • = Guideline or restriction applies to seating line.

Appearance Guidelines:

1 Thick or stiff textiles may result in gathers and puckers around corners, contours and certain seams.
2 Matched directional textiles, such as stripes, plaids, and patterns, may not align properly (e.g., decorative stitching, tufting, buttons, seams, seat-to-back match, etc.)
3 Textiles with high nylon or wool content (more than 50%) may show signs of material stretch and lack of rebound when room temperatures fluctuate.
4 Mohair, velvet, and chenille may be easily bruised or have the potential for crooked seams due to the heavy nap and flip.

Restrictions:

5 Textiles that are not approved for glue application cannot be used. Potential issues could include poor adhesion quality to the mating surface, separation of the fabric face from the backing, or glue bleeding through the fabric.
6 Thin and/or loosely woven textiles cannot be used due to potential fabric separation at the seams.

COM and COL

Process Overview

Applicability	➤See page 295
Additional Information	296
Yardage Requirements	297
TB133 on COM/COL	303

Kimball Office will upholster its products in fabric or leather supplied by the customer whenever possible.

IMPORTANT: Before placing an order utilizing COM or COL, please read all the information in this section. Orders for COM or COL are not subject to return.

Step ①

Review applicability guidelines and restrictions for the seating frame.
➤See page 295.

Step ②

Send a sample to Kimball Office for approval. Sample should be no smaller than 5" x 7" for fabric or 4" x 4" for leather. Include a list of model numbers on which you wish to use the COM. Reference “application approval” and send to:

Kimball Office
Attn: COM Administration
1600 Royal Street
Jasper, IN 47549

Kimball Office will advise of approval or disapproval. Approval signifies only that such fabric or leather can be applied to the products for which intended. Such approval does not constitute any responsibility nor any warranty on the part of Kimball Office as to appearance, behavior, or durability of the fabric or leather.

Step ③

Verify yardage requirements.
➤See page 297.

Step ④

Prepare and send your purchase order. Purchase order must include:

- Fabric vendor
- Pattern number and name
- Color number and name
- Application instructions (i.e., direction of pattern) for striped, plaid, patterned, or unusual fabrics and which face to use if fabric is reversible.
  Note: If you do not supply application instructions, Kimball Office will apply the fabric in what it determines to be the best manner, and cannot be held responsible after the upholstery is applied.

Kimball Office will send an acknowledgement of your order with a tentative order ship date and the date by which your COM or COL must be received. If your material is not received by the specified date, your ship date will be reassigned.

Step ⑤

After you receive order acknowledgement from Kimball Office, ship your material to:

Kimball Office
Attn: COM Department
340 East 11th Avenue
Jasper, IN 47549-1001

Please include:

- Dealer name and p.o. number
- Kimball Office seating model number
- Quantity of chairs
- Kimball Office acknowledgement number

COM and COL

Matrix

Applicability by Seating Line

GSA Non-Contract

Kimball Office has listed general applicability guidelines for each seating frame due to application constraints or aesthetic concerns in the matrix at right.

Appearance guidelines indicate characteristics that may be apparent when certain types of fabrics are applied; these are not restrictions, but are intended to educate customers on the potential appearance of their product. Guidelines 1 through 4 are explanations of what you may see on your chair. We can still upholster fabrics associated with these guidelines, but you may see some of the characteristics described.

Restrictions indicate types of fabrics that cannot be used on the indicated seating line. Fabrics associated with guidelines 5 and 6 prevent us from upholstering them on the applicable chair series.

IMPORTANT: These guidelines do not constitute any responsibility nor any warranty on the part of Kimball Office as to appearance, behavior, or durability of a material.

Key:

- • = Guideline or restriction applies to seating line.

Appearance Guidelines:

1 Thick or stiff textiles may result in gathers and puckers around corners, contours and certain seams.

2 Matched directional textiles, such as stripes, plaids, and patterns, may not align properly (e.g., decorative stitching, tufting, buttons, seams, seat-to-back match, etc.)

3 Textiles with high nylon or wool content (more than 50%) may show signs of material stretch and lack of rebound when room temperatures fluctuate.

4 Mohair, velvet, and chenille may be easily bruised or have the potential for crooked seams due to the heavy nap and flip.

Restrictions:

5 Textiles that are not approved for glue application cannot be used. Potential issues could include poor adhesion quality to the mating surface, separation of the fabric face from the backing, or glue bleeding through the fabric.

6 Thin and/or loosely woven textiles cannot be used due to potential fabric separation at the seams.

Overview	➤See page 294
Applicability	295
Yardage Requirements	297
TB133 on COM/COL	303

Fabric Characteristics:

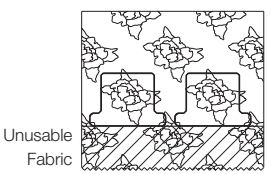
Kimball Office inspects fabrics for mill imperfections, but some are difficult to recognize. Kimball Office is solely responsible for seating workmanship and cannot assume responsibility or liability for the durability, tailoring appearance or other qualities such as color inaccuracies, dye lot variations, and other such flaws or defects of customer furnished coverings.

Different fabrics and seating constructions will respond better than others to specific seating applications. Certain fabric constructions are more prone to relaxing over time and may demonstrate characteristics such as wrinkling, pilling, fuzzing, or puddling. This does not indicate that the fabric or application is deficient, but is considered normal behavior as an inherent characteristic of the fabric.

Directional upholstery, such as stripes, patterns, and plaids may not be suitable for chairs with contoured shapes, tufting, or decorative stitching. Every effort is made to upholster all chairs as expertly as possible; however such orders are not subject to return. If in doubt about an upholstery application, please contact Customer Service prior to placing the order.

Decorative Fabric Patterns:

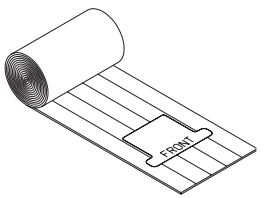
Yardage requirements are greatly affected by not only the size of repeats, but also by the print or pattern. Kimball Office cuts all seating patterns with aesthetic concerns in mind for high quality and consistency.
➤Refer to appropriate column in the COM yardage table on page 297.



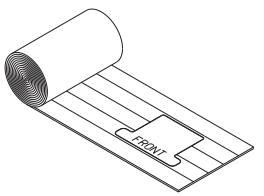
The illustration above depicts two seat cushions in the proper placement on a piece of decorative fabric. Please note the unusable fabric. It is not always appropriate to place a seat pattern at the edge of the fabric. Due to this circumstance, please include an additional one-half yard per order.
Note: If repeats are not to be matched, please contact Customer Service.

Directional Fabrics:

Some COM fabrics are considered directional that may not be considered directional by the fabric supplier due to the upholstering process used by Kimball Office.



"Up the Roll"



"Railroaded"

Application of COM fabrics—"up the roll" or "railroaded"—will be as depicted on the swatch card or website. If a different application is desired, the pattern must be custom quoted.
➤Please contact ***By Design***.

Customer's Own Leather:

Customer's own leather yardage (size) requirements for Kimball Office seating are based on an average hide size of 45–50 sq. feet. Consult Customer Service for requirements for other hide sizes.

The shape of a hide and the usable, clean square footage may make it necessary for us to request more leather after COL is received.

Calf hides must be at least 30 square feet of clean, usable, matching hides. When specifying calf hides, add 15% to COL requirements.
➤See page 297 for COL requirements.

Leather is a natural product and variation in texture is a pleasing quality belonging exclusively to high grade, full top grain leathers.

Flammability Compliance:

Kimball Office assumes no responsibility for the flame retardancy of any COM. Customers are solely responsible for making sure that COM complies with all applicable codes and regulations.

When COM or COL products must meet specific requirements, Kimball Office will require the customer to supply documentation that the material meets the code requirements.

COM/COL Storage:

Kimball Office will store excess COM/COL for 6 weeks after completion of order. Unallocated COM fabric will be stored for three months.

Kimball Office must be advised if COM is to be retained longer than three months for a future order or if it is to be returned.

Overview ➤See page 294
Applicability 295
Additional Information 296
TB133 on COM/COL 303

Kimball Office has analyzed each model to most accurately reflect the yardage requirements. The yardage requirement for each model is based on 54"W fabric and cutting the fabric up the roll.

For widths other than 54", increase the yardage requirement by the factors below:

Fabric width	*Increase yardage*
50"–53"	15%
48"–49"	30%
45"–47"	45%

Larger Orders:

When ordering 10 or more chairs in the same COM, yardage requirements may be reduced.
➤Contact Customer Service.

Railroad Application:

If COM fabric is to be "railroaded," contact Customer Service for yardage requirements.

Large Repeats:

For repeats larger than 18", we suggest a swatch with one full repeat be sent for yardage requirement assessment:
Kimball Office
Attn: COM Dept.
340 East 11th Avenue
Jasper, IN 47549-1001
Please note the model number and number of chairs.

TB133 Process

for COM, COL, and Alliance Program Upholstery

Overview	➤See page 270
Alliance Program	283
COM and COL	294
TB133 Inquiry Form	304

Kimball Office provides TB133 testing services for COM (Customers Own Material), COL (Customers Own Leather), and Alliance Program upholstery orders. We require that COM, COL, or Alliance Program upholstery first be evaluated for application approval, then for TB133 approval.

California Technical Bulletin No. 133—Flammability Test Procedure for Seating Furniture for Use in Public Occupancies—provides guidelines for a full-scale, composite burn test. To obtain TB133 certification, a specific model/upholstery combination must be subjected to and pass TB133 testing.

IMPORTANT: The CAL TB133 Seating Fabric Inquiry Form must be submitted prior to order entry for all seating with COM, COL, or Alliance Program upholstery specified to meet TB133.
➤See page 304.

The Process:

① If specifying Alliance Program upholstery for TB133, contact Customer Service to receive a custom quote for your seating order.

② Complete the CAL TB133 Seating Fabric Inquiry Form and submit it to Customer Service.

③ Kimball Office will determine:
- If the fabric is similar in content to a previously approved fabric for the chair model;
- If additional testing is required because no similar test documentation was found for the model/upholstery combination; or
- If the combination will not meet TB133 requirements, based on previous testing.

④ If a burn test is required, pricing for the testing will be as follows:
- $1300 (list, including shipping) for testing services; plus the
- Chair price (test sample)

Note: COM price is invoiced at Kimball Office Upholstery price grade 1, plus the cost of the COM; COL is invoiced at price grade 3 plus the cost of the leather. All Alliance Program upholstery orders must be custom quoted.

⑤ If the model/upholstery combination passes testing, you will receive proof of TB133 certification, at which time you may place your seating order.

NOTE: California Technical Bulletin No. TB133 is a full scale burn test. Kimball Office will provide TB133 testing services for COM (Customer's Own Material), COL (Customer's Own Leather) or Alliance Partner pattern orders. TB133 Certification is based on actual testing. Approval can also be determined by similar, previously tested fabrics on similar chair models by experts familiar with TB133 testing. As there are a wide array of materials and chair models it is inconceivable to test all possible material and model combinations. All COM, COL and Alliance patterns must first be evaluated for application approval, then for TB133 approval.

COM APPROVAL INFORMATION

☐ Fabric is similar in content to a previously approved fabric for this chair model and will not require a full scale burn test. Letter of Assurance is available upon request.

☐ Additional testing will be required because no similar test documentation was found for this content/model. To proceed with TB133 testing, please submit a purchase order and yardage needed for a specific model. Certification Letter is available upon request.

☐ Based on previously tested models, this will not meet TB133 requirements.

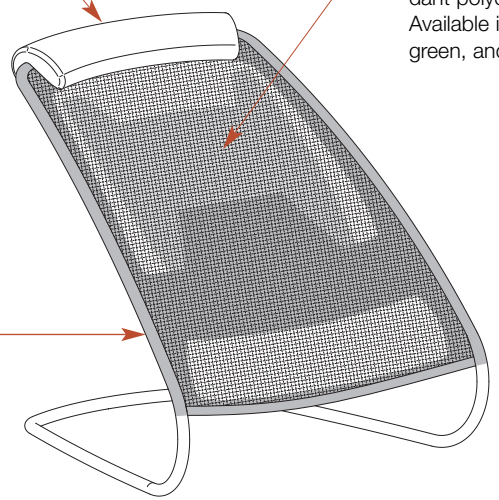
Lounge Seating

Overview

Statement of Line ➤See page 309
Finishes & Materials 329

Fabric-covered headrest, specified separately, is made of CFC- and CHC-free molded foam, covered in 69% Trevira CS (flame-retardant polyester) and 31% Lycra.

Frame is $1^{3}/_{16}$" tubular steel, powder-coated and painted to match mesh seat.



Seat is made of 3D fabric with open mesh structure and various fabric zones of 81% Trevira CS (flame-retardant polyester) and 19% Lycra. Available in four colors: black, red, green, and grey

Details

Lounge ships knocked down in two pieces.

Black felt glides are available on side chairs that will be used on hard floors. Upcharge applies.

User rated up to 285 lbs.

Cleaning

Cleaning Code WS

- Use water-based cleaning agents or foam. Mild water-free solvents may also be used.
- Cleaning by a professional furniture service is recommended.

Arm height	24⅛"–32⅝"
Seat height	16¼"–20¾"
Highest Column Position	
Overall height	49¹³⁄₁₆"–57¼"
Arm height	25¾"–34⅜"
Seat height	18³⁄₁₆"–22⁷⁄₁₆"

Mid-Back Desk Chairs	
Lowest Column Position	
Overall height	41"–45¼"
Arm height	24⅛"–32⅝"
Seat height	16¼"–20¾"
Highest Column Position	
Overall height	42⁹⁄₁₆"–47¼"
Arm height	25¾"–34⅜"
Seat height	18³⁄₁₆"–22⁷⁄₁₆"

Note: Chairs are shipped with the column set at a mid-point between the lowest and highest positions.

Desk and Side Chairs

Overview

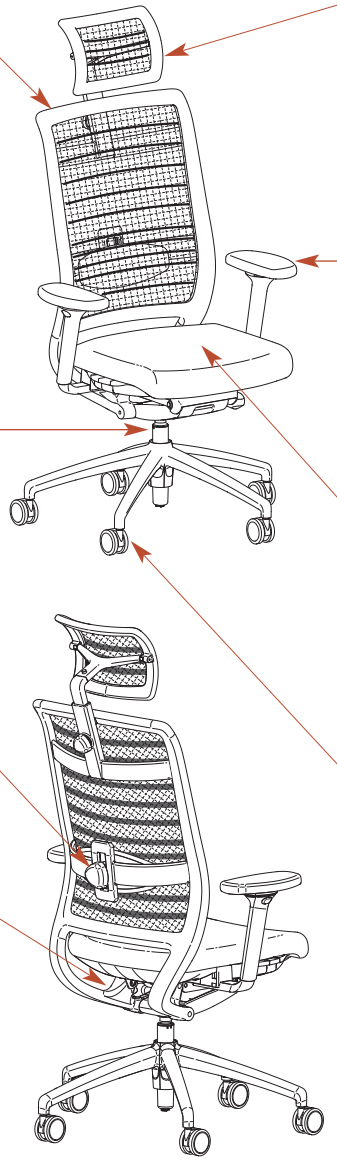
Statement of Line ➤See page 313
Finishes & Materials 329
COM/COL Process 334

Mesh-back models incorporate a ribbed design perfectly proportioned to give ergonomically correct, flexible support in all upright or reclined positions. Available in three colors. The mesh is secured to a structural, black plastic frame made of glass- filled polypropylene.

Seat height adjusts from 16 1/4" to 22 7/16" via a patented twist/threaded column adjustment feature and pneumatic (gas) cylinder.

Adjustable lumbar support for mesh-back desk chairs utilizes a molded polyurethane pad, allowing 2" height and 1" depth adjustments.

Autofit synchro mechanism with automatic weight regulation and fine adjustment is standard. 126° maximum opening angle between seat and back; can be locked in four positions.



Headrest on high-back models is height and depth adjustable—3" range for height and 2" range for depth—and also pivots.

T-shaped arm rests are standard with 2D adjustability. User can adjust the arm vertically within a 4" range (11 positions); technician can adjust the arm horizontally within a 1 3/4" range (unlimited positions). Arm caps are black polyurethane.

Seat cushions are 2 1/8" thick—1 3/4" CFC- and CHC-free molded foam, plus 3/8" Dacron top pad.

Fabric or leather upholstery is unglued, ensuring optimal air movement.

Five-star base is available in glass-filled nylon black plastic or cast aluminum in three finish options.

Black, dual-wheel casters on desk chairs are 65mm in diameter and available in hard and soft options. Specify hard casters (802) for chairs that will be used on carpeted floors. Specify soft casters (801) for chairs that will be used on hard floors.

Details

Upholstered-back models features a three-piece assembly—a visible, black plastic/polypropylene back with 3/4" CFC- and CHC-free molded foam covered in specified upholstery. The fabric back assembly is then secured to a structural frame made of glass-filled polypropylene.

Adjustable lumbar support for upholstered-back desk chairs utilizes air-pressure technology. Height is adjustable within a 2 1/2" range.

4-D arm option enables the user to make front-to-back adjustment within a 2" range (7 positions) and 360° pivot (10 positions). Includes the same adjustment features as 2-D arms, as well.

Side chairs feature a 7/8" tubular steel frame. Mesh-back construction is the same as desk chair. Seat cushions are 1 9/16" CFC- and CHC-free molded foam. Stackable up to 4 high.

Desk and side chairs are user rated up to 275 lbs.

Desk Chairs

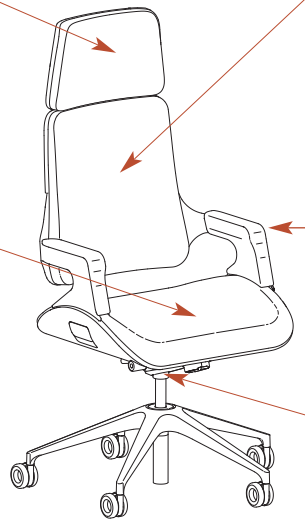
Overview

Statement of Line ➤See page 319
Finishes & Materials 329
COM/COL Process 334

Integrated headrest on high-back model is upholstered to match back and seat.

Seat cushions are 2 3/4" thick, 2 3/8" CFC- and CHC-free molded foam, plus 3/8" Dacron top pad applied over a 1/8"-thick ABS panel.

Fabric or leather upholstery is unglued, ensuring optimal air movement.



Back cushions are 2" thick, 1 5/8" CFC- and CHC-free molded foam, plus 3/8" cotton top pad applied over a 1/8"-thick ABS panel.

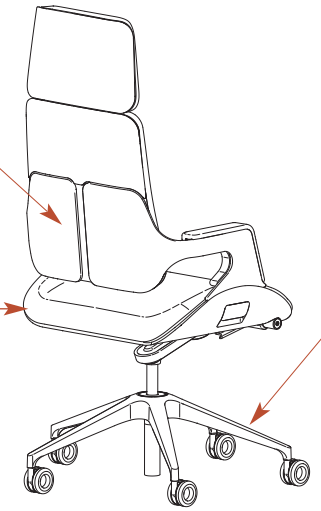
Arm rest cushions are 1 3/16"- thick, CFC- and CHC-free molded foam, applied over a 1/8"-thick ABS panel.

Fold-out crank on the underside of the seat allows the chair's function to be matched specifically to its user's body weight.

Patented synchronous mechanism on desk chairs combines the backward motion of the backrest with balanced inclination of the seat, providing optimum support for the body in any position. 116° maximum opening angle between seat and back, with infinitely lockable positions. Anti-kick back feature controls forward movement of the back rest when the lock is disengaged.

Contoured shell is die cast aluminum and available in three finishes.

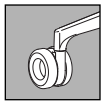
Seat height adjusts from 16 1/2"–20 13/16" via a pneumatic (gas) cylinder.



Five-star cast aluminum base is available in three finishes.

Casters feature a static discharge function and are hermetically sealed to keep bearings free of dirt and dust.

Details



Dual-wheel casters on desk chairs are 65mm in diameter and available in hard and soft options. Hard casters are light grey; soft casters are dark grey. Specify hard casters (804) for chairs that will be used on carpeted floors. Specify soft casters (803) for chairs that will be used on hard floors.

Desk chairs are user rated up to 275 lbs.

Adjustability Features

Synchro-tilt	•
Pneumatic height	•
Swivel	•
Tilt tension	•
Back tilt lock	•

• = standard ○ = option

Knee-tilt control provides minimal rise of the front edge when reclining, allowing the user's feet to remain firmly on the floor.

Tilt tension control adjusts the amount of resistance the user feels when leaning back.

Desk and Side Chairs

Overview

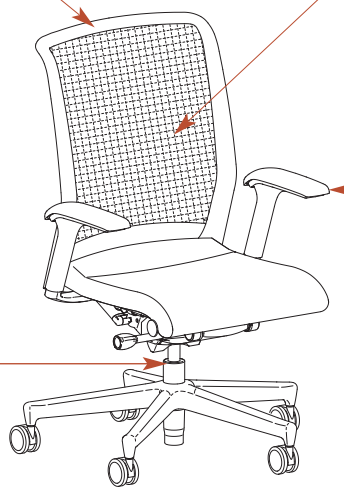
Statement of Line ➤See page 323
Finishes & Materials 329
COM/COL Process 334

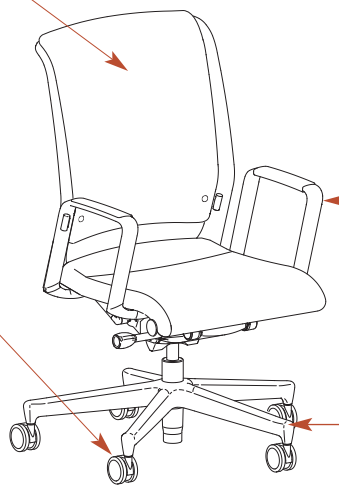
Mesh-back, on applicable models, is available in two patterns. The mesh is stretched over a cast aluminum frame.

Seat height adjusts from 17½"–21⅞" via a pneumatic (gas) cylinder.

Upholstered-back models have 1"-thick CFC- and CHC-free molded foam covered in specified upholstery. The foam back is secured to the mesh back understructure.

Black, dual-wheel casters on desk chairs are 65mm in diameter and available in hard and soft options. Specify hard casters (800) for chairs that will be used on carpeted floors. Specify soft casters (801) for chairs that will be used on hard floors.





Seat cushions are 1¾"-thick—1⅜" CFC- and CHC-free molded foam, plus ⅜" Dacron top pad.

Fabric or leather upholstery is unglued, ensuring optimal air movement.

Adjustable arms are standard with 2D adjustability. User can adjust the arm vertically within a 3⅛" range (6 positions); technician can adjust the arm horizontally within a 1½" range (unlimited positions).

Arm caps on adjustable arm models are black plastic. Leather arm caps are available; upcharge applies.

Loop arms models feature soft leather arm caps. Arm finish matches the finish specified for the frame/base.

Aluminum frame and base is available in three finishes.

Details

Adjustable

Loop

Two arm styles are available on Xantos desk chairs.

Optional, adjustable lumbar support for desk chairs utilizes air-pressure technology. Height is adjustable within a 2½" range.

Side chairs feature a ⅞" tubular steel cantilever-style frame; Back and seat constructions are consistent with mesh-back desk chairs. Stackable up to 4 high for models with plastic arm caps; 2 high for leather arm cap models.

Desk and side chairs are user rated up to 275 lbs.

Adjustability Features

Synchro-tilt	•
Pneumatic height	•
Swivel	•
Tilt tension	•
Lumbar	○
Seat depth	○
Back tilt lock	•
2-D arms on adjustable arm models	•

• = standard ○ = option

Active seat depth adjustment option provides user with more resting surface for their thighs; 1½" adjustment range.

Synchro-tilt mechanism provides synchronized seat-to-back movement with a 2:1 ratio, every 2 degrees the back moves the seat angle changes 1 degree. 126° maximum opening angle between seat and back.

Free-float movement allows user to lock the chair in multiple positions.

Anti-kickback feature controls forward movement of backrest when the lock is disengaged.

Reclining tension adjustment accommodates a wide range of weight.

Notes

Samples:

Swatch cards and memo samples of Kimball Office fabrics are available upon request. There may be slight differences between samples and actual yardage as a result of variations in dye lots.

To order swatches:

- Visit our web site at **www.kimballoffice.com** to order materials electronically
- Contact your Kimball Office Sales Representative or the nearest Kimball Office Showroom

Discontinuation Policy:

Kimball Office strives to give all business partners advanced notification of surface materials that are scheduled for discontinuation. Efforts will be made to support discontinued materials as specified in the deletion announcement. Pricing cannot be guaranteed. Extended leadtimes and minimum order requirements may apply.

Disclaimer:

Kimball Office will make every reasonable effort to maintain our commitments. If surface material changes must occur due to unforeseen circumstances, we will work with you on an alternative recommendation. Kimball Office reserves the right to cancel or make changes to standard products and surface materials.

Characteristics:

- Certain fabrics may relax over time (e.g., some woven fabrics) creating a loosely upholstered appearance.
- Some fabrics may wrinkle, pill, fuzz, or puddle as a normal, inherent characteristic. This does not indicate that the covering or application is deficient.
- Fabrics are cut to provide the best match possible when transitioning from piece to piece.
- Fabrics reflect light differently when viewed at various angles, creating a natural phenomenon called “flip.” Flip is visible on all fabrics and is not considered a defect; it is more easily recognized on fabrics with a nap or shimmer and more apparent on crescent or corner units.
- Kimball Office will always ship a satisfactory commercial match. Because of industry dye-lot variation, colors may not match exactly.
- Fabrics are not warranted against fading and wear, discoloration from contact with liquids, or change in color or texture caused by application of finishes (flame proofing, stain resistance).

Cleaning Codes:

Cleaning Code S
- Use only mild, pure water-free cleaning solvents.
- Cleaning by a professional furniture service is recommended.

Cleaning Code WS
- Use water-based cleaning agents or foam. Mild water-free solvents may also be used.
- Cleaning by a professional furniture service is recommended.

Cleaning Code W
- Use water-based cleaning agents or foam.

Cleaning Code D
- Dry clean only.

Key:
• = Complies with standard

Contrasting Upholstery:

Contrasting upholstery is defined by entire back and seat upholstery application. Contrasting upholstery is available on the following seating series:
• Hero. Just for You.
• Xantos

How to Specify

① Follow the How to Specify steps on the appropriate pricing pages for the seating model, indicating the contrasting fabric information in the order outlined.

Note: The best way to price a seating product with contrasting upholstery is by using an electronic specification tool. If one is not available, you may contact Customer Service.

Advisory:

Purchaser must consult local fire and code official to determine the suitability of product being selected for any particular application. Certain jurisdictions may require the use of additional fire retardants of composite flammability testing. Kimball Office assumes no responsibility for composite testing or for compliance with any particular code or other flammability standards different than as contained in applicable catalog information unless such requirements are specified in writing by purchaser to Kimball Office prior to confirmation of order. Cost of additional flammability treatments or testing needs of purchaser shall be borne by purchaser.

TB117:

California Flammability Regulation #117 is a set of minimum allowable standards of flammability to which all upholstered furniture sold in the State of California must comply. It relates primarily to fabric coverings and resilient fillings. All shipments of Kimball Office upholstery comply with Regulation #117 and our invoices and law labels for such goods bear certification that our upholstered products comply.

UFAC:

All Kimball Office seating is made in accordance with the Upholstered Furniture Action Council (UFAC) criteria to reduce chance of ignition by burning cigarettes.

TB133 Factor:

TB133 factor is a full-scale fire test for furniture manufactured for public use in which an entire piece of furniture is tested as a unit. Kimball Office offers a wide variety of seating products that can be manufactured to meet TB133

Standard Regulation Testing by Upholstery Pattern:

Pattern	*California TB117 (Section E)*	*UFAC Classification 1 or A*
Aquarius	•	•
Divina Melange	•	•
King	•	•
Lucia	•	•
Magic	•	•
Remix	•	•
Steelcut	•	•

Flame Resistance

Flammability testing determines a fabrics resistance to burning.

Application	*Passes*
Upholstery	California Bulletin 117, Section E, Class 1
Panels and uphol. walls	ASTM E-84 (unadhered method), Class A or 1

Cut Yardage:

Kimball Office Interstuhl upholstery is available on a cut yardage basis; whole yards only. List prices include freight.

Fabric Pattern	*List Price per yard*

② Upholstery pattern
③ Upholstery color number

Paints & Non-Paint ➤See page 330
Cleaning Codes 332
Contrasting Upholstery 333
Application Test Form 335

Kimball Office will upholster its products in materials supplied by the customer whenever possible. Before ordering COM/COL, please read all the information in this section.

Application Approval:

Kimball Office requires that a sample (2 yards of fabric or 22 sq. ft. of leather) be submitted along with a purchase order for testing and a COM/COL Application Test Form prior to an order being placed.
➤See page 335 for Test Request Form.

Kimball Office approval signifies only that such materials can be applied to the products for which it was tested. Such approval does not constitute any responsibility nor any warranty on the part of Kimball Office as to appearance, behavior, or durability of the material.

Fabric Characteristics:

Kimball Office inspects fabrics for mill imperfections, but some are difficult to recognize. Kimball Office is solely responsible for seating workmanship and cannot assume responsibility or liability for the durability, tailoring appearance or other qualities such as color inaccuracies, dye lot variations, and other such flaws or defects of customer furnished coverings.

Different fabrics and seating constructions will respond better than others to specific seating applications. Certain fabric constructions are more prone to relaxing over time and may demonstrate characteristics such as wrinkling, pilling, fuzzing, or puddling. This does not indicate that the fabric or application is deficient, but is considered normal behavior as an inherent characteristic of the fabric.

Directional upholstery, such as stripes, patterns, and plaids may not be suitable for chairs with contoured shapes, tufting, or decorative stitching. Every effort is made to upholster all chairs as expertly as possible; however such orders are not subject to return. If in doubt about an upholstery application, please contact Customer Service prior to placing the order.

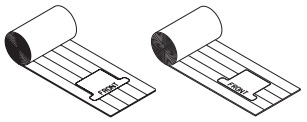
Kimball Office will apply the fabric as indicated on the Application Test Request Form, and cannot be held responsible after the upholstery is applied.

Decorative Patterns:

Yardage requirements are greatly affected by not only the size of repeats, but also by the print or pattern. Kimball Office cuts all seating patterns with aesthetic concerns in mind for high quality and consistency, unless directed otherwise on the Application Test Request Form

Directional Fabrics:

Some COM fabrics are considered directional that may not be considered directional by the fabric supplier due to the upholstering process used by Kimball Office.



Cut “Up the Roll” Railroaded

Application of COM fabrics—”up the roll” or “railroaded”—will be as depicted on the swatch card or website. If a different application is desired, the pattern must be custom quoted.
➤Please contact ***By Design***.

Flammability Compliance:

Kimball Office assumes no responsibility for the flame retardancy of any COM. Customers are solely responsible for making sure that COM complies with all applicable codes and regulations.

When COM or COL products must meet specific requirements, Kimball Office will require the customer to supply documentation that the material meets the code requirements.

Customer’s Own Leather:

Kimball Office is pleased to cooperate with COL selections whenever possible.

Leather is a natural product and variation in texture is a pleasing quality belonging exclusively to high grade, full top grain leathers.

Size requirements are based on usable sq, footage. The shape of a hide and the usable, clean footage may make it necessary for us to request more leather after COL is received.

Calf hides must be at least 30 square feet of clean, usable, matching hides. When specifying calf hides, add 15% to COL requirements.

Storage:

Kimball Office will not store excess COM/COL after completion of order.

How to Order

① Request application testing.
➤See form and specific instructions on page 335.
② You will receive notification of approval or disapproval via e-mail.
③ Submit your purchase order.
Note: Order will be acknowledged with a tentative ship date and notification of the date COM/COL must be received. If not received by that date, your ship date will be reassigned.
④ After order acknowledgement is received, ship fabric or leather “DDP” (delivered duty paid) to:
Interstuhl Büromöbel GmbH & Co. KG
Brühlstrasse 21
Wareneingang Textil—Rampe 1
D-72469 Messstetten–Tieringen
Germany
Attn: COM/COL Application Test Department

Include:
- Dealer name
- Purchase order number
- Kimball Office seating model number(s)
- Quantity of chairs
- Kimball Office acknowledgement number

IMPORTANT: Due to specific international shipping requirements, it is recommended that COM/COL be shipped directly from the mill.

How to Apply for Testing

① Complete an Application Test Request Form for each unique COM/COL pattern and color.

② Prepare Purchase Order for application testing, listing test model **INTAPPLTEST** (one for each application test requested). Each chair model and unique fabric combination is considered a separate test and will be billed at $50 net per test.

③ Ship:

- 2 yards of fabric or 22 square feet of leather for each chair model to be tested
- Application Test Request Form(s)
- Purchase Order

to:
Kimball Office
Attn: COM Administration
1600 Royal Street
Jasper, IN 47546

Note: Dealer is responsible for accuracy of information. If the chair model you desire changes after testing/approval, a new test must be completed.

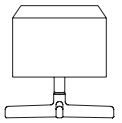
BIFMA and ANSI Chair Testing

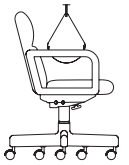
X5.1–2011 General Purpose Office Chair Tests

Terms & Conditions ➤See page 338
Product Warranty 340
Warranty for Bingo 341
Warranty for Skye 342

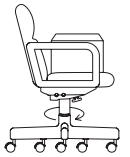
Backrest Strength Test: Type **I**—back tilt chair, 200 lb. force applied, 300 lb. proof load. Type **II** & **III**—back tilt chair, 150 lb. force applied, 250 lb. proof load.



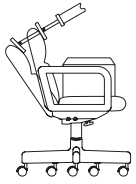
Base Test: Using 2500 lb. force for one minute, 2500 lb. proof load.



Drop Test: Using 225 lb. weight, 300 lb. proof load with 6" drop.

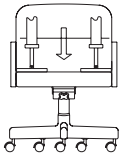


Swivel Cycle Test: 250 lb. on seat rotating base, 60,000 cycles at mid point and 60,000 lowest position.

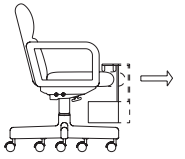


Tilt Mechanism Test: 300,000 tilts with 225 lb. in seat.

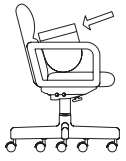
Seat Durability Test: 125 lb. weight dropped onto seat 100,000 cycles.



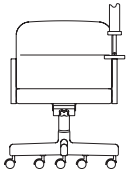
Front Load Ease: 165 lb. alternating for 40,000 cycles.



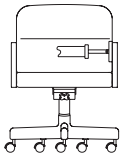
Front Stability Test: Apply 135 lb. on front edge of seat while applying horizontal 4.5 lb. force at top of seat.



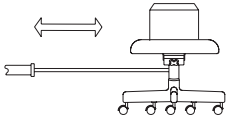
Rear Stability Test: 173 lb. on seat, no less than 20 lb. of pressure should be required to tip chair back.



Arm Strength Test—Downward Application: 169 lb. force applied downward at arm's weakest point, 253 lb. proof load.



Arm Strength Test—Outward Application: 100 lb. force applied outward at arm's weakest point, 150 lb. proof load.



Chair/Chair Base Durability Test: 2,000 cycles over obstruction, 98,000 over smooth along a 30" distance with a 250 lb. load.

Chair Testing:

The X5.1–2011 General Purpose Office Chair Tests were developed by the Business and Institutional Furniture Manufacturer's Association (BIFMA) and approved by the American National Standards Institute (ANSI). These performance tests determine the stamina of seating in its day to day use.

Kimball Office is a member of the Business and Institutional Furniture Manufacturer's Association.

Note: This testing does not serve as a warranty or guarantee. Generally, products within this price list meet or exceed the applicable BIFMA/ANSI standards.

Kimball® Office

SEATING PRICE LIST

Revision Summary

April 2014

This document provides a summary of revisions made to the Seating Price List since December 2, 2013.
These revisions are effective April 15, 2014.

Additions

New Maharam upholstery fabrics are now available.
➤See page 235.

New Momentum upholstery fabrics are now available.
➤See page 239.

Changes

Independence Suffolk desk chairs are now available standard with pneumatic height adjustment.
➤See page 104.

Maharam Medium and Messenger fabrics have been moved from price grade D to B.
➤See page 235.

Fit lounge chair and headrest are available for quick shipment as standard. The model numbers are now the same as the Kwik Office models beginning with a "Q." TB133 model numbers remain unchanged.
➤See page 263.

Clarifications

Itsa seating is warranted for three-shift (24/7) service.
➤See pages 124 and 290.

Corrections

Disperse seating upholstery abrasion test rating has been corrected to 100,000 double rubs.
➤See page 228.

Phone number for Maharam has been corrected.
➤See page 233.

Corrections to Maharam and Momentum colorways and specifications have been made to conform to current information from the alliance partner.
➤See pages 235–241.

Silver is not available in Nappa Leather.
➤See page 273.

Deletions

Maharam Milestone fabric is no longer available.

Kimball® Office

SEATING PRICE LIST

Revision Summary

June 2014

This document provides a summary of revisions made to the Seating Price List since April 15 2014.
These revisions are effective June 23, 2014.

Additions

Enjoy lounge seating is now available in TB133 models.
➤See page 93.

Pose lounge seating, benches and ottomans are now available in TB133 models.
➤See pages 143–145.

Villa lounge privacy-back models are now available in TB133 models.
➤See pages 182 and 184.

Changes

Updates to the Finishes and Materials chapter have been made to reflect the current offering, including the addition of three new wood finishes and laminates.
➤See page 219.

Clarifications

BIFMA/ANSI: 100% of the products manufactured by Kimball Office are level® certified.
➤See page 5.

Product warranty has been updated to reflect that Itsa and Campos seating lines have a "normal" use classification and warranted for 3-shift, 24/7 service. Itsa Mesh and Campos Mesh models have a warranty period of 3 years.
➤See page 290.

Corrections

Beo one-seaters and tandem two-seaters with clean-out option must be specified with the plus-3"-width option if you also want to specify a table arm.
➤See pages 40 and 42.

Ebony finish on Bingo is a paint finish.
➤See pages 49 and 50.

Tablet arm on Villa lounge shown on the overview page illustrates a right-handed tablet arm. Text corrected.
➤See page 168.

Deletions

Axos seating is no longer available.

Kimball® Office

SEATING PRICE LIST

Revision Summary

July 2014

This document provides a summary of revisions made to the Seating Price List since June 23, 2014.
These revisions are effective July 15, 2014.

Additions

Boyd lounge seating is now available.
➤See page 51.

Wish seating has been redesigned and now includes new mesh-back and mesh-upholstered seat models, as well as upholstered seat and back models.
➤See page 205.

Changes

Exisiting Wish models are still available under the name Wish Classic.
➤See page 249.

Clarifications

No clarifications at this time.

Corrections

No corrections at this time.

Deletions

No deletions at this time.

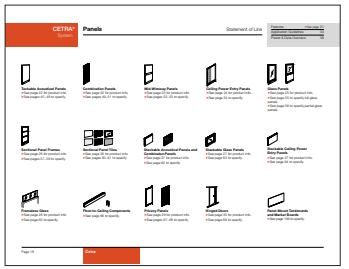
How to Use this Price List

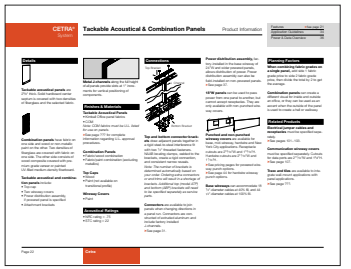
Product Positioning	➤See page 5
Product Integration	12
Sustainability	15
Finishes & Materials	573

Kimball Office has made every effort to make this price list accurate and complete with all of the information you need to specify our products.

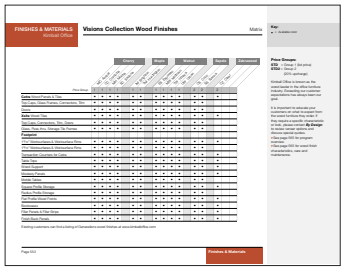
We suggest that you become familiar with the format of this price list. You'll find information about the product line, planning guidelines, pricing, and how to specify the product.



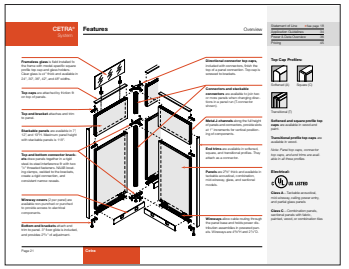
Statement of Line provides a snapshot of the entire product line. We've included an illustration and page cross references to the applicable pricing and how to specify pages.



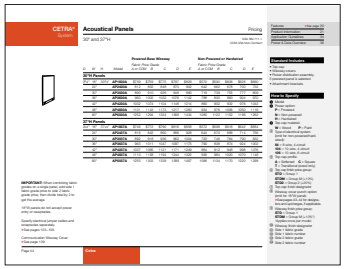
Product Information pages provide detailed information about the product, connections that can be made with other models, and planning factors, and applications guidelines.



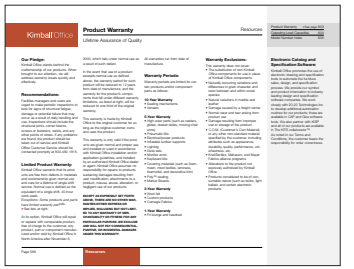
Look in the Finishes and Materials section to see what materials and finishes are available. Matrices for wood finishes, laminate, paint, fabrics, and other surface materials offer a quick reference by product.



Overviews offer a quick look at the distinguishing features of the product line.



Pricing pages list each model individually along with its list prices. How to Specify steps instruct you how to build a complete model that includes all of its options and materials.



Use the Resources in the back of the price list. This repository of useful information includes Terms and Conditions, Warranty, Operating Load Capacities. You'll also find a model number index with references to the appropriate pricing page.

Dimensions provided in this price list are nominal. Products are manufactured to meet standard industry tolerances.

Illustrations and specifications contained in this price list are based on the latest product information at time of publication. Kimball Office reserves the right to make changes at any time without notice.

Items listed herein are considered by Kimball Office as portable furniture and as such are subject to local fire, electrical, and building codes applicable to portable furniture.

Only Underwriters' Laboratory (U.L.) listed electrical components are used in electrical devices and are so labeled.

The customer is responsible for the proper application of products to the local codes under which installation must be made. Further specifications are available on request.

Product Integration	12
Sustainability	15
Finishes & Materials	573

Complete specifications are built by following a set of steps. These "How to Specify" steps are located in the far right column of each pricing page and are specific to the models found on that page. These steps will guide you in the proper order to specify the base model, materials, finishes, options, etc.

Base model numbers may be comprised of two or more steps. For concise presentation, some models numbers have been truncated within the pricing table.

- The steps numbered using a solid circle with a white number inside (e.g., ❶, ❷, or ❸) make up of the base model number.
- Steps numbered using an outlined circle with black number inside (e.g., ④, ⑦, or ⑨) are required to complete the specification.

Kimball Office promotes the use of electronic drawing and specification tools to automate the furniture sales, design, and specification process. We provide our symbol and product information to industry leading design and specification software companies. We work closely with 20-20 Technologies Inc. to develop additional automation routines for our products; these are available in CAP and Giza software tools. We also partner with KISP and all of our products are available in The KITS *collaborator*™. As noted in our Terms and Conditions, the customer bears the responsibility for order correctness.

Application Guidelines 34
Power & Data Overview 36

Standard Includes

- Top cap
- Wireway covers
- Power distribution assembly, if powered panel is selected
- Attachment brackets

How to Specify

❶ Model
❷ Power option:
P = Powered
N = Non-powered
H = Hardwired
❸ Top cap material:
W = Wood **P** = Paint
④ Type of electrical system (omit for non-powered/hard-wired):
84 = 8-wire, 4-circuit
104 = 10-wire, 4-circuit
106 = 10-wire, 6-circuit
⑤ Top cap profile:
A = Softened **C** = Square
T = Transitional (wood only)
⑥ Top cap finish price group:
STD = Group 1
STDM = Group M (+10%)
STD2 = Group 2 (+20%)
⑦ Top cap finish designator
⑧ Wireway cover punch option (omit for 18"W panel):
➤See pages 43–44 for designators and upcharges, if applicable.
⑨ Wireway finish price group:
STD = Group 1
STDM = Group M (+10%*)
*Applies once per model.
⑩ Wireway finish designator
⑪ Side 1 fabric grade
⑫ Side 1 fabric number
⑬ Side 2 fabric grade
⑭ Side 2 fabric number

Refer to the "standard includes" list to see what ships standard as part of the base model.

Follow these steps to build a complete model specification.

Options that incur an upcharge or decrease the base price are noted within the "How to Specify" steps.

Sample Specification:

The example below shows a complete model number for an **Cetra panel.**

Kwik Office Program

Product Positioning ➤See page 5
Product Integration 12
Sustainability 15
Finishes & Materials 573

Kwik Office systems are available to ship within ten (10) business days upon receipt of a credit-approved order.

Specific models and options from the following lines are available:
- Interworks EQ
- Traxx and Tiles
- Footprint
- Task Lights

The Kwik Office program is designed to provide the flexibility required to meet the immediate needs of our customers. Kwik Office offers a large selection of Kimball Office product in an extensive finish offering.

The Kwik Office Price List is the most complete reference for Systems, Casegoods, Tables, Metal Filing, and Seating products. Although we indicate which models are available, please use the Kwik Office Price List to specify.

Model Numbers:

Models and finishes that are available on Kwik Office have been marked with a K icon in this price list.

Kwik Office model numbers are different from standard model numbers. Base model numbers for Kwik Office products include all options and finish designators.

The K icon on standard lead-time pricing pages indicates availability; it does not provide the correct model numbers and option designators for specifying. You must use the complete model numbers listed in the Kwik Office Price List.

Include only Kwik Office models on your order. Any orders containing non-Kwik Office products will be treated as such and entered at standard lead times. Indicate clearly at the top of your order “Kwik Office.”

Changes and Cancellations:

No changes or cancellations will be accepted after order entry for Kwik Office products.

Order Size:

The Kwik Office program has a limited weekly volume capacity, with orders being entered on a first come, first served basis. Contact Customer Service for availability.

Customers are encouraged to verify the application via specifying tips in the price list prior to placing an order to ensure the best results.

Cetra	Xsite	Interworks EQ
Overview		
Elegant and refined, Cetra offers a solid sense of permanence in the open plan. Cetra's mixture of materials and warm woods not only presents an elegant image, but also combines to make Cetra one of the strongest and most durable panel systems in the industry, increasing the value of our customer's investment. Particularly popular in financial and law offices as well as customer interface areas, Cetra is perfect for areas where making an impression counts.	A "frame and tile" system, Xsite is an innovative, next-generation approach to the open plan. Xsite's off-modular placement of components helps optimize space utilization. In addition, Xsite's aesthetic appeal—with eight-foot wide tiles, nearly seamless tile integration, and a wide range of options—makes it one of the most beautiful systems in the industry.	Easy to specify, quick to install and simple to reconfigure, Interworks EQ is perfect for creating straightforward, highly productive workspaces. Integral top cable lay-in lets you route all the data cables you need, with easy access for quick changes. Slim and clean, Interworks EQ works for you.
Ability to Change Appearance		
Use of sectional panels provides flexibility. Many appearances can be created with broad selection of panel types.	Key benefit. Total flexibility from one panel side to the other, including segmented on one side and monolithic on the other, allows for creating different appearances.	Use of sectional panels provides flexibility
Stacking as an option within application requirements. Hi-lo requires specific connectors.	Stacking as an option within application requirements.	Height changes between panels are simple. Stacking as an option with application requirements.
Panel Thickness		
2⅝" thickness provides solid appearance (electrical and cable routing in panel base or mid-wireway).	3¼" thickness provides substantial wall appearance (space inside panel is used for some inset tiles and for cabling capabilities).	2" thickness minimizes floor space (perimeter channels within panel provide vertical and horizontal routing of cables and electrical).

Cetra	Xsite	Interworks EQ
Materials/Finishes		
Full offering of Kimball Office paints and wood finishes	Full offering of Kimball Office paints and wood finishes.	Available in select colors.
Steel frame.	Steel frame.	Steel frame.
Trim		
Softened and square top caps in paint or wood. Transitional top caps in wood. Solid wood end trim available in paint or wood finishes. Radius and square vertical corners available in fabric, wood veneer, or paint on aluminum. Wood and painted top caps available at the same price.	Flat or curved profile top caps. Top caps can be specified to span frames up to 8'W for a seamless appearance. End trim is available in flat or curved profiles to match top cap profiles. Vertical trim has a flat profile.	Crowned profile top caps. Full-height end trim provides finished look for end of run. Finish channels for corners (fabric only).
Panel Heights		
8 standard heights (30", 37", 42", 50", 56", 61", 68", 80") and 19 optional heights using 7", 12" and 19" stackable panels in conjunction with the heights above. Floor-to-ceiling top channel provides light and sound seal, but panels do not attach to ceiling. Maximum ceiling height is 118".	7 heights (30", 42", 50", 55", 68", 80", 93"). 80" and 93" achieved by stacking.	7 heights (34", 42", 48", 54", 62", 66", 80").

Positioning of Worksurfaces, Storage and Accessories		
Attached on vertical channels at panel joints.	100% off-module placement of worksurfaces, storage, and accessories exactly where you need them.	Attached on vertical channels at panel joints.
Panel Runs		
28 feet or 7 panels for supported run of panels. The steel-to-steel panel connection allows for fewer wing panels and longer panel runs.	12’ for supported panel run. Welded frames allow for fewer wing panels and longer panel runs.	10 feet or 3 panels for supported run of panels. Wing walls and attachment to worksurfaces important for panel support. Panels come with carpet grippers to help prevent unsupported panels from moving.
Connection Method		
Top and bottom connector brackets bring panels together in a rigid steel-to-steel connection. Brackets are provided.	Welded frames connected by alignment bolts through frame verticals. All necessary hardware is supplied.	Continuous, flexible polypropylene hinge locks panels together through side rails along the full height of the panel. The same piece is used for all connections (2 come with each panel). Alignment clips slip into alignment slots to vertically align panels.

Interworks EQ 241

Cetra	Xsite	Interworks EQ
Directional Connectors and Corner Trim		
Directional connectors are structural and required for their specific application. Available in fabric, paint, and wood finishes. End trim is available in paint or wood finishes, and in 3 profiles. 90° available in radius or square profile.	Directional connectors are specific to their application. One piece construction of vertical trim pieces allow for consistent finish from top to bottom. Connectors and end trim are available in paint or wood finishes.	Finish channels are required at change-of-directions to provide proper alignment. Finish channels are fabric with top caps and wireway covers in select colors.
Connections made at 90° and 120° angles.	Connections made at 90° and 120° angles.	Connections made at any angle. *Note: Corner trim available for 90° and 120° angles.*
Wall Attachment		
Easily accomplished by using a “W” wall mount connector (adds 2¾" to dimension) or by using an “M” wall mount connector (adds ⅝"). Shimming may be required with “M” connector. Panel run is attached to the connector.	Adjustable wall channel available to compensate for out-of-plumb wall conditions. Panel run is attached to a wall-mount channel.	Accomplished by attaching panel wall mount to the wall. The panel run is attached using the flexible polymer hinge that connects panels together. Shimming may be required.
Panel-to-Traxx Attachment		
M connectors attach to the wall and are compatible with wall Traxx.	Use off-module frame to attach to Traxx. Panel run is attached using frame-to-frame alignment bolts. Specify tiles, Xsite Traxx, and top caps to span across off-module frame for a seamless appearance.	Traxx panel starter kit (¼") is attached to Traxx on wall. The panel run is attached using the flexible polymer hinge that connects panels together. Very clean connection and allows for future flexibility in placement.
68"H panel is compatible with wall-mounted Traxx and 37"H tiles. 80"H panel is compatible with wall-mounted Traxx and 49"H tiles.	68"H frame is compatible with wall-mounted Traxx and 37"H tiles. 80"H structure is compatible with wall-mounted Traxx and 49"H tiles.	66"H panel is compatible with wall-mounted Traxx and 36"H tiles. 80"H panel is compatible with wall-mounted Traxx and 49"H tiles.

Ease of Laying In Data and Communication Cables		
Cables are routed through base wireway of panel (next to shielded electrical) as standard. Base wireway can accommodate 18 ¼"-diameter cables at 40% fill. Mid-wireway panels allow electrical to be routed in mid-wireway channel and communication cables in the base wireway. Mid-wireway can accommodate 31 ¼"-diameter cables at 40% fill.	Top lay-in is standard below the frame top cap. Top channel can accommodate 36 ¼"-diameter cables at 40% fill. Cables can also be routed inside between the frame and the tiles (similar to building wall construction).	Top lay-in is standard in top of panel. Top channel can accommodate 22 ¼"-diameter cables at 40% fill. Frame of panel allows for vertical routing of individual cables to ports in the base wireway. Base wireway can also accommodate 8 ¼"-diameter cables at 40% fill.
Power and Communications Access for Users		
Power is standard in base wireway. Mid-wireway panels are also available.	Power standard in base wireway. Cabling may be located in base; however, the recommended location is at the top of the frame.	Power is standard in base wireway. Mid-wireway panels are also available.
High-Speed Cable Capability		
Mid-wireway panels provide pathway for electrical wiring to provide separation and allow for increased capacity in the base wireway for high-speed cables.	Top lay-in allowable bend radius and free space within the frame make Xsite very responsive to future high-speed cabling requirements through separation, capacity, and clearance.	Top lay-in and channel around the perimeter of the panel make Interworks EQ very responsive to future high-speed cable requirements through separation, capacity, and clearance.

Finishes & Materials	573

At Kimball Office, we are proud of our environmental stewardship. We are committed to sustainable business practices and continuous improvement. It's part of our heritage to take initiative, to reduce waste, to conserve energy, to commit fully, and to lead by example. It's not enough to simply sustain. We strive to enhance our world.

Throughout our more than 40 years of documented environmental actions, we've made perpetual progress as a responsible steward of resources and an agent of sustainable change in our industry.

In the end, we're just beginning. Yes, the efforts we've made have the clear intention of minimizing our impacts on the planet in order to preserve a healthy world for future generations. Ultimately, the more we do in the area of sustainability, the more it helps you to achieve your environmental aims. Let us show you just how easy it is with Kimball Office.

➤Find more specific details regarding the environmental aspects of our product offerings at: **www.kimballoffice.com**

ANSI/BIFMA level™
100% of the products manufactured by Kimball Office are level® certified. We offer the most sustainable portfolio in the industry, which includes systems, casegoods, tables, and seating. Our product testing team evaluates all Kimball Office products, ensuring they meet and exceed ANSI/BIFMA Standards. Our team members regularly participate on BIFMA and USGBC committees to contribute to industry-wide standards.

ecoScorecard℠

Through this free online tool, you have quick, simple, 24/7 access to the environmental attributes of our products. By partnering with ecoScorecard, we are enabling speed and accuracy in the calculation of environmental credits, like LEED®, as well as saving you time and ultimately, money.
➤See how easy it is at kimballoffice.ecoscorecard.com.

ecoScorecard contains credit and other information for the following environmental rating systems:
- LEED for New Construction
- LEED for Commercial Interiors
- LEED for Existing Buildings
- CHPS
- LABS21
- Green Guide for Healthcare

LEED® Certification
Kimball Office offers furniture solutions which may contribute toward achieving U.S. Green Building Council certification status in your facilities. The LEED® Green Building Rating System™ is the nationally accepted benchmark for design, construction, and operation of high performance green buildings. Kimball Office has sought and received LEED certification for several of its facilities across the country.

LEED-CI Gold:
- Jasper, IN showroom
- San Francisco, CA showroom

LEED-CI Silver:
- Atlanta, GA showroom
- Chicago, IL showroom

LEED-CI:
- Corporate Headquarters
- New York, NY showroom
- R&D Team Rooms

Surface Materials Program
As the industry's first comprehensive offering to be designed around sustainability, our offering includes environmentally friendly textiles, woods, laminates, and paint finishes.

Indoor Air Quality
One of the largest contributions office furniture can make to a building's LEED certification is indoor air quality via low-emitting products. For certification of our product lines, Kimball Office uses the Indoor Advantage program from Scientific Certification Systems (SCS). Several of our Indoor Advantage Gold products also meet the more stringent CAL 01350 requirements.

Design for the Environment (DfE) is our approach to product development to ensure the inherent sustainability of our new offerings. By considering a full continuum of environmental factors—including durable engineering, recycled and recyclable materials, indoor air quality, packaging, and beyond, we have greatly improved the life cycle performance of our furniture.
➤For environmental data, visit our website at www.kimballoffice.com.

Pura® is our proprietary wood finish that has virtually no volatile organic compounds (VOCs). Pura is a key part of our sustainability story, enabling a broader range of products to meet or exceed indoor air quality standards and help our customers achieve LEED credits.

FSC-Certified Wood
Due to our roots in crafting fine wood furniture, we have a natural respect for responsible forestry. Several series in our offering give you the option (denoted by FSC next to the model number) to specify FSC wood. A 3% upcharge applies to FSC models and FSCW must be specified as the finish price group. The FSC option is not currently available on Sapele or Zebrawood veneers, laminate, thermofoil, or laminate with wood rim worksurfaces. Standard lead times apply to FSC orders.

Asset Network for Education Worldwide, Inc. (ANEW) is an easy, effective way to responsibly disposition surplus furniture, fixtures and equipment (FF&E). Through our partnership with this third-party foundation, you can repurpose FF&E to benefit those in need, while diverting materials from landfills. ANEW calls it "Doing what's right with what's left." We call it smart.

Features

Overview

Statement of Line	➤See page 18
Application Guidelines	34
Power & Data Overview	36
Pricing	45

Frameless glass is field installed fo the frame with model-specific square profile top cap and glass holders. Clear glass is ⅜" thick and available in 24", 30", 36", 42", and 48" widths.

Top caps are attached by friction fit on top of panels.

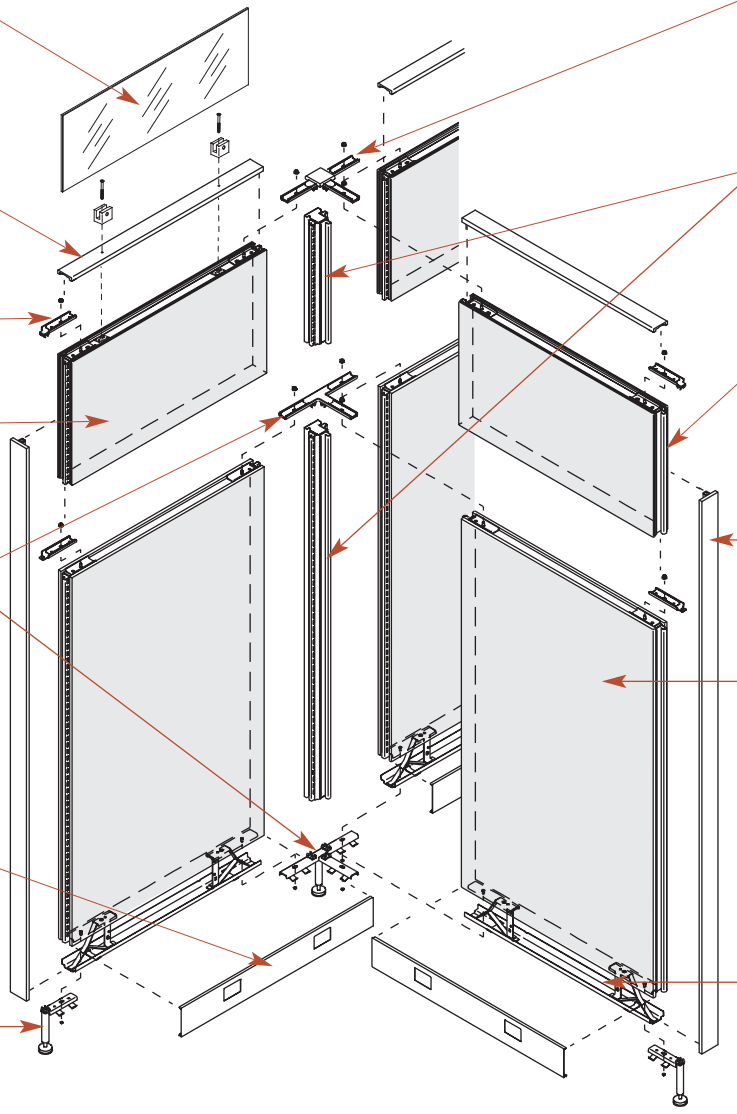
Top end bracket attaches end trim to panel.

Stackable panels are available in 7", 12", and 19"H. Maximum panel height with stackable panels is 118".

Top and bottom connector brackets draw panels together in a rigid steel-to-steel interference fit with two ¼" threaded fasteners. NAAB locating clamps, welded to the brackets, create a rigid connection, and consistent narrow reveals.

Wireway covers (2 per panel) are available non-punched or punched to provide access to electrical components.

Bottom end brackets attach end trim to panel. 3" floor glide is included, and provides 2¾" of adjustment.



Directional connector top caps, included with connectors, finish the top of a panel connection. Top cap is screwed to brackets.

Connectors and stackable connectors are available to join two or more panels when changing directions in a panel run (T-connector shown).

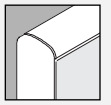
Metal J-channels along the full height of panels and connectors, provide slots at 1" increments for vertical positioning of components.

End trims are available in softened, square, and transitional profiles. They attach as a connector.

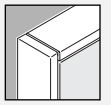
Panels are 2⅝" thick and available in tackable acoustical, combination, mid-wireway, glass, and sectional models.

Wireways allow cable routing through the panel base and holds power distribution assemblies in powered panels. Wireways are 4⅜"H and 2½"D.

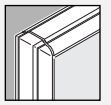
Top Cap Profiles:



Softened (A)



Square (C)



Transitional (T)

Softened and square profile top caps are available in wood and paint.

Transitional profile top caps are available in wood.

Note: Panel top caps, connector top caps, and end trims are available in all three profiles.

Electrical:

c UL US LISTED

Class A—Tackable acoustical, mid-wireway, ceiling power entry, and partial glass panels

Class C—Combination panels, sectional panels with fabric, painted, wood, or combination tiles

Tackable Acoustical & Combination Panels

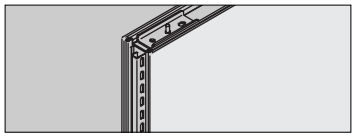
Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

Details

Tackable acoustical panels are 2⅝" thick. Solid hardboard center septum is covered with two densities of fiberglass and the selected fabric.

Combination panels have fabric on one side and wood or non-metallic paint on the other. Two densities of fiberglass are covered with fabric on one side. The other side consists of wood composite covered with premium grade veneer or painted UV-filled medium-density fiberboard.

Tackable acoustical and combination panels include:
- Top cap
- Two wireway covers
- Power distribution assembly, if powered panel is specified
- Attachment brackets



Metal J-channels along the full height of all panels provide slots at 1" increments for vertical positioning of components.

Finishes & Materials

Tackable Acoustical Panels
- Kimball Office panel fabrics
- COM

Note: COM fabrics must be U.L. listed for use on panels.
➤See page 594 for complete information regarding U.L. approval procedures.

Combination Panels
- Fabric/wood combination
- Fabric/paint combination (excluding metallics)

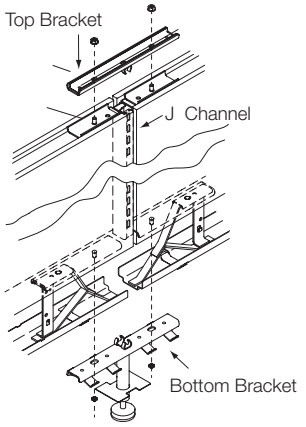
Top Caps
- Wood
- Paint (not available on transitional profile)

Wireway Covers
- Paint

Acoustical Ratings

- NRC rating = .75
- STC rating = 22

Connections

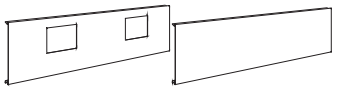


Top and bottom connector brackets draw adjacent panels together in a rigid steel-to-steel interference fit with two ¼" threaded fasteners. NAAB locating clamps, welded to the brackets, create a rigid connection, and consistent narrow reveals.
Note: The number of brackets is determined automatically based on your order. Ordering extra connectors or end trims will result in a shortage of brackets. Additional top (model ATP) and bottom (ABP) brackets will need to be specified separately as service parts.

Connectors are available to join panels when changing directions in a panel run. Connectors are constructed of extruded aluminum and include factory installed J-channels.
➤See page 31.

Power distribution assembly, factory-installed in the base wireway of 24"W and wider powered panels, allows distribution of power. Power distribution assembly can also be field-installed on non-powered panels.
➤See page 37.

18"W panels can be used to pass power from one panel to another, but cannot accept receptacles. They are only available with non-punched wireway covers.



Punched and non-punched wireway covers are available for base, mid-wireway, hardwire and New York City applications. Receptacle cutouts are 2 15/16"W and 1 15/16"H. Hardwire cutouts are 2 11/16"W and 1 7/16"H.
➤See pricing pages for powered wireway punch options.
➤See page 44 for hardwire wireway punch options.

Base wireways can accommodate 18 ¼"-diameter cables at 40% fill, and 44 ¼"-diameter cables at 100% fill.

Planning Factors

When combining fabric grades on a single panel, add side 1 fabric grade price to side 2 fabric grade price, then divide the total by 2 to get the average.

Combination panels can create a different visual for inside and outside an office, or they can be used as an accent when the outside of the panel is used to create a hall or walkway.

Related Products

Electrical jumper cables and receptacles must be specified separately.
➤See pages 101–103.

Communication wireway covers must be specified separately. Cutouts for data ports are 2 11/16"W and 1⅜"H.
➤See page 107.

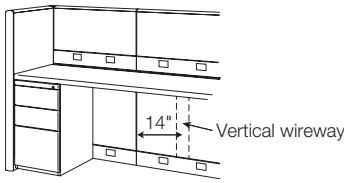
Traxx and tiles are available to integrate wall-mount applications with panel applications.
➤See page 333.

Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

Details

Mid-wireway panels are 2⅝" thick and provide electrical and communications access at worksurface height. Solid hardboard center septum is covered with two densities of fiberglass and fabric.

Mid-wireway models include:
- Top cap
- Four wireway covers
- Power distribution assembly for base wireway
- Attachment brackets



Vertical wireway channel in mid-wireway panels, located between cutouts in fiberglass and septum, extends from mid-height to base wireway. It is 2.6 sq. inches and located 14" from one edge of the panel.

Finishes & Materials

Mid-Wireway Panels
- Kimball Office panel fabrics
- COM

Note: COM fabrics must be U.L. listed for use on panels.
➤See page 594 for complete information regarding U.L. approval procedures.

Top Caps
- Wood
- Paint (not available on transitional profile)

Wireway Covers
- Paint

Connections

Top and bottom connector brackets draw adjacent panels together in a rigid steel-to-steel interference fit with two ¼" threaded fasteners. NAAB locating clamps, welded to the brackets, create a rigid connection, and consistent narrow reveals.
➤See page 22 for illustration.

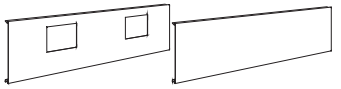
Connectors are available to join panels when changing directions in a panel run.
➤See page 31.

Power & Data

Electrical components used in mid-wireways are the same as those used for base wireways; specified separately.

Power distribution assembly, factory-installed in the base wireway of powered mid-wireway panels, allows distribution of power. Power distribution assembly can also be field-installed on non-powered panels.
➤See page 37.

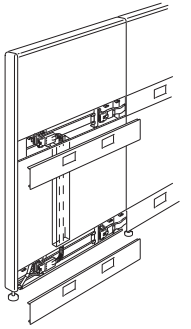
Mid-wireways can accommodate 31 ¼"-diameter cables at 40% fill, and 78 ¼"-diameter cables at 100% fill.



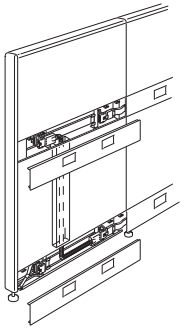
Punched and non-punched wireway covers are available for mid-wireway. Receptacle cutouts are $2^{15}/_{16}$"W and $1^{15}/_{16}$"H. Hardwire cutouts are $2^{11}/_{16}$"W and $1^{7}/_{16}$"H.
➤See pricing pages for punch options.
➤See page 44 for hardwire wireway punch options.

Planning Factors

Jumper cables, which pass power from base wireway to mid-wireway, will displace one receptacle at base and mid-height.



On 36"W or wider panels, jumper cables from mid-wireway to base must be installed on same side of panel at top and bottom.



On 24"W and 30"W panels, jumper cables can connect to AEDs at the same end, or at opposite ends.

Related Products

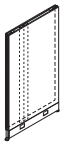
Electrical jumper cables and receptacles must be specified separately.
➤See pages 101–103.

Communication wireway covers must be specified separately. Cutouts for data ports are $2^{11}/_{16}$"W and $1^{3}/_{8}$"H.
➤See page 107.

Ceiling Power Entry Panels

Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

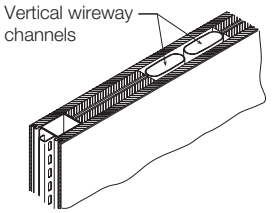
Details



Ceiling power entry panels are available for installations when building power will be accessed from the ceiling. ⅛" thick hardboard center septum is covered with two densities of fiberglass and the selected fabric.

Ceiling power entry panels include:
- Power pole
- Divided top cap
- Wireway covers
- Power distribution assembly
- Attachment brackets

Note: Ceiling power entry assembly must be specified separately.



Two full-height vertical channels route power and communications cabling to the base wireway. Channels are located inside the panel 12 inches from one edge. Each channel, or vertical wireway, is 2.6 sq. inches and is located between the fiberglass and septum.

Finishes & Materials

Ceiling Power Entry Panels
- Kimball Office panel fabrics
- COM

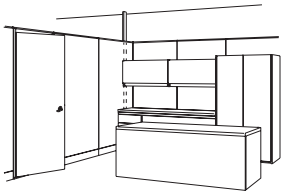
Note: COM fabrics must be U.L. listed for use on panels.

➤See page 594 for complete information regarding U.L. approval procedures.

Top Caps
- Wood
- Paint (not available on transitional profile)

Wireway Covers
- Paint

Connections



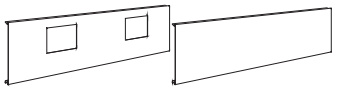
Extruded aluminum vertical power pole, standard with ceiling power entry panel, attaches to the top of the panel to extend the channel to ceiling height. Power pole is 5½"W, 1⅜"D, and 82"H. Any excess height telescopes into the ceiling or can be cut to size at the installation site.

Top and bottom connector brackets draw adjacent panels together in a rigid steel-to-steel interference fit with two ¼" threaded fasteners. NAAB locating clamps, welded to the brackets, create a rigid connection, and consistent narrow reveals.
➤See page 22 for illustration.

Connectors are available to join panels when changing directions in a panel run. Connectors are constructed of extruded aluminum and include factory installed J-channels.

Power & Data

Power distribution assembly, factory-installed in the base wireway allows distribution of power. Power distribution assembly can also be field-installed on non-powered panels.
➤See page 37.



Punched and non-punched wireway covers are available for base, hardwire and New York City applications. Receptacle cutouts are 2 15⁄16"W and 1 15⁄16"H. Hardwire cutouts are 2 11⁄16"W and 1 7⁄16"H.
➤See pricing pages for powered wireway punch options.
➤See page 44 for hardwire wireway punch options.

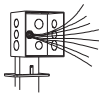
Base wireways can accommodate 18 ¼"-diameter cables at 40% fill, and 44 ¼"-diameter cables at 100% fill.

Each vertical channel can accommodate 20 ¼"-diameter cables at 40% fill.

Planning Factors

When combining fabric grades on a single panel, add side 1 fabric grade price to side 2 fabric grade price, then divide the total by 2 to get the average.

Related Products



Ceiling power entry assembly should be specified separately when power will be accessed from the ceiling to enable routing of power into ceiling power entry panel.
➤See page 38.

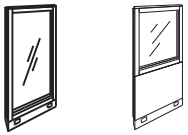
Electrical jumper cables and receptacles must be specified separately.
➤See pages 101–103.

Communication wireway covers must be specified separately. Cutouts for data ports are 2 11⁄16"W and 1⅜"H.
➤See page 107.

Glass Panels

Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

Details



Full or partial glass panels are available. Partial glass panels have glass in the upper portion and fabric on the bottom.

Glass panel models include:
- Top cap
- Two wireway covers
- Power distribution assembly, if powered panel is specified
- Attachment brackets

Tempered glass is ¼" thick and secured with a concealed channel liner.

Frames are constructed of aluminum and are painted or covered with wood or fabric.

Finishes & Materials

Full Glass Panels
- Tempered glass: clear

Partial Glass Panels
- Tempered glass: clear
- Kimball Office panel fabrics or COM *Note: COM fabrics must be U.L. listed for use on panels.*

➤See page 594 for complete information regarding U.L. approval procedures.

Panel Frame
- Wood
- Paint
- Fabric

Top Caps
- Wood
- Paint (not available on transitional profile)

Wireway Covers
- Paint

Connections

Top and bottom connector brackets draw adjacent panels together in a rigid steel-to-steel interference fit with two ¼" threaded fasteners. NAAB locating clamps, welded to the brackets, create a rigid connection, and consistent narrow reveals.

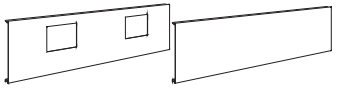
➤See page 22 for illustration.

Connectors are available to join panels when changing directions in a panel run. Connectors are constructed of extruded aluminum and include factory installed J-channels.

Power & Data

Power distribution assembly, factory-installed in the base wireway of 24"W and wider powered panels, allows distribution of power. Power distribution assembly can also be field-installed on non-powered panels.

➤See page 37.



Punched and non-punched wireway covers are available for base, mid-wireway, hardwire and New York City applications. Receptacle cutouts are $2^{15}/_{16}$"W and $1^{15}/_{16}$"H. Hardwire cutouts are $2^{11}/_{16}$"W and $1^{7}/_{16}$"H.

➤See pricing pages for powered wireway punch options.
➤See page 44 for hardwire wireway punch options.

Base wireways can accommodate 18 ¼"-diameter cables at 40% fill, and 44 ¼"-diameter cables at 100% fill.

Related Products

Electrical jumper cables and receptacles must be specified separately.

➤See pages 101–103.

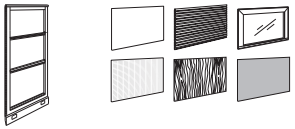
Communication wireway covers must be specified separately. Cutouts for data ports are $2^{11}/_{16}$"W and $1^{3}/_{8}$"H.

➤See page 107.

Sectional Panels and Tiles

Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

Details



Sectional panel frames and sectional tiles are specified separately. Sectional panels can be used in conjunction with monolithic panels.

Frames are constructed of black steel tubing. Frames are completely covered by sectional tiles. Frames models include:

- Top cap
- Two wireway covers
- Power distribution assembly, if powered panel is specified
- Attachment brackets

Metal J-channels along the full height of panel frame provide slots at 1" increments for vertical positioning of components.

Sectional tiles are available in fabric, slat, glass, ventilated, wood, or paint.
IMPORTANT: Sectional tiles in this section are for use on Cetra sectional panels only.

Two tiles are required for each section; one for each side of the panel.

Horizontal extruded aluminum channels on the frame hold tiles in place.

Fabric tiles are constructed of ½" thick wood composite covered with the selected fabric. Tiles are non-tackable and non-acoustical.

Slat tiles have 1" slats. Slat tiles are constructed of extruded anodized aluminum.

Glass tiles have an extruded aluminum frame. Top and side frame rails are 2¾"W; bottom frame rail is 1 1/16"W. Glass tiles cannot be used in 30"H panel frames. They are not visually compatible with glass stackable panels

Ventilated tiles have an extruded aluminum frame. Top, bottom and side frame rails are 2¾"W.

Wood tiles are constructed of ½" thick wood composite covered with premium veneer.

Painted tiles are ½" thick filled medium density fiberboard. They are not available in metallic paints.

Finishes & Materials

Sectional Panel Frames

- Metal: black only

Fabric Tiles

- Kimball Office panel fabrics or COM
  Note: COM fabrics must be U.L. listed for use on panels.

Slat, Ventilated, and Paint Tiles

- Paint
  Note: Metallic paint is excluded for Paint tiles, but is available on slat, and ventilated.

Glass Tiles

- Tempered glass: clear or frosted
- Tile frame: paint

Wood Tiles

- Wood finishes

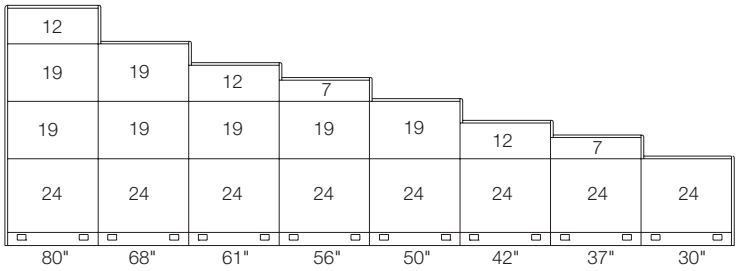
Top Caps

- Wood
- Paint (not available on transitional profile)

Wireway Covers

- Paint

Sectional Panel Tile Application Guidelines:



Connections

Top and bottom connector brackets draw adjacent panels together in a rigid steel-to-steel interference fit with two ¼" threaded fasteners.
➤See page 22 for illustration.

Connectors are available to join panels when changing directions in a panel run.
➤See page 31.

Power & Data

Power distribution assembly, factory-installed in the base wireway of 24"W and wider powered panels, allows distribution of power. Power distribution assembly can also be field-installed on non-powered panels.
➤See page 37.

18"W panels can be used to pass power from one panel to another, but cannot accept receptacles. They are only available with non-punched wireway covers.

Punched and non-punched wireway covers are available for base, hardwire, and New York City applications. Receptacle cutouts are 2 15/16"W and 1 15/16"H. Hardwire cutouts are 2 11/16"W and 1 7/16"H.

Base wireways can accommodate 18 ¼"-diameter cables at 40% fill, and 44 ¼"-diameter cables at 100% fill.

Related Products

Electrical jumper cables and receptacles must be specified separately.
➤See pages 101–103.

Stackable Panels

Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

Details

Stackable panels are available in fabric, combination, glass, and ceiling power entry. Stackable panels are for use with any standard Cetra panel to accommodate height changes up to full enclosure. Models include:

- Panel
- Attachment brackets

Note: Top cap from base panel will be used on stacking unit.

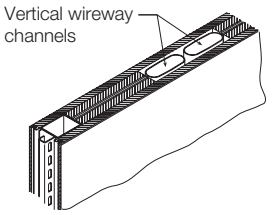
Heights available include 7", 12", and 19". Specify appropriate stackable panel to increase the height of workstation. Stackable panel heights coordinate with sectional tile heights for a consistent look when using both products in the same office setting.

Stackable fabric panels are constructed of a 1/8" thick hardboard septum covered with two densities of fiberglass and fabric (7"H panel has only one density of fiberglass per side).

Stackable combination panels are constructed of two densities of fiberglass covered with fabric on one side and wood composite covered with premium veneer or UV filled medium density fiberboard painted to specification on the other side.

Stackable glass panels are constructed of tubular aluminum frames. Tempered glass is available in clear and frosted. Glass is secured in the channel with a concealed channel liner. Stackable glass panels are not visually compatible with sectional glass tiles.

Stackable ceiling power entry panels are constructed with a 1/8" thick hardboard center septum covered with two densities of fiberglass and fabric.



Two full-height vertical channels in ceiling power entry model route power and data cabling to the base wireway.

Finishes & Materials

Stackable Acoustical Panels

- Kimball Office panel fabrics
- COM

Note: COM fabrics must be U.L. listed for use on panels.

➤See page 594 for complete information regarding U.L. approval procedures.

Stackable Combination Panels

- Fabric/wood combination
- Fabric/ paint combination (excluding metallics)

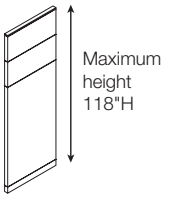
Stackable Glass Panels

- Glass: clear or frosted
- Frames: fabric, wood, or paint

Stackable Ceiling Power Entry Panels

- Kimball Office panel fabrics
- COM

Connections



A maximum of two panels can be stacked on to a standard panel. Maximum panel height with stackable panels is 118".

Floor-to-ceiling applications can be accommodated using the floor-to-ceiling top channel.
➤See page 35 for application guidelines.

Floor-to-ceiling top channels provide a light and sound seal, but do not attach to the ceiling. Channel is constructed of extruded PVC.

Stackable panels are loadbearing and will support overheads when used according to guidelines.
➤See page 34 for panel run rules.

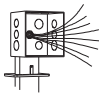
Planning Factors

➤See page 35 for additional application guidelines for stackable panels.

Stackable panels may be installed on any standard Cetra panel, new or existing, without disassembling the existing panel run.

Stackable panels must be the same width as the panel they will be stacked above.

Related Products



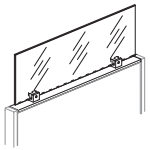
Ceiling power entry assembly
➤See page 38.

Floor-to-ceiling top channels
➤See page 66.

Frameless Glass

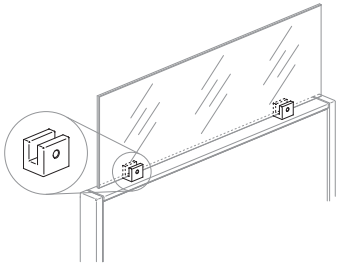
Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

Details

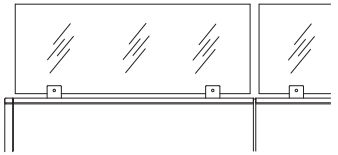


Frameless glass is clear, 3⁄8" tempered glass with flat polished edges. Model includes:

- Glass
- Two aluminum glass holders
- Two stainless steel set screws
- Four clear gaskets
- Square profile top cap
- Attachment bolts
- Two threaded plates
- Attachment screws



Two aluminum glass holders are standard with each piece of glass and are available in any paint color, independent of the top cap. The glass is centered between the glass holders and held in place with two clear gaskets per glass holder and a stainless steel set screw.



Glass sits 9⁄16" off the top cap when installed. Adjacent frameless glass models are designed to be offset from one another with a 1 1⁄8" gap.

When used in a hi-lo application, the top of the frameless glass will be flush with the top of the adjacent panel's top cap.

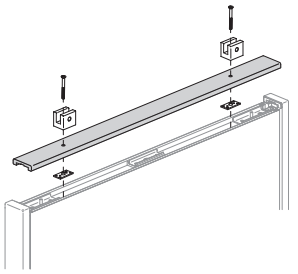
U.L. Listing 1286

Finishes & Materials

Frameless Glass

- Glass: clear
- Glass holders: paint
- Top cap: wood or paint

Connections



Square profile top cap, standard with frameless glass model, features pre-drilled holes, which allow the aluminum glass holders to be securely bolted to the panel frame in the field and facilitates correct placement.

Planning Factors

Frameless glass is not loadbearing. Hanging components or accessories on frameless glass is not recommended.

Frameless glass cannot be scribed in the field.

Cetra frameless glass cannot span more than one panel and must be the same width as the panel to which it is attached.

Cetra frameless glass models cannot be used on Xsite; likewise, Xsite frameless glass models cannot be used on Cetra panels.

Cetra frameless glass models cannot be attached to full glass, partial glass, or stackable glass panels, nor can they be used in a hi-lo-hi application.

Cetra frameless glass is not recommended on low panels adjacent to high-traffic areas.

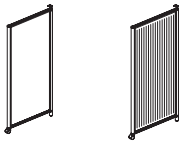
Overall Heights:

Panel Height	*Overall Height incl. Frameless Glass*
30"	42 1⁄4"
37"	49 1⁄4"
42"	54 1⁄4"
50"	61 1⁄4"
56"	68 1⁄4"
61"	73 1⁄4"
68"	80 1⁄4"
80"	92 1⁄4"

Privacy Panels

Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

Details



Privacy panels are available 36" or 42"W and in three designs: fabric on both sides, fabric/markerboard combination, or translucent.

Privacy panel models include:
- Top attachment bracket
- Base pivot bracket
- Caster

Fabric and fabric/markerboard combination privacy panels have an extruded aluminum frame. Interior is fiberglass over a honeycomb panel.

Translucent privacy panels feature a ribbed pattern to provide privacy, yet allow light to pass through. Frame is extruded aluminum.

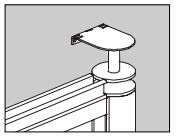
Single caster allows privacy panel to pivot open or closed.

Finishes & Materials

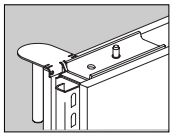
Privacy Panel Frame
- 462 Cinder paint
- 501 Platinum metallic paint

Privacy Panel Inserts
- Kimball Office panel fabric
- Markerboard: 488M Frosty White
- Translucent

Connections

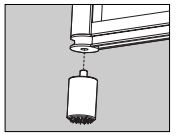


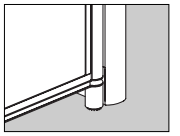
Top bracket



Top bracket shown on Cetra panel

Top attachment bracket is used to mount the privacy panel to any 68"H Cetra panel. Top bracket attaches under the top cap and can be easily relocated.



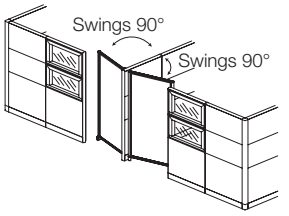


Base pivot bracket features a carpet gripper to hold bracket in place while allowing the privacy panel to swing.

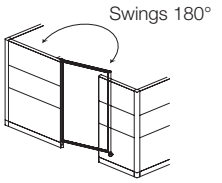
Privacy panels abut the opposite panel, but do not latch.

Non-handed and reversible, privacy panels can be mounted left or right, and can be flipped so the markerboard or different fabrics can be positioned inside or outside the workstation.

Planning Factors



When mounted to the perpendicular panel (on one or both sides) in an L or T configuration, panel swings 90°.

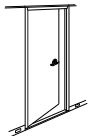


When mounting in a straight panel run, specify privacy panel to be wider than the opening to allow for proper clearance. Panel swings 180° to lay flat against the Cetra panel.

Hinged Doors

Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

Details

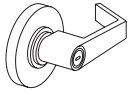


Hinged doors are available 36” or 42”W (nominal). All models include:
- Frame and threshold
- Top cap
- Full-length hinge
- Frame gasket
- Attachment brackets

Hinged doors are 1¾" thick and feature a honeycomb interior. Frame is extruded aluminum.

Full-length hinge is used for strength and durability.

Frame gasket protects the door when closing and quiets closure.



Locking lever is available and is suitable for ADA guidelines.

Door opening width for the 36"W door is 31¼"; for the 42"W door it is 37¼". Opening height is 76$^{13}/_{16}$". 42”W hinged doors or gates are recommended for ADA compliance. Doors are interchangeable with other 80"H panels.

Finishes & Materials

Door
- Wood finishes
- Paints (excluding metallics)

Door Frame
- Paint

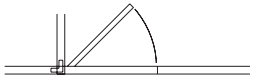
Top Caps
- Wood
- Paint (not available on transitional profile)

Connections

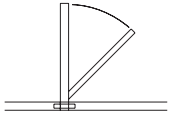
An adjustment to the bottom bracket of hinge doors and gates is required when installation is next to a directional connector. The correct bracket must be specified separately. *Note: The correct bracketry adjustment will be generated for drawings made using an electronic specification tool. If not using an electronic specification tool, then use the guidelines provided.*

Bottom Bracketry Adjustment Guidelines

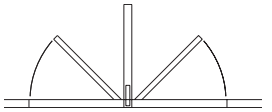
T Connections:



In this situation, substitute the bottom “T” bracket (ABT) with a bottom “L” bracket (ABL), specified separately.

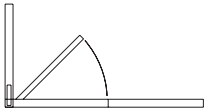


In this situation, substitute the bottom “T” bracket (ABT) with a bottom straight connector bracket (ABS), specified separately.



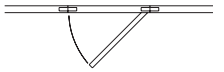
In this situation, substitute the bottom “T” bracket (ABT) with a bottom door end connector bracket (ABD). Also specify a door plate (ABDU) to support the T connector wireway cover.

L Connections:



In this situation, substitute the bottom “L” bracket (ABL) with a bottom door end bracket (ABD), specified separately.

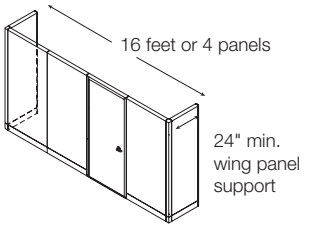
Straight Connections:



When door panel is located between two panels in a straight run, no adjustment is required.

Planning Factors

Hinged doors must not be placed more than one 36"W panel from a directional connector or a wall mount. Hinged doors cannot be placed next to Y or V connectors.



Maximum panel run when using doors is 16' or 4 panels. Panels must be supported on both ends.

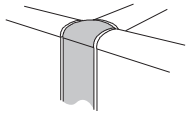
IMPORTANT: Hinged doors cannot be used in unsupported panel runs.

Specify a W connector (2¾" wall mount) when wall mounting a hinged door for greater adjustment to compensate for out-of-plumb walls.

Connectors

Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

Details



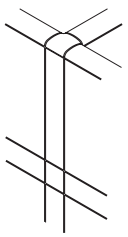
Connectors are available to join two or more panels when changing directions in a panel run.

Connector models include:
- Connector
- Top cap
- Wireway cover
- Connection bracketry

Connectors are constructed of extruded aluminum.

Metal J-channels along the full height of all connectors provide slots at 1" increments for vertical positioning of components.

Connector top caps are available in softened, square, and transitional profiles.



Mid-wireway connectors enable power and data to be passed from one panel to another at worksurface height when changing directions.

Stackable connectors are available for use with stackable panels.
➤See page 32.

Finishes & Materials

Connectors and Stackable Connectors
- Kimball Office panel fabrics
- COM
  Note: COM fabrics must be U.L. listed for use on panels.
➤See page 594 for complete information regarding U.L. approval procedures.
- Paint
- Wood
- Fabric/wood combination
- Fabric/paint combination

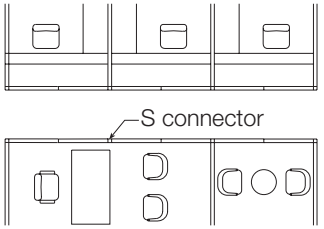
Connector Top Caps
- Wood
- Paint (not available on transitional profile)

Connector Wireway Covers
- Paint

Connections

Connectors can be used in the following configurations:
- L (2-way 90°)
- T (3-way 90°)
- X (4-way 90°)
- S (straight 180°)
- M or W (wall mount)
- V (2-way 135°)
- Y (3-way 120°/120°/120°)

➤See pricing pages for illustrations of each configuration.



S connectors (straight) are available to fill parallel panel runs where one panel run has a connector and the other does not. It is not required to join panels.

Y connectors are available for use in 120° applications. They cannot be used next to hinged doors.

Power & Data

Power and data can be routed through connectors.
➤See page 37 for mid-wireway jumper applications.
➤See page 42 for cable management information.

Planning Factors

Specify appropriate connectors for the combined height of standard and stackable panels. Base connector must always be the same height or taller than any adjacent standard panel.

Allow for connector thickness when space planning.
- Connectors are 2⅝" thick.
- M wall mount connectors are ⅝" thick.
- W wall mount connectors are 2¾" thick.

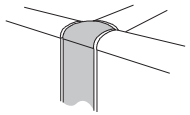
Thickness of the M wall mount connector corresponds to Traxx. M connectors have no adjustability for out-of-plumb walls; shimming may be required.

W wall mount connectors offer ⅝" lateral adjustment to compensate for out-of-plumb walls.

Stackable Connectors

Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

Details



Stackable connectors are available to join panels when changing directions in a panel run with stackable panels.

Stackable connector models include:
- Connector
- Connection bracketry

Note: Top caps are not included. Top cap from base connector will be used.

Connectors are constructed of extruded aluminum.

Metal J-channels along the full height of all connectors provide slots at 1" increments for vertical positioning of components.

Finishes & Materials

Stackable Connectors
- Kimball Office panel fabrics
- COM

Note: COM fabrics must be U.L. listed for use on panels.

➤See page 594 for complete information regarding U.L. approval procedures.

- Paint
- Wood
- Fabric/wood combination
- Fabric/paint combination

Connector Top Caps
- Wood
- Paint (not available on transitional profile)

Connections

Connectors can be used in the following configurations:
- L (2-way 90°)
- T (3-way 90°)
- X (4-way 90°)
- S (straight 180°)
- M or W (wall mount)

➤See pricing pages for illustrations of each configuration.

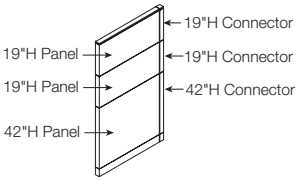
Note: Y configurations are not available in stackable models.

Planning Factors

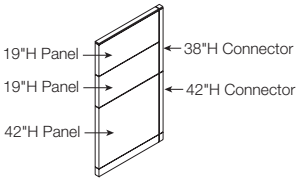
Allow for connector thickness when space planning.
- Connectors—2⅝" thick
- M connectors—⅝" thick
- W connectors—2¾" thick

Specify appropriate connectors for the combined height of standard and stackable panels. Base connector must always be the same height or taller than any adjacent standard panel.

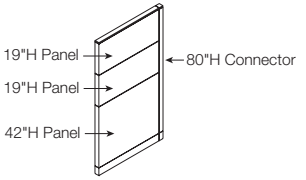
Stackable connectors can be specified in one of three ways:



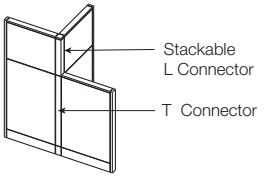
① Specify stackable connectors to equal each stackable panel height. Provides the most flexibility for reconfiguration.



② Specify one stackable connector equal to the height of both stackable panels. Enables the panel height to be lowered without taking down the station; however, it provides less flexibility during reconfiguration.



③ Specify a connector equal to the combined height of the base panel and stackable panels.
This option limits the ease of reconfiguration since the workstations will need to be completely disassembled to change panel heights.



When using square profile trim, different connectors may be used above a base connector.
Example: T connector may be used on the bottom with an L connector on the top. This creates a change of height at a connector, however, stackable panels must be used on both sides of the L connector for support.

When the stackable connector is the same as the base connector, the top cap is removed from the base connector and placed above.

When an stackable connector is different than a lower connector, a new top cap bracket assembly for the upper connector needs to be specified.

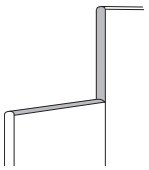
➤See page 99.

Specify the same profile for both base and stackable connectors to ensure visual compatibility.

Trim

Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

Details



End trim is 1" thick and covers the vertical panel edge at the end of each panel run.

Hi-lo trim kits finish off the vertical end of panels when transitioning heights. Kit includes:
- Vertical end trim
- Bracket
- Top cap for the lower panel

Panel-to-panel or connector-to-panel hi-lo trim kits are available.

End trim and hi-lo trim kits are available in softened and square profiles (paint and wood) and in transitional profile (wood only).

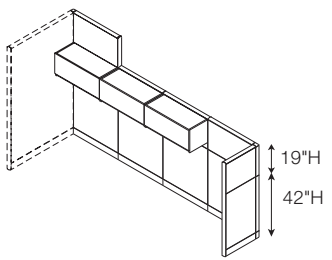
Finishes & Materials

End Trim
- Wood
- Paint (not available on transitional profile)

Hi-Lo Trim Kits
- Wood
- Paint (not available on transitional profile

Connections

Hi-lo trim kits cannot be used:
- Next to a connector (stackable or standard) when the connector is being used next to stackable panels.
- Next to a Y connector.
- Next to a floor-to-ceiling top channel.



Overheads cannot be hung in a row of stackable panels where a hi-lo trim kit is used. They may be hung in a row beneath the hi-lo application.

Planning Factors

Specify end trim and hi-lo trim kits for the combined height of panels and stackable panels.

Allow for end trim thickness of 1" when space planning.

To specify hi-lo trim kits, determine the following:
① Height of the drop
② Width of the lower panel
③ Top cap profile
Note: Hi-lo trim kits for stackable panels are determined the same as for standard panels.

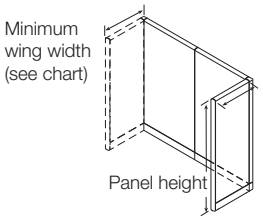
IMPORTANT: When you specify a hi-lo trim kit to be used with a directional connector, the appropriate connector top cap/bracket assemblies must be specified separately.
➤See page 100.

Due to the notching operation which must be done to the top cap of the lower panel in a hi-lo situation, a single lower panel may not be placed between two higher panels. To achieve the look of a single panel drop, specify two panels that equal the desired width (36" minimum).

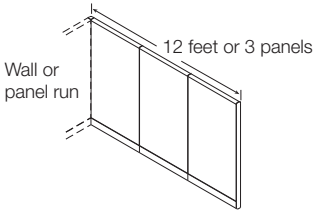
Hi-lo trim kits are not available in heights less than 5" due to the attachment method.

Guidelines for Panel Runs

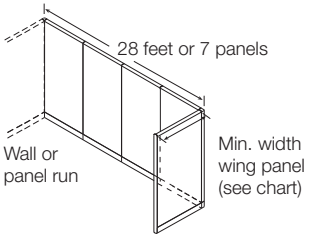
Features ➤See page 21
Power & Data Overview 36



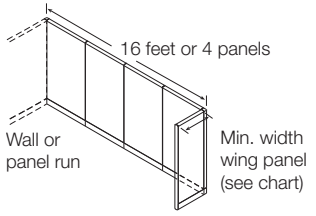
Minimum wing widths apply to a freestanding "C" station that does not have support from a panel run or a wall connector at either end. Panels can be any height; however wing panels must be the same height as the panel run. The width of the wing wall increases according to height.
➤See chart for minimum wing width.



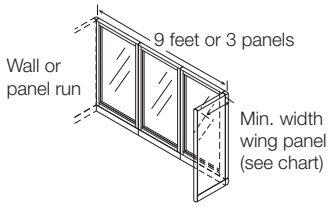
Maximum panel run for unsupported panels (those not attached to a wall, wing panel, or floor support on BOTH ends) is 3 panels with a maximum run of 12'.
➤See chart for minimum wing width.



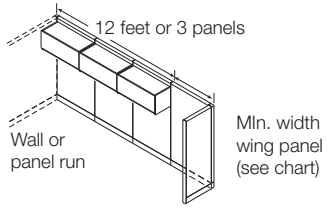
Maximum panel run for supported panels (those supported with a wall or panel run on one end and a **same-height wing panel** on the other) is 7 panels with a maximum run of 28'. The width of the wing wall increases according to height.
➤See chart for minimum wing width.



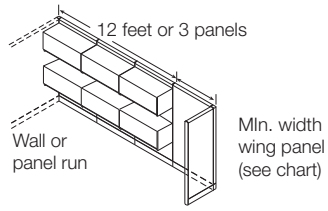
Maximum panel run supported panels (those supported with a wall or panel run on one end and a **wing panel that is shorter than the spine** on the other) is 4 panels with a maximum run of 16'.



Maximum panel run for supported glass panels (those supported with a wall or panel run on one end and a minimum width wing panel on the other) is 3 panels with a maximum run of 9'.
➤See chart for minimum wing width if wing panel will be used for support on both ends of the run.
Note: Frameless glass cannot be attached to glass panels.



Overhead cabinets may be hung on the inside of the panel system on a maximum of three panels no greater than 12 feet. When cabinets are hung on both sides of this type of panel run, so as to counter balance the load, the length may be increased to four panels or 16 feet. For proper support, a wing panel or wall mount must be adjacent to both ends of any run of overheads.
Note: Overhead must be ganged to assure maximum rigidity.



Overhead cabinets may be stacked as long as the 12' and 16' (counter balanced) guidelines in the previous paragraph are followed. There may be a maximum of two rows of overheads unless stacking on one panel between two wing panels. Allow a minimum of 7" between overheads for proper clearance of flipper doors.

Frameless glass does not affect application guidelines, except where noted.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run to eliminate the possibility of tipping or injury under standard loading and usage.

Spine Run	*Minimum Wing Width*
30", 37", 42", or 50"H	24"
56", 61", or 68"H	30"
80"H	42"
Combination panels	48"

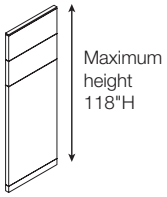
IMPORTANT: Wing panel height is not required to be the same height as the panel run, except in free-standing "C" applications, 80"H supported runs, and runs containing combination panels.

Guidelines for Stackable Panels

Features ➤See page 21
Application Guidelines 34
Power & Data Overview 36

Stackable panels may be installed on any standard Cetra panel, new or existing, without disassembling the existing panel run.

Stackable panels must be the same width as the panel they will be stacked above.

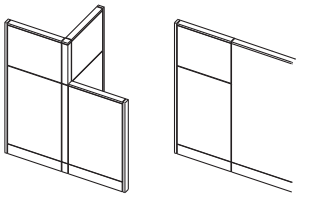


Only two stackable panels may be stacked above a standard panel to a maximum height of 118".

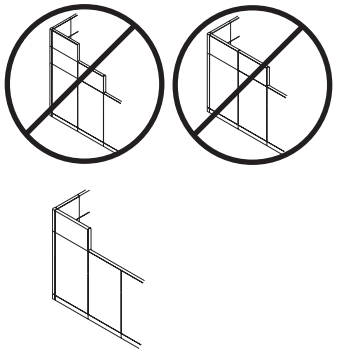
Frameless glass can be used on all stackable panel models, except glass stackables. Maximum height with glass is 130¼"

Panel run rules are the same for stackable panels as for standard Cetra panels.
➤See page 34.

Stackable panel runs must have a wing panel that is equal to the combined height of the base panel plus the stackable panels, on at least one end for support.



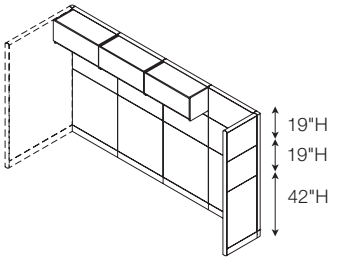
For proper support, stackable panels must either turn a corner or be connected to a monolithic panel that is equal to the height of the base panel plus the stackable panels.



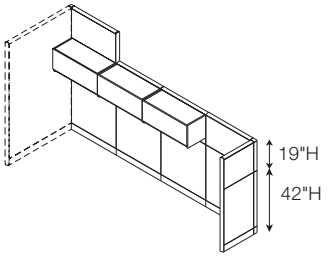
When using stackable panels to create a "step down or cityscape" effect, you can only extend out one panel width from the connector.

End trim height must match the combined height of the base and stackable panels.

Stackable panels are load-bearing and will support overheads when used according to guidelines.
➤See page 34 for maximum panel run rules.



Overheads can not be hung above 80" high.

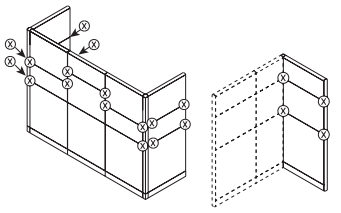


Overheads can not be hung in a row of stackable panels where a hi-lo trim kit is used. They may be hung in a row beneath the hi-lo application.

Overheads cannot be hung on a stackable wing wall.

ATET Bracketry Guidelines:

Note: Certain applications require that additional hook brackets (model ATET) be specified separately. One bracket is standard with stackable panel.



Need 16 ATET
Will receive 10
Specify 6 addt'l

Need 4 ATET
Will receive 2
Specify 2 addt'l

When stackable panel heights are staggered, you will need 1 additional ATET bracket per panel to connect the lower stackable panel to the MIDDLE of the adjacent panel. The standard panel-to-panel bracket is used at the top connection.

When stackable panels are used between an end trim and a connector, you will need one additional ATET bracket per stackable panel to connect the bottom of each panel to the end trim on one side and the connector on the other side. The standard connector brackets are used at the top connections.
➤See page 98 to specify ATET brackets.

Floor-to-Ceiling Applications:

Floor-to-ceiling top channel is available in 12' lengths and may be field scribed to desired length. Channel provides sound and light seal for space between top of panel and ceiling. Top channel provides 2" of adjustability.
Note: Hi-lo trim and end trim cannot be used next to top channels.

To create a completely enclosed office:

① Determine your ceiling height.
② Determine the combination of standard and stackable panels that will come closest to, but below ceiling height. (Maximum of two stacking panels above a standard panel.) For varied ceiling heights use lowest point from floor to ceiling.
③ Order floor-to-ceiling top channel based on lineal feet requirement.
④ Field scribe floor-to-ceiling top channel on site for required length and to fit around square connectors.
⑤ A minimum clearance of 1½" is required to install floor-to-ceiling top channel.

Power and Data

Features ➤See page 21
Standard 8-Wire System 40
Enhanced 10-Wire System 41

Cetra panels offer a standard 8-wire system and an enhanced 10-wire system for increased capacity requirements.

Standard and enhanced electrical components are keyed differently to prevent mixing of components.

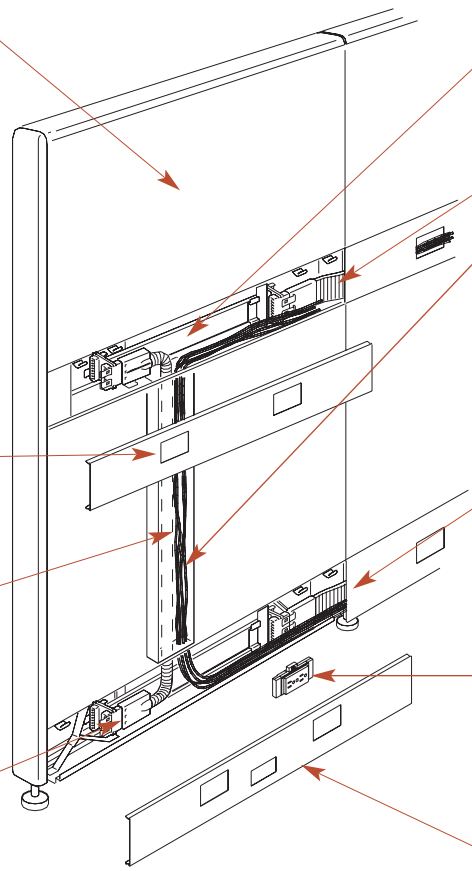
Components used to power the mid-wireway are the same as those used in the base wireway.

Building-to-panel electrical connections can be accomplished whether power is sourced in the wall, floor, or ceiling.

Duplex opening in wireway cover provides access to duplex receptacles. Openings are located 9" from the panel reveal.

Communication cables may be routed through channel in mid-wireway panels to base wireway. For standard panels, route communication cables in the base.

Power distribution assembly carries power to receptacles. They are factory installed on powered panels; they can be field installed on non-powered panels.



Power distribution assembly in mid-wireway requires field installation and must be specified separately.

Electrical jumper cables are used to pass power from panel to panel, from base to mid-wireway, and through directional connectors at the mid-wireway or base wireway. Models are specified based on the panel configuration.
➤See page 101 or 103 for details.

Wireway is 4½"H x 2½"D.

Receptacles are inserted into the power distribution assembly and secured with screws. Up to 4 duplex receptacles may be specified for each base wireway panel. Up to 8 duplex receptacles may be specified for each mid-wireway panel.

Communication wireway cover has an additional window for communication ports.
➤See page 42 for cable management application guidelines.

Wireway Cover Options:

➤See page 43 for powered and non-powered wireway cover punch options.
➤See page 44 for hardwire wireway cover punch options.
➤See page 107 for communication wireway covers.

Punch Dimensions:

Receptacle cutouts—
$2\frac{15}{16}$"W x $1\frac{15}{16}$"H

Hardwire cutouts—
$2\frac{11}{16}$"W x $1\frac{7}{16}$"H

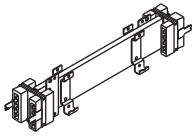
Data port cutouts—
$2\frac{11}{16}$"W x $1\frac{3}{8}$"H

Power Distribution

Assemblies, Jumpers, and Receptacles

Features ➤See page 21
Power & Data Overview 36
Standard 8-Wire System 40
Enhanced 10-Wire System 41

Details



Powered panels feature factory-installed electrical distribution assemblies in the base wireway. Power distribution assembly can also be field-installed on non-powered panels.

Mid-wireway powered panels feature factory-installed power distribution assembly in the base. Specify power distribution assembly for mid-wireway separately for field installation.

Power distribution assemblies and receptacles used to power the mid-wireway are the same as those used in the base wireway.

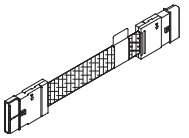
Two wiring configurations are possible utilizing the same components.
➤See pages 40–41 for planning and installation guidelines.

Duplex receptacles are rated at 15 amps and maybe installed back-to-back in base and mid-wireways.

Up to four duplex receptacles (two per side) can be installed in each base wireway.

Up to eight duplex receptacles (four per side) may be specified for each mid-wireway panel.

Connections



Jumper cables are used to pass power from panel to panel and from base to mid-wireway.

18"W panels and 6"W starter panels have no electrical access; however, 18"W panels can pass power to adjacent panels. Both are available with non-punched wireway covers only.

When an 18"W panel is used in a T configuration, one AEJ2 and one AEJ5 jumper must be used to route power through mid-wireway connectors.
➤See illustrations at right.

Planning Factors

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

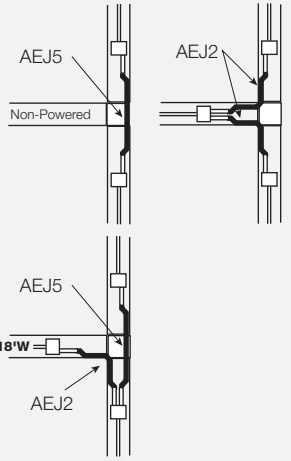
Hardwire electrical components for use in the base wireway are available for areas where local codes do not accept modular electrical plug-in components.
➤See page 39.

New York City electrical applications require a special power entry. Panels should be specified as non-powered and electrical distribution assemblies should be specified separately.
➤See page 39.

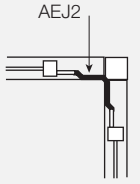
Mid-Wireway Jumpers:

To pass power through mid-wireway connectors, specific jumper models are required.

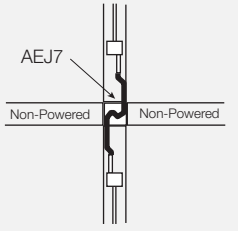
T Configurations



L Configurations



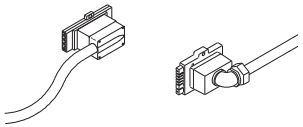
X Configurations



Power Entries

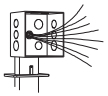
Features ➤See page 21
Power & Data Overview 36
Standard 8-Wire System 40
Enhanced 10-Wire System 41

Details



For 8-wire system For 10-wire system

Floor power entry is available to bring power to the panel run from the floor or wall.



Ceiling power entry assembly is available to bring power to the panel run from the ceiling. It is used in conjunction with ceiling power entry panels.

Ceiling power entry assembly models include:
- Junction box
- 12’ jumper cable
- Hardware

Planning Factors

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

Access to ceiling power source is regulated by National Code to a maximum of 12 ft. conduit.

18"W panels and 6"W starter panels have no electrical access. 18”W panels can be used to pass power from one panel to another, but cannot accept receptacles or power entries.

Power entries will take up the space of one receptacle location on the power distribution assembly.

Related Products

Hardwire electrical components are available for areas where local codes do not accept modular electrical plug-in components.
➤See page 39.

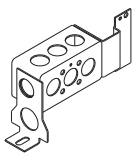
New York City electrical applications require a New York City power assembly for the panel where power entry is made.
➤See page 39.

Hardwire and New York City Components

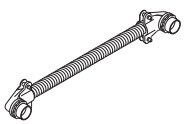
Features ➤See page 21
Power & Data Overview 36
Standard 8-Wire System 40
Enhanced 10-Wire System 41

Details

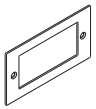
Hardwire panel option and components should be specified to accommodate hardwire applications.



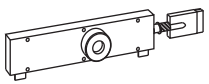
Junction box, specified separately, is required for each panel that will receive field-installed hardwired electrical.



Branching conduit is used between boxes and for panel-to-panel connections. Conduit must be listed, ½" trade-size Greenfield.



Cover plates are available in black only. Blank junction box cover plate is required to cover junction box or power entry boxes. Cover plates from other sources will not fit properly.



New York City electrical applications require a special power entry. Panels should be specified as non-powered; power distribution assemblies should be specified separately.

Connections

Installations must be completed by a qualified electrician or an electrical engineer familiar with the National Electrical Code and the appropriate local codes.

Planning Factors

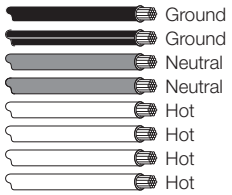
IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

18"W panels are not available with the hardwire option.

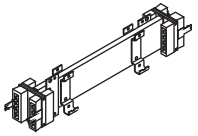
Circuit Configurations

Standard 8-Wire Electrical System

Features ➤See page 21
Power & Data Overview 36
Enhanced 10-Wire System 41



Cetra 8-wire, 4-circuit system supports work environments having light- to medium-intensity computerized equipment needs. The 8-wire systems include two 12-gauge ground wires, two 10-gauge neutral wires, and four 12-gauge hot wires.



Powered panels feature factory-installed electrical distribution assemblies in the base wireway. Power distribution assemblies can be field-installed on non-powered panels.
➤See page 37.

Two wiring configurations are possible—3 and 1 or 2 and 2—utilizing the same components.
➤See wiring configurations at right.

Building-to-panel electrical connections can be accomplished from power sources in the wall, floor, or ceiling.
➤See page 38.

Duplex receptacles used for both types of configurations are the same. This simplifies specifications and allows a faster understanding of the system.
➤See page 37.

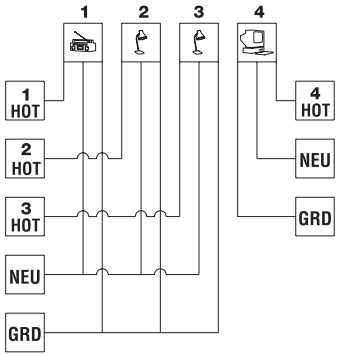
Components used in base wireway applications are also used in mid-wireway applications.

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

Installations should be in accordance with the NEC. Local codes may vary. Consult a qualified electrical contractor or engineer for proper installation of electrical equipment.

All components are shipped with hardware necessary for installation.

3 and 1 (8-wire):

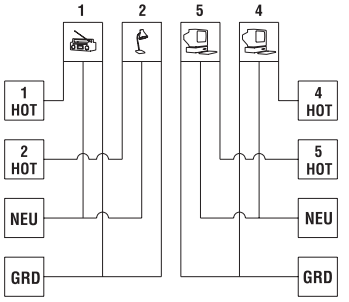


- Three utility circuits share a neutral and common ground.
- One circuit with a DEDICATED hot, neutral and ground.
- Utilize Cetra receptacles #1, 2, 3 for utility and #4 for the DEDICATED ground circuit.

Circuits 1, 2, and 3 can be used for general electrical needs. Customarily, one or more of the circuits is reserved for lighting or other everyday uses, which allows control by central or master switching.

Circuit 4 consists of three separate conductors (hot, neutral, and ground) and meets the BIFMA/ANSI definition for a dedicated circuit.

2 and 2 (8-wire):



- Two DESIGNATED utility circuits and two DESIGNATED computer circuits.
- Utilize Cetra receptacles #1 and #2 for the designated utility circuits and receptacles #4 and #5 for the designated computer circuits.

Note: Receptacle #3 cannot be used in the 2 and 2 configuration. If receptacle #3 is used, possible cross feed or interference from utility circuits one and two can be introduced to computer circuits.

Circuits 1 and 2 provide a pair of designated circuits for general electrical needs, as described for the 3 & 1.

Circuits 4 and 5 provide a pair of designated circuits for computer applications.

Approval/Compliance:

Cetra's electrical system is UL approved, complies with the National Electrical Code (NEC), and is certified for electrical safety to Canadian Standards Association (CSA) standard C22.1 No. 203.
Note: Any field modification of the electrical components voids the UL listing.

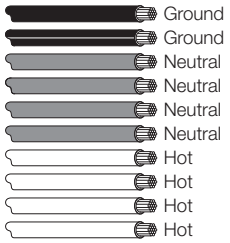
Electrical Service:

Cetra's 8-wire electrical system is rated for 20-amp service. To support the usage, 15-amp convenience receptacles can be placed anywhere along the leg of the electrical connection. In the event that an appliance, such as a larger printer/copier/plotter needs to have a 20-amp receptacle, it is recommended to use a dedicated circuit with a 15/20-amp simplex receptacle. Using 15-amp convenience receptacles will aid in ensuring that no one leg of the system can pull too much current, which could potentially cause the system to trip out and loose power across the entire system.
➤Contact By Design for details on 20-amp simplex receptacles

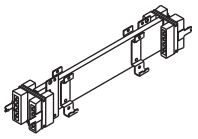
Circuit Configurations

Enhanced 10-Wire Electrical System

Features ➤See page 21
Power & Data Overview 36
Standard 8-Wire System 40



The 10-wire configuration supports work environments having heavy intensity, advanced computerized equipment requirements. 10-wire systems include two 12 gauge ground wires, four 12 gauge neutral wires, and four 12 gauge hot wires.
➤See electrical service info at left.



Powered panels feature factory-installed electrical distribution assembles in the base wireway. Power distribution assemblies can be field-installed on non-powered panels.
➤See page 37.

Two wiring configurations are possible—3 and 3 or 2 and 2—utilizing the same components.
➤See wiring configurations at right.

Building-to-panel electrical connections can be accomplished from power sources in the wall, floor, or ceiling.
➤See page 38.

Duplex receptacles used for both types of configurations are the same. This simplifies specifications and allows a faster understanding of the system.
➤See page 37.

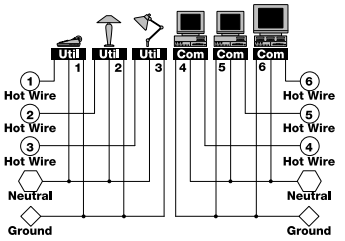
Components used in base wireway applications are also used in mid-wireway applications.

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

Installations should be in accordance with the NEC. Local codes may vary. Consult a qualified electrical contractor or engineer for proper installation of electrical equipment.

All components are shipped with hardware necessary for installation.

3 and 3 (10-wire):

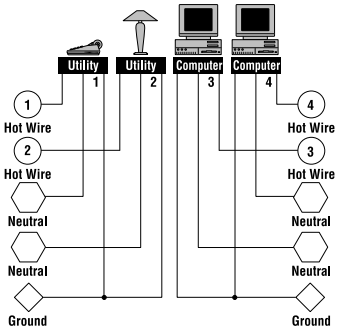


- Three DESIGNATED utility circuits and Three DESIGNATED computer circuits.
- Specify Cetra receptacles #1, #2, and #3 for the designated utility circuits and receptacles #4, #5, and #6 for the designated computer circuits.

Circuits 1, 2, and 3 share a common increased size neutral and ground wire, providing three designated circuits for lighting and other general/utility equipment. Use Kimball Office receptacles AER16, AER26, AER36.

Circuits 4, 5, and 6 share a common increased size neutral and ground wire, providing three designated circuits for computer applications. Use Kimball Office receptacles AER46, AER56, and AER66.

2 and 2 (10-wire):



- Two DESIGNATED utility circuits and two DESIGNATED computer circuits.
- Specify Cetra receptacles #1 and #2 for the designated utility circuits and receptacles #3 and #4 for the designated computer circuits.

Circuits 1 and 2 provide a pair of designated circuits for general electrical needs.

Circuits 3 and 4 provide a pair of designated circuits for computer applications.
Note: The additional two neutral wires featured in the 10-wire system configuration provide an enhanced level of power for installations having higher intensity computer equipment levels.

Approval/Compliance:

Cetra's electrical system is UL approved, complies with the National Electrical Code (NEC), and is certified for electrical safety to Canadian Standards Association (CSA) standard C22.1 No. 203.
Note: Any field modification of the electrical components voids the UL listing.

Electrical Service:

Cetra's enhanced 10-wire electrical system is rated for 20-amp service. To support the usage, 15-amp convenience receptacles can be placed anywhere along the leg of the electrical connection.

Features	➤See page 21
Power & Data Overview	36
Standard 8-Wire System	40
Enhanced 10-Wire System	41

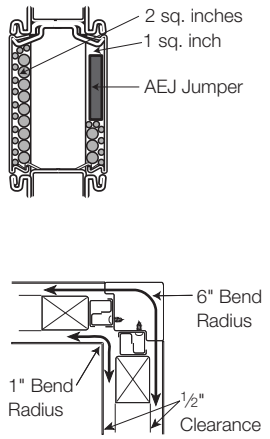
Communication and data cables can be routed through base and mid-wireways.

Communication wireway covers for 30"W or wider panels are available. They are pre-punched to accept data access ports. Only one data opening per wireway cover is available.
➤See page 107.

The opening is left of center to allow proper clearance. This enables ports to be installed in both sides of the Cetra panel. Opening is 1⅜"H x 2¹¹⁄₁₆"W. Only one opening per wireway cover is available.

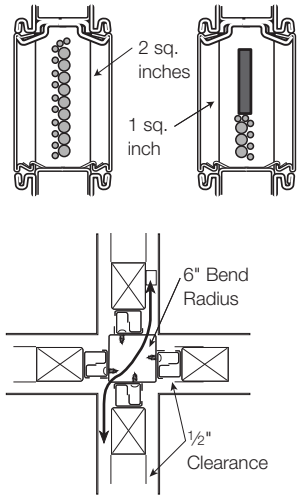
When purchasing ports commercially, verify that the depth of port and size of cover are applicable for proper fit. Data ports can be purchased through the port manufacturer or their distribution network.

L, S, and T Connectors:



Cable capacity when using communication cables is 2 sq. in. **per side** (18 ¼"-diameter cables at 40% fill) for L, S, and T connectors. One sq. in. **per side** of cable capacity (9 ¼"-diameter cables at 40% fill) is available when combining electrical and communication cabling.

X Connectors:



Due to flow of cable pathway when using "X" connectors (as shown in the illustration above), cable capacity for X connectors is 2 square inches **per connector** when using communication cables only or 1 sq. inch **per connector** when combining electrical and communication cabling.

Related Products

Vertical cable managers are available separately to conceal task light cords.
➤See page 108 to specify.

Power & Data Overview 36
Standard 8-Wire System 40
Enhanced 10-Wire System 41

Designator	*Description*	*Add $ to Hardwired Panel Price*
Standard Hardwire Panel Punch Options		
For Use with Kimball Office Junction Box		
H1	1 H punched, 1 non-punched	No charge
H2	2 H punched	No charge
NP2	2 non-punched	No charge
For Use with Midwest Interstate Junction Box		
C1	1 C punched, 1 non-punched	+$26
C2	2 C punched	+$53
Mid-Wireway Hardwire Panel Punch Options		
For Use with Kimball Office Junction Box		
H3	2 H punched, 2 non-punched	No charge
NP4	4 non-punched	No charge
For Use with Midwest Interstate Junction Box		
C3	2 C punched, 2 non-punched	+$53
C1L	1 C left-hand punched, 1 non-punched	+$26
C1R	1 C right-hand punched, 1 non-punched	+$26
C1LR	1 C left-hand punched, 1 C right-hand punched	+$53
C4	1 C left-hand punched, 1 C right-hand punched, 2 non-punched	+$53
C2L	2 C left-hand punched, 2 non-punched	+$53
C2R	2 C right-hand punched, 2 non-punched	+$53
C2LR	2 C left-hand punched, 2 C right-hand punched	+$105

How to Specify

① Insert the desired wireway cover designator into your specification.

➤See the panel's pricing page for model number, pricing, and how to specify.

H punches are compatible with Kimball Office components.

C punches are compatible with Midwest Interstate components.

For hardwired mid-wireway panels, please use electronic specification tools for accurate pricing.

IMPORTANT: 18"W panels do not accept power entry or receptacles.

When combining fabric grades on a single panel, add side 1 fabric grade price to side 2 fabric grade price, then divide total by 2 to get the average.

Specify electrical jumper cables and receptacles separately.
➤See pages 101–106.

Specify ceiling power entry assembly separately.
➤See pages 102 and 104.

Communication Wireway Cover
➤See page 107.

Standard Includes

- Panel
- Divided top cap for power pole
- Power pole
- Wireway covers
- Power distribution assembly, if powered panel is selected
- Attachment brackets

How to Specify

❶ Model
❸ Power option:
P = Powered
N = Non-powered
H = Hardwired
❸ Top cap material:
W = Wood
P = Paint
④ Type of electrical system (omit for non-powered/hardwired):
84 = 8-wire, 4-circuit
104 = 10-wire, 4-circuit
106 = 10-wire, 6-circuit
⑤ Top cap profile:
A = Softened
C = Square
T = Transitional (wood only)
⑥ Top cap finish price group:
STD = Group 1
STDM = Group M (+10%)
STD2 = Group 2 (+20%)
⑦ Top cap finish designator
⑧ Wireway cover punch option:
➤See pages 43–44 for designators and upcharges, if applicable.
⑨ Wireway finish price group:
STD = Group 1
STDM = Group M (+10%*)
**Applies once per model.*
⑩ Wireway/power pole finish desig.
⑪ Side 1 fabric grade
⑫ Side 1 fabric number
⑬ Side 2 fabric grade
⑭ Side 2 fabric number

A maximum of two stackable panels may be added to a standard panel. Combined panel height may not exceed 118".

When combining fabric grades on a single panel, add side 1 fabric grade price to side 2 fabric grade price, then divide total by 2 to get the average.

A maximum of two tackboards may be panel mounted side by side.

13"H tackboards are recommended when using overheads on Cetra panels.

Expo or Expo2 dry erase markers are recommended for use on marker-boards. Low-odor dry erase markers are not recommended, as they may leave undesirable results when erased.

Standard Includes

- Tackboard (fabric) or markerboard (409M Icey White)
- Black tray on markerboard
- Mounting hardware

Features

Overview

Statement of Line ➤See page 112
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Welded frames are the backbone of the Xsite system. They provide structural rigidity to the system.

Xsite panels are 3¼" thick.

Ceiling power/data pole allows power and data to be dropped down from above to clusters in open areas that are away from walls and where power/data is not accessible within the floor.

Overhead support brackets used with Xsite Traxx allow for off-module placement of Kimball Office Footprint overhead storage units.

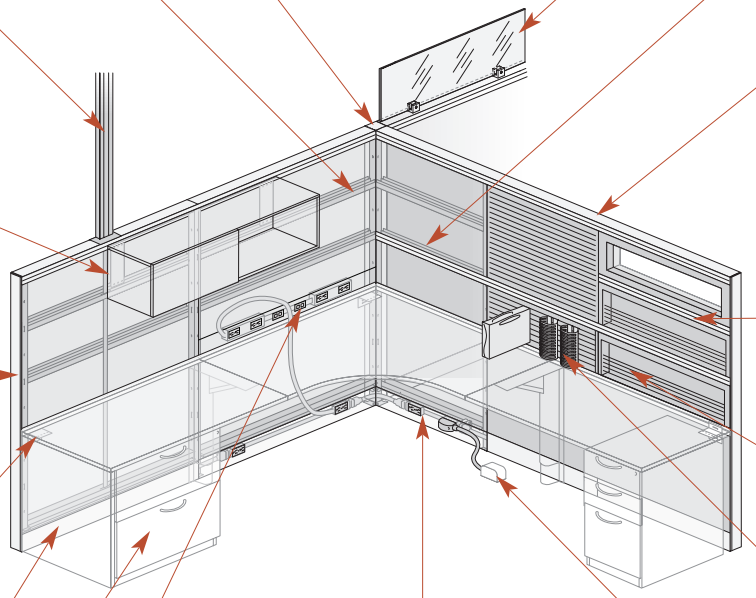
End trims are screwed to frames for a secure fit, and provide a clean aesthetic at the end of panel runs.

Edge support brackets used with Xsite Traxx allow for adjustable support of all Kimball Office worksurfaces.

Base wireway covers provide access to power and data and are included with base wireway frames.

Kimball Office Footprint worksurfaces and storage integrate with the Xsite system.

Connectors and hi-lo trim are available to accommodate change of direction and change of the height.



Technology tile provides access to power and data at 2nd, 3rd, 4th or 5th segments.

Base power harnesses and jumpers distribute power through the base.

Frameless glass adds height to the panel for separation but keeps the look open.

Mid-frame supports provide support for tiles and components and are required wherever Traxx are used.

Top caps are specified separately and can span multiple frames. They are available up to 8 feet long for a seamless appearance.

Top channel provides top lay-in capability.

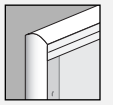
Xsite Traxx allows tile to be independent from frame for monolithic or segmented look.

Storage tiles maximize space by using interior of structure.

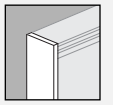
Accessories are available for mounting on Xsite Traxx, and slat tiles or within storage tile. You may also select from work tools and Traxx presentation tools.

Base power entry allows power to enter at the floor, wall, or column. Power can then be distributed to the base and/or jumped up to the power/data or technology tile.

Trim Profiles:

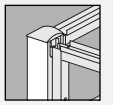


Curved



Flat

Applies to end trim, hi-lo end trim, and top caps.



Flat

Applies to connectors and frameless glass top caps.

Top caps and trim are available in wood finishes or paint.

Electrical:

c UL US LISTED

Class A—Tackable acoustical tiles. *Note: COM must comply with U.L. Standard 1286*

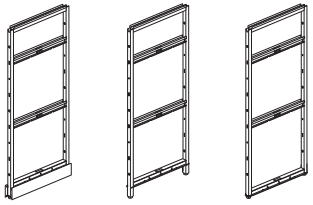
Class B—Laminate tiles

Class C—Wood and painted tiles

Frames

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Details



Base Wireway | Open Base | To-the-Floor

Frames are available in 18", 24", 30", 36", 42" and 48" widths and in 2-high (29 1/2"), 3-high (42 1/8"), 3.5–high (49 1/32"), 4-high (54 23/32"), and 5-high (67 5/16") heights. All frames include:

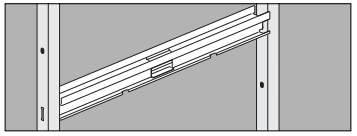
- Mid-frame supports
  - –At the 2-high and 4-high positions on 5-high frames
  - –At the 2-high position on 3-high, 3.5-high, and 4-high frames
- Glides
- Attachment hardware

Steel frames are painted black on base-wireway and to-the-floor frames and available in a variety of paint colors on open-base frames.

Base-wireway frames are available in powered and non-powered models and feature a painted base-wireway cover. Powered models include a power harness.

Open-base frames do not have a base wireway or cover and are open and finished at the bottom. Legs are painted.

To-the-floor frames allow tiles to go all the way to the floor. There is no base wireway.

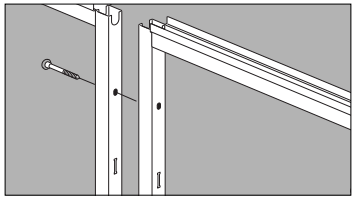


Mid-frame supports are standard at the 2-high position to provide support for worksurfaces. On 5-high frames, mid-frame supports are also standard at the 4-high position to provide support for overhead storage.

Finishes & Materials

- Vertical frame: 16 gauge cold-rolled steel, black
- Horizontal frame: 14 gauge cold-rolled steel, black

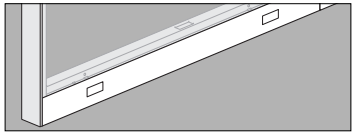
Connections



Frames are attached with bolts that provide consistent alignment from frame-to-frame as well as strength and rigidity to the panel run.

Specially sized, to-the-floor tiles must be specified for the lowest segment on to-the-floor frames to accommodate the extra height. Standard tiles can be used to complete the panel. 5-high to-the-floor frames must be specified with a minimum of two segments. Due to fabric width constraints, a 5-high to-the-floor tile is not available.

Power & Data



Wireway covers for base-wireway frames are available punched or non-punched.

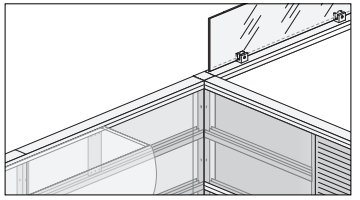
Deep top channel in frames allows for generous top lay-in cabling capacity.

Cutouts for routing cables vertically are provided in the frame's top channel, bottom channel, and mid-frame supports.

Data cabling can also be routed between tiles and frames.

Connectors have two openings below worksurface height (2-high) to allow cable routing behind tiles at connectors.

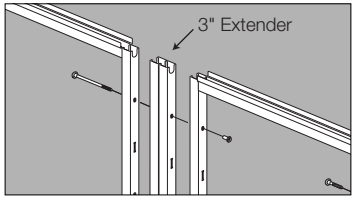
Planning Factors



Mid-frame supports are required wherever Xsite Traxx are used to support tiles. If planning segmented panels, additional mid-frame supports, specified separately, may be required. The mid-frame supports provided at the 2-high and 4-high positions can be relocated if tiles, worksurfaces, and overheads are not mounted at those locations; or if they interrupt the placement of glass, pass-thru, or performance tiles.

Relocation of the mid-frame support on 3.5-high and 4-high frames, or the specification of an additional mid-frame support, will be required when overheads will be mounted to the inside top of the frame to correspond with the bottom of the overhead. Relocation of the mid-frame support is not necessary for center-mounted overheads.

Related Products



3" extenders attach to frames for planning in 3" increments. They consist of two 1 1/2" frame verticals attached together. They are available for use in straight panel runs (in-line), next to a connector, or at the end of a panel run; specify the appropriate designator for the application type. Specify 3" extender to be the same height as the frame or connector to which it will attach. They are not applicable to runs of to-the-floor or open-base frames.

➤See page 174.

Note: Top caps, Traxx, and tiles must all span across the frame and the 3" extender. All models are available in additional 3" increment sizes not shown in the price list. Use electronic specification tools to specify.

Glass, storage, fold down, power/data and pass-thru tiles cannot span across the 3" extender.

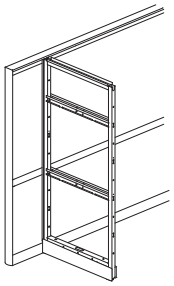
Xsite Traxx and tiles complete the panel frame.

➤See page 137.

Off-Module Frames

Features	➤See page 116
Application Guidelines	130
Power & Data Overview	146
Electrical Guidelines	152

Details



Off-module frames—available in base-wireway, open-base, and to-the-floor models—are used to start a new panel run perpendicular to the existing run without using a connector. They can also be used to start a run from wall-mounted Traxx.

Off-module frames are available in 18"W, 24"W, and 30"W. All frames include:

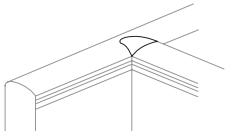
- Mid-frame supports
  - –At the 2-high and 4-high positions on 5-high frames
  - –At the 2-high position on 3-high, 3.5-high, and 4-high frames
- Glides
- Attachment hardware|
- Top cap splice

Steel frames are painted black on base-wireway and to-the-floor frames and available in a variety of paint colors on open-base frames.

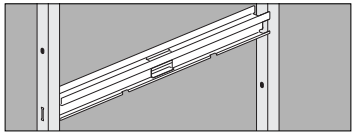
Base-wireway frames are available in powered and non-powered models and feature a painted base-wireway cover. Powered models include a power harness.

Open-base frames do not have a base wireway or cover and are open and finished at the bottom. Legs are painted.

To-the-floor frames allow tiles to go all the way to the floor. There is no base wireway.



Top cap splice, shipped standard with the off-module frame, transitions the top cap at the connection point.

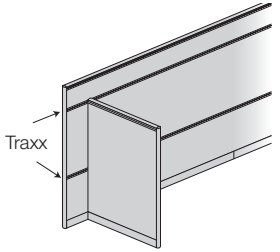


Mid-frame supports are standard at the 2-high position to provide support for worksurfaces. On 5-high frames, mid-frame supports are also standard at the 4-high position to provide support for overhead storage.

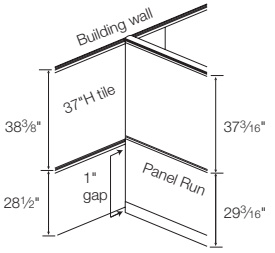
Finishes & Materials

- Vertical frame: 16 gauge cold-rolled steel, black
- Horizontal frame: 14 gauge cold-rolled steel, black

Connections



A minimum of two Xsite Traxx are required to attach an off-module frame to a spine run. One attachment point must be at the uppermost point possible of the off-module connector. The other can vary depending on the location of Traxx on the spine run.



Dimensions are from centerline of Traxx.

Standard wall-mounted Traxx, when installed at proper heights for use with 37"H tiles, will integrate with Xsite Traxx in 5-high applications. Component heights will match if mounting guidelines are followed.

To ensure worksurfaces will be at the same height, use Traxx worksurface brackets for wall-mounted Traxx and Xsite worksurface brackets for Xsite Traxx. Overhead brackets are the same for standard and Xsite Traxx.

A 1" gap (approx.) will occur between the wall and the off-module frame below the bottom wall-mounted Traxx.

Power & Data

Power and data cannot be routed from the spine run into the off-module run.

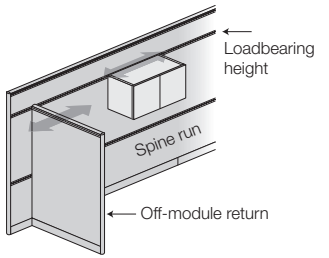
Planning Factors

Return runs started with an off-module frame can provide support for spine runs.

Full-width tiles positioned on the spine run behind the off-module frame allow the off-module run to be easily reconfigured.

Hi-lo return wall can be created using an off-module frame.

In non-loadbearing conditions, the off-module frame may be equal to or less than the height of the spine run.



Loadbearing conditions require the off-module frame run to be equal to the loadbearing height of the spine run.

Mid-frame supports are required wherever Xsite Traxx are used to support tiles. If planning segmented panels, additional mid-frame supports, specified separately, may be required.

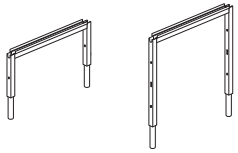
Related Products

Adjustable wall-mount channel may be specified separately to fill the gap below the lowest wall-mounted Traxx if the off-module frame will be exposed.
➤See page 127.

Stacking Frames

Features	➤See page 116
Application Guidelines	130
Power & Data Overview	146
Electrical Guidelines	152

Details



Stacking frames may be added to 2-high, 3-high, 4-high, or 5-high base frames to increase the height of the panel.
IMPORTANT: 3.5-high base frames cannot accept stacking frames.

Stacking frames are available in 1-high and 2-high segments. They include:

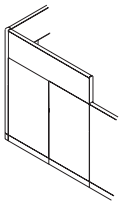
- Welded frame
- Attachment hardware

Finishes & Materials

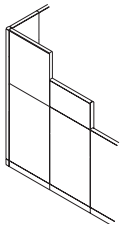
- Vertical frame: 16 gauge cold-rolled steel, black
- Horizontal frame: 14 gauge cold-rolled steel, black

Connections

One 1-high or 2-high stacking frame may be added on top of a base frame (except 3.5-high) up to a max. of 93¼" including the top cap.

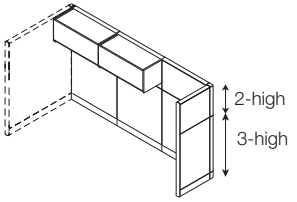


48"W stacking segment can span across two 24"W base structures.



Hi-lo applications can be created by using a 1-high stacking frame next to a 2-high stacking frame. Specify appropriate hi-lo vertical trim for end of the run.

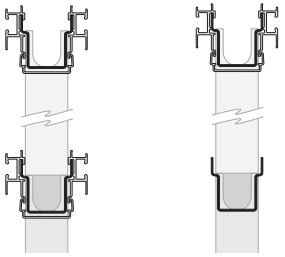
Planning Factors



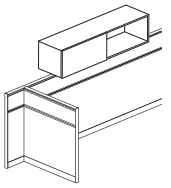
Stacking frames are loadbearing when same-height return runs are used at each end.

In hi-lo applications, stacking frames can be loadbearing, but require overheads on both sides.

Components must be hung on a top channel of either the base or stacking frame.



Xsite Traxx must be used at the top of the stacking frame on both sides. When stacking, the top of the base frame must have Xsite Traxx on both sides or neither side.



Center-mounted overheads can be positioned on top of stacking frames up to 4-high.

Technology tiles can be used on stacking frames where data is required; electrical cannot be accommodated because the power block mounting brackets must attach to the mid channel.

Specify mid-frame supports separately if using Xsite Traxx at the 1-high segment on a 2-high stacking frame.

Related Products

Stacking 3" extenders are available in 1-high and 2-high segments and may be added to base extenders of any height. They are available for use in straight panel runs (in-line), next to a connector, or at the end of a panel run; specify the appropriate designator for the application type. Base and stacking extender heights must be equal to the base and stacking frame heights to which they are attached. Specify top caps, Traxx and tiles to span across extenders for a seamless look.

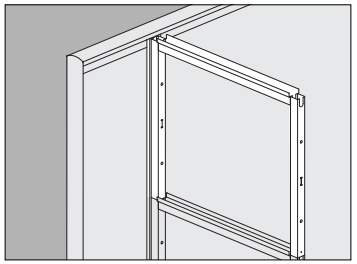
Vertical end trim and connectors must be specified to equal the combined height of the base and stacking frames.

Xsite Traxx and tiles complete the panel frame.
➤See page 137.

Stacking Off-Module Frames

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Details



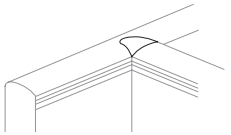
Stacking off-module frame is used to increase the height of a 2-high, 3-high, 4-high, or 5-high base off-module frame.
IMPORTANT: 3.5-high base off-module frames cannot accept stacking off-module frames.

Stacking off-module frames are available in 1-high and 2-high segments. They include:
- Welded frame
- Attachment hardware

Finishes & Materials

- Vertical frame: 16 gauge cold-rolled steel, black
- Horizontal frame: 14 gauge cold-rolled steel, black

Connections



Top cap splice, shipped standard with the stacking off-module frame, transitions the top cap at the connection point.

One 1-high or 2-high stacking off-module frame may be added to the base off-module frame (except 3.5-high).

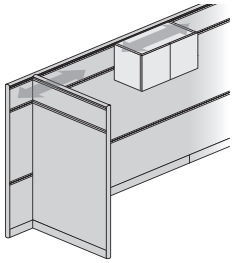
Stacking frame must attach to at least one Xsite Traxx in the spine run.

Power & Data

Power and data cannot be routed from the spine run into an off-module run.

Planning Factors

Stacking frames are loadbearing when wing panels are used at each end.



Height of off-module run (base plus stacking frame height) must be equal to the loadbearing height of the spine run.

Specify mid-frame supports separately if using Xsite Traxx at the 1-high segment of a 2-high stacking frame.

Full-width tiles positioned on the spine run behind the off-module frame allow the off-module run to be easily reconfigured.

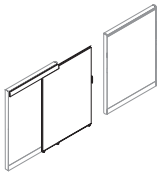
Related Products

Xsite Traxx and tiles complete the panel frame.
➤See page 137.

Sliding Privacy Door

Features ➤See page 116
Door Placement 130
Locking Information 123

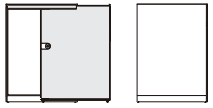
Details



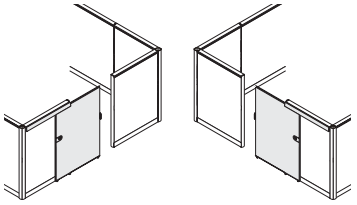
Sliding privacy doors provide a visual signal for heads down and uninterrupted work. Privacy doors are lightweight and do not have a threshold or header for a sleek design. They are not intended for use as a security door. Models include:

- Door frame and insert
- Hardware kit:
  - –Two roller wheels and attachment hardware
  - –Top guide assembly
  - –Bottom guide with alignment bracket and guide rod

Five heights are available: 3.5-high, 4-high, 5-high, 6-high, and 7-high to correspond to Xsite frame heights.

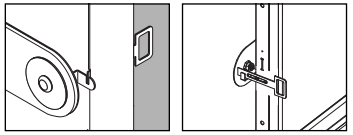


Two widths are available: 36"W and 42"W. Actual door width is 6” wider so that when closed, the door overhangs the host frame to which it is attached. Both widths meet ADA requirements for 5 lb. pull force to open and 32" minimum clearance.



Left-Hand Right-Hand

Doors are specified to open left or right. The host frame to which the sliding privacy door’s top guide is attached determines handedness.



Locking models feature a drilled hole, into which lock assemblies, included but shipped separately, are field installed on the outside of the door. Lock engages in the end trim of the host panel on the back side of the door face at 38½" from the floor. A safety release latch is installed on the inside. Locking models include:

- Lock housing, core, and key (key random option): black or matte nickel (silver)
- Safety release latch
- Lock plate
- End trim with notch for lock engagement for the host panel

Note: Key specific option is available.

➤See page 123 for more detailed locking information.

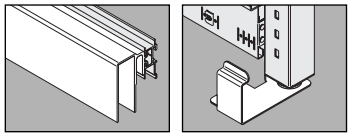
ADA-compliant door handle is available for field installation; specified separately.

U.L. listing 1286.

Finishes & Materials

- Frame: painted aluminum
- Insert: reeded polycarbonate
- Roller wheels: medium-hard durometer
- Top guide: painted steel
- Bottom guide: painted steel

Connections



Top and bottom guides affix to the panel frame. Top guide attaches to Traxx and adds 1⅝" to the overall panel thickness. Bottom guide is installed under the wireway and panel glide and prevents over extension.

Privacy doors can be added into an existing installation with 42" or 48"W panels. The wireway cover on the panel will have to be removed so the bottom glide can be installed.

➤See planning factors.

Stacking frames can be used with privacy doors. Specify end trim to match the full height of the panel.

Frames with glass tiles can be used with privacy door; however, when the door is open, the glass will be covered.

Planning Factors

Width of the panel frame to which the door attaches must be 6" wider than the door opening. For example, a 42"W door is installed on a 48"W; a 36"W door must be installed on a 42"W frame.

Height of the panel frame to which the door attaches must be equal to or taller than the privacy door. For example, a 5-high door can be used on a 7-high panel with Traxx at the 5-high position only. A 3.5-high can only be used with a 3.5-high frame.

Locking models overhang the door opening by 2" when in the open position; non-locking models recede fully over the host frame.

Electrical cannot be installed in the base wireway of the host frame.

Changing a non-locking privacy door to locking after installation is not recommended.

When installing on carpeted floors, the carpeting should have a face weight of more than 24 oz and a density level above 6000 per square yard.

➤See page 122 for additional application guidelines

Sliding Privacy Door

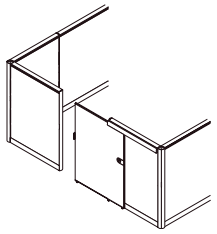
Application Guidelines

Door Placement Guidelines

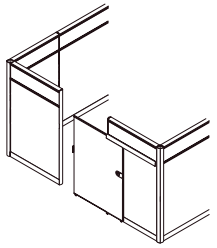
Features ➤See page 116
Product Information 125
Locking Information 123

IMPORTANT: Sliding privacy doors "float" in the top channel and will follow the slope (if any) of the Xsite frame and floor. Any unevenness of the floor will be reflected in how the door matches up against the abutting wall or panel, and may result in a less-than-true vertical line when the door is in the closed position against the abutting panel or wall.

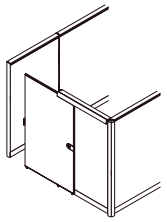
The door sits off the face of the host panel by ¾".

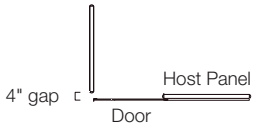


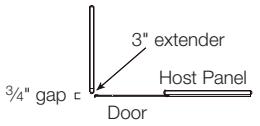
- Door may be the same height as the host frame or host frame plus a stacking frame.
  Note: 3.5H sliding privacy door can only be used on a 50"H frame.



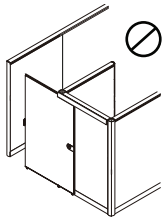
- Door may be shorter than host frame or host frame plus stacking a frame.
  Note: Must have Traxx at the door height to accept top guide.



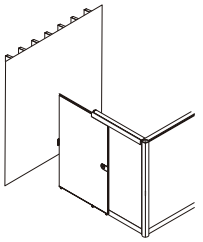




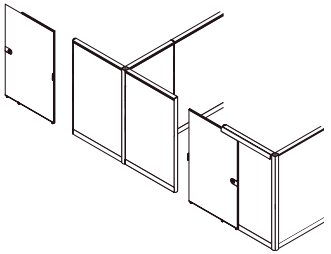
- Door may abut a perpendicular panel run. It is recommended that the abutting panel include a 3" extender to minimize gap.



- Door cannot travel across a connector due to the space consumed.

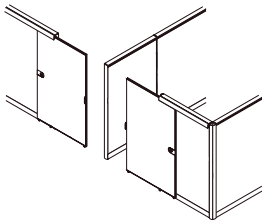


- Door can abut a building wall.
  ➤See note at far left.

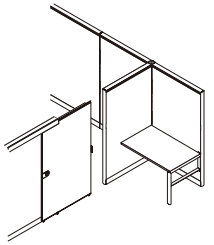


- Multiple doors may be installed in a panel run. Follow the same application guidelines for Xsite panel runs.
  ➤See page 130.

- Cannot be used on a host frame that is attached to a wall using a wall-mount channel due to interference with the top guide.



- Any floor variation will be reflected in the privacy doors as they come toward the center.



- Can be positioned inside the workstation; consider the location of worksurfaces, overhead storage and accessories.

Sliding Privacy Door

Application Guidelines

Locking Information

GSA SIN 711-1

Features ➤See page 116
Product Information 125
Door Placement 130

Locking privacy doors can be specified as:
- Key random with a black lock core and hinged key (KRB);
- Key random with a silver (matte nickel) lock core and round-head key (KRS); or
- Key specific black (KSB);
- Key specific silver (KSS)

Key Random Option:

When key random option is selected, key numbers will be assigned arbitrarily at the factory with key numbers ranging from KSCB001 to KSCB300 (black) or KSCG001 to KSCG100 (silver).

Randomly numbered lock core(s) will ship standard along with your order for field installation.

With random keying, different furniture units may or may not have the same key number. If you must have all locks keyed differently or all locks keyed the same, choose the key specific option.

Key Specific Option:

When a key specific option is selected, the sliding privacy door will be pre-drilled and fitted with hardware to accept either a black or silver lock core; however, no lock cores will be shipped standard with the unit. The price of the unit is reduced by the price of the lock core or cores.

You must specify lock core(s) separately for key specific option; specify any key number from KSCB001 to KSCB300 (black) or KSCG001 to KSCG100 (silver).

To key all the sliding privacy door units in a workstation or department alike, choose a key specific option and order the quantity of locks needed for your installation.

Black lock cores and hinged keys are identical to the ones used with Footprint storage.

Silver lock cores and round keys are matte nickel. These lock cores and keys are identical to the ones used with Definition, Fluent and Hum. Minds at Work. series.

Standard key that ships with the lock core can be used for the initial installation of the lock core in the field.

Change key model KSCD1CK allows removal of keys within these ranges:
KSCB001–KSCB300
KSCG001–KSCG100

IMPORTANT: A change key, specified separately, is required to remove lock cores in the field.

Master key model KS2GMK will unlock any lock within these key ranges:
KSCB001–KSCB300
KSCG001–KCCG100

Model/Key Range	*Price*
Black Lock Cores	
KCCB001 to KCCB300	$21
Silver Lock Cores	
KSCG001 to KSCG100	$21
Change Key	
KCCB1CK	$5
Master Key	
KC2GMK	$11

How to Specify

❶ Specify exact key number for lock cores as the model number or model number for change or master key

Hinged Door

Features	➤See page 116
Application Guidelines	130
Power & Data Overview	146
Electrical Guidelines	152

Details

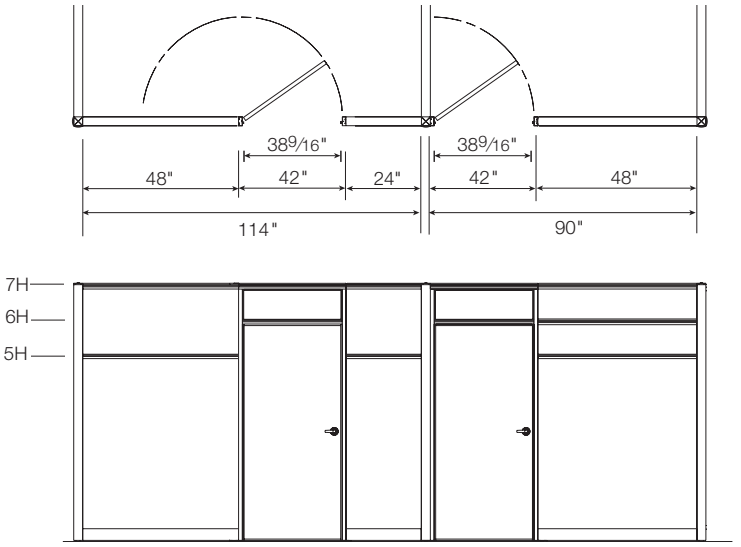
Hinged doors are available in 36" and 42"W models; both are available with a right or left hinge. Right-hinge model shown at left.

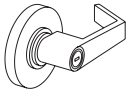
Actual door width for 36"W is 32 9/16"W; 42"W door is 38 9/16" (shown above). 42"W hinged doors are appropriate for ADA compliance.

Hinged door units are designed as 7-high to accommodate the 6-high door with a 1-high tile above it. Adjacent panels must also be 7-high.

The door assembly includes:
- Door
- Attachment hardware
- Door stop and pre-assembled frame
- Door frame consisting of rubber bumpers, threshold, and mid-header
- Top header
- Two-piece vertical door jamb

Top header and mid-header resemble Traxx, but will not support components.





Locking lever is available and is suitable for ADA guidelines.

Finishes & Materials

- Door: honeycomb core overlaid with veneered 5/16" MDF (paint or wood finish)
- Door frame: aluminum, paint
- Lever/lock: satin chrome
- Threshold: anodized aluminum, black

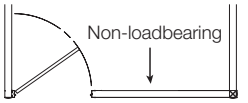
Connections

Door frames attach directly to the adjacent frame using frame-to-frame alignment bolts. Door frames attach to connectors using connector bolts.

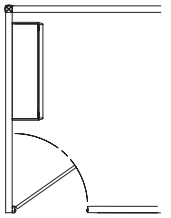
Use an adjustable wall-mount channel to attach a hinged door frame to a building wall. Connector will provide 3/4" of adjustability for out-of-plumb walls.
➤See page 127.

Planning Factors

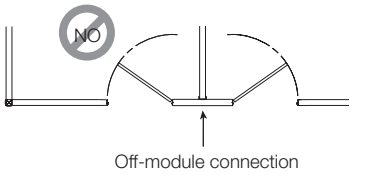
Off-module frames should not be used to support panel runs that include doors.



Panel runs with doors are not considered loadbearing.



Panel runs perpendicular to runs with doors are considered loadbearing, provided that panel run application guidelines are followed.
➤See page 130.



Off-module panel runs are not suitable to provide support for the door.

Related Products

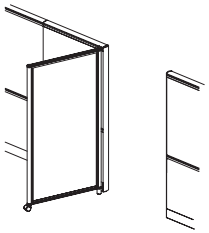
Top cap must be specified separately to span across the door frame.
➤See page 128.

Tiles must be specified separately. Specify 33"W tile for 36"W doors and 39"W tile for 42"W doors.
➤See page 141.

Privacy Panels

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Details



Privacy panels provide a non-latching, pivoting panel solution for added privacy in workstation environments.

Privacy panels are 5-high and available in 36" and 42" widths. They are available in three designs: fabric on both sides, fabric/marker board combination, or translucent.

Privacy panel models include:
- Top attachment bracket
- Base pivot bracket
- Caster

Fabric and fabric/marker board combination privacy panels have an extruded aluminum frame. Interior is fiberglass over a honeycomb panel.

Translucent privacy panels feature a ribbed pattern to provide privacy, yet allow light to pass through. Frame is extruded aluminum.

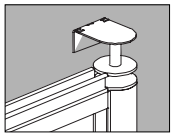
Single caster allows privacy panel to pivot open or closed.

Finishes & Materials

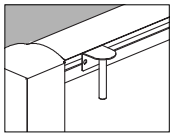
Privacy Panel Frame
- 462 Cinder paint
- 501 Platinum metallic paint

Privacy Panel Inserts
- Kimball Office panel fabric
- Marker board (488M Frosty White)
- Translucent

Connections

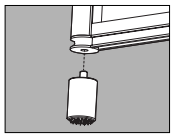


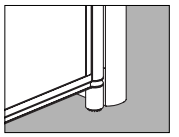
Top bracket



Top bracket shown on Xsite panel

Top attachment bracket is used to mount the privacy panel to any 5-high Xsite panel. Top bracket attaches into Xsite Traxx and can be easily relocated.





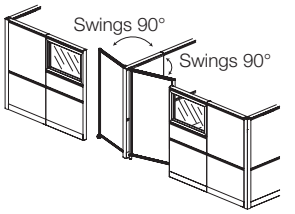
Base pivot bracket features a carpet gripper to hold bracket in place while allowing the privacy panel to swing.

Privacy panels abut the opposite panel, but do not latch.

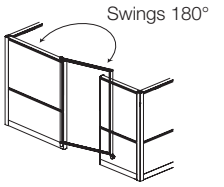
Non-handed and reversible, privacy panels can be mounted left or right, and can be flipped so the marker board or different fabrics can be positioned inside or outside the workstation.

Planning Factors

Privacy panels can be mounted in any 5-high or higher application, providing there is Xsite Traxx at the 5-high position.



When mounted to the perpendicular panel (on one or both sides) in an L or T configuration, panel swings 90°.



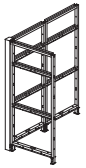
When mounting in a straight panel run, specify privacy panel to be wider than the opening to allow for proper clearance. Panel swings 180° to lay flat against the Xsite panel.

It is recommended that the privacy panel be specified to swing into the workstation.

Connectors

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Details



Connectors are available to join two or more panels when changing directions in a panel run. Connectors are constructed of extruded aluminum and have a flat profile. They are painted or covered with premium grade veneer.

Connectors can be used in the following configurations:
- L (2-way 90°)
- T (3-way 90°)
- X (4-way 90°)
- Straight (180°)
- V (2-way 120°)
- Y (3-way 120°/120°/120°)

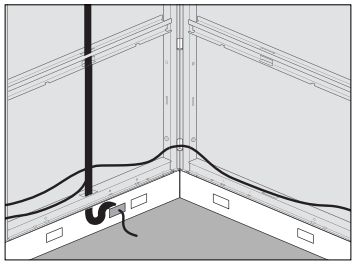
Top cap, vertical trim, and connecting bolts are included with each connector.

Connector top caps are curved profile to match panel top caps.

Finishes & Materials

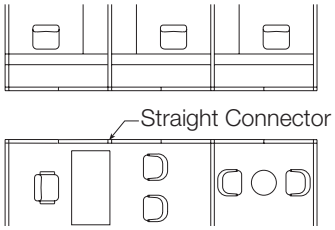
- Connector frame: extruded aluminum, black
- Connector (vertical trim): wood or paint
- Top cap: wood or paint

Power & Data



Cut outs are provided at 2-high just below the worksurface, and just above the wireway for routing cables through the connector.

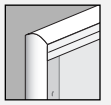
Planning Factors



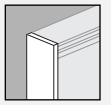
Straight connectors fill parallel panel runs where one panel run has a connector and the other does not. It is not required to join panels.

Specify appropriate connectors for the combined height of standard and stackable panels.

Trim Profiles:

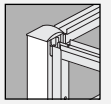


Curved



Flat

Applies to end trim, hi-lo end trim, and top caps.



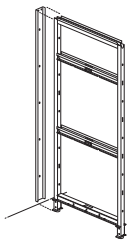
Flat

Applies to connectors (vertical trim) and frameless glass top caps.

Adjustable Wall-Mount Channels

Features	➤See page 116
Application Guidelines	130
Power & Data Overview	146
Electrical Guidelines	152

Details



Adjustable wall-mount channel is used to accommodate out-of-plumb wall conditions when attaching a panel run directly to a building wall. It allows for 3/4" adjustment.

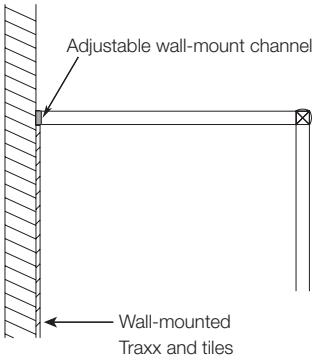
Finishes & Materials

• 20 gauge cold-rolled steel

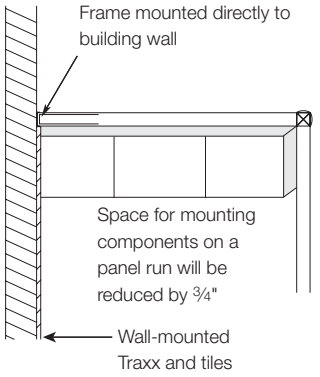
Connections

Attachment fasteners are not included. The installer should select and purchase the proper fasteners for the specific wall application.

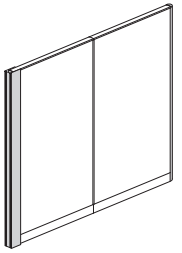
Planning Factors



Thickness of an adjustable wall-mount channel is the same as wall-mounted Traxx. The wall mount channel can be used to "shim out" from the wall in applications where Traxx will be adjacent too, but not used for attaching the frame to provide proper alignment.



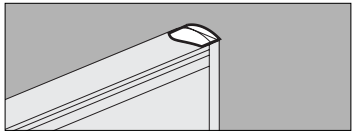
If you choose not to use an adjustable wall-mount channel in a wall-mount application, the available space for mounting components on the panel run perpendicular to the building wall will be reduced by 3/4" where wall-mounted Traxx and tiles extend from the wall and abut the frame.
Note: To eliminate this condition, use an adjustable wall-mount channel to shim out from the wall.



The panel run must consist of at least two tiles. Wall-mount channels are U-shaped and a single tile cannot be inserted once trim or connectors have been installed at the end of the run.

Not for use with sliding privacy doors.

Related Products



Top cap splice can be specified separately to cover the top of an adjustable wall-mount channel when using curved profile top caps.
➤See page 188.

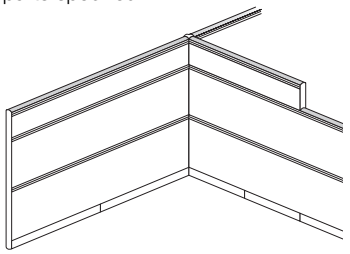
Top Caps and End Trim

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Details

Top caps finish the top of the frame and conceal data cables in the top channel.

Specify a monolithic top cap where possible to provide a seamless look and to reduce the number of parts specified.

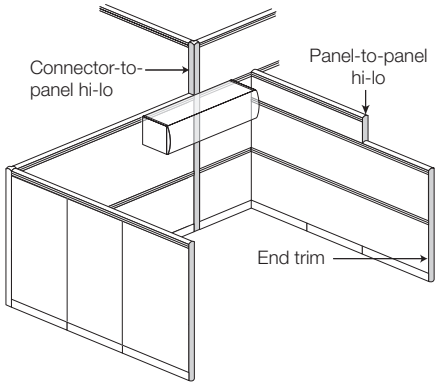


Top caps are available in widths up to 8'. They can be field scribed, if necessary.
Note: Top caps are available in additional widths in 3" increments up to the largest standard size. Use your electronic specification tools to specify.

End trim covers the vertical frame edge at the end of each panel run.

Hi-lo trim finishes off the vertical end of frames when transitioning heights.

Panel-to-panel and connector-to-panel hi-lo trims are available.



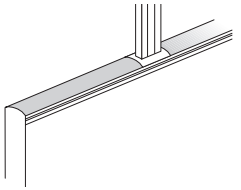
Finishes & Materials

- Top caps: wood or paint
- End trim: wood or paint

Connections

Top caps fit securely onto frames using a pressure-fit attachment method.

Related Products



Notched top cap, included with power/data pole, is available in 6" increments from 24" to 48"W.

Top caps for use with frameless glass are pre-drilled to accept frameless glass holders.
➤See page 129 for details.

Overall Panel Heights:

The chart below shows the overall panel height including the top cap, frame, and glides.

Panel Height	*with Curved Top Cap*	*with Flat Top Cap*
2-high	30"H	29¾"H
3-high	42 19/32"H	42⅜"H
3.5-high	49`17/32"H	49 9/32"H
4-high	55 7/32"H	54 29/32"H
5-high	67 13/16"H	67 17/32"H
6-high*	80⅜"H	80 3/16"H
7-high*	93"H	92¾"H

* 5-high base frame with stacking frame.

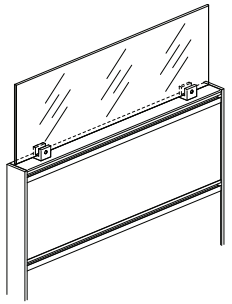
Frameless Glass

Product Information

Panes and Top Caps

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

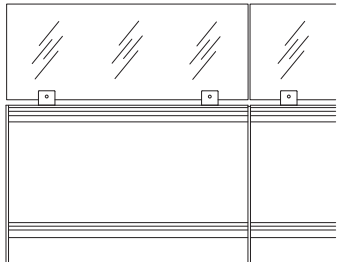
Details



Frameless glass is available as a clear or etched, 3⁄8"-thick, tempered glass pane with flat polished edges.

Top cap for use with frameless glass pane must be specified separately. Top cap model includes:

- Flat profile top cap with pre-drilled holes
- Choice of extruded aluminum rail or two aluminum brackets with attachment hardware

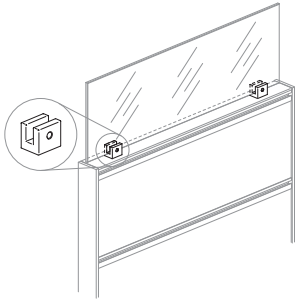


Glass sits 9⁄16" off the top cap when installed.

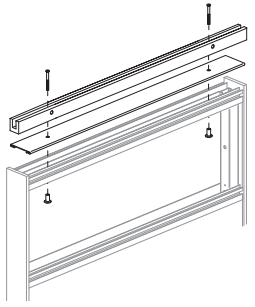
Finishes & Materials

- Pane: clear or etched, tempered glass
- Brackets or rail: aluminum, paint
- Top cap: metal, paint

Connections



Glass pane is centered between the two brackets (shown) or rail.

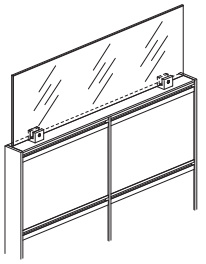


Top cap for use with frameless glass features pre-drilled holes, which allow the brackets or rail (shown) to be securely bolted to the panel frame in the field and facilitates correct placement.

Planning Factors

Frameless glass is not loadbearing. Hanging components or accessories on frameless glass is not recommended.

Frameless glass cannot be scribed in the field.



Width of the frameless glass pane must be the same width as the top cap. Both should be specified to match the width of the panel frame to which they will attach or the combined width if spanning over two or more frames up to 96"W. For example, a 96"W pane and top cap can span two 48"W frame or four 24"W frames.

Specify hi-lo models for the lower panel in a hi-lo application. Glass and top cap widths have been adjusted to accommodate the vertical hi-lo end trim.
Note: Hi-lo-hi application is not possible due to the width of the glass.

Lay-in cabling can be accommodated in the top channel. The frameless glass and glass holders will have to be removed to access the interior of the panel and cables.

3.5-high base frames can accept frameless glass, but the overall height will not line up with a 4-high panel.

Frameless glass is not recommended on low panels adjacent to high-traffic areas.

Xsite frameless glass models cannot be used on Cetra; likewise, Cetra frameless glass models cannot be used on Xsite.

Customer-supplied glass can be used with frameless glass top caps with brackets or rail. Customer's glass should be 3⁄8"-thick tempered glass or other safety material. The width of the glass should be 1⁄8" less than the width of the panel frame to which it will attach; for hi-lo applications, the glass should be 5⁄8" less wide than the panel.

Overall Heights:

Panel Height	*Overall Height incl. Frameless Glass*
2-high	42 3⁄8"
3-high	54 15⁄16"
3.5-high	61 29⁄32"
4-high	67 9⁄16"
5-high	80 1⁄8"
5-high + 1 stacking	92 3⁄4"
5-high + 2 stacking	105 3⁄8"

Codes:

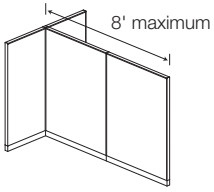
U.L. Listing 1286

Panel Configurations

Without Components

Features ➤See page 116
Power & Data Overview 146
Electrical Guidelines 152

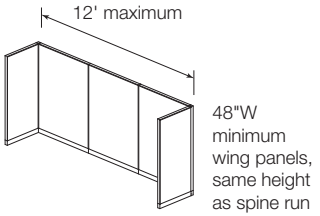
Unsupported Span:



- 8' maximum
- 2 panels maximum; and
- Minimum wing panels

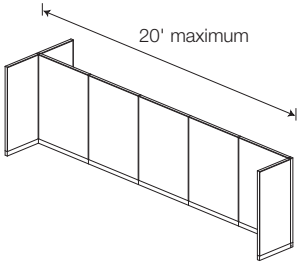
➤See minimum wing panel chart at right.

C-Shaped Workstation:



- 12' maximum
- 48"W minimum wing panels on both ends

T or Wall on One Side:



- 20' maximum
- Minimum wing panel on one end
- T or wall on at least one side

➤See minimum wing panel chart at right.

Note: Frameless glass does not affect application guidelines on this page.

Definitions:

Unsupported panel runs—
Runs not attached on BOTH ends to a wall, wing panel, or floor support.

Floor support—
Undersurface storage units, support panels, or column legs

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage.

Height of Panel Run	Minimum Wing Width
2-high (30")	30"
3-high (42")	30"
3.5-high (50")	36"
4-high (54")	36"
5-high (68")	36"
6-high (80")	48"
7-high (93")	48"

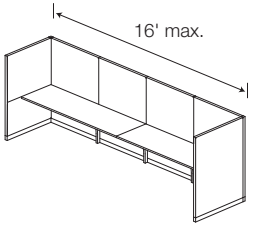
IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 6-high and 7-high runs and any height C-shaped workstations must be the same height as the spine run and 48"W.

Panel Configurations

Without Overhead Storage

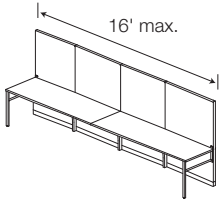
Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Supported Runs:



- 16' maximum
- Mid-supports
- Minimum wing panels or 2 support legs; and
- No overheads
- With or without frameless glass

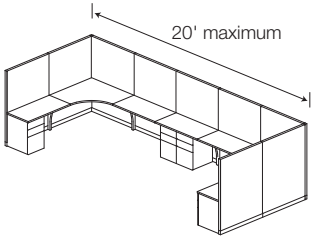
➤See minimum wing panel chart at right.



- 16' maximum
- Mid-supports
- Support legs or wing panels
- No overheads
- With or without frameless glass

Note: Not applicable with adjustable mid-supports.

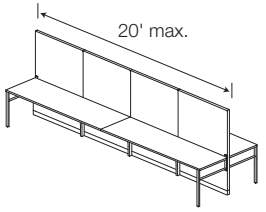
C-Shaped Workstation:



- 20' maximum
- Mid-supports
- Minimum wing panels
- 2 floor supports mid-run, minimum;
- Floor supports at end of wing panels, and
- No overheads
- With or without frameless glass

➤See minimum wing panel chart at right.

Balanced back-to-back:



- 20' maximum
- Balanced back-to-back
- Mid-supports
- Support legs, storage, or wing panels
- No overheads
- With or without frameless glass

IMPORTANT Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, support legs, or undersurface storage.

Definitions:

Unsupported panel runs—
Runs not attached on BOTH ends to a wall, wing panel, or floor support.

Floor support—
Undersurface storage units, support panels, or column legs

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage.

Height of Panel Run	Minimum Wing Width
2-high (30")	30"
3-high (42")	30"
3.5-high (50")	36"
4-high (54")	36"
5-high (68")	36"
6-high (80")	48"
7-high (93")	48"

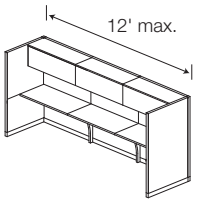
IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 6-high and 7-high runs and any height C-shaped workstations must be the same height as the spine run and 48"W.

Panel Configurations

With Overhead Storage

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

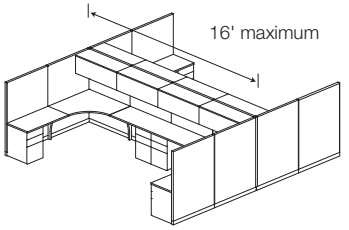
Supported Run:



- 12' maximum
- Mid-supports; and
- Minimum wing panels or one wing panel and one end-support leg
- With or without frameless glass
- For hi-lo applications with stacking frames: overheads balanced back to back (for hi-lo with full frames: overheads can be on one side only)

➤See minimum wing panel chart on page 130.

Balanced Back-to-Back:

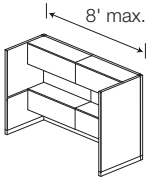


- 16' maximum
- Mid-supports
- Minimum wing panels; and
- Balanced back-to-back
- With or without frameless glass

➤See minimum wing panel chart on page 130.

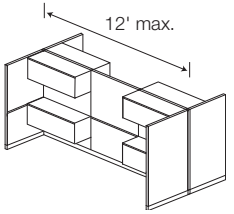
Note: Runs over 12' are required to be balanced back-to-back.

Stacked Overheads, Unbalanced:

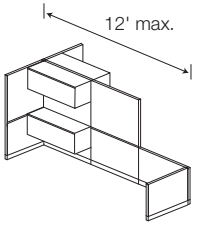


- 8' maximum
- 2 overheads stacked, maximum
- 4 overheads total
- Minimum wing panels
- With or without frameless glass

Stacked Overheads, Balanced Back-to-Back:



- 12' maximum
- 4 overheads per side maximum
- Balanced back to back
- Minimum wing panels
- With or without frameless glass



- 8' maximum stepped run
- Two overheads per side maximum;
- Balanced back to back
- Minimum wing panels
- With or without frameless glass

When stacking overheads, place the following at least two Traxx segments apart (e.g., at 3-high and 5-high):

- Square profile standard- or reduced-height hinged door overheads
- Square and radius profile reduced-height flipper door overheads
- Radius profile standard- or reduced-height hinged door overheads
- Lunar, curved, bevel overheads
- Flat profile overheads

When stacking overheads, place the following at least three Traxx segments apart (e.g., at 3-high and 6-high):

- Square profile standard-height flipper door overheads
- Radius profile standard-height flipper door overheads

➤See clearance chart at left.

IMPORTANT Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, support legs, or undersurface storage.

Definitions:

Unsupported panel runs—
Runs not attached on BOTH ends to a wall, wing panel, or floor support.

Balanced back-to-back—
Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Stacked Overhead Clearances:

These clearances apply between rows of overheads when placed two Traxx segments apart on 4- to 7-high panels or at 2-high and 3.5-high on a 3.5-high panel:

Overhead Profile	Clearance 4- to 7-high	Clearance 3.5-high
Square/Radius (19"H)		
–Hinged Doors	8.7"	3.0"
–Flipper Door*	19.1"	13.4"
Square/Radius (16"H)		
–Hinged Doors	8.7"	3.0"
–Flipper Door	8.7"	3.0"
Lunar	10.8"	5.1"
Curved	9.8"	4.1"
Bevel/Flat	8.7"	3.0"
Cubby	17.2"	11.5"

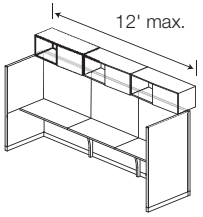
* Placed three segments apart. Not recommended on 3.5-high frames.

Panel Configurations

With Center-Mounted Overhead Storage

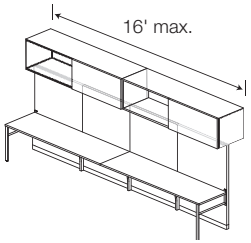
Features	➤See page 116
Application Guidelines	130
Power & Data Overview	146
Electrical Guidelines	152

Supported Run:



- 12' maximum
- Mid-supports; and
- Minimum wing panels or one wing panel and one end-support leg

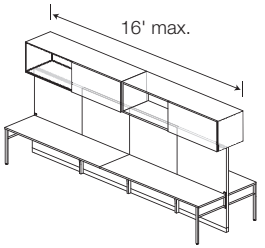
➤See minimum wing panel chart on page 130.



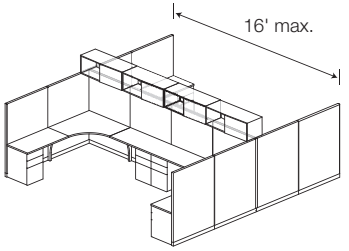
- 16' maximum
- Mid-supports
- Minimum wing panels; or
- Support legs, storage or wing panels

Note: Not applicable with adjustable mid-supports due to stability. Not recommended for 5H or stacking frames.

Balanced Back-to-Back:



- 16' maximum
- Balanced back-to-back
- Mid-supports
- Support legs, storage or wing panels

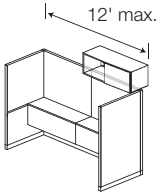


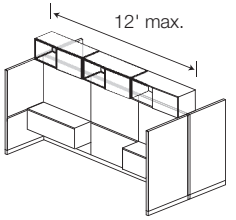
- 16' maximum
- Mid-supports
- Minimum wing panels; and
- Balanced back-to-back
- With or without frameless glass

➤See minimum wing panel chart.

Note: Runs over 12' are required to be balanced back-to-back.

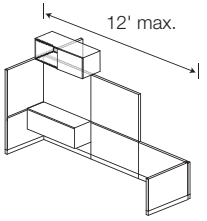
Stacked Overheads:





- 12' maximum
- Traxx-mount and center-mount overheads:
- Minimum wing panels
- With or without frameless glass

Note: Consider potential bracket interference if stacking center-mount above Traxx-mount overheads.



- 12' maximum stepped run
- Traxx-mount and center-mount overheads:
- Two overheads per side maximum;
- Balanced back to back
- Minimum wing panels
- With or without frameless glass

IMPORTANT Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, support legs, or undersurface storage.

Definitions:

Unsupported panel runs—
Runs not attached on BOTH ends to a wall, wing panel, or floor support.

Balanced back-to-back—
Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Center-Mount Overhead Heights:

Panel		***Top Cap***	
Config.	Height	Flat	Curved
Floor to Top of Overhead			
2H	29 1/2"	44 3/16"	44 9/16"
3H	42 1/8"	56 13/16"	57 3/16"
3.5H	49 1/32"	63 11/16"	64 1/16"
4H	54 23/32"	69 3/8"	69 3/4"
5H	67 5/16"	82"	82 3/8"
5H+1H	79 15/16"	94 5/8"	95"
5H+2H	92 9/16"	107 1/4"	107 5/8"
Wskf. to Bottom of Overhead

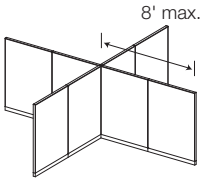
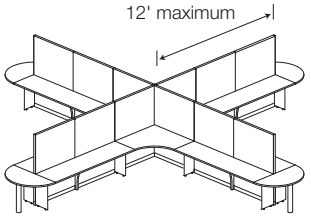
Unsupported Run:



- 8' maximum
- With or without frameless glass

Without Overhead Storage:



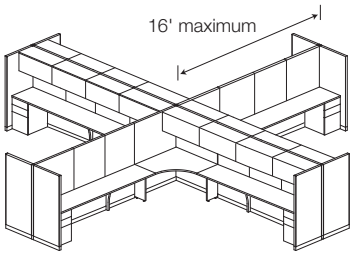
- 12' maximum
- Mid-supports;
- 12"D support panels;
- No overheads;
- Balanced back-to-back; and
- Column legs or stick legs for D-shape spanners
- With or without frameless glass

If adding center-mount or balanced, back-to-back overheads, or eliminating D-shape spanners, full-depth support panels are required on the ends of straight worksurfaces.

If adding overheads that will not be back to back, wing panels are required.
➤See minimum wing panel chart at right.

Mid-supports can also be used in place of 12"D support panels in balanced back-to-back applications.

With Overhead Storage:



- 16' maximum
- Mid-supports;
- Minimum wing panels or end-support legs; and
- Balanced back-to-back or center-mount overheads
- With or without frameless glass

➤See minimum wing panel chart at right. Total wing panel width must follow guidelines.

IMPORTANT Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, support legs, or undersurface storage.

Definitions:

Unsupported panel runs—
Runs not attached on BOTH ends to a wall, wing panel, or floor support.

Balanced back-to-back—
Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage.

Height of Panel Run	Minimum Wing Width
2-high (30")	30"
3-high (42")	30"
3.5-high (50")	36"
4-high (54")	36"
5-high (68")	36"
6-high (80")	48"
7-high (93")	48"

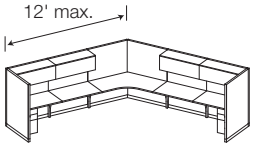
IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 6-high and 7-high runs and any height C-shaped workstations must be the same height as the spine run and 48"W.

Panel Configurations

120°/V and 120°/Y Configurations

Features	➤See page 116
Application Guidelines	130
Power & Data Overview	146
Electrical Guidelines	152

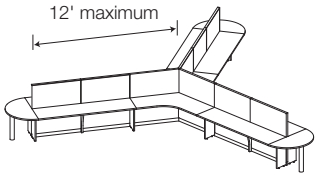
120°/V:



- 12' maximum
- Mid-supports; and
- Minimum wing panels or end-support legs;
- Floor supports on end of runs
- With or without frameless glass
- With or without face-mount or center-mount overheads

➤See minimum wing panel chart at right.

120°/Y without Overheads:

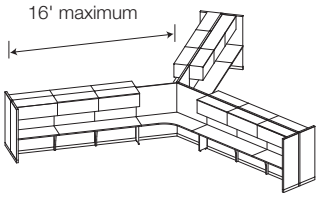


- 12' maximum
- Mid-supports;
- Minimum wing panels or floor supports on ends of runs;
- Column legs or stick legs for D-shaped spanners; and
- No overheads
- With or without frameless glass

➤See minimum wing panel chart at right.

Maximum run can be extended to 16' when panels are balanced back to back. Wing panels are required. Total wing panel width must follow guidelines.

120°/Y with Overheads:



- 16' maximum
- Mid-supports
- Minimum wing panels or end-support legs;
- Balanced back-to-back face-mount or center-mount overheads; and
- One floor support mid-run, minimum
- With or without frameless glass

➤See minimum wing panel chart at right.
at right. Total wing panel width must follow guidelines.

IMPORTANT Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, support legs, or undersurface storage.

Definitions:

Floor support—
Undersurface storage units, support panels, or column legs

Balanced back-to-back—
Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage.

Height of Panel Run	Minimum Wing Width
2-high (30")	30"
3-high (42")	30"

4-high (54")	36"
5-high (68")	36"
6-high (80")	48"
7-high (93")	48"

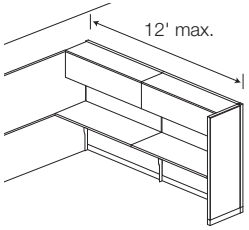
IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 6-high and 7-high runs and any height C-shaped workstations must be the same height as the spine run and 48"W.

Panel Configurations

Wall and Traxx-Mounted Configurations

Features	➤See page 116
Application Guidelines	130
Power & Data Overview	146
Electrical Guidelines	152

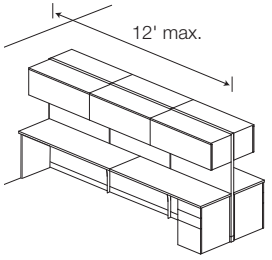
Unbalanced:



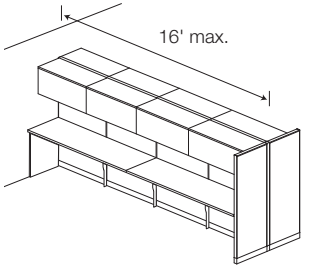
- 12' maximum
- Mid-supports;
- Floor support or wall-mounted Traxx to support worksurface end; and
- Minimum wing panel
- With or without frameless glass
- With or without face-mount or center-mount overheads

➤See minimum wing panel chart at right. Total wing panel width must follow guidelines.

Balanced Back-to-Back:

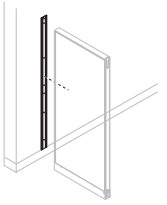


- 12' maximum
- Mid-supports
- Floor supports or wall-mounted Traxx to support worksurface end;
- Two minimum wing panels, support legs, or two full-depth support panels at the end of the run; and
- Balanced back-to-back
- With or without frameless glass
- With or without face-mount or center-mount overheads



- 16' maximum
- Mid-supports
- Floor supports or wall-mounted Traxx to support worksurface end;
- Two minimum wing panels at the end of the run; and
- Balanced back-to-back face-mount or center-mount overheads; and
- With or without frameless glass

➤See minimum wing panel chart at right. Total wing panel width must follow guidelines.



Wall-mount brackets and Traxx starter kits must be secured to the building wall by fastening into the stud or by using drywall fasteners. Selection and purchase of the proper attachment fasteners for your wall is the responsibility of the installer.

IMPORTANT Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, support legs, or undersurface storage.

Definitions:

Floor support—
Undersurface storage units, support panels, or column legs

Balanced back-to-back—
Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage.

Height of Panel Run	Minimum Wing Width
2-high (30")	30"
3-high (42")	30"
3.5-high (50")	36"
4-high (54")	36"
5-high (68")	36"
6-high (80")	48"
7-high (93")	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 6-high and 7-high runs and any height C-shaped workstations must be the same height as the spine run and 48"W.

Xsite Traxx and Tiles

Overview

Features ➤See page 116
Tile Height Relationships 138
Xsite Traxx 140
Tiles 141

Xsite tiles are available in widths ranging from 3" to 96" and in heights of 1- to 5-high segments. Segments are nominally 12⅝"H. Additional heights—.5-, 1.5-, and 3.5-high tiles—correspond to 3.5-high frames. Xsite tile types include:

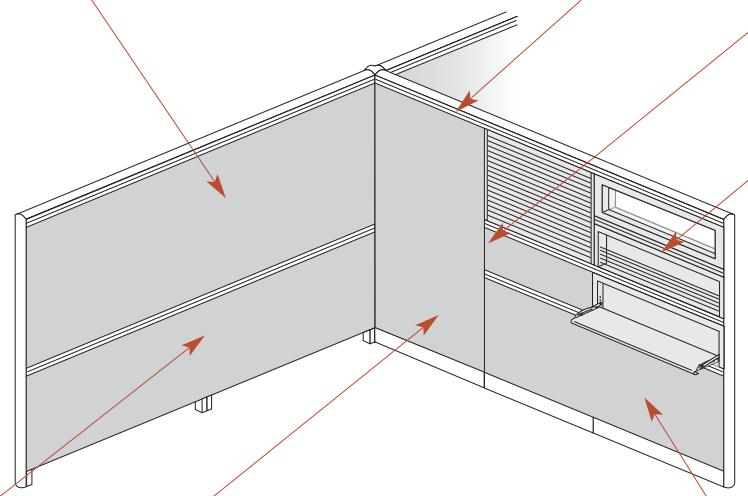
- Tackable acoustical
- To-the-floor tackable acoustical
- Glass
- Metal (perforated or embossed)
- Wood
- Laminate
- Paint
- Storage
- Fold-down
- Technology
- Power/data
- Marker board
- Slat
- Pass-thru

➤See page 138 for available sizes by tile type.

Tiles can span two or more frames on the interior or exterior of a workstation. Tiles cannot span over connectors.

Tile heights can be mixed on a panel run to create a segmented, vertical monolithic, or horizontal monolithic look.

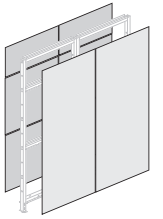
Note: Product information and application guidelines for technology tiles and power/data tiles are located in the Xsite Power and Data section.
➤See pages 156 and 162.



Xsite Traxx provides support for Xsite tiles, holding tiles in place at the top and bottom. They can also support worksurfaces, storage, and accessories.

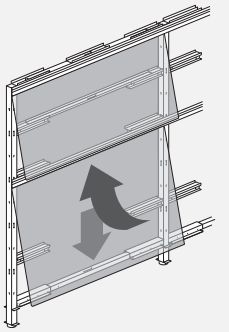
Tiles are installed side-by-side with no panel reveals to create a virtually seamless appearance.

3"D interior of frame can be utilized by specifying storage, fold-down, technology, power/data, or pass-thru tiles.



Tiles can vary in both height and width from one side of the frame to the other. Each side of the frame is independent of the other, allowing for different aesthetics and accommodating different functions. One side can provide a private office look while the other offers a segmented, highly personalized space.

How Tiles are Mounted:



Tiles lift in and lower into place. They are inserted into the Xsite Traxx at the top and rest on either a lower Xsite Traxx or the frame's bottom channel when in the 1st segment.

Xsite Traxx must extend the entire width of both the top and bottom of each tile. Mid-frame supports are required at each Traxx location that will support worksurfaces or storage. *Exception: Tiles that rest on the bottom channel use Traxx at the top of the tile only.*

Tiles may be omitted on panel runs where visually acceptable, provided no components are on the affected side of the frame.

Frame and Tile Height Relationships

Features	➤See page 116
Tile Availability Matrix	139
Xsite Traxx	140
Tiles	141

Illustrations at right show tile heights that match the frame height (monolithic panel plus stacking frames); however, many more tile combinations are possible.

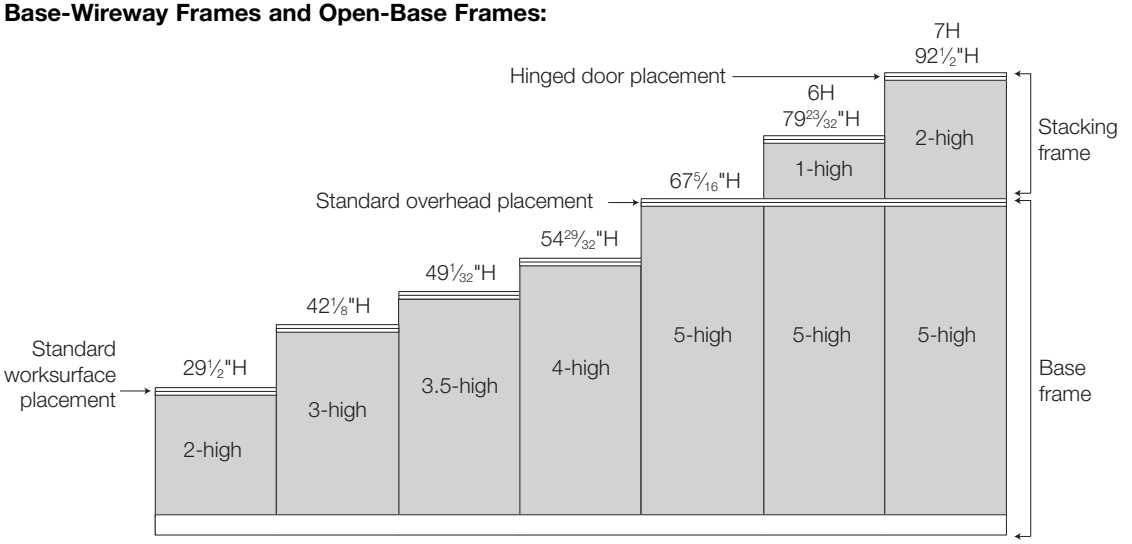
Dimensions are calculated to the top of the frame with glides fully recessed. Curved profile top caps will add ½" to overall height; flat profile top caps will add ¼". Glides provides 2½" adjustment.

Stacking of 1-high and 2-high frames, along with 1-high and 2-high tiles, can be used to achieve structures up to 6- or 7-high. Stacking is not applicable to 3.5-high frames.

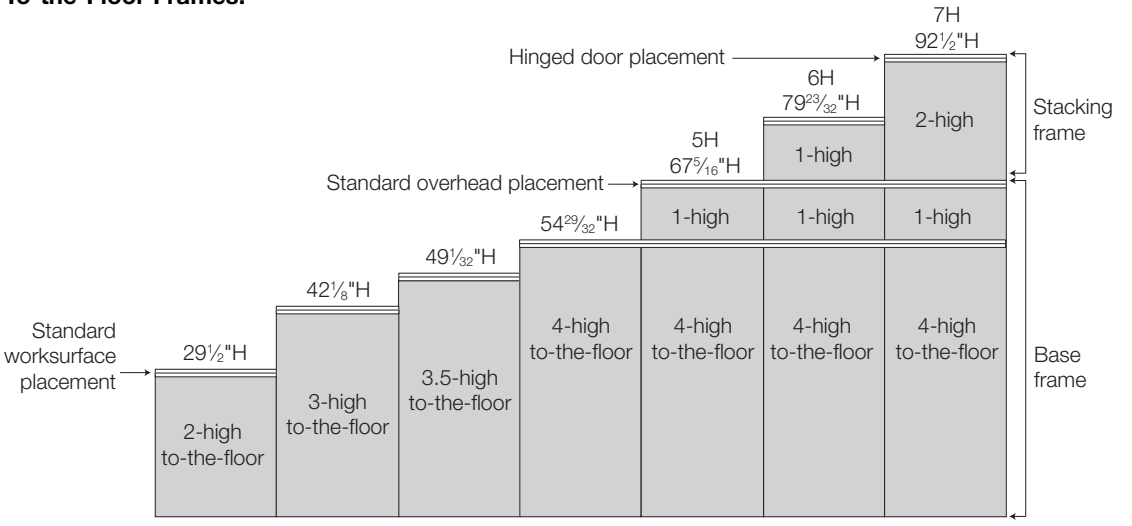
To-the-floor tackable acoustical tiles are available in 1-, 2-, 3-, and 4-high models. They are 3 13/16" longer than standard tiles and must be specified for the entire to-the-floor frame height (monolithic) or the lowest segment plus standard tiles to complete the frame above.
Note: 5-high models for to-the-floor frames are not available due to fabric limitations.

Combined tile heights must match the overall base frame height.

Base-Wireway Frames and Open-Base Frames:

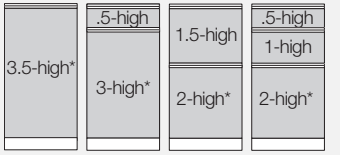


To-the-Floor Frames:



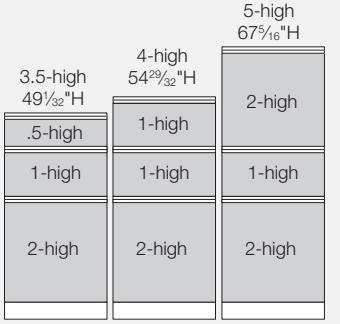
3.5-High Tile Combinations:

Only the height combinations shown below are possible for 3.5-high frames.



* For to-the-floor frames, specify a to-the-floor tile for the full frame or the lowest segment.

3.5-High Frame Traxx Relationships:



Traxx locations at the 2-high and 3-high segments correspond to the same locations on other frames. Traxx at the top fo the 3.5-high frame does not line up with possible Traxx locations on other frames.

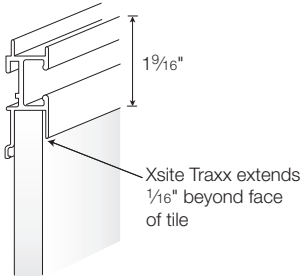
Note: Tackable acoustical (excluding to-the-floor), wood, laminate, and paint tiles are available in additional widths not listed above in 3" increments from 21"W up to the widest standard size offered for the tile height. Use an electronic specification tool to specify. Xsite tiles in woodgrain laminate available up to 57"W.

Xsite Traxx

Features	➤See page 116
Traxx and Tiles Overview	137
Tile Height Relationships	138
Tiles	141

Details

Xsite Traxx is a horizontal mounting rail that provides support for Xsite tiles, worksurfaces, storage, and accessories.



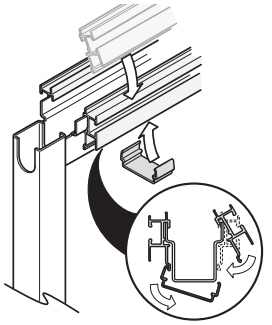
Tiles are held in place on the frame by Xsite Traxx at the top and bottom of the tile.

Xsite Traxx can span multiple frames up to 144"W for a seamless aesthetic.
Note: Xsite Traxx is available in additional widths (other than those listed on the pricing page in 3" increments up to the largest standard size. Use your electronic specification tools to specify.

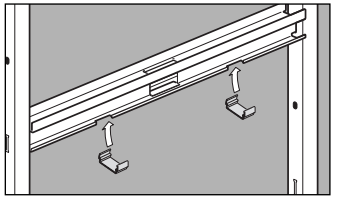
Finishes & Materials

- Xsite Traxx: extruded aluminum, paint

Connections



Xsite Traxx attaches to top channels, mid-frame supports, and stacking frames with Traxx lock brackets (included). Traxx lock bracket slips under the top channel and provides tension to hold both Xsite Traxx in place.



Mid-frame supports have two cut-outs at the bottom where Traxx lock brackets can attach. The location of these cut-outs requires Traxx to be attached within 6" of frame verticals. However, Traxx can span across multiple frames.

Planning Factors

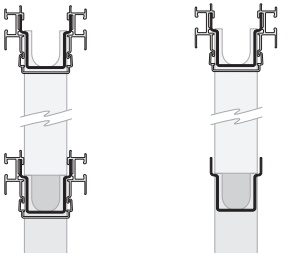
Xsite Traxx width and tile width do not have to correspond. Traxx can span across multiple tiles.

Xsite Traxx and Kimball Office Traxx are not interchangeable, but are functionally compatible. Xsite Traxx cannot be wall mounted.
➤See page 118 for off-module applications.

Xsite Traxx is required at the top of all frames on BOTH sides.

Mid-frame supports are required at each Xsite Traxx location below the top channel. Xsite Traxx may be located on one or both sides of frame where there is a mid-frame support.

Xsite Traxx can be scribed in the field.



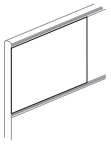
In stacking applications, Xsite Traxx must be located at the top of the stacking frame AND on either both sides OR neither side at the top of the base frame. Traxx lock bracket will not hold a single Xsite Traxx securely against the top channel.

Tiles

Tackable Acoustical, Wood, Laminate and Painted Tiles

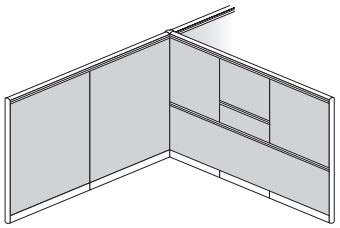
Features ➤See page 116
Traxx and Tiles Overview 137
Tile Height Relationships 138
Xsite Traxx 140

Details



Tackable acoustical, to-the-floor tackable acoustical, wood, laminate, and painted tiles are available in a variety of widths and heights.

➤See tile availability matrix on page 139.



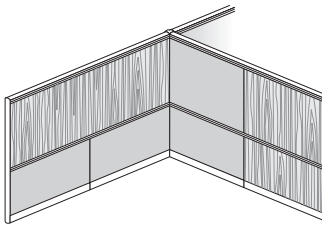
Vertical and horizontal monolithic or segmented aesthetics can be created with the use of tiles.

Tackable acoustical tiles are constructed of fiberglass and covered in fabric. They can be field scribed if necessary. Fabric is applied railroad style.

➤See page 586.

Wood, laminate and painted tiles are constructed of a 7/16" wood composite core and covered with premium-grade wood veneer or laminate, or painted.

Wood, laminate and painted tiles are very durable and are recommended for use under a worksurface, in lower positions in corridors or beside marker tiles. They can also be used to provide visual interest when creating a segmented look.

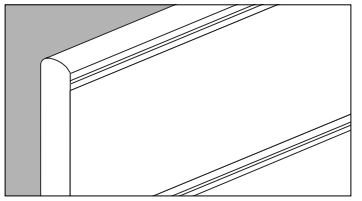


Woodgrain direction runs vertical on wood and woodgrain laminate tiles.

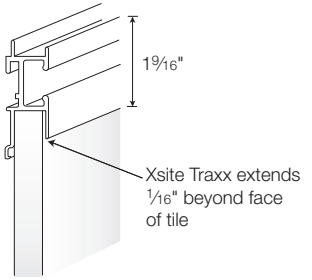
Finishes & Materials

- Panel fabrics
- Wood
- Laminate
- Paint (excluding metallic paint)

Connections



Tiles are held in place on the frame by Xsite Traxx at the top and bottom of the tile.



Xsite Traxx extends beyond the face of the tile by 1/16".

Power & Data

Power and data can be routed vertically in the panel's interior behind tackable acoustical, wood, laminate, and painted tiles.

Planning Factors

Specify tiles for both sides of the frame to complete the panel. Tiles may be omitted on panel runs where visually acceptable, provided no components are on the affected side of the frame.

Acoustical Ratings:

NRC = 0.70
STC = 13

Electrical:

c UL US LISTED

Class A—Tackable acoustical tiles. *Note: COM must comply with U.L. Standard 1286*

Class B—Laminate tiles

Class C—Wood and painted tiles

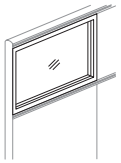
Tiles

Product Information

Glass and Pass-Thru Tiles

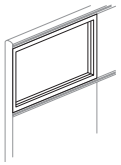
Features ➤See page 116
Traxx and Tiles Overview 137
Tile Height Relationships 138
Xsite Traxx 140

Details

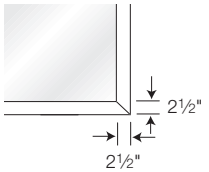


Glass tiles have an extruded aluminum frame (painted or covered with premium grade veneer) with 3mm-thick (clear or frosted) or 4mm-thick (linear vertical) tempered glass. Glass tiles are available in clear, frosted, and linear-vertical pattern. Glass tiles cannot be field scribed.

Glass tiles consist of two tile frames (one for each side of the frame) with a single pane of tempered glass between them. Only one glass tile is needed to complete both sides of the frame. They are available in 1-, 1.5-, 2-, and 3-high models.



Pass-thru tiles provide access from station to station. They consist of two tile frames (one for each side of the structure) and a rubber gasket. Only one pass-thru tile is needed to complete both sides of the frame. They are available in 2- and 3-high models.

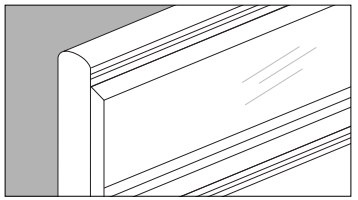


Frames on glass tiles and pass-thru tiles are 2½"W.

Finishes & Materials

- Glass tile frames: paint or wood
- Glass panes: clear, frosted, or linear vertical tempered glass
- Pass-thru tile frames: paint

Connections



Tiles are held in place on the frame by Xsite Traxx at the top and bottom of the tile.

Xsite Traxx extends beyond the face of the tile by 1⁄16".

Power & Data

Power and data cannot be routed through glass or pass-thru tiles.

Planning Factors

Mid-frame support can be removed or relocated if the standard placement interrupts the placement of a glass or pass-thru tile.

Hanging overheads over glass and pass-thru tiles is not recommended.

Consider accessory location. They may obstruct the view through glass tiles.

Glass or pass-thru tiles cannot be field scribed.

Glass tiles are not recommended for use next to adjustable wall-mount channel.

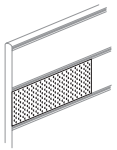
Tiles

Product Information

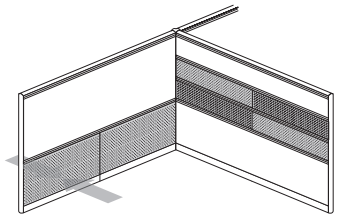
Metal Tiles

Features ➤See page 116
Traxx and Tiles Overview 137
Tile Height Relationships 138
Xsite Traxx 140

Details

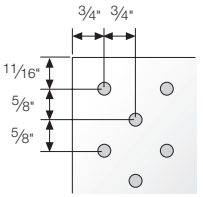


Metal tiles are available with a perforated or embossed (shown) surface. They are available in .5-, 1-, 1.5-, and 2-high models.



Perforated metal tiles, when used on both sides of a frame, increase ventilation below the worksurface or behind computer equipment. If perforated tiles are used on both sides of a run, it is recommended that they be the same size.

Metal tiles are washable, durable, and magnetic.

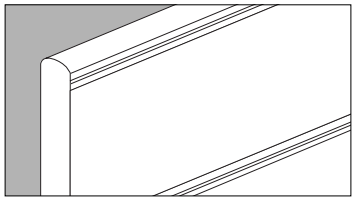


Pattern of perforated or embossed tiles is consistently spaced on centerlines.
Perforation hole size: 3/16" (5 mm)
Embossed circle size: 3/8" (10 mm)

Finishes & Materials

- 18 gauge steel: paint

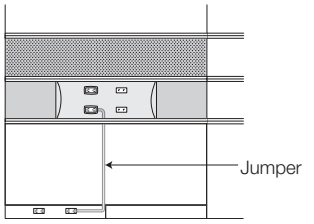
Connections



Tiles are held in place on the frame by Xsite Traxx at the top and bottom of the tile.

Xsite Traxx extends beyond the face of the tile by 1/16".

Planning Factors



Do not use a perforated metal tile below a technology or power/data tile to avoid seeing the jumper passing through the structure.

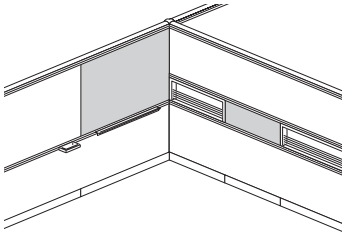
Tiles

Product Information

Marker Board and Slat Tiles

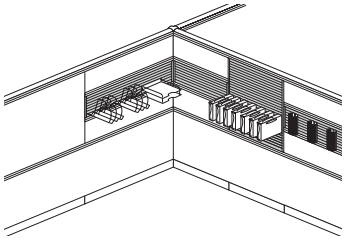
Features ➤See page 116
Traxx and Tiles Overview 137
Tile Height Relationships 138
Xsite Traxx 140

Details

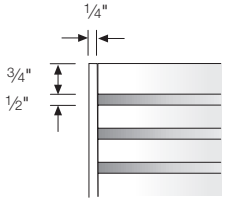


Marker boards are available in variety of tile widths and heights to provide a larger writing surface for meeting spaces and smaller surfaces for private workspaces.

Expo or Expo2 dry erase markers are recommended for use on marker boards. Low-odor dry erase markers are not recommended, as they may leave undesirable results when erased.



Slat tiles allow work tools to be placed in appropriate areas to accommodate individual user needs. They accommodate all Kimball Office metal work tools.



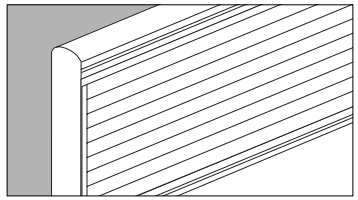
Slats are ¾"H; space between slats is ½"H. Trim channel is ¼"W.
.5-high = 4 slats
1-high = 8 slats
1.5-high = 14 slats
2-high = 18 slats
3-high = 28 slats

Finishes & Materials

Marker Board Tiles
- Core: standard 7/16" wood composite
- Erasable marker board surface: 409M Icey White or 483M Off White
- Vertical edges: black PVC

Slat Tiles
- Extruded aluminum: paint

Connections



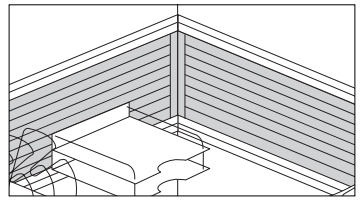
Tiles are held in place on the frame by Xsite Traxx at the top and bottom of the tile.

Xsite Traxx extends beyond the face of the tile by 1/16".

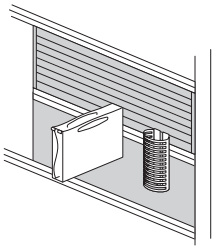
Monitor arms can be used on 18", 24", and 30"W 1-high and 2-high slat tiles. 2-high tiles require an additional mid-frame support, specified separately. Only one monitor arm per slat tile can be accommodated.

Trim channel on slat tiles prevents tools from spanning across two slat tiles. Tools can hang within ¼" of edge of the tile. Trim can be removed to allow tools to span across two slat tiles.

Planning Factors



Slat tiles can be placed at right angles to each other in a corner.



Consider what will be above and below the accessory. It may interfere with other tiles such as glass or marker board.

Slat tiles placed behind overheads can provide functionality inside the overhead, since the back is open.

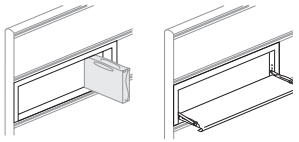
Tiles

Product Information

Storage and Fold-Down Tiles

Features	➤See page 116
Traxx and Tiles Overview	137
Tile Height Relationships	138
Xsite Traxx	140

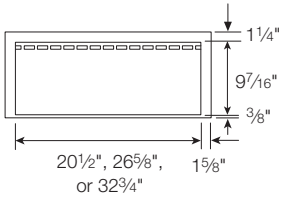
Details



Storage and fold-down tiles maximize space by using the interior of the structure. Both are available in 1-high in four widths: 18", 24", 30", and 36".

Fold-down tile features a one-piece door that can be opened to provide a surface for impromptu meetings. Fold-down surface heights:

Mounted at	*Surface height*
2-high	17¼"
3-high	30"
4-high	42½"
5-high	55"
6-high	67¾"
7-high	80¼"

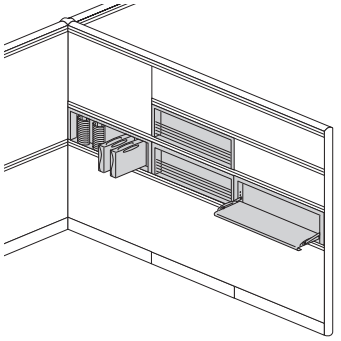


Finishes & Materials

Tile

- 18 gauge steel: paint

Connections



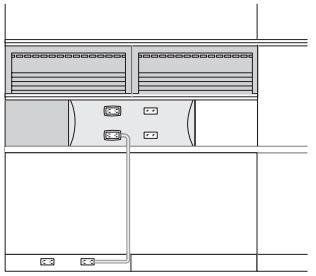
Storage tiles accept a variety of accessories, specified separately, to accommodate the user's individual work requirements.

Planning Factors

Storage tiles use the interior space of the frame; therefore, they cannot be placed back to back, nor can a storage tile be placed back to back with a power/data tile.

Specify tackable acoustical, wood, laminate, painted, metal, marker board, or slat tiles for the opposite side of the panel behind storage tiles.

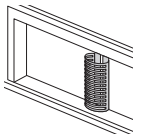
Storage and fold-down tiles can be installed at the 2-high segment and above. On a 3.5-high frame, they can be installed at worksurface height with a .5-high tile above.



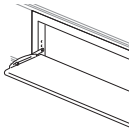
Do not use a storage tile below a technology or power/data tile (shown) as it will interfere with the vertical routing of power and data.

Storage and fold-down tiles cannot cross a frame or connector and cannot be field scribed.

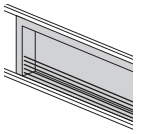
Related Products



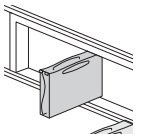
CD holder holds 12 CDs. It takes up the space of 3 slots in storage tile. Painted metal.
➤See the Perks Price List to specify.



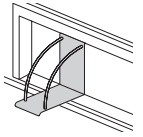
Fold-down accessory kit provides a fold-down surface for existing storage tiles. It is available in three widths to correspond to storage tile.



Web kit provides five horizontal elastic bands (black) to hold items in open view. Web kit consumes the entire width of the tile. They cannot be combined with other accessories.



Translucent file pocket accommodates standard file folders and other items. It requires two slots; consumes half of each slot (two file pockets placed side by side consume 3 slots). Interior dimensions: 1¾"D x 11¾"W x 9³⁄₁₆"H.
➤See the Perks Price List to specify.



Binder shelf works only in wide center slot of 36"W storage tile.
➤See the Perks Price List to specify.

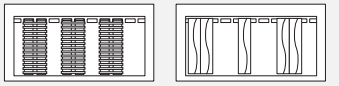
Storage Tile Capacity:

	Storage Tile Width 24"	30"	36"
CD holder	3	4	5
File pocket	10	13	16
Binder shelf	–	–	1
Fold-down accessory kit	1	1	1

Note: This table indicates the quantities of accessories that can be accommodated in a single storage tile. It assumes only one type of accessory is used in each tile.

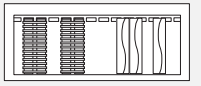
Examples of Mixed Accessories:

24"W Storage Tile
11 slots



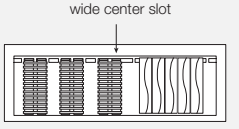
- 3 CD holders
- 5 file pockets

30"W Storage Tile
14 slots



- 2 CD holders
- 2 file pockets

36"W Storage Tile
15 slots



- 3 CD holders
- 4 file pockets

Power & Data

Overview

Features ➤See page 116
Base Wireway 147
Electrical Guidelines 152

Xsite offers a 10-wire power system for the base wireway.
Options include:
- 10-wire shared neutral: 6 hot (3 and 3), 2 neutral, 2 ground
- 10-wire shared neutral can be wired for 8-wire configuration by using 4 hot (3 and 1 or 2 and 2), 2 neutral, 2 ground
- 10-wire independent neutral: 4 hot (2 and 2), 4 neutral, 2 ground

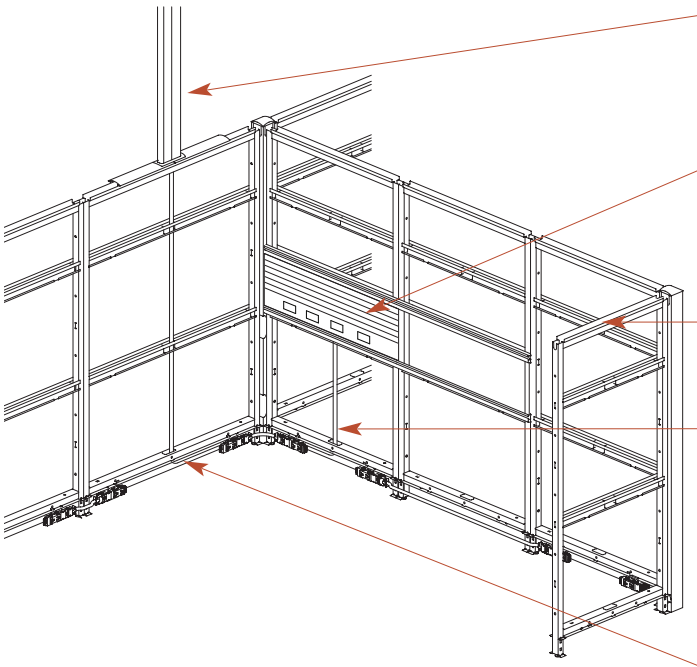
Note: Independent and shared neutral components cannot be mixed.

All electrical components are non-directional. The base wireway harness simply hooks into place—no mechanical attachment is required.
Components include:
- Base or ceiling power feeds
- Base wireway harness
- Base wireway jumper
- Pass-thru jumpers
- Technology tile and components
- Power/data tile and components
- Hardwire components

The building's power capability should be determined before power is configured and components are specified.

Xsite is approved to accept Chicago electrical.

Vertical cable managers are available separately to conceal task light cords.
➤See page 240 to specify.



Ceiling power/data pole allows power and data to be dropped down from above.

Technology tiles provide access to power and data at 2nd, 3rd, 4th, and 5th segments. Technology tiles utilize an 8-wire system.

Top channel provides top lay-in capability

Data cables may be distributed through the frame and connectors.
➤See page 166 for cable management information.

Base wireway power harnesses and jumpers distribute power through the base.

Base wireway power entry allows power to enter at the floor, wall, or column. Power can then be distributed to the base and/or jumped up to a technology or power/data tile.

Wireway Cover Options:

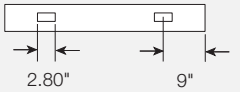
NP2	2 non-punched
P1	1 power punched 1 non-punched
P2	2 power punched
PD1	1 power & data punched 1 non-punched *Not available on 24"W*
PD2	2 power & data punched *Not available on 24"W*

Note: All punched (power and power & data) covers include two wireway cover doors.

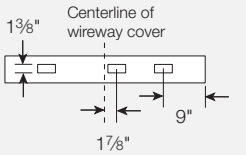
Wireway Cover Punch Dimensions:

2.80"W x 1.38"H.
Applies to both power and data punches.

No power or data access



Power access only



Power and data access

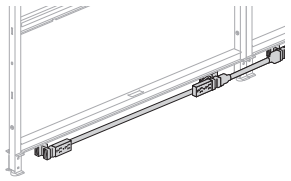
Base Wireway Components

Product Information

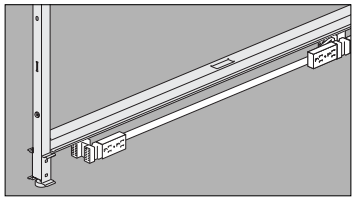
Harnesses and Receptacles

Features	➤See page 116
Power & Data Overview	146
Ceiling Power	151
Electrical Guidelines	152

Details



Base wireway harnesses distribute power through the base of the frame.



Base wireway harness provides two duplex receptacles per side, for a total of four.

Duplex receptacles are rated at either 15 or 20 amps and may be installed back-to-back in the base wireway. 20-amp models, required for some large equipment applications, protrude ⅛" more than 15-amp models. Duplex receptacles are available in black, white, or orange for use as a visual aid.
Note: Orange color duplex receptacles for the base wireway do not match the dark orange color for technology tile receptacles.

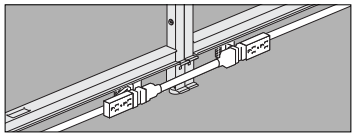
Up to four duplex receptacles (two per side) can be installed in each base wireway.

Finishes & Materials

Harness

- Ends: injection-molded plastic
- Conduit: ¾" oval

Connections



Jumper cables are used to pass power from panel to panel or through non-powered panels.
➤See page 148.

Building-to-panel power connections can be accomplished whether the power source is in the wall, floor, or ceiling.
➤See pages 149–151.

Power entry will consume one duplex receptacle location.

Power & data poles bring voice/data cables and electrical wiring from the ceiling to the panel run.
➤See page 151.

Planning Factors

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

Specify the appropriate harness based on the corresponding width of the frame. Use 24", 27", and 30"W harnesses for the corresponding frame width. For 33"–36" widths use a 36"W harness; for 39"–42" widths use a 42"W harness; for 45"–48" widths use a 48"W harness.

One receptacle location will be consumed if the harness will have a power entry (floor/wall or ceiling) jumper for technology tile or power/data tile attached.

Specify a base wireway cover without power or data access if access to power is not needed. Receptacles and a punched wireway cover can be added later as needed.

Independent and shared neutral components cannot be mixed.

New York City electrical applications require a special power entry.
➤See page 149.

Hardwire electrical components for use in the base wireway are available for areas where local codes do not accept modular electrical plug-in components.
➤See page 150.

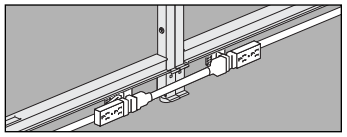
Base Wireway Components

Product Information

Jumpers

Features	➤See page 116
Power & Data Overview	146
Ceiling Power	151
Electrical Guidelines	152

Details



Jumpers continue power between two adjacent base wireway harnesses.

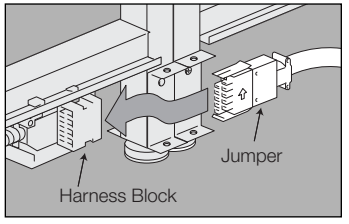
Base wireway jumpers are available in 5 different models and are specified according to the application.
➤See chart at right.

Pass-thru jumpers are available in 8 different models to pass power through a frame base where duplex receptacles are not required. Size required is determined by application.
➤See chart on page 234.

Finishes & Materials

- Ends: injection-molded plastic
- Mesh sleeving
- Metal oval conduit

Planning Factors



Base wireway jumpers and pass-thru jumpers connect to a base wireway harness on each end. They cannot connect to another jumper.

Independent and shared neutral components cannot be mixed.

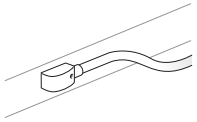
Base Wireway Components

Product Information

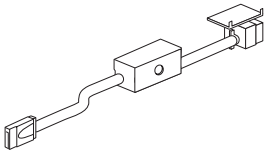
Power Entries

Features	➤See page 116
Power & Data Overview	146
Ceiling Power	151
Electrical Guidelines	152

Details



Base power entries deliver power from building to frame.



New York City base power entries are available to meet codes that require a hardwired infeed connection to modular electrical systems inside the frame. New York City approval number E44747.

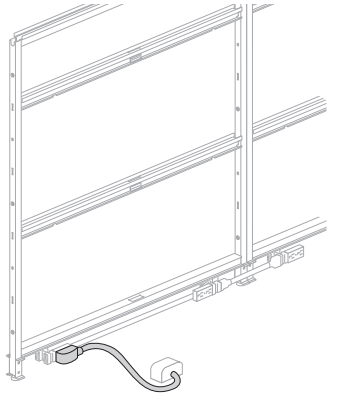
Capacity:

- Six 20-amp circuits for shared neutral.
- Four 20-amp circuits for independent neutral.

Finishes & Materials

- Black liquid-tight conduit; 6' length

Connections



Base power entry can be adjusted in the field for left- or right-hand applications.

New York City model passes power in one direction and accepts base wireway jumper cable on opposite end.

Planning Factors

It is most cost effective to place your infeeds at the ends of spine runs where the highest usage is expected. You can then feed returns only as needed.

Multiple power entries cannot be interconnected.

Independent and shared neutral components cannot be mixed.

System connection to building power must be made by a licensed electrician.

Base power entry extends 1¾" from face of frame; allow proper clearance.

One receptacle location will be consumed in the base wireway harness by floor/wall power entry.

If the junction box is on the wall directly behind the system connection, approximately 12" will be required for the conduit. To avoid this space requirement, offset the junction box from the system connection.

New York City model replaces the base wireway harness and eliminates two receptacles. Use in 30"W or greater structure due to box size. The electrical contractor must furnish box fittings, conduit, and wiring from the system junction box to the building power source connection for New York City models.

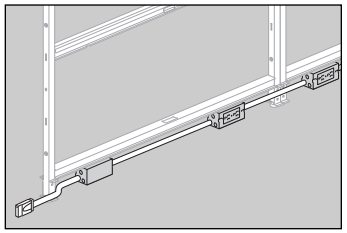
Base Wireway Components

Product Information

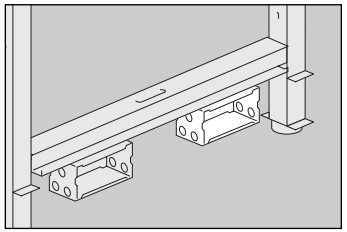
Hardwire Boxes & Cover Plates

Features ➤See page 116
Power & Data Overview 146
Ceiling Power 151
Electrical Guidelines 152

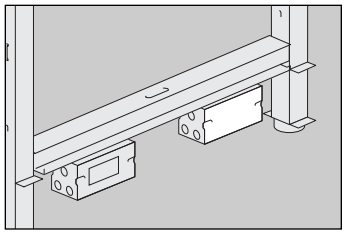
Details



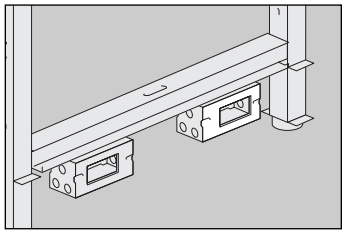
Hardwire components allow field hardwiring of power within the base frame where required by local codes.



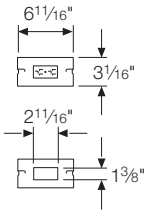
Hardwire box accommodates junctions and receptacles.



Hardwire cover plate is solid to cover and protect the contents of the hardwire box.



Hardwire cover plate for power provides an access hole, sized to fit Pass & Seymour 26242 series receptacles (or compatible size and type).



Cover plates are required for both sides of the hardwire box.

Planning Factors

For hardwire applications, specify non-powered panel frame with appropriate wireway cover punch option and hardwire electrical components separately.

Specify power or power and data base wireway covers.

Power/data tiles are compatible with hardwire applications.

Ceiling Power Entries and Power/Data Poles

Features ➤See page 116
Power & Data Overview 146
Base Wireway 147
Electrical Guidelines 152

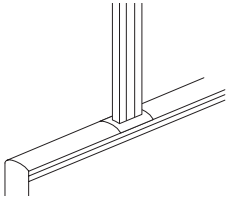
Details

Ceiling power entries deliver building power to the base wireway in applications where power must be dropped down from above to clusters in open areas away from walls or where power is not accessible in the floor. Ceiling power entry is 12' in length.

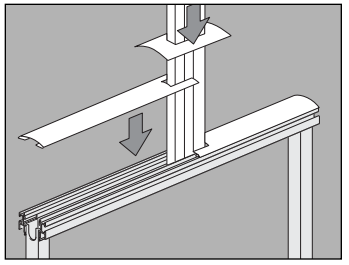
Note: Models detailed on this page are not for use with technology tiles. ➤See page 157 for ceiling power entries for use with technology tiles.

Ceiling power entry capacity:

- Six 20-amp circuits for shared neutral
- Four 20-amp circuits for independent neutral



Power/data pole provides a chase for power or data drops from the ceiling. Pole is specified separately from power entry.



Pole is divided into two sections. A top cap and power pole trim plate are provided to blend into frame top cap. Pole is 5½"W x 82"H.

Power/data pole capacity:

- 50 ¼"-diameter cables at 40% fill or 126 ¼"-diameter cables at 100% fill (non-powered)
- 46 ¼"-diameter cables at 40% fill or 117 ¼"-diameter cables at 100% fill, (powered)
- Over 2 square inches of capacity per section of power/data pole

Finishes & Materials

Ceiling Power Entry

- ¾" oval metal conduit

Power/Data Poles

- Pole: extruded aluminum, paint
- Top cap: painted steel or wood veneer
- Trim plate: paint

Planning Factors

Plan for ceiling power entries where no glass, storage, or pass-thru tiles are used, since the conduit must have a direct path to the base wireway harness.

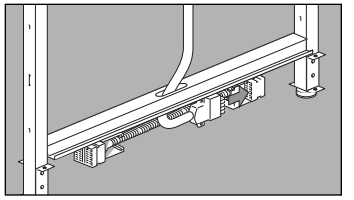
It is most cost effective to place your infeeds at the ends of spine runs where the highest usage is expected. You can then feed returns only as needed.

Multiple power entries cannot be interconnected.

Independent and shared neutral components cannot be mixed.

System connection to building power must be made by a licensed electrician. Ceiling power entries do not include junction box and related connectors.

6" of ceiling power entry conduit is required above ceiling for electrical connection.



Power entry must plug into right hand block of base wireway harness.

Use ceiling power entry and poles on frame that is a minimum of 24"W for terminal block to pass through frame opening.

Access to ceiling source is regulated by National Electric Code to 12' maximum conduit for our standard infeed construction. Ceiling power entry in lengths up to 24' are available with custom quote for alternate construction.

New York City approval number is E44747.

Maximum Ceiling Height for Power/Data Pole:

With Ceiling Power Entry	
2-high Frame	
24"–48"W	100 15/16"
3-high Frame	
24"–48"W	113½"
3.5-high Frame	
24"–48"W	120½"
4-high Frame	
24"–48"W	126⅛"
5-, 6-, or 7-high Frame	
24"W	140¾"
30"W	137¾"
36"W	134¾"
42"W	131¾"
48"W	128¾"

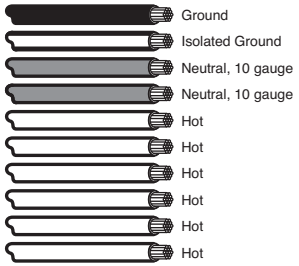
Without Ceiling Power Entry	
2-high	100 15/16"
3-high	113½"
3.5-high	120½"
4-high	126⅛"
5-high	138¾"
6-high	151⅜"
7-high	164"

Base Wireway Electrical System

Application Guidelines

Shared Neutral 10-Wire (10S) Circuit Configurations

Features	➤See page 116
Power & Data Overview	146
Base Wireway	147
Ceiling Power	151



The 10-wire configuration supports work environments having heavy intensity, advanced computerized equipment requirements. A 10-wire system consists of six 12-gauge hot wires, two 10-gauge neutral wires, and two 12-gauge ground wires.

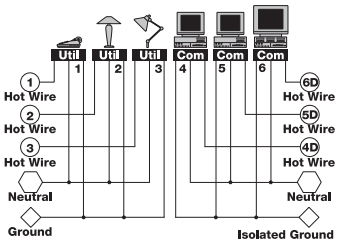
➤See electrical service info at left.
➤See page 153 for wiring diagrams.

The same components are used for all configurations through the addition or substitution of receptacles. This simplifies specifications and allows a faster understanding of the system. In addition, components used in the bottom channel are also used in other locations except in technology tiles.

Xsite's 10-wire electrical system is rated for 20-amp service. To support the usage, 15-amp convenience receptacles can be placed anywhere along the leg of the electrical connection. In the event that an appliance, such as a larger printer/copier/plotter needs to have a 20-amp receptacle, it is recommended to use a dedicated circuit with a 20-amp receptacle. Using 15-amp convenience receptacles will aid in ensuring that no one leg of the system can pull too much current, which could potentially cause the system to trip out and lose power across the entire system.

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided here is intended to assist specifiers. Access to ceiling power source is regulated by National Code to a maximum of 12 ft. conduit.

3 and 3 (10-wire):



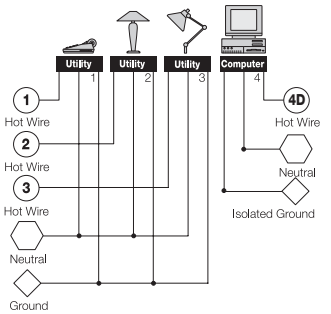
Circuits 1, 2, and 3 share a common 10 gauge neutral and 12 gauge ground wire, providing three designated circuits for lighting and other general/utility equipment.

Circuits 4, 5, and 6 share a common increased size neutral and isolated ground wire, providing three designated circuits for computer applications.

Circuit	*15-amp Model*	*20-amp Model*
1	36PER110S	36PER110S20
2	36PER210S	36PER210S20
3	36PER310S	36PER310S20
4	36PER4D10S	36PER4D10S20
5	36PER5D10S	36PER5D10S20
6	36PER6D10S	36PER6D10S20

IMPORTANT: Technology tiles cannot be connected to power in a base wireway utilizing this configuration.

3 and 1 (8-wire):

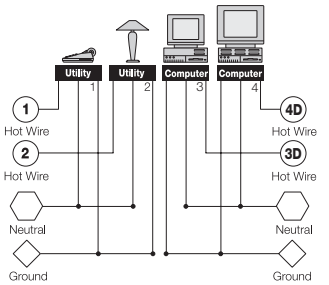


Circuits 1, 2, and 3 share a neutral and common ground, providing circuits for general electrical needs. Customarily, one or more of the circuits is reserved for lighting or other everyday uses, which allows control by central or master switching.

Circuit 4 consists of three separate conductors (hot, neutral, and ground) and meets the BIFMA/ANSI definition for a dedicated circuit.

Circuit	*15-amp Model*	*20-amp Model*
1	36PER110S	36PER110S20
2	36PER210S	36PER210S20
3	36PER310S	36PER310S20
4	36PER4D10S	36PER4D10S20

2 and 2 (8-wire):



Circuits 1 and 2 provide a pair of designated circuits for general electrical needs.

Circuits 3 and 4 provide a pair of designated circuits for computer applications.

Circuit	*15-amp Model*	*20-amp Model*
1	36PER110S	36PER110S20
2	36PER210S	36PER210S20
3	36PER3D10S	36PER3D10S20
4	36PER4D10S	36PER4D10S20

Features	➤See page 116
Power & Data Overview	146

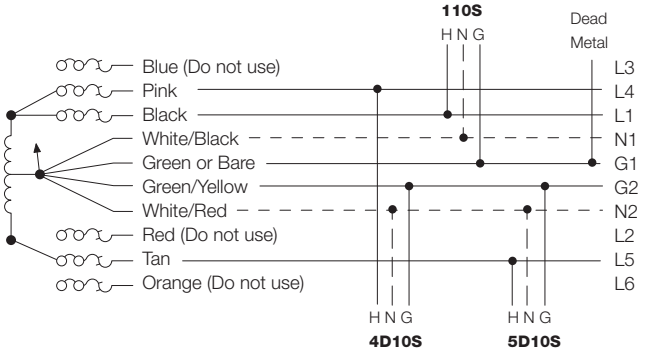
Receptacles: 110S, 4D10S, 5D10S

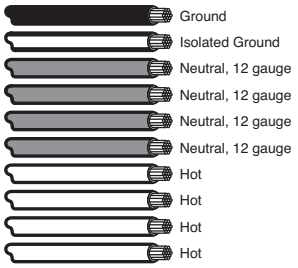


Base Wireway Electrical System

Application Guidelines

Independent Neutral 10-Wire (10D) Circuit Configurations

Features ➤See page 116
Power & Data Overview 146
Base Wireway 147
Ceiling Power 151



The 10-wire configuration supports work environments having heavy intensity, advanced computerized equipment requirements. An independent neutral 10-wire system consists of four 12-gauge hot wires, four 12-gauge neutral wires, and two 12-gauge ground wires.
➤See page 155 for wiring diagrams.

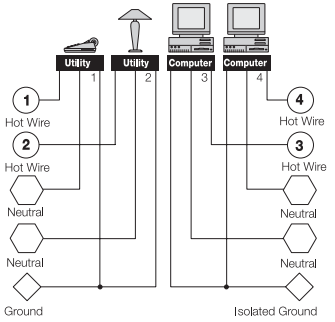
The same components are used for all configurations through the addition or substitution of receptacles. This simplifies specifications and allows a faster understanding of the system. In addition, components used in the bottom channel are also used in other locations.

Base wireway independent neutral (10D) system cannot be used with technology tiles.

Xsite's 10-wire electrical system is rated for 20-amp service. To support the usage, 15-amp convenience receptacles can be placed anywhere along the leg of the electrical connection. In the event that an appliance, such as a larger printer/copier/plotter needs to have a 20-amp receptacle, it is recommended to use a dedicated circuit with a 20-amp receptacle. Using 15-amp convenience receptacles will aid in ensuring that no one leg of the system can pull too much current, which could potentially cause the system to trip out and lose power across the entire system.

IMPORTANT Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided here is intended to assist specifiers. Access to ceiling power source is regulated by National Code to a maximum of 12 ft. conduit.

2 and 2 (10-wire):



Circuits 1 and 2 each have a neutral wire and share a common ground wire, providing a pair of designated circuits for lighting and other general/utility equipment.

Circuits 3 and 4 each have a neutral wire and share an isolated ground wire, providing a pair of designated circuits for computer applications.

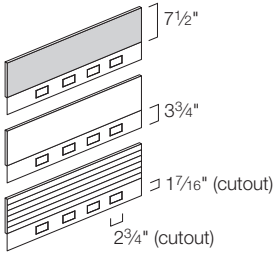
Technology Tiles

Features ➤See page 116
Power & Data Overview 146
Tech Tile Electrical 157
Circuit Configurations 160

Details

Technology tile provides power and data at the 2nd, 3rd, 4th or 5th segments for access below the worksurfaces, at worksurface height, at standing height, or at the overhead position. Technology tiles utilize an 8-wire electrical system.



Three header options to meet user needs include:
- Tackable fabric
- Marker board
- Slat

Note: Marker board tiles should not be used on unsupported runs due to panel movement when writing on the surface.

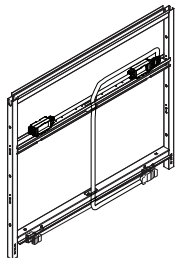
Two to six cut-outs, depending on the width of the tile, are provided in each technology tile to accommodate duplex receptacles and/or data ports. The in-line arrangement of the cut-outs provide a clean aesthetic.
➤See chart on page 158 for configuration options.

Technology tiles without cutouts are available for a seamless look.

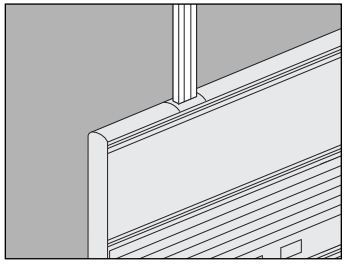
Finishes & Materials

- Tile: formed steel, paint
- Tile header:
  - –Tackable fabric
  - –Slat: extruded aluminum, paint
  - –Erasable marker board:
    409M Icey White or
    483M Off White
    (edges: black PVC)

Connections



Technology tiles may be powered from the base wireway with a vertical jumper. One base receptacle location will be used for the vertical jumper; no receptacle location in the technology tile is required/lost for the vertical jumper.



Ceiling power entry for technology tile can be used to bring power to the tile from above. This model cannot be used to route power down to the base wireway.

Power cannot be jumped from one technology tile to another through a connector or from a technology tile to a power/data tile.

Planning Factors

Technology tiles can be used in both Xsite cubicle and benching applications.

Technology tiles should be placed back to back for optimum component utilization. The same arrangement of duplex and data receptacles should be used in both tiles.

Technology tiles cannot be used back to back with storage tiles or power/data tiles since both tiles use the interior space of the frame.

Specify technology tiles to match the width of the frame.

Technology tiles without cutouts must be specified where pass-through jumpers will be used.

Stacking frames can accept technology tiles where only data is required. Power cannot be installed in this application because the power block mounting brackets must attach to the mid channel.

Hole cover plates, specified separately (10 per package), are recommended to cover unused power blocks and where cut-out is not being used for data.

Consider the tile below a technology tile in base entry applications. The jumper needs to pass from the base through the interior of the frame to the tile; therefore, storage tiles or any tiles where the jumper may be visible are not recommended.

Related Products

Technology tile electrical components must be specified separately.
➤See page 157.

Technology slat tile can support one or two Perks® single-monitor arms (model 99KSMAM2SMS). Perks work tools are available.
➤See the Perks Price List.

Power/data tile components cannot be used with technology tiles.

Expo or Expo2 dry erase markers are recommended for use on marker boards. Low-odor dry erase markers are not recommended.

Acoustical Ratings:

NRC = 0.70
STC = 13

Electrical:

c UL US LISTED

Class A—Tiles with tackable acoustical header.
Note: COM must comply with U.L. Standard 1286

Class B—Tiles with marker board header.

Technology Tile Power/Data Components

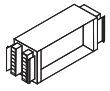
Features ➤See page 116
Power & Data Overview 146
Circuit Configurations 160

Details

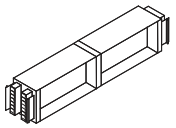
Technology tile components are required to provide power and data access to the tile.

Power components for technology tiles are offered in kits based on application with specific models for each tile width. Kits include the appropriate quantity and size of power blocks, mounting brackets and hardware, harnesses, vertical and/or horizontal jumpers for the application.
➤See page 158 for kit descriptions.

Individual components in the kits may ship separately. Use assembly instructions found online at: www.kimballoffice.com/resources/assembly.aspx?sID=54

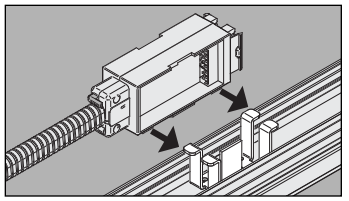


Single Block

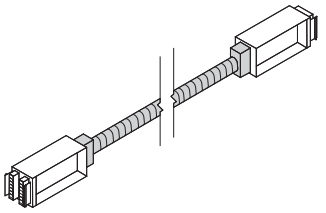


Double Bllock

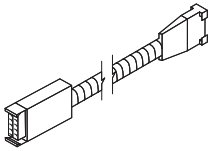
Power blocks are either single or double. Both single and double blocks are two sided and each opening can house a duplex receptacle:
- Single power block holds 1 duplex receptacle per side; total of 2
- Double power block holds 2 duplex receptacles per side; total of 4



Mounting brackets hold power blocks and are standard with the kit. A metal template also ships standard with the brackets (one per order) to assist with correct placement of the mounting brackets.

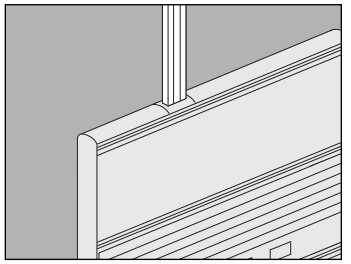


Single power block assemblies, for use behind a single tile, include an attached power harness (flexible metal conduit).



Jumpers are used to pass electricity from one point to another. There are four types of jumpers:
- Horizontal (tile-to-tile)
- Vertical (base wireway-to-tile)
- Pass-thru
- Double block-to-double block

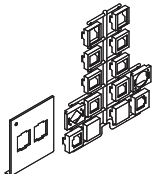
Hardwire box allows hardwiring of power with the base of the frame to comply with local codes.



Ceiling power entry for technology tile delivers power to the tile by dropping power down from above to clusters in open areas away from walls or where power is not accessible in the floor. Ceiling power entry is 12' in length. The ceiling power entry assembly can be used with a ceiling power/data pole. Ceiling power entry connects to the end of a power block.

Duplex receptacles for use with technology tiles are rated at 15 or 20 amps. 20-amp models, required for some large equipment applications, protrude ⅛" more than 15-amp models. Duplex receptacles are available in black, white, or orange for use as a visual aid; specified separately. Trim plate is standard with each receptacle: black with Cinder or Dark Orange receptacles or white with Designer White receptacles. *Note: Dark orange receptacles are not the same color as orange base wireway receptacles.*

Hole cover plates, specified separately (10 per package), are recommended to cover unused power blocks or where cut-out is not being used for data.



Data plates have two openings and come with a voice/data adapter kit to accommodate couplers/jacks from multiple suppliers. Two of each style of adapter are standard in the kit.
➤See page 158 for adapter/manufacturer chart.

Finishes & Materials

- Power blocks: injection-molded, PVC-free plastic
- Power block brackets: formed steel
- Block-to-block and panel-to-panel jumpers: injection-molded, PVC-free plastic ends and metal conduit
- Vertical base-to-tile jumper: plastic and metal conduit
- Receptacles: injection-molded, PVC-free plastic
- Power entries: metal conduit
- Trim plates: painted steel
- Data plates: painted steel
- Voice adapter kit: PVC-free plastic

Technology Tile Power/Data Components

Product Information

continued

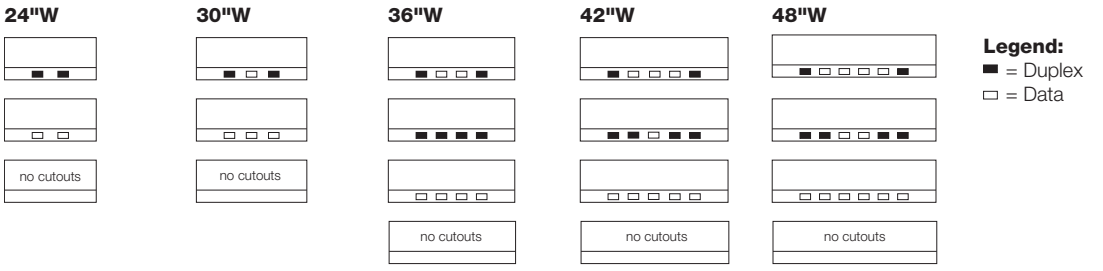
Features ➤See page 116
Power & Data Overview 146
Tech Tile Electrical 157
Circuit Configurations 160

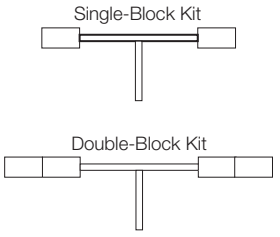
Connections

Power must be "started" in a 30"W or wider tile. Power cannot be "started" from 24"W tiles due to space constraints.
➤See next page for kits applicable to 24"W tiles.

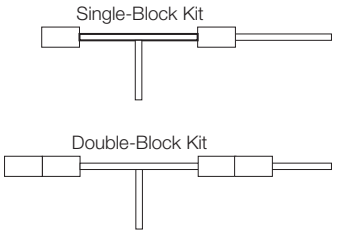
Kits for use in 30", 36", 42", and 48"W technology tiles:

Receptacle and Data Configuration Options:

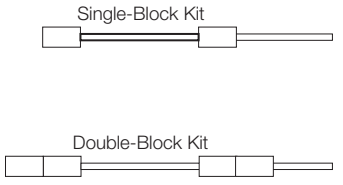




Power kit with vertical jumper brings power up from the base wireway to a technology tile at 2- or 3-high in a single-frame application. Kit includes:
- Vertical (base-to-tile) jumper
- Single power block assemblies (includes two single blocks and harness) or two double power blocks with jumpers
- Mounting brackets and hardware

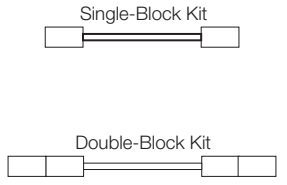


Power kit with vertical and horizontal jumpers brings power up from the base wireway to a technology tile at 2- or 3-high and jumps power to an adjacent technology tile not separated by a connector.
Kit includes:
- Vertical (base-to-tile) jumper
- Horizontal (tile-to-tile) jumper
- Single power block assemblies (includes two single blocks and harness) or two double power blocks with jumpers
- Mounting brackets and hardware



Power kit with horizontal jumper provides power to one tile and jumps power to an adjacent tile not separated by a connector. This kit is also applicable for a power in-feed application (ceiling, NYC, or hardwire power entry) or in a 4H or 5H application. Kit includes:
- Horizontal (tile-to-tile) jumper
- Single power block assemblies (includes two single blocks and harness) or two double power blocks with jumpers
- Mounting brackets and hardware

Note: For 4H & 5H applications, specify a base-to-tile jumper separately.



Power kit with blocks and harness only is for use at the end of a run where power will not be continued further and in single-frame applications. This kit is also applicable for a power in-feed application (ceiling, NYC, or hardwire power entry) or in a 4H or 5H application. Kit includes:
- Single power block assemblies (includes two single blocks and harness) or two double power blocks with jumpers
- Mounting brackets and hardware

Note: For 4H & 5H applications, specify a base-to-tile jumper separately.

Technology Tile Power/Data Components

Product Information

continued

Features ➤See page 116
Power & Data Overview 146
Tech Tile Electrical 157
Circuit Configurations 160

Two kits for use in 24" technology tiles:

24"W power kit with horizontal jumper provides power to one tile and jumps power to an adjacent tile not separated by a connector.
Kit includes:
- Horizontal (tile-to-tile) jumper
- One double power block
- Mounting brackets and hardware

24"W power kit with block only provides power to one tile. It may be used as illustrated at far right where power is jumped to it from an adjacent frame or in a single-frame application with a ceiling, NYC, or hardwire power entry. Kit includes:
- One double power block
- Mounting brackets and hardware

Planning Factors

Vertical jumpers included with kits are designed for bringing power to the 2- or 3-high segment. If you need to route power to a different segment, specify a kit without a vertical jumper and specify the appropriate length vertical (base-to-tile) jumper separately.

If only one frame will have a technology tile, use a power kit with vertical jumper for routing power from the base wireway. If routing power down from the ceiling, specify a kit with blocks and harness only.

Power cannot be jumped from one technology tile to another through a connector.

Power cannot be jumped from a technology tile to a power/data tile.

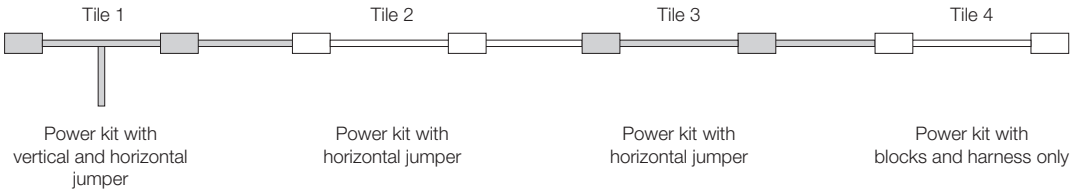
Data plates cannot cover power blocks, but can be used in any of the tile's cutouts.

Hole cover plates can be used over a power block or any cut-out that is not in use. Duplex receptacles are not required in all power block locations.

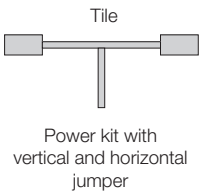
IMPORTANT Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided here is intended to assist specifiers.

Typical Layouts:

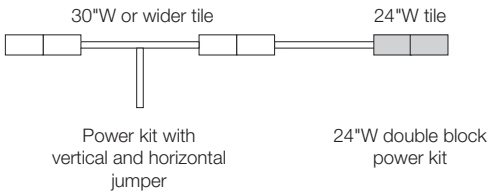
Four-frame benching application



Single-frame application



24"W frame application

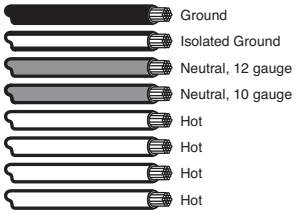


Technology Tile Electrical System

Application Guidelines

8-Wire Circuit Configurations

Features ➤See page 116
Power & Data Overview 146
Tech Tile Electrical 157



8-wire configuration supports work environments having heavy-intensity advanced computerized equipment requirements. An 8-wire systems includes four 12-gauge hot wires, one 12-gauge dedicated neutral wire, one 10-gauge shared neutral wire, and two 12-gauge ground wires.
➤See electrical service info at left.
➤See wiring configurations at right and wiring diagrams on the next page.

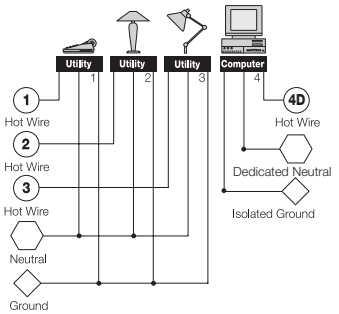
Base wireway shared neutral (10S) system or ceiling power in-feed should be used technology tiles.
➤See page 152 for base wireway circuit configurations.

Base wireway independent neutral (10D) system cannot be used with technology tiles.

Xsite's technology tile electrical system is rated for 20-amp service. To support the usage, 15-amp convenience receptacles can be placed anywhere along the leg of the electrical connection. In the event that an appliance, such as a larger printer/copier/plotter needs to have a 20-amp receptacle, it is recommended to use a dedicated circuit with a 20-amp receptacle. Using 15-amp convenience receptacles will aid in ensuring that no one leg of the system can pull too much current, which could potentially cause the system to trip out and lose power across the entire system.

IMPORTANT Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided here is intended to assist specifiers.

3 and 1 (8-wire):



Circuits 1, 2, and 3 share a neutral and common ground, providing circuits for general electrical needs. Customarily, one or more of the circuits are reserved for lighting or other everyday uses, which allows control by central or master switching.

Circuit 4 consists of three separate conductors (hot, neutral, and ground) and meets the BIFMA/ANSI definition for a dedicated circuit.

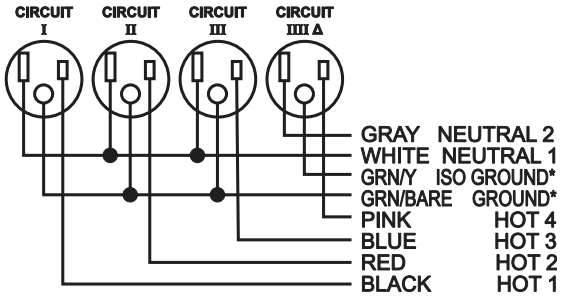
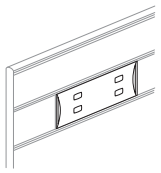
Receptacles: 1, 2, 3, 4Δ



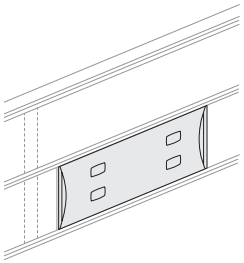
Power/Data Tiles

Xsite Overview ➤See page 116
Power & Data Overview 146
Product Information 163
Application Guidelines 152

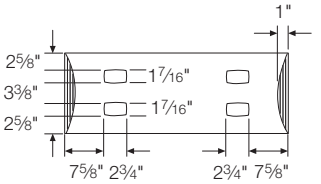
Details



Power/data tiles provide access to power and data at the 2nd, 3rd, 4th or 5th segments. They utilize the same wiring configuration as the used in the base wireway, either 10-wire shared neutral or 10-wire independent neutral.
➤See pages 152–155 for circuit configurations and wiring diagrams.



Flexible material on both ends allows excess cables to be stored inside the frame interior. Not accessible when in-line with a frame vertical.



Four cut-outs are provided in each power/data tile to accommodate a combination of four duplex receptacles and/or data ports.

Finishes & Materials

- Tile: formed steel, paint
- Trim plates and cover plates: black plastic

Connections

Power/data tiles may be powered with a ceiling infeed to provide belt line power throughout the system without extending to the base.

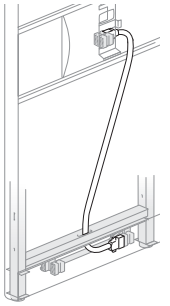
Power/data tile may be placed horizontally at any location on the frame provided the distribution block bracket does not conflict with the frame. Tiles should not be placed at the end of a panel run or aligned with frame verticals because the full functionality of accessing the frame interior for cable management is not realized.

Special power/data tile components are specified separately to bring and distribute power to the tile.
➤See page 163 for product info.
➤See page 164 for application guidelines.

Planning Factors

Power/data tiles may be placed back to back, provided the power and/or data components are not back to back. Power/data tiles cannot be placed back to back with technology tiles or storage tiles since both tiles use the interior space of the frame.

Place power/data tiles in frames wider than the tile to allow access to cable manager.



Consider the tile below a power/data tile in base entry applications. The jumper needs to pass from the base through the interior of the frame to the tile; therefore, storage tiles or any tiles where the jumper may be visible are not recommended.

One receptacle at the base will be used to connect the power/data tile.

Data cabling can be routed from the top, bottom, or sides. Top or bottom feed provides the least amount of conflict with opposing tiles. Specify data ports through the communications supplier or their distribution network.

Hardwire applications can be accommodated.

Related Products

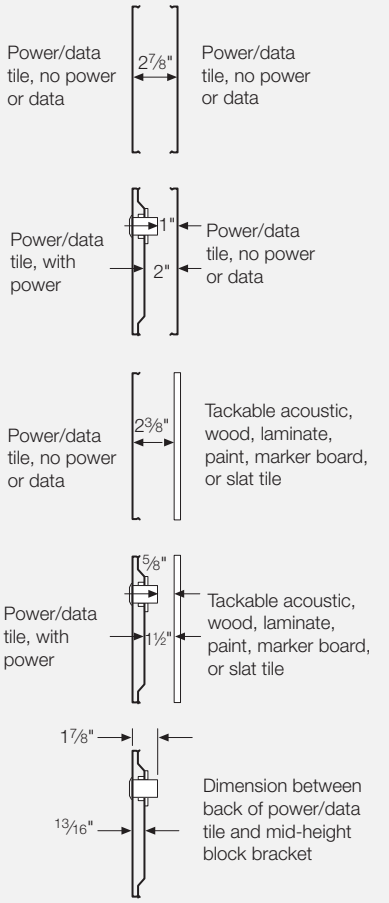
➤See page 164 for jumper application guidelines.

Technology tile electrical components cannot be used with power/data tiles.

Interior Dimensions:



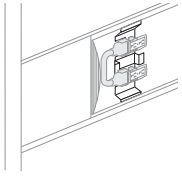
Power/Data Tile Electrical Components

Product Information

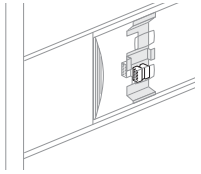
Xsite Overview ➤See page 116
Power & Data Overview 146
Application Guidelines 152

Details

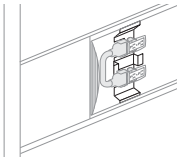
Power/data tile components are required to provide power access to the power/data tile. They utilize the same wiring configuration as the used in the base wireway, either 10-wire shared neutral or 10-wire independent neutral.
➤See pages 152–155 for circuit configurations and wiring diagrams.



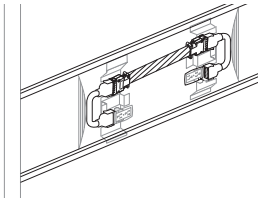
Mid-distribution block bracket snaps into the power/data tile to hold two mid-distribution blocks.



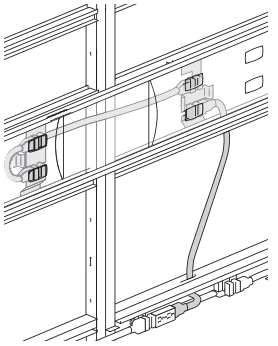
Mid-distribution block screws to the mid-distribution block bracket and accepts one duplex receptacle and up to three jumpers.



Base wireway panel-to-panel jumper (36PEJB1) is used to connect two vertically adjacent receptacles.



Mid-block jumper passes power horizontally between two power/data tiles, between two sets of vertically adjacent receptacles, or to connect back-to-back tiles with staggered receptacle locations.



Base-to-power/data tile jumper passes power from base wireway harness to mid-distribution block in power/data tile. Two lengths available, one for power/data tiles located in the 2nd segment, and one for the 3rd or 4th segment. When connecting two power/data tiles across a vertical, a metal tile (up to 36"W) must be used to allow sufficient space for the jumpers.

Finishes & Materials

- Mid-distribution block: injection-molded plastic
- Mid-distribution block bracket: formed steel
- Mid-block jumper: injection-molded plastic ends; mesh sleeving
- Base-to-power/data tile jumper: injection-molded plastic ends; ¾" oval metal conduit

Planning Factors

Independent and shared neutral components cannot be mixed.

Power/data tile accepts one to four mid-distribution blocks and one to two mid-distribution block brackets. Blocks should be placed where duplex receptacles are required.

IMPORTANT: Specific guidelines apply to power/data tile jumper connections.
➤See page 164.

IMPORTANT: Technology tile electrical components cannot be used with power/data tiles.

Related Products

Power/Data Tile Electrical Components

Selecting Jumpers

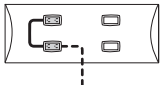
Key:
- ▬ = Mid-Block Jumper
- ▬ = Base Wireway Panel-Panel Jumper
- ▬ = Base Wireway Pass-Thru Jumper
- - - = Base to Power/Data Tile Jumper

Note: Illustrations intended to show applications, not actual dimensions.

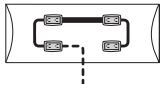
IMPORTANT: Power cannot be passed through connectors. If there is a connector between power/data tiles, power must be brought up from the base for each tile next to the connector.

IMPORTANT: Power cannot be jumped between power/data tiles if they are separated by a different tile type, except an embossed metal tile (see continuous beltline at right).

One Side of a Run:

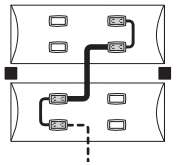


Use a base wireway panel-to-panel jumper (36PEJB1) to connect two vertically adjacent receptacles.



Use base wireway panel-to-panel jumper to connect two vertically adjacent receptacles and a mid-block jumper to pass power horizontally between sets.

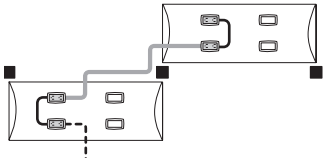
Back-to-Back:



Use mid-block jumper to connect back-to-back tiles with staggered receptacle locations. Two receptacles per side only. Use base wireway pane-to-panel jumper to connect two vertically adjacent receptacles.

IMPORTANT Mid-distribution blocks and brackets must be staggered side to side when using power/data tiles opposite each other (back to back).

Adjacent on Opposite Side:



Use base wireway panel-to-panel jumper to connect two vertically adjacent receptacles; use a base wireway pass-thru jumper to connect tiles that are adjacent (not back to back) on opposites sides of the run (see tile-to-tile option 2 for size).

Continuous Beltline:

Use a base pass-thru jumper to connect two inside mid-block distribution blocks.

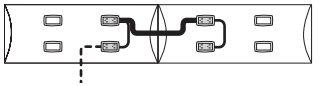
Tile	*Specify Jumper Model*
24"W	36P36EPT
30"W	36P42EPT
36"W	36P48EPT

Tile separating the power/data tiles must be embossed metal. The frame vertical must be at least 3" from the end of the metal tile.

If metal tile exceeds 36"W, there is no standard-size jumper available.

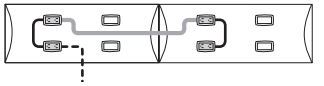
Tile-to-Tile:

Option 1—



Use base wireway panel-to-panel jumper to connect two vertically adjacent receptacles; use a mid-block jumper to pass power horizontally between tiles.

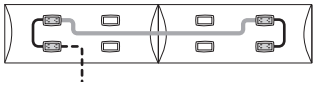
Option 2—



Use base wireway panel-to-panel jumper to connect two vertically adjacent receptacles; use a base wireway pass-thru jumper to connect non-adjacent receptacles.

Tile 1	*Tile 2*	*Pass-Thru Jumper Model*
30"W	30"W	36P30EPT
30"W	36"W	36P36EPT
36"W	36"W	36P42EPT

Option 3—



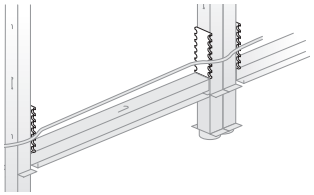
Use base wireway panel-to-panel jumper to connect two vertically adjacent receptacles; use a base wireway pass-thru jumper to connect non-adjacent receptacles.

Tile 1	*Tile 2*	*Pass-Thru Jumper Model*
30"W	30"W	36P36EPT
30"W	36"W	36P42EPT
36"W	36"W	36P48EPT

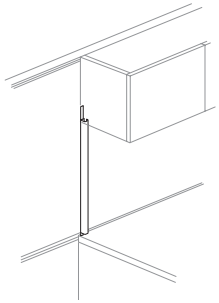
Cable Management Components

Xsite Overview ➤See page 116
Power & Data Overview 146
Product Information 163
Application Guidelines 166

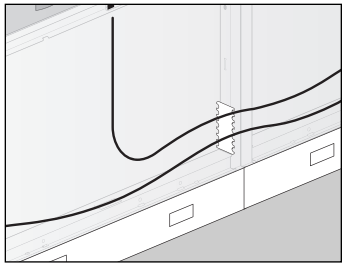
Details



Data cable manager manages up to twelve ¼" cables per side within the frame's interior.



Vertical cable manager manages cables in vertical application and conceals up to two task light cords.



Space between frame and tile is ¼", allowing cables to pass horizontally across verticals.

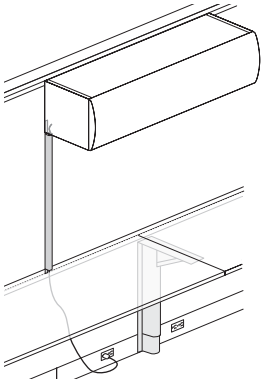
Finishes & Materials

- Data cable manager: polypropylene
- Vertical cable manager: fabric

Connections

Data cable managers can be located at any point up and down the frame's vertical elements.

Planning Factors



Plan for vertical cable manager to be located at the end of the cabinet. Specify the appropriate size vertical cable manager based on the space between the cabinet and worksurface below.

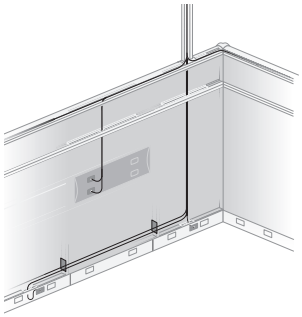
Cable Management

Xsite Overview ➤See page 116
Power & Data Overview 146
Product Information 163

Cables may enter the frame through a base wireway cover or through a ceiling power/data pole.

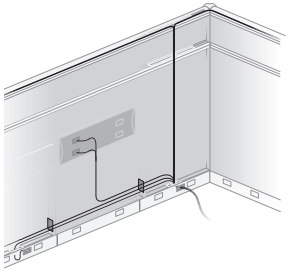
Cables may be routed through the frame in the top channel, at the bottom of the frame above the base wireway, or through the interior of the frame.

Ceiling Entry:



Ceiling entry applications utilize a power/data pole. Pole features a divided septum to separate power and data cables. Cables are distributed in the top channel of the frame and dropped down for access in power/data tiles or in the base wireway.

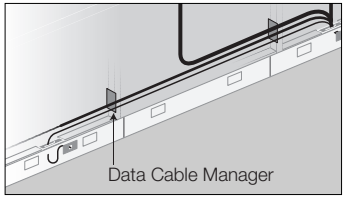
Base Entry:



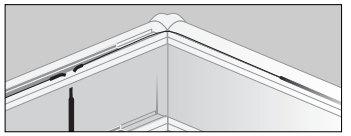
In base entry applications, cables enter through the data opening in a base wireway cover (power and data access model). Cables are routed up to the top channel or a power/data tile.

Allow an additional 12' of cable when routing up to the top channel from the base entry.

Horizontal Routing:



Data cable manager guides cables between frame and tiles. Up to 12 ¼"-diameter cables can be accommodated on each side of the frame. Locate as many as required on the frame verticals.



Cables in top channel can be routed through connectors. Top channel is 1¾"W and 1¼"H.
➤See chart at right for cable capacity.
➤See chart at left for bend radius.

Hi-Lo Applications:

When cabling is distributed in a run with a hi-lo condition, the cabling must go into the frame, pass across the hi-lo condition, and then route back to the top of the frame.

Cable Capacities:

Capacities listed below are for ¼"-diameter cables at 40% fill. Actual capacities may vary. A substantial number of cables can also be accommodated between the frame and tiles.

	40% Fill
Top channel	36
Top channel and mid-frame support cut-out	30
Power/data pole:	
• With power	46
• Without power	50
• Per segment	25
Power/data pole to top of frame, each direction	14
Connector top cap	
• Paint:	24
• Wood	24

Bend Radius:

	Min.	*Max.*
Top channel at connector	1"	1⅜"
Through frame at connector	1"	1⅝"
Frame to wireway	1"	2⅛"
Top channel to inside frame	1"	2"
Power/data pole to top channel	1"	2"

Mid-frame supports are required wherever Xsite Traxx are used to support tiles and/or overheads. Mid-frame supports can be relocated or additional mid-frame supports may need to be specified separately.
➤See page 117 for planning factors.
➤See page 173 to specify.

IMPORTANT: 18"W panels do not accept power entry or receptacles.

For hardwire applications, specify non-powered frame and hardwire electrical components separately.

Features ➤See page 116
Product Information 117
Application Guidelines 130
Power & Data Overview 146

Standard Includes

- Frame
- Attachment hardware
- Mid-frame supports at 2-high position on 3-high and 3.5-high frames
- Wireway covers
- Base wireway harness on powered frames

Note: To complete the panel, specify Xsite Traxx, tiles, and top cap separately.

How to Specify

❶ Model
❷ Power option:
P = Powered
N = Non-powered
③ Type of power system (omit for non-powered):
10S = Shared neutral
10D = Independent neutral
④ Wireway cover punch option (omit for 18"W):
➤See page 146 for designators.
⑤ Wireway cover finish group:
STD = Group 1
STDM = Group M (+10%)
⑥ Wireway cover finish designator

Standard Includes

- Frame
- Top cap splice
- Attachment hardware
- Mid-frame supports:
  - — At 2-high position on 3-high, 3.5-high, and 4-high frames
  - — At 2-high and 4-high positions on 5-high frames

Note: To complete the panel, specify Xsite Traxx, tiles, and top cap separately.

How to Specify

❶ Model
② Top cap splice finish designator:
Paint color or
501 = Platinum Metallic (+10%)
③ Frame finish group:
STD = Group 1
STDM = Group M (+10%)
④ Frame finish designator

Mid-frame supports are required wherever Xsite Traxx are used to support tiles and/or overheads. Mid-frame supports can be relocated or additional mid-frame supports may need to be specified separately.
➤See page 117 for planning factors.
➤See page 173 to specify.

Connectors
➤See page 185.

Stacking Frames

	36"		**36P362FS**	162
	42"		**36P422FS**	170
	48"		**36P482FS**	179

One 1-high or 2-high stacking frame can be added to 1-, 2-, 3-, 4-, or 5-high base frame.
Note: Stacking frames cannot be used on 3.5-high base frames.

Specify end trims and connectors to be equal to the combined height of base and stacking frames.

Specify mid-frame supports separately if using Traxx at the 1-high segment on a 2-high stacking frame.
➤See page 173.

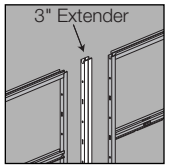
Connector



I
Frame–
Extender–
Frame

Base and stacking extender heights must be equal to the base and stacking frame heights to which they are attached.
Note: Stacking extenders cannot be used on 3.5-high base frames.

Specify top caps, Traxx, and tiles to span across extender.

Specify “EF” for application type if extender will be used at the end of a panel run next to an end trim or a connector. Specify “E” if extender will be used next to a connector. Specify “I” if extender will be used between two in-line frames.

1-high tiles for each side of frame must be specified separately. Specify 33"W tiles for use with 36"W door and 39"W tiles for use with 42"W door.
➤See page 198.

Specify the hinge location (right or left) so that the door will swing in the correct direction. With a right hinge, door will swing away from you to the right; with a left hinge, door will swing away from you to the left.

Top cap must be specified separately to span across door frame.
➤See page 192.

42"W hinged door is recommended for ADA compliance.

Standard Includes

- Door: wood or paint (non-metallic)
- Door frame: paint
- Threshold
- Door stop

When mounting privacy panel in a straight panel run, specify panel to be wider than opening to allow for proper clearance.

Privacy panels are non-handed and reversible. They can be mounted left or right and can be flipped so that the marker board or different fabrics can be positioned inside or out.

Expo or Expo2 dry erase markers are recommended for use on marker boards. Low-odor dry erase markers are not recommended, as they may leave undesirable results when erased.

Standard Includes

- Privacy panel
- Mounting brackets
- Caster
- Marker board, on applicable models: 488M Frosty White

IMPORTANT Frameless glass pane must be specified separately. Specify pane and top cap to match the width of the panel frame or the combined width of multiple frames to which they will attach.

IMPORTANT Top cap with brackets can be used in a hi-lo application along with a hi-lo pane. For top cap with rail in a hi-lo application, specify a hi-lo model to receive a shorter rail that can be used with a vertical hi-lo end trim and hi-lo frameless glass pane.

Standard Includes

- Flat profile top cap with pre-drilled holes
- Rail or two brackets, as specified: aluminum, paint
- Attachment bolts and hardware

How to Specify

Top Cap with Brackets or Top Cap with Rail:

❶ Model
② Top cap profile:
F = Flat
③ Finish type:
STD = Group 1
STDM = Group M (+10%)
STD2 = Group 2 (+20%)
④ Finish designator

Top Cap with Rail for Use in Hi-Lo Application:

❶ Model
② Hi-lo application:
L = Left
R = Right
③ Top cap profile:
F = Flat
④ Finish type:
STD = Group 1
STDM = Group M (+10%)
STD2 = Group 2 (+20%)
⑤ Finish designator

Overview

Statement of Line	➤See page 242
Product Information	245
Application Guidelines	254
Power & Data Overview	261

Top caps feature integral snap fit to secure the top cap onto the panel.

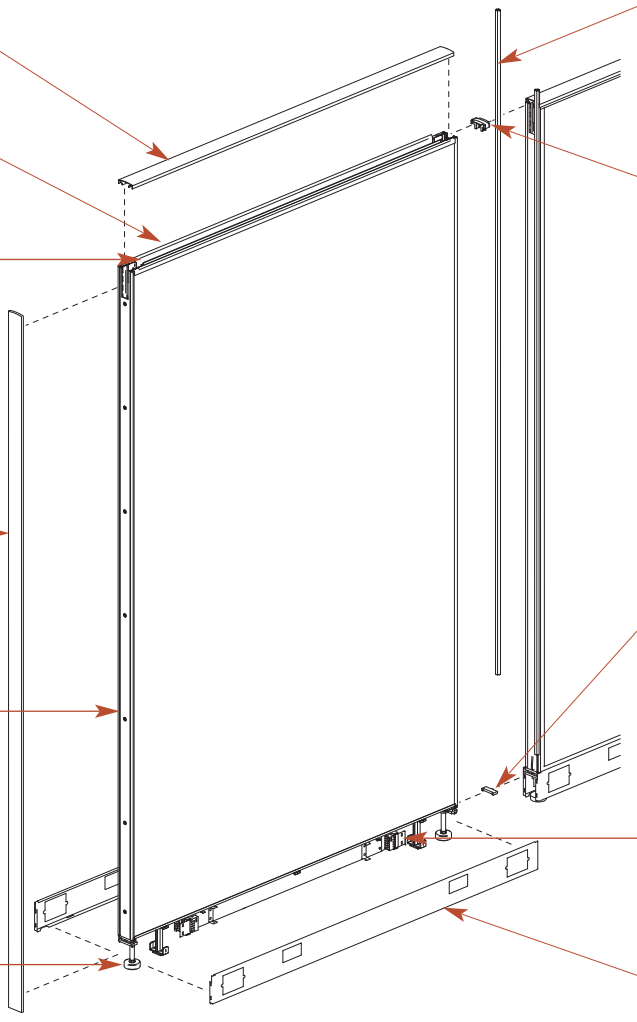
Top channel provides lay-in capability of data cables.

Horizontal rail holds panel face in place at the top and bottom of the frame.

Full-height end trim provides a finished look at the end of the panel run.

Side rails are slotted at 1" increments for attachment of panel-supported components.

Glides provide 2" of adjustability. Carpet grippers are included.



Panel hinges lock panels together along the full height of the panel.

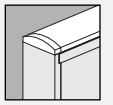
In-line connectors transition joints between panels in straight panel runs. Specified separately.

Alignment clips slip into alignment slots to vertically align adjacent panels.

Wireways allow power and data routing through panels bases.

Wireway covers are available punched or non-punched for power and data access.
➤See page 261.

Top Cap Profiles:



Crowned (C) top caps are available in select colors.

c UL US LISTED

Class A—Tackable acoustical panels

Related Products:

Traxx and tiles are available to integrate wall-mount applications and panel applications.
➤See page 333.

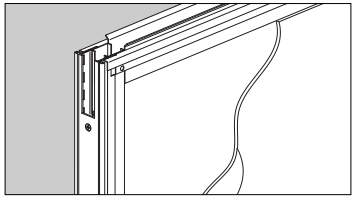
Tackable Acoustical Panels

Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
Circuit Configurations	266

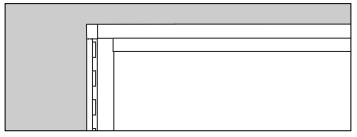
Details

Tackable acoustical panels are 2" thick and fabric covered. All panel models include:

- Top cap
- Wireway covers
- Panel hinges
- Glides and carpet grippers



Panel frame is constructed of 1¼" steel tubing. Panel interior has two sheets of ¼" thick fiberglass that are held in place at the top and bottom with a horizontal rail.



Side rails provide slots at 1" increments for mounting components.

Panel dimensions listed in the pricing tables are actual. Panel width includes the width of the panel plus the width of one panel hinge.

Finishes & Materials

Tackable Acoustical Panel

- Kimball Office panel fabrics: grade A and B
- COM

Note: COM fabrics must be U.L. listed for use on panels.

➤See page 594 for complete information regarding U.L. approval procedures.

Top Cap

- Aluminum: select paint colors

Wireway Covers

- Steel: select paint colors

Full-Height End Trim

- PVC: select colors

Trim Top Cap and In-Line Connector Kit

- ABS plastic: select colors

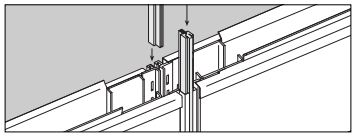
Panel Hinge

- Polypropylene: select colors

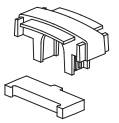
Acoustical Ratings

- NRC rating = .65
- STC rating = 15

Connections

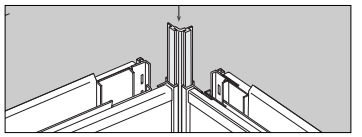


Continuous, polypropylene panel hinge inserted into side rails locks adjacent panels together along the full height of the panel. This hinge design allows removal of a single in-line panel, simplifying reconfigurations.



In-line connector kit, specified separately, provides a connector to transition joints between panels in a straight run and an alignment clip that slips into alignment slots to vertically align adjacent panels. They are required at each in-line panel-to-panel connection.

➤See page 317.

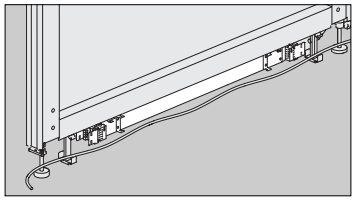


Panel hinges interlock to form L-, T-, X- and 120°-configurations. Alignment clips, included with finish channels, are essential for proper alignment.

Panel runs may also be started using a wall-mount connector or Traxx starter kit.

➤See page 253.

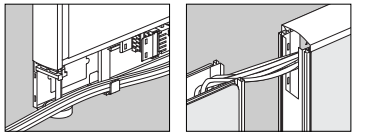
Power & Data



Wireway in the panel base allows power and data cable routing.

Power distribution assembly, factory-installed in the base wireway of 24"W and wider powered panels, allows distribution of power. Power can also be field-installed on non-powered panels. 18"W panels provide no power or data access, but can pass power to adjacent panels.

➤See page 262.



Cable routing is possible in the base wireway and in the top channel. Base wireway can accommodate up to 8 ¼"-diameter data cables at 40% fill or up to 12 at 60% fill. Top channel provides lay-in capability of up to 22 ¼"-diameter data cables at 40% fill or up to 33 at 60% fill. The capacity from panel to panel is 11 at 40% fill or 16 at 60% fill. Capacity is based on ¼"-diameter (nominal) Cat 5 or Cat 6 (4-pair UTP) cables. Data cables can also be run from the base to the mid-wireway.

Related Products

Full-height end trim, specified separately, is required to provide a finished look to the end of a panel run.

➤See page 318.

Finish channels are required when changing directions. They include alignment clips for proper panel alignment and for L, T, and, and X configurations. Specify separately.

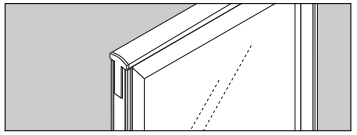
➤See page 252.

Full Glass Panels

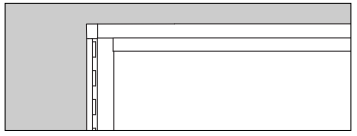
Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
8-Wire Power System	266

Details

Full glass panels are 2" thick and feature a horizontal rail at the top and bottom. All panel models include:
- Top cap
- Wireway covers
- Panel hinges
- Glides and carpet grippers



Tempered glass is ⅛" thick and secured in an 2⅞" extruded aluminum frame. Structural frame is 1¼" steel tubing.



Side rails provide slots at 1" increments for mounting components.

Panel dimensions listed in the pricing tables are actual. Panel width includes the width of the panel plus the width of one panel hinge.

Finishes & Materials

Glass
- Tempered: clear or frosted

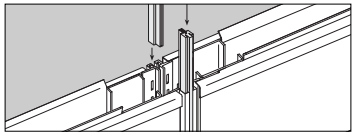
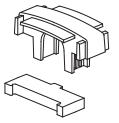
Connections

Worksurfaces can be mounted on glass panels; however, consider the visual through the glass from the back side.

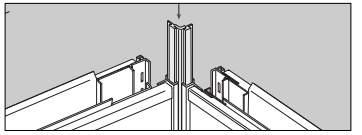
Overheads cannot be mounted to glass panels.



Continuous, polypropylene panel hinge inserted into side rails locks adjacent panels together along the full height of the panel. This hinge design allows removal of a single in-line panel, simplifying reconfigurations.



In-line connector kit, specified separately, provides a connector to transition joints between panels in a straight run and an alignment clip that slips into alignment slots to vertically align adjacent panels. They are required at each in-line panel-to-panel connection.

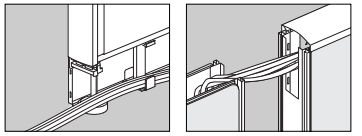


Panel hinges interlock to form L-, T-, X- and 120°-configurations. Alignment clips, included with finish channels, are essential for proper alignment.

Panels runs may also be started using a wall-mount connector or Traxx starter kit.
➤See page 253.

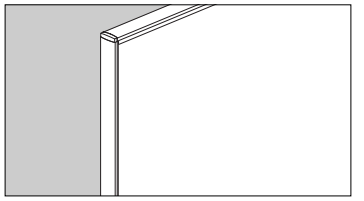
Power & Data

Wireway in the panel base allows data routing. Glass panels do not accept power distribution assemblies or pass-thru jumpers.



Cable routing is possible in the base wireway and in the top channel. Base wireway can accommodate up to 8 ¼"-diameter data cables at 40% fill or up to 12 at 60% fill. Top channel provides lay-in capability of up to 22 ¼"-diameter data cables at 40% fill or up to 33 at 60% fill. The capacity from panel to panel is 11 at 40% fill or 16 at 60% fill. Capacity is based on ¼"-diameter (nominal) Cat 5 or Cat 6 (4-pair UTP) cables. Data cables cannot be run from the top to the bottom of full glass panels.

Related Products



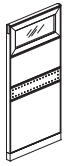
Full-height end trim, specified separately, is required to provide a finished look to the end of a panel run.
➤See page 318.

Finish channels are required when changing directions. They include alignment clips for proper panel alignment and for L, T, and, and X configurations. Specify separately.
➤See page 252.

Tackable Sectional Panels

Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
8-Wire Power System	266

Details



Sectional panel frames are constructed of 1¼" steel tubing and are 2" thick. Panel tiles are held in place at the top and bottom with a horizontal rail. All panel models include:

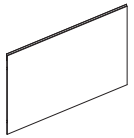
- Sectional tiles
- Top cap
- Base wireway covers
- Panel hinges
- Glides and carpet grippers
- Power distribution assembly on powered panels

Sectional panels ship with the tiles assembled to the frame. Tiles are held in place at the top bottom with horizontal rails.

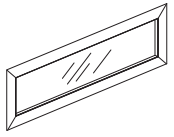
Mid-wireway sectional panel frames include, in addition to the list above:

- Base and mid-wireway power distribution assemblies
- Base-to-mid-wireway jumper
- Mid-wireway covers

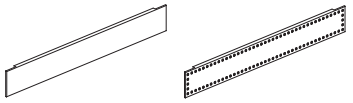
Panel dimensions listed in the pricing tables are actual. Panel width includes the width of the panel plus the width of one panel hinge.



Fabric sectional tiles are constructed of ¼"-thick fiberglass and covered with the selected fabric.



Glass sectional tiles have a 2⅞" extruded aluminum frame with ⅛" tempered glass; available clear or frosted. is available in clear or frosted. Specify only one glass tile to complete both sides of the sectional panel.



Metal sectional tiles are 6"H and are designed for placement just above the worksurface for added visual interest. Metal sectional tiles match mid-wireway covers to create a consistent accent band throughout the workstation. They are available in smooth or bordered profiles.

Finishes & Materials

Sectional Tiles

- Fabric: Kimball Office panel fabrics (grades A and B)
- Tempered glass: clear or frosted
- Metal (steel): selected paint colors
- COM
  Note: COM fabrics must be U.L. listed for use on panels.

➤See page 594 for complete information regarding U.L. approval procedures.

Note: Sectional panels ship with the tiles assembled to the frame. Panels are specified as fully configured models.

Stackable Panels

Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
8-Wire Power System	266

Details

Stackable panels are available for use on top of monolithic, glass, or sectional panels.

Stackable panels are 2" thick and have a horizontal rail at top and bottom. All stackable panels models include:
- Panel hinge
- Attachment hardware

Note: Top cap from base panel will be used on top of stacking panel.

Panel dimensions listed in the pricing tables are actual. Panel width includes the width of the panel plus the width of one panel hinge.

12", 14", and 18" panel heights are available to increase the height of the workstation. These heights correspond to sectional panel tile heights for a consistent look when using both types of panels in the same office setting.
➤See page 260 for application guidelines.

Stackable panels are available in fabric or glass.

Fabric stackable panel is constructed of steel tubing with a ¼" fiberglass core and covered with selected fabric.

Tempered glass in glass stackable is ⅛" thick and available in clear and frosted. Frames are extruded aluminum.

Top lay-in capability provides space for up to 22 ¼"-diameter data cables at 40% fill or up to 33 at 60% fill. The capacity from panel to panel is 11 at 40% fill or 16 at 60% fill. Capacity is based on ¼"-diameter (nominal) Cat 5 or Cat 6 (4-pair UTP) cables.

Finishes & Materials

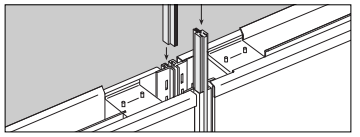
Fabric Stackable Panel
- Kimball Office panel fabrics: grade A and B
- COM

  Note: COM fabrics must be U.L. listed for use on panels.

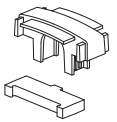
➤See page 594 for complete information regarding U.L. approval procedures.

Glass Stackable Panel
- Tempered glass: clear or frosted
- Steel-tubing frame: select colors

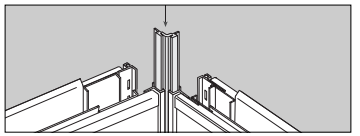
Connections



Continuous, polypropylene panel hinge inserted into side rails locks adjacent panels together along the full height of the panel. This hinge design allows removal of a single in-line panel, simplifying reconfigurations.

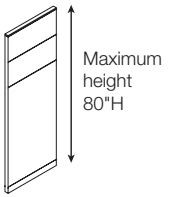


In-line connector kit, specified separately, provides a connector to transition joints between panels in a straight run and an alignment clip that slips into alignment slots to vertically align adjacent panels. They are required at each in-line panel-to-panel connection.



Panel hinges interlock to form L-, T-, X- and 120°-configurations. Alignment clips, included with finish channels, are essential for proper alignment.

Installation of stackable panel is accomplished without disassembling the existing panel run. Stackable panel is bolted to the base panel frame.



One or two stackable panels may be stacked onto a base panel to a maximum overall height of 80".

Width of stackable panel must match the width of the base panel.

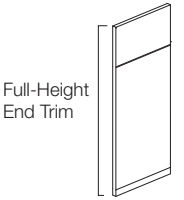
Panel run stability rules are the same for stackable panels as for standard Interworks EQ panels.
➤See pages 254–259.

Overhead components can be supported by panel runs containing stackable panels; however, specific application guidelines apply.
➤See page 260.

Panels made prior to 2/26/07 cannot accommodate stackable panels.

Panels with model numbers beginning with 10P cannot accommodate stackable panels with model numbers beginning with 11P, and vice versa.

Related Products

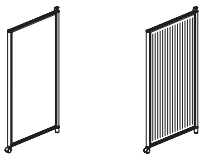


Finish channels and end trim, specified separately, must match the combined height of the base and the stackable panel(s). Finish channels include alignment clips for proper panel alignment and are required in change-of-direction applications. Specify separately.
➤See page 252.

Privacy Panels

Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
8-Wire Power System 266

Details



Privacy panels are available 36" or 42"W and in three designs: fabric on both sides, fabric/marker board combination, or translucent.

Privacy panel models include:
- Top attachment bracket
- Base pivot bracket
- Caster

Fabric and fabric/marker board combination privacy panels have an extruded aluminum frame. Interior is fiberglass over a honeycomb panel.

Translucent privacy panels feature a ribbed pattern to provide privacy, yet allow light to pass through. Frame is extruded aluminum.

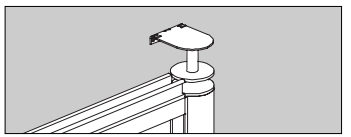
Single caster allows privacy panel to pivot open or closed.

Finishes & Materials

Privacy Panel Frame
- 462 Cinder paint
- 501 Platinum metallic paint

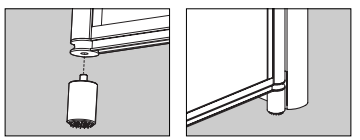
Privacy Panel Inserts
- Kimball Office panel fabrics: grade A and B
- COM
  Note: COM fabrics must be U.L. listed for use on panels.
  ➤See page 594 for complete information regarding U.L. approval procedures.
- Marker board (488M Frosty White)
- Translucent

Connections



Top attachment bracket is used to mount the privacy panel to any 66"H Interworks EQ panel. Top bracket attaches under the top cap and can be easily relocated.

Privacy panel is 68"H and is compatible to, but does not directly align with, Interworks EQ panels.

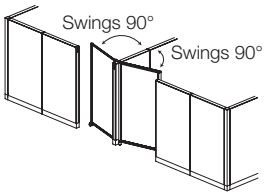


Base pivot bracket features a carpet gripper to hold bracket in place while allowing the privacy panel to swing.

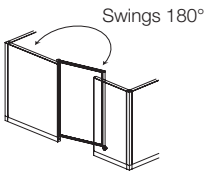
Privacy panels abut the opposite panel, but do not latch.

Non-handed and reversible, privacy panels can be mounted left or right, and can be flipped so the marker board or different fabrics can be positioned inside or outside the workstation.

Planning Factors



When mounted to the perpendicular panel (on one or both sides) in an L or T configuration, panel swings 90°.

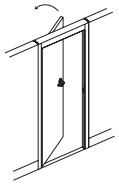


When mounting in a straight panel run, specify privacy panel to be wider than the opening to allow for proper clearance. Panel will swing 180° to lay flat against the Interworks EQ panel.

Hinged Doors

Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
8-Wire Power System 266

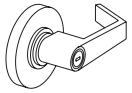
Details



Hinged doors are available 36” or 42”W (nominal). All hinged doors include:

- Frame and threshold
- Top cap
- Panel hinges
- In-line connector caps

Door is 1 7/16" thick hollow-core construction with laminate faces.



Locking lever is available and is suitable for ADA guidelines.

Door opening width for the 36"W door is 29 7/8"; for the 42"W door it is 35 7/8". Opening height is 76 3/4". 42”W hinged door is recommended for ADA guidelines.

Finishes & Materials

Door

- Solid laminate: select colors

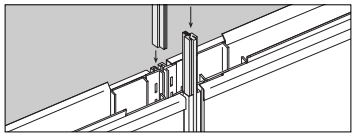
Door Frame

- Paint: select colors

Top Cap

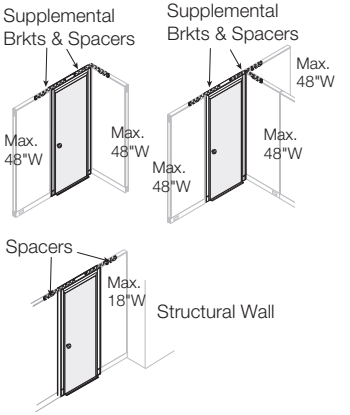
- Aluminum: select paint colors

Connections



Continuous, polypropylene panel hinge inserted into side rails locks adjacent panels together along the full height of the panel. This hinge design allows removal of a single in-line panel, simplifying reconfigurations.

Planning Factors



Hinged doors in a panel run must be placed next to a corner or T-configuration where panels are not wider than 48" for necessary stability. Supplemental brackets and spacers are required at panel connections along the door panel run.

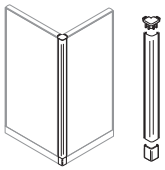
Hinged door in wall-mount applications must not be more than one 18"W panel from the wall.

Finish Channels and Trim Top Caps

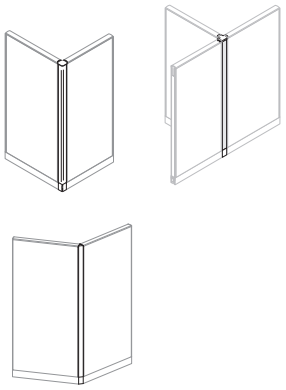
Product Information

Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
8-Wire Power System	266

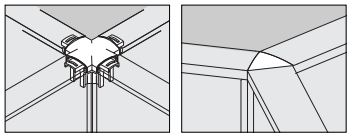
Details



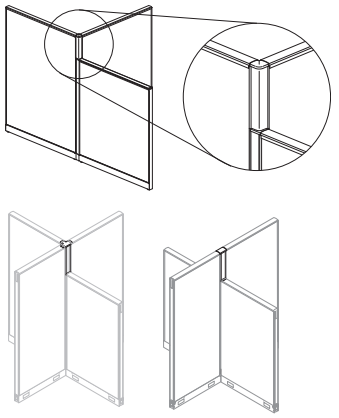
Finish channels provide a finished look to the end of a panel. Finish channels include alignment clips for proper panel alignment and are required in change-of-direction applications; specified separately.



Same-height corner/L-, straight/T-, and 120° V-configuration finish channels include:
- Fabric channel
- Finish channel top cap
- Metal base cover
- Alignment clip



Same-height X- and 3-way 120° Y-configurations do not require a finish channel since the connection will be concealed by the panels. Specify the appropriate top cap to bridge the gap between the panel top caps.



Varied-height 3-way/T- and 4-way/X-configuration finish channels include:
- Fabric channel (one or two)
- Finish channel top cap
- In-line fill caps
- Alignment clip(s)

The appropriate model is determined based on the difference in panel heights.

Finishes & Materials

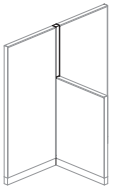
Finish Channel
- Kimball Office panel fabrics: grades A and B
- COM

Note: COM fabrics must be U.L. listed for use on panels.

➤See page 594 for complete information regarding U.L. approval procedures.

Top Cap
- Aluminum: select paint colors

Planning Factors



3-way/T-configuration with one perpendicular lower-height panel requires specification of two finish channel models:
- Same-height straight/T finish channel in the appropriate height for the straight side; and
- Varied-height 4-way/X with two lower-height panels finish channel (models 10P**CNHLL) for the side with the lower-height perpendicular panel.

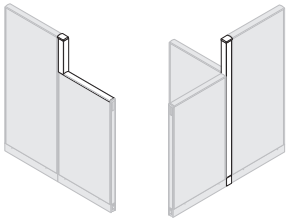
120° configurations must always be with same height panels. Varied height finish channels are not available.

To achieve a different 2-, 3-, or 4-way configuration than those shown on this page, an alternate top cap must be specified separately in addition to the finish channel.

➤See page 315.

Power & Data

When passing electrical cabling from one panel to another, finish channels are required at change-of-direction connections to enclose cabling. They are not needed between two panels in a straight panel run.



Data channels are for use in change-of-height applications to run data cables between the top channel of adjacent panels with differing heights. In-line, corner/L-, and straight/T-configuration are available. Knock outs are provided at each panel height to allow data access into the panel. All models include:
- Metal channel
- Data channel top cap
- Metal base cover
- Alignment clip
- In-line fill caps
- Top cap for the lower-height panel (in-line only)

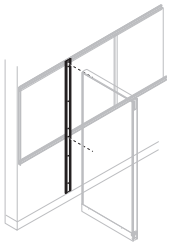
➤See page 330 to specify.

Connectors

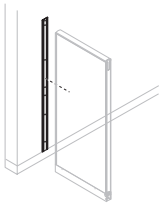
Traxx Starter Kits and Wall-Mount

Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
8-Wire Power System 266

Details



Traxx panel starter kit is used when starting a panel run from a wall with Traxx. The kit must be the same height as the adjoining panel. It includes necessary hardware to attach the perpendicular panel to Traxx.



Wall-mount connectors are available to start a panel run from a building wall. The wall-mount connector must be the same height as the adjoining panel and must be attached level to the start of the panel run.

IMPORTANT: The selection and purchase of the proper fasteners based on wall type for installing wall-mount and Traxx panel starter kit is the responsibility of the installer.

Finishes & Materials

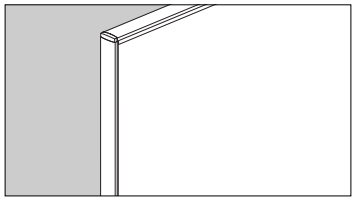
Traxx Panel Starter Kit

- Paint: select colors

Wall-Mount Connector

- Paint: select colors

Related Products



Full-height end trim, specified separately, is required to provide a finished look to the end of a panel run.
➤See page 318.

Panel Configurations

Without Components

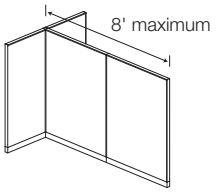
Features ➤See page 244
Power & Data Overview 261
8-Wire Power System 266

General Guidelines:

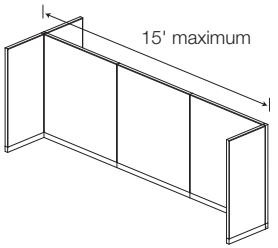
The most stable configurations are those in which panels are tied to worksurfaces and pedestals.

Workstations that include pedestals can accommodate longer panel runs.

Configurations that include overhead storage carry heavier loads and work best on shorter panel runs with additional floor supports.



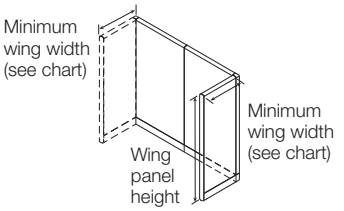
Unsupported run:
- 8' maximum; and
- 2 panels maximum
- 2 supplemental brackets (recommended)



8' to 15' supported runs:
- 3 panels maximum; and
- Wing panels
- 4 supplemental brackets (recommended)

➤See minimum wing panel chart at right.

Do not exceed maximum number of panels in a run.



C-shaped workstations:
- Wing panels
- 3 supplemental brackets (recommended)

➤See minimum wing panel chart at right.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage. They are critical in unsupported (panel only) configurations.

Height of Panel Run	*Minimum Wing Width*
34", 42", or 48"	30"
54", 62", or 66"	36"
80"	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 80"H runs must be 80"H.

Panel Configurations

Without Overhead Storage

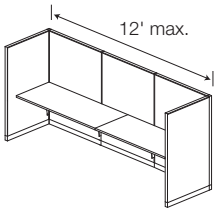
Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
8-Wire Power System 266

General Guidelines:

The most stable configurations are those in which panels are tied to worksurfaces and pedestals.

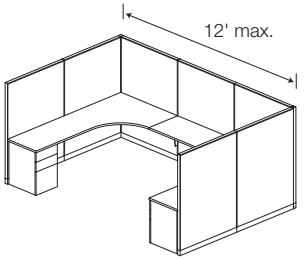
Workstations that include pedestals can accommodate longer panel runs.

Configurations that include overhead storage carry heavier loads and work best on shorter panel runs with additional floor supports.

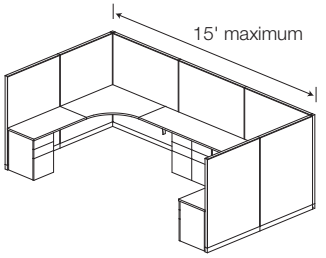


Maximum 12' supported run:
- Cantilevers;
- 3 panels maximum; and
- Wing panels; and
- No overheads

➤See minimum wing panel chart at right.

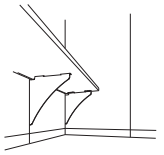


Maximum 12' supported run:
- Cantilevers;
- 3 panels maximum;
- Floor supports at end of wing panel runs; and
- No overheads

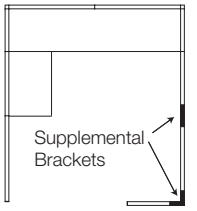


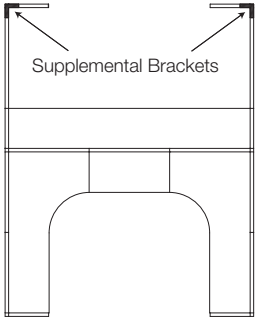
Maximum 15' supported run:
- Cantilevers;
- 3 panels maximum;
- Minimum 2 floor supports mid-run;
- Floor supports at end of wing panel runs; and
- No overheads

Do not exceed maximum number of panels in a run.



Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, or undersurface storage.





IMPORTANT: It is recommended that wing panels be tied to worksurfaces at front and back edges for maximum stability. If not, specify supplemental brackets.

Specify pedestal filler strip where there is no wing panel beside a pedestal to tie the panel and pedestal together for additional support.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage. They are critical in unsupported (panel only) configurations.

Height of Panel Run	*Minimum Wing Width*
34", 42", or 48"	30"
54", 62", or 66"	36"
80"	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 80"H runs must be 80"H.

Panel Configurations

With Overhead Storage

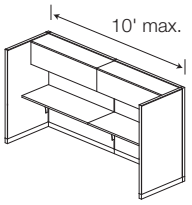
Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
8-Wire Power System	266

General Guidelines:

The most stable configurations are those in which panels are tied to worksurfaces and pedestals.

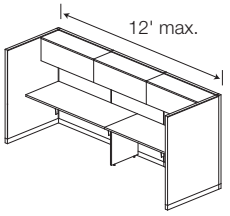
Workstations that include pedestals can accommodate longer panel runs.

Configurations that include overhead storage carry heavier loads and work best on shorter panel runs with additional floor supports.



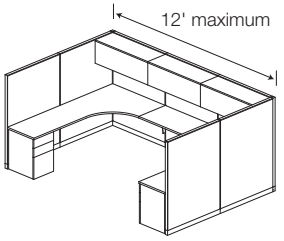
Maximum 10' supported run:
- Cantilevers;
- 3 panels maximum; and
- Wing panels

➤See minimum wing panel chart at right.

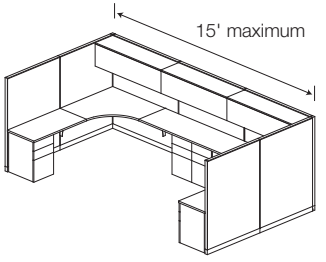


Maximum 12' supported run:
- Cantilevers;
- 3 panels maximum;
- 1 floor support, minimum; and
- Wing panels
- Two supplemental brackets recommended

➤See minimum wing panel chart at right.



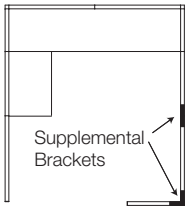
Maximum 12' supported run:
- Cantilevers;
- 3 panels maximum; and
- Floor supports at end of wing panel runs

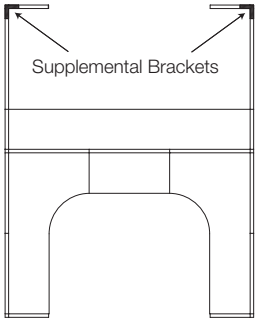


Maximum 15' supported run:
- Cantilevers;
- 3 panels maximum;
- Floor supports at end of wing panel runs; and
- 2 floor supports mid-run, minimum

Do not exceed maximum number of panels in a run.

IMPORTANT: Overhead cabinets must be ganged to ensure maximum rigidity.





IMPORTANT: It is recommended that wing panels be tied to worksurfaces at front and back edges for maximum stability. If not, specify supplemental brackets.

Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, or undersurface storage.

Specify pedestal filler strip where there is no wing panel beside a pedestal to tie the panel and pedestal together for additional support.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage. They are critical in unsupported (panel only) configurations.

Height of Panel Run	*Minimum Wing Width*
34", 42", or 48"	30"
54", 62", or 66"	36"
80"	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 80"H runs must be 80"H.

Panel Configurations

X Configurations

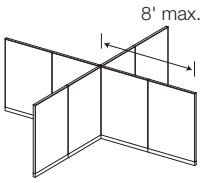
Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
Circuit Configurations 266

General Guidelines:

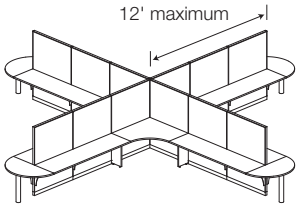
The most stable configurations are those in which panels are tied to worksurfaces and pedestals.

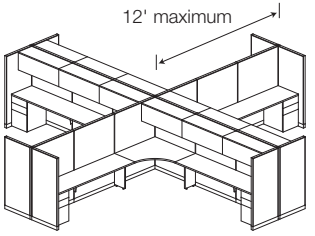
Workstations that include pedestals can accommodate longer panel runs.

Configurations that include overhead storage carry heavier loads and work best on shorter panel runs with additional floor supports.



Unsupported run:
- 8' maximum; and
- 2 panels maximum
- 5 supplemental brackets (recommended)

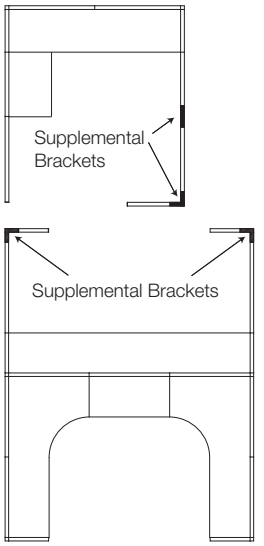




12' supported run:
- Cantilevers;
- 3 panels maximum;
- 1 floor support mid-run minimum; and
- Floor supports at end of wing panel runs

Do not exceed maximum number of panels in a run.

IMPORTANT: Overhead cabinets must be ganged to ensure maximum rigidity.



IMPORTANT: It is recommended that wing panels be tied to worksurfaces at front and back edges for maximum stability. If not, specify supplemental brackets.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage. They are critical in unsupported (panel only) configurations.

Height of Panel Run	*Minimum Wing Width*
34", 42", or 48"	30"
54", 62", or 66"	36"
80"	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 80"H runs must be 80"H.

Panel Configurations

120° V- and Y-Configurations

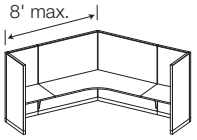
Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
Circuit Configurations 266

General Guidelines:

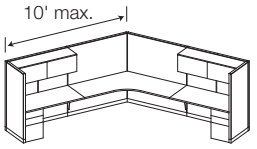
The most stable configurations are those in which panels are tied to worksurfaces and pedestals.

Workstations that include pedestals can accommodate longer panel runs.

Configurations that include overhead storage carry heavier loads and work best on shorter panel runs with additional floor supports.



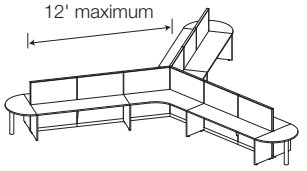
Unsupported run:
- 8' maximum; and
- 2 panels maximum
- Supplemental brackets (recommended)



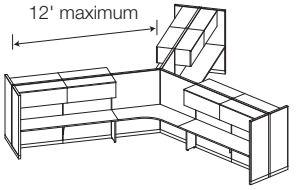
Maximum 10' supported V:
- Cantilevers;
- 3 panels maximum; and
- Wing panels

➤See minimum wing panel chart at right.

Balanced back-to-back overheads can extend maximum run to 12'



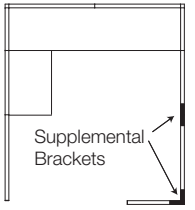
12' supported Y:
- Cantilevers;
- 3 panels 54"H maximum;
- Floor supports at end of run and one additional at mid-run; and
- No overheads

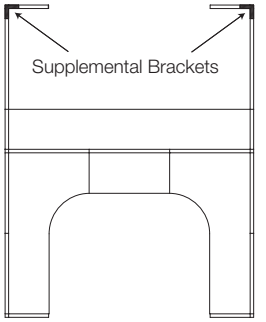


Maximum 12' supported Y:
- Cantilevers;
- 3 panels maximum;
- Wing panels;
- Balanced back-to-back overheads; and
- 1 floor support mid-run minimum

➤See minimum wing panel chart at right.

Do not exceed maximum number of panels in a run.





IMPORTANT: It is recommended that wing panels be tied to worksurfaces at front and back edges for maximum stability. If not, specify supplemental brackets.

Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, or undersurface storage.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage. They are critical in unsupported (panel only) configurations.

Height of Panel Run	*Minimum Wing Width*
34", 42", or 48"	30"
54", 62", or 66"	36"
80"	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 80"H runs must be 80"H.

Panel Configurations

Wall- and Traxx-Mounted

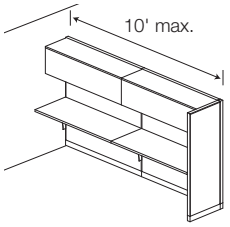
Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
Circuit Configurations	266

General Guidelines:

The most stable configurations are those in which panels are tied to worksurfaces and pedestals.

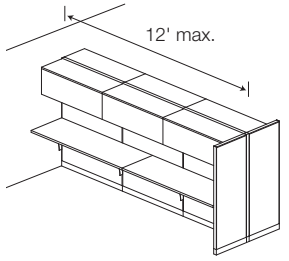
Workstations that include pedestals can accommodate longer panel runs.

Configurations that include overhead storage carry heavier loads and work best on shorter panel runs with additional floor supports.



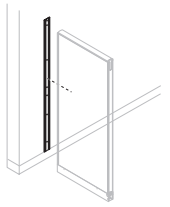
Maximum 10' supported run:
- Cantilever next to wall;
- Cantilever in middle of run; and
- Minimum width wing panel

➤See minimum wing panel chart at right.



Maximum 12' supported run:
- Cantilever next to wall;
- Cantilevers in middle of run;
- Minimum width wing panel; and
- Balanced back to back

➤See minimum wing panel chart at right.



Wall-mount brackets and Traxx starter kits must be secured to the building wall by fastening into the stud or by using drywall fasteners. Selection and purchase of the proper attachment fasteners for your wall is the responsibility of the installer.

Do not exceed maximum panels in a run.

Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, or undersurface storage.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

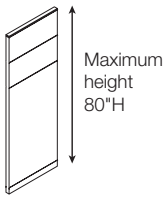
Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage. They are critical in unsupported (panel only) configurations.

Height of Panel Run	*Minimum Wing Width*
34", 42", or 48"	30"
54", 62", or 66"	36"
80"	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 80"H runs must be 80"H.

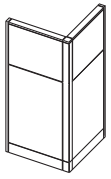
Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
Circuit Configurations	266



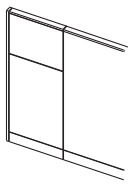
One or two stackable panels may be stacked onto a base panel. Maximum height of any combination of base and stackable panels is 80".

Width of stackable panel must match the width of the base panel.

Panel run stability rules are the same for stackable panels as for standard Interworks EQ panels.
➤See pages 254–259.

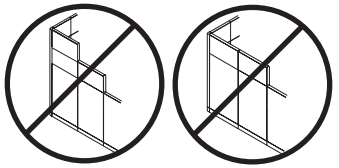


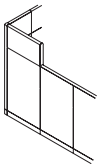
Turning a corner



Attached to monolithic panel

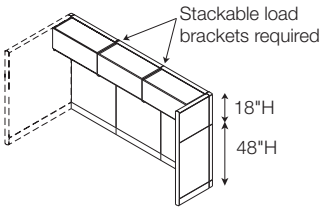
For proper support, stackable panels must either turn a corner or be connected to a panel or finish channel that is equal to the height of the base panel plus the height of the stackable panel.





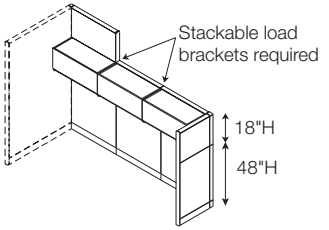
When creating a "step-down" or "cityscape" effect, stackable panels can only extend out one panel width from a connector, unless a stackable load bracket is used.

Wing panel must be equal to the combined height of the base panel plus the stackable panel.



First row of stackable fabric panels above the base panel can support overheads. Overheads cannot be mounted on the second row (top row) of stackable panels.
➤See page 254 for stability rules.

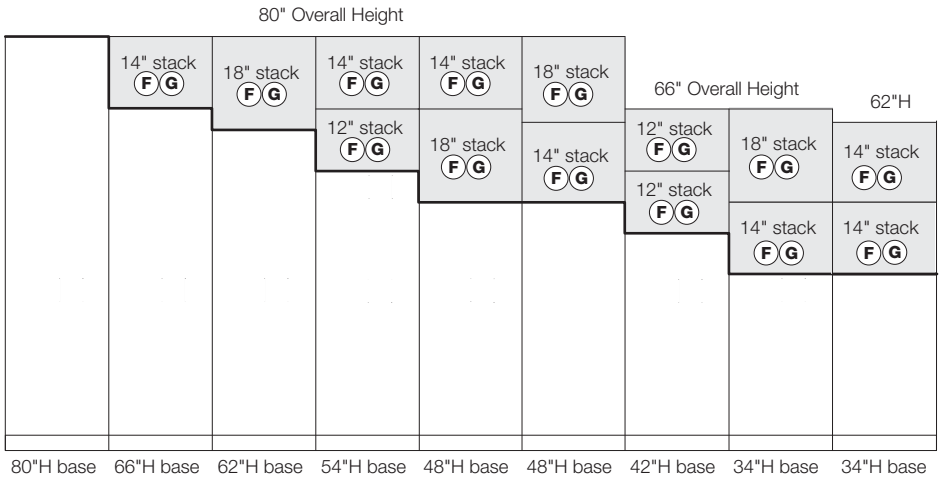
Overheads mounted on 12" or 14" stackable panels will hang down on to the base panel.



Overheads cannot be hung in a row of stackable panels where a hi-lo trim kit is used. However, they may be hung in the row beneath the hi-lo application as shown above.

Stackable load brackets specified separately, are required at in-line stackable panel connections when mounting overheads on stackable panels on only one side of the run.

Stackable load brackets are not required when overheads are balanced back-to-back on stackable panels, nor at the connection to a finish channel (change of direction) or end trim (end of run).
➤See illustration at left.



Power & Data

Overview

Features ➤See page 244
Application Guidelines 254
Circuit Configurations 266
Wiring Diagrams 267

Electrical system is an 8-wire, 4-circuit system. Power is distributed through panels via wireways in the base.

Top channel provides a horizontal lay-in space for cable routing in the top of the panel, accommodating 22 ¼"-diameter cables at 40% fill.

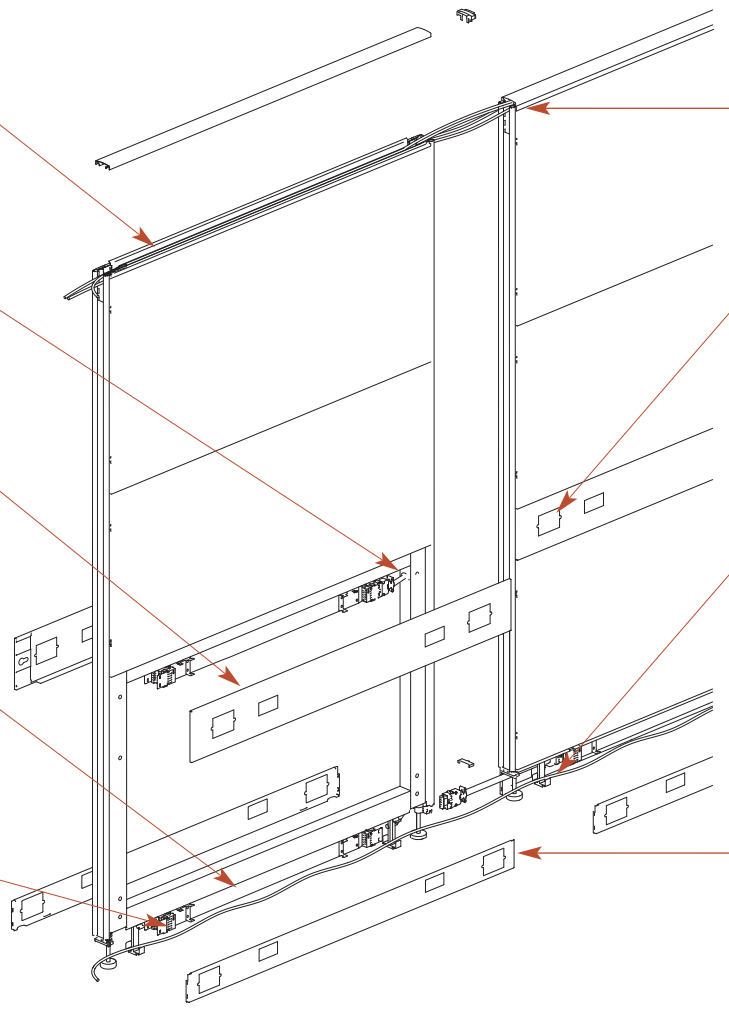
Base-to-mid-wireway jumper cable, routed through the panel frame, distributes power from the base to the mid-wireway.

Data cables may be routed from the base to worksurface height in mid-wireway panels, up to the top channel or from the top channel down to the base through the vertical channels.

Wireway provides space at the base of the panel for power and data cable routing. Wireway is 1 15/16"D x 3 1/4"H.

Power distribution assembly in powered panels accepts up to four duplex receptacles.

Base power entries are available to bring power from the floor or wall.



Ceiling power entry and power pole are available to bring power from the ceiling to the panel.

Side rail cutout allows cables to be routed to adjacent panels.

Data port openings (two per panel side, four per side on mid-wireway panels) provide access to data cabling. Interworks EQ cover plates or commercially purchased data ports and faceplates are required.

Base wireway can accommodate up to 8 ¼"-diameter data cables.

Wireway cover is removable to allow access to cavity in the panel base. Available punched and non-punched for power and data access.

Wireway Cover Options:

NP2	2 non-punched
P1	1 power punched 1 non-punched
P2	2 power punched
PD1	1 power & data punched 1 non-punched
PD2	2 power & data punched
H1	1 hardwire punched 1 non-punched
H2	2 hardwire punched
HD1	1 hardwire & data punched 1 non-punched
HD2	2 hardwire & data punched

Punch Dimensions:

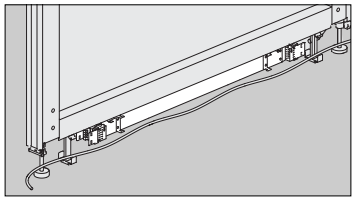
Power: 2.71"W x 1.38"H
Data: 3.00"W x 2.19"H

Power Distribution Assemblies & Receptacles

Product Information

Features	➤See page 244
Power & Data Overview	261
Circuit Configurations	266
Wiring Diagrams	267

Details



Powered panels feature factory-installed electrical distribution assemblies in the base wireway. Power can also be field-installed in non-powered panels.

Mid-wireway sectional panels feature factory-installed power distribution assemblies in both the base wireway and mid-wireway.

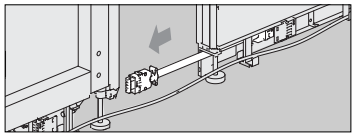
Power distribution assemblies and receptacles are the same for base and mid-wireway.

Two wiring configurations are possible—3 and 1 or 2 and 2—utilizing the same components.
➤See page 266 for planning and installation guidelines.

Duplex receptacles are rated at 15 amps and may be installed back-to-back in base and mid-wireways.

Two data ports can be installed in each wireway (two on one side or one on each side). There are four data port locations, however, data ports cannot be installed back to back. One data port location in the mid-wireway will be eliminated by the base-to-mid-wireway jumper.

Connections



Jumper cables are used to pass power from panel to panel at the base and from base to mid-wireway. Power cannot be passed from panel to panel at the mid-wireway.

Pass-thru jumper cables are used to pass power through non-powered panels.

18"W panels have no electrical access; however, they can accept pass-thru jumper cables to pass power to adjacent panels.

Building-to-panel power connections can be accomplished whether the power source is in the wall, floor, or ceiling.
➤See page 263.

Power and data poles bring voice/data cables and electrical wiring from the ceiling to the panel run.
➤See page 263.

Application Guidelines

IMPORTANT: **Planning actual power supplies and branch circuits** must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

New York City electrical applications require a special power entry. Panels should be specified as non-powered and electrical distribution assemblies should be specified separately.
➤See page 265.

Hardwire electrical components for use in the base wireway are available for areas where local codes do not accept modular electrical plug-in components.
➤See page 264.

Receptacle Capacity per Panel:

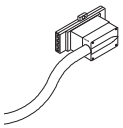
Panel Width	**Tackable Acoustical (Monolithic) Panels**		**Sectional Panels**		**Mid-Wireway Sectional Panels**	
	Base Wireway	*Total per Panel*	*Base Wireway*	*Total per Panel*	*Mid-Wireway*	*Total per Panel*
18"	0	0	0	0	0	0
24"	1 per side	2	1 per side	2	1 per side	4*
30"–60"	2 per side	4	2 per side	4	2 per side	8*

* Including receptacle locations in the base wireway.

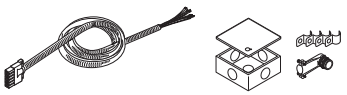
Power Entries and Power/Data Poles

Features ➤See page 244
Power & Data Overview 261
Circuit Configurations 266
Wiring Diagrams 267

Details

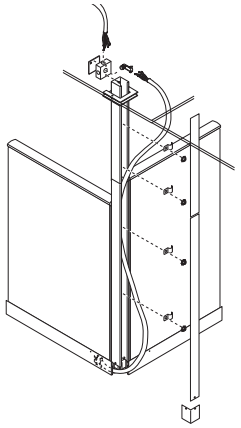


Base power entry is available in straight, corner, end, and side models to bring power to the panel run from the floor or wall.



Ceiling power entry assembly is available to bring power to the panel run from the ceiling. It is used in conjunction with a power and data pole. Ceiling power entry assembly includes:

- Ceiling power entry
- Junction box
- 15' jumper cable
- Hardware



Power/data poles bring voice/data cables and/or electrical wiring from the ceiling to the panel. Poles include:

- Pole and cover
- Ceiling plate
- Appropriate base cover
- Alignment clip
- Fill caps

Note: Ceiling power entry assembly must be specified separately.

Application Guidelines

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

Access to ceiling power source is regulated by National Electrical Code to a maximum of 12 ft. conduit.

When using power pole with two ceiling power entry assemblies, plan an extra pole for data cabling.

18"W panels have no electrical access. They can be used to pass power from one panel to another, but cannot accept receptacles or power entries.

Power entries will take up the space of one receptacle location on the power distribution assembly.

Related Products

Hardwire electrical components are available for areas where local codes do not accept modular electrical plug-in components.
➤See page 264.

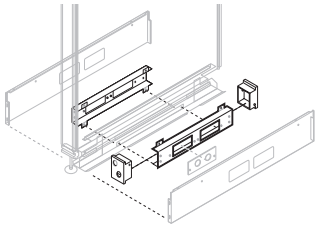
New York City electrical applications require a New York City power assembly for the panel where power entry is made.
➤See page 265.

Hardwire Components

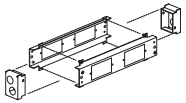
Features ➤See page 244
Power & Data Overview 261
Circuit Configurations 266
Wiring Diagrams 267

Details

Interworks EQ tackable acoustical and sectional panels are available with a hardwire option. Components should be specified separately to accommodate hardwire applications. All duplex receptacles must be Leviton brand or equivalent for hardwire.

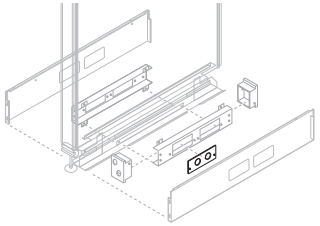


Hardwire panels ship with an internal wireway modified to accept the junction box and one or two punched wireway covers with modified access windows.



Junction box kit, specified separately, is required for each panel that will receive field-installed hardwired electrical. Junction box kit includes:

- Junction box
- Single duplex port per side on 24”W; two ports per side on other widths
- Two junction box end caps with knockouts to feed power in from the panel ends



Side feed plate, specified separately, enables power in-feed from the side into the junction box.

End

Corner

Straight

Appropriate replacement wireway end cap should be specified to in-feed power from the end or through a finish channel.

Connections

Hardwire installations must be completed by a qualified electrician or an electrical engineer familiar with the National Electrical Code and the appropriate local codes.

Application Guidelines

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

18"W panels are not available with the hardwire option.

Hardwire Wireway Cover Options:

H1	1 hardwire punched 1 non-punched
H2	2 hardwire punched
HD1	1 hardwire & data punched 1 non-punched
HD2	2 hardwire & data punched

Punch Dimensions:

Power: 2.71"W x 1.38"H
Data: 3.00"W x 2.19"H

New York City Power Assemblies

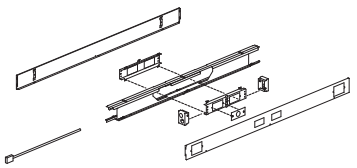
Features ➤See page 244
Power & Data Overview 261
Circuit Configurations 266
Wiring Diagrams 267

Details

Interworks EQ tackable acoustical and sectional panels can be modified to meet New York City electrical code.

New York City electrical power assembly is available for field installation in each starter panel—those into which power from the building will be connected. The starter panel can then be hardwired in the field by a qualified electrician. New York City power assembly is only required in the starter panel. It is not available for use in 18"W or 24"W panels.

Mid-wireway panels are not available with New York City power option.



For 30"–60"W Panels

New York City power assembly includes:

- Internal panel wireway
- Jumper cable
- Junction box
- Interface plate
- Two junction box end caps
- Wireway covers

New York City power assemblies are different depending on the width of the panel as illustrated above.

Connections

Duplex receptacles are not accommodated in panels with New York City power assembly.

Data ports can be installed in panels with New York City power assembly.

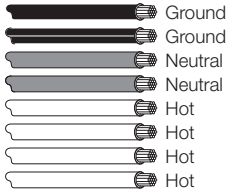
Application Guidelines

IMPORTANT: **Planning actual power supplies and branch circuits** must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

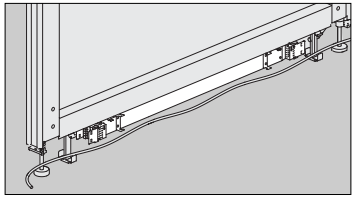
Circuit Configurations

Shared Neutral 8-Wire Power System

Features ➤See page 244
Power & Data Overview 261
Wiring Diagrams 267



Interworks EQ 8-wire, 4-circuit power system supports work environments having light- to medium-intensity computerized equipment needs. The 8-wire systems include two 12-gauge ground wires, two 10-gauge neutral wires, and four 12-gauge hot wires.



Powered panels feature factory-installed electrical distribution assemblies in the base wireway. Power can be field-installed on non-powered panels.
➤See page 269.

Building-to-panel electrical connections can be accomplished from power sources in the wall, floor, or ceiling.
➤See page 263.

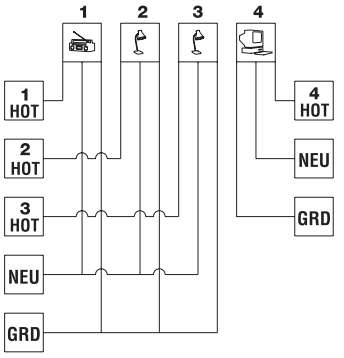
Two wiring configurations are possible—3 and 1 or 2 and 2—utilizing the same components.
➤See wiring configurations at right.

Duplex receptacles used for both types of wiring configurations are the same. This simplifies specifications and allows a faster understanding of the system.
➤See page 262.

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

Installations should be in accordance with the NEC. Local codes may vary. Consult a qualified electrical contractor or engineer for proper installation of electrical equipment. Hardware necessary for installation is shipped with all components.

3 and 1 (8-wire):

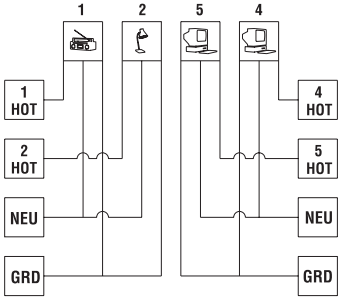


- Three utility circuits share a neutral and common ground.
- One circuit with a DEDICATED hot, neutral and ground.
- Utilize Interworks EQ receptacles #1, 2, 3 for utility and #4 for the DEDICATED ground circuit.

Circuits 1, 2, and 3 can be used for general electrical needs. Customarily, one or more of the circuits is reserved for lighting or other everyday uses, which allows control by central or master switching.

Circuit 4 consists of three separate conductors (hot, neutral, and ground) and meets the BIFMA/ANSI definition for a dedicated circuit.

2 and 2 (8-wire):



- Two DESIGNATED utility circuits and two DESIGNATED computer circuits.
- Utilize Interworks EQ receptacles #1 and #2 for the designated utility circuits and receptacles #4 and #5 for the designated computer circuits.

Note: Receptacle #3 cannot be used in the 2 and 2 configuration. If receptacle #3 is used, possible cross feed or interference from utility circuits one and two can be introduced to computer circuits.

Circuits 1 and 2 provide a pair of designated circuits for general electrical needs, as described for the 3 & 1.

Circuits 4 and 5 provide a pair of designated circuits for computer applications.

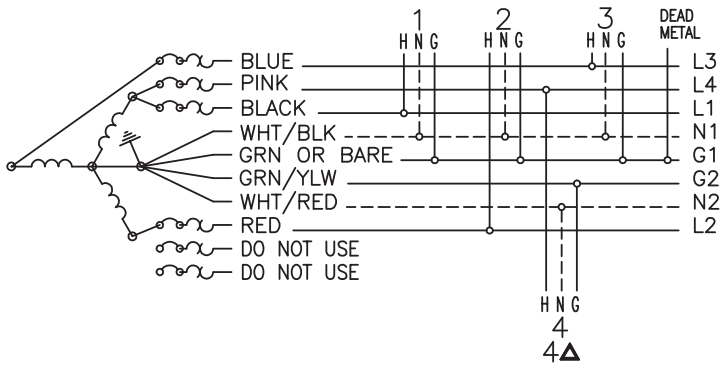
Approval/Compliance:

Interworks EQ's electrical system is UL approved, complies with the National Electrical Code (NEC), and is certified for electrical safety to Canadian Standards Association (CSA) standard C22.1 No. 203.
Note: Any field modification of the electrical components voids the UL listing.

Provide these wiring diagrams to the electrical contractor.

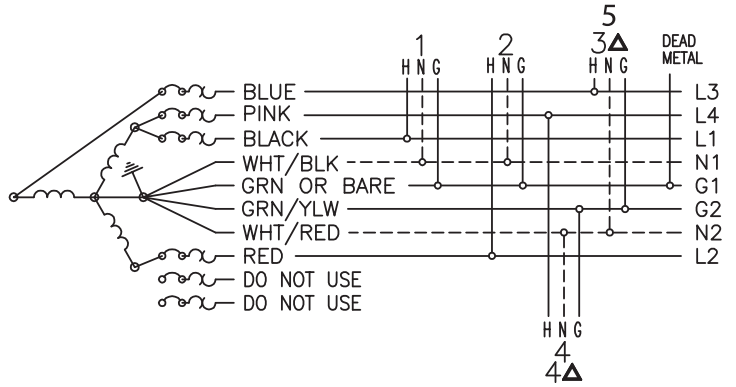
Interworks EQ 3 and 1 Configuration 8-Wire:

120/208V WYE 3 Phase 8-10 Shared Neutral
Receptacles: 1, 2, 3, and 4 (or 4Δ)



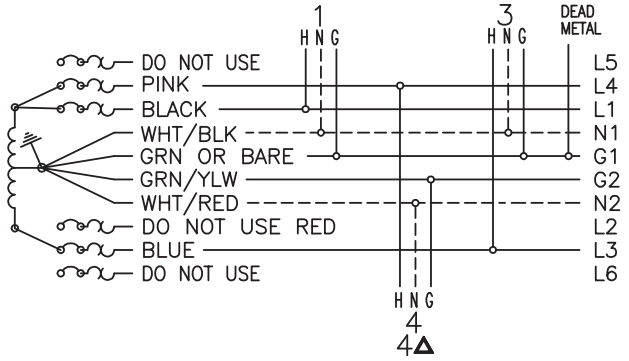
Interworks EQ 2 and 2 Configuration 8-Wire

120/208V WYE 3 Phase 8-10 Shared Neutral
Receptacles: 1, 2, 4, and 5 (or 1, 2, 3Δ, and 4Δ)



Interworks EQ 2 and 1 Configuration 8-Wire

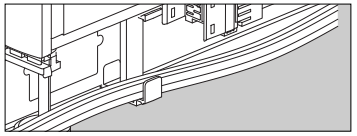
120/240V 1 Phase 8-10 Shared Neutral
Receptacles: 1, 3, and 4 (or 4Δ)



Cable Management

Features	➤See page 244
Power & Data Overview	261
Circuit Configurations	266
Wiring Diagrams	267

Communication and data cables can be routed:
- Through top channel of panels,
- Through verticals to the base wireway.
- Through the base wireway, or
- From the base wireway up to mid-height

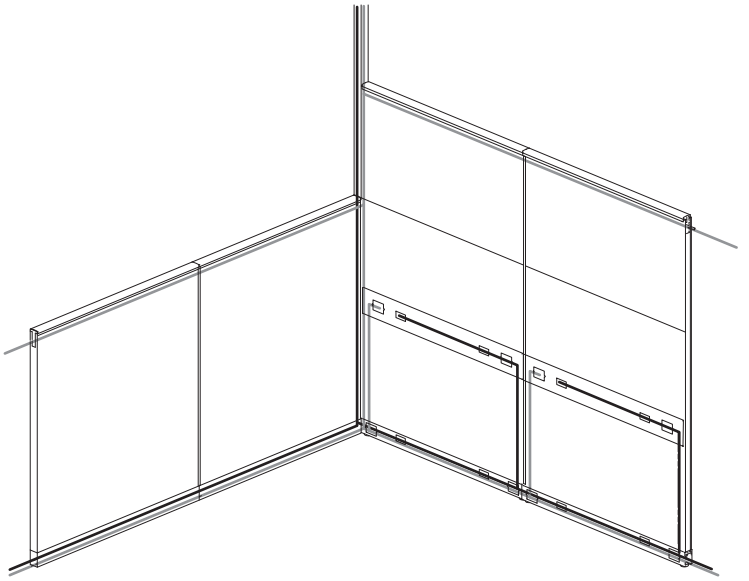


Cable hanger allows data cables to be routed through the base wireway.

Base wireways can have up to two data port openings on each side of the panel.

Mid-wireway panels can have up to four data port openings on each side of the panel: two in the base and two at worksurface height. However, base-to-mid-wireway jumper will eliminate access to one data port opening in the base and one in the mid-wireway.

Data ports cannot be installed back to back unless surface mounted ports are purchased commercially.



When purchasing data ports commercially, verify that the depth of the port and size of cover plate are appropriate for proper fit. Data ports can be purchased through the port manufacturer or their distribution network. Data ports up to 1½"D can be accommodated provided the data port is on Side 1 and the jumper is on Side 2 or there is no electrical jumper.

Consider the cable bend radius when planning the routing of data cables through Interworks EQ panels at panel-to-panel connections or within the panel.

	Min. Radius	*Max. Radius*
Top Channel to Vertical Channel		
	½"	1½"
Top Channel Panel-to-Panel at 90°		
	½"	1½"
Vertical Channel to Base Wireway		
	1"	2"
Mid-Wireway to Vertical Channel		
	½"	1½"

Panel-to-panel capacity is limited by the top channel cutout and is 11 at 40% fill or 16 at 60% fill..

Cable Capacities:

	¼"-diameter cables at 40% Fill*
Base Wireway	8
Top Channel	
–Acoustical	22
–Sectional	22
–Full Glass	22
Panel-to-panel	11
Vertical Channel	
–Acoustical	13
–Sectional	13
Mid-Wireway	8

** Cable capacities are based on ¼"-diameter Cat5 or Cat 6 (4-pair UTP) cables.*

Punch Dimensions:

Data: 3.00"W x 2.19"H

Related Products:

Vertical cable managers are available separately to conceal task light cords.

Metal pattern selected will apply to both metal tiles.

Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
Circuit Configurations 266

Standard Includes

- Top cap
- Two fabric tiles per side
- One metal tile per side
- Two base wireway covers
- Two panel hinges
- Two panel glides
- Carpet grippers
- Power distribution assembly on powered panels

How to Specify

❶ Model
❷ Power option:
P = Powered
N = Non-powered
H = Hardwired (+$53 to non-powered)
❸ Top cap material:
P = Paint
④ Type of power system (omit for non-powered and hardwired):
84 = 8-wire, 4-circuit
⑤ Top cap profile:
C = Crowned
⑥ Wireway cover punch option (omit for 18"W):
➤See page 261 for designators.
⑦ Metal pattern:
D = Bordered
S = Smooth
⑧ Trim finish designator:
Paint number or
501 = Platinum Metallic (+10%)
⑨ Hinge color designator
⑩ Side 1 fabric grade
⑪ Side 1 fabric number
⑫ Side 2 fabric grade
⑬ Side 2 fabric number

Pricing

GSA SIN 711-1
COM GSA Non-Contract

When mounting privacy panel in a straight panel run, specify panel to be wider than opening to allow for proper clearance.

Privacy panels can be mounted left or right and are reversible so that different fabrics or marker board can be positioned inside or out.

Expo or Expo2 dry erase markers are recommended for use on marker boards. Low-odor dry erase markers are not recommended, as they may leave undesirable results when erased.

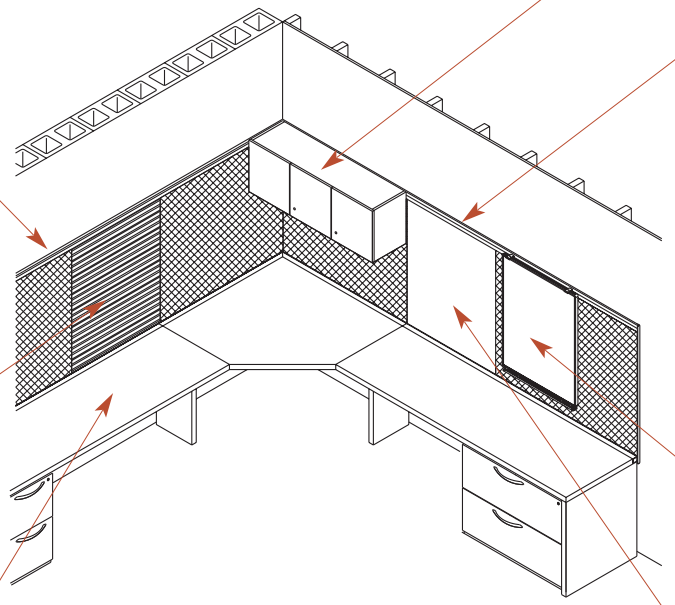
Overview

Statement of Line ➤See page 334
Traxx & Tiles Product Info 336
Installation & Planning 337
Presentation Tools 338

Traxx is a unique horizontal rail system that attaches to existing architecture, allowing free, off-module placement of Kimball Office components. Place storage, worksurfaces, tiles and panels wherever you need them.



Overhead storage can be mounted to upper Traxx.

Traxx can be mounted to most interior walls, including steel or wood stud walls, masonry block, or solid masonry walls.

Upper Traxx can be mounted to correspond with appropriate panel heights or at 80"H for conference room applications.

Tiles mount between upper and lower Traxx to add functionality to the workspace.

Worksurfaces can be mounted to lower Traxx.

Presentation tools hang from upper Traxx and slide along rail.
➤See page 344.

Fabric and standard marker board tiles can be scribed in the field to meet individual requirements.

Related Products:

Vertical cable manager is available to route cords. It is available in fabric or black plastic.

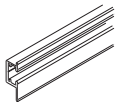
Traxx and Tiles

Features ➤See page 335
Installation & Planning 337
Presentation Tools 338

Details



Traxx is available in lengths of 72" and 144", and can be scribed in the field. Traxx models include:
- Two Traxx (72" or 144")
- Four splice plates

Tiles are available in fabric, slat, or marker board models. Fabric and standard marker board tiles can be scribed in the field. Tile models include:
- Tile
- Two trim channels

Marker board tiles add convenient, erasable writing space and are ideal for offices, training rooms, and conference areas. Available in laminate or magnetic porcelain.

Slat tiles offer flexibility in placement of work tools. Selecting the slat tile with fabric above is an economical alternative when overhead storage will be used.

Two trim channels, standard with each tile, provide an expansion joint, wire manager attachment, and compensate for out-of-plumb walls. Additional trim channels are available, if required, for tiles that have been scribed in the field.

Finishes & Materials

Traxx
- Paint

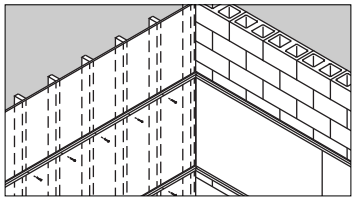
End Trim
- Paint, except 499 Satin

Trim Cap
- Paint
- Wood finishes

Tiles
- Fabric
- Slat: paint
- Marker board: 409M Icey White or 483M Off White

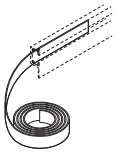
Trim Channels
- Fabric
- Paint

Connections

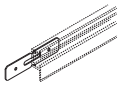


Traxx are mounted horizontally permitting complete tie-in to all studs.

No additional blocking is required to support Traxx, if walls are designed and built to specifications outlined. ➤See page 337 for application guidelines.



Fastener concealment is used to conceal splice plates and fasteners. It does not interfere with mounted components and does not require any additional tools for installation. Fastener concealment is available in vinyl or felt. Vinyl must be specified when using presentation tools.



Splice plates are required to align two sections of Traxx in-line or when turning corners. They are easily modified in the field to accommodate angles or corners.

Planning Factors

Traxx can be mounted at any height if not corresponding to other products. ➤See page 337 for mounting heights to correspond to panel applications.

To custom paint Traxx in the field, specify 480 Antique White. Schedule delivery to precede the rest of the order to provide time for painting. Traxx should be lightly sanded before painting. Enamel based paints are recommended.

Traxx and tiles, excluding porcelain marker board) can be scribed in the field to the desired size.

Related Products

Traxx panel starter kits allow attachment of a panel anywhere along Traxx.

Full end trim is available to finish the end of tile between upper and lower Traxx.

Panel-height full end trims are available for use with Traxx panel starter kit.

Single end trim finishes the end of a single Traxx rail, if stopping Traxx short of an intersecting wall.

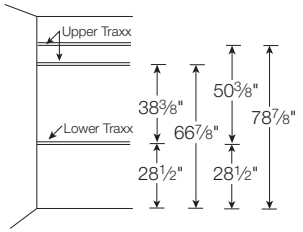
Trim cap slips into the top ledge of the upper Traxx to provide continuity with panel heights. ➤See page 345.

Features ➤See page 335
Traxx & Tiles Product Info 336
Presentation Tools 338

Installation Heights:

Traxx should be installed at heights to correspond with the appropriate application.

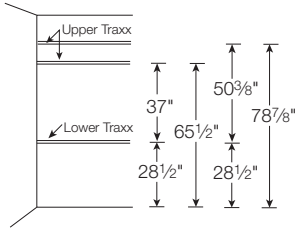
Compatible with Cetra and Xsite:



Overhead Cabinets	66⅞"H
Worksurfaces	28½"H
Conferencing Solutions	78⅞"H

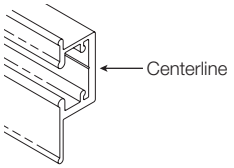
Note: 37"H tiles coordinate with Cetra and Xsite 68"H applications.

Compatible with Interworks EQ:



Overhead Cabinets	65½"H
Worksurfaces	28½"H
Conferencing Solutions	78⅞"H

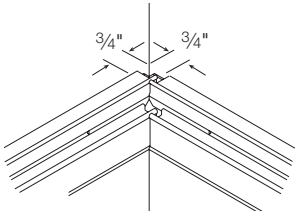
Note: 36"H tiles coordinate with Interworks EQ 66"H applications.



Determine proper position of Traxx using centerline of lower Traxx as a reference point.

Actual mounting height can be varied to meet specific needs; however, undersurface storage height must be considered.

Variations in the floor surface (peaks and valleys) should be considered, especially where horizontal placement is critical.



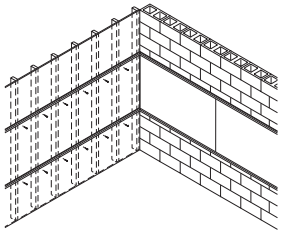
Traxx extends ¾" from the wall. This dimensional loss should be considered when space planning for components, when Traxx are being used on 2 or more walls of a space.

When planning components for the entire length of the wall, total length of storage components should be a minimum of 1½" less than the total length of the wall. Filler panels may be specified to fill any remaining space.

Select worksurfaces and tiles can be field scribed to fit space.

In fixed wall Traxx applications, choose your tile height based on your specific application. Consider the height of the cabinet and clearance between the bottom of the overhead and the worksurface.

Recommended Fasteners:



Fasteners must tie in directly to the substructure of a structural wall for proper attachment of Traxx. Kimball Office defines a structural wall as a loadbearing wall constructed of materials such as poured concrete, concrete block, or studs.

Selection and purchase of the proper attachment fasteners for your wall conditions is the responsibility of the installer.

Type and Size	*Commercial Model #*
Steel studs (½" to ¾" drywall)	
Hilti® Toggler® anchor toggle bolts, ¼"–20 x 2" grade 5 bolts	374494
Wood studs (¼" to ½" drywall) *Meets or exceeds ANSI/ASME B18.6.4 and SAE J933.*	
Pan head sheet metal screw	10-2 PHPMS
Solid Masonry	
Crown Bolt lag shields ¼" x 1½"	
Buildex Tapcon concrete anchor screw ¼" x 2¾"	24385
Masonry Block	
Hilti Toggler anchor toggle bolts, ¼"–20 x 2" grade 5 bolts	374494
Crown Bolt lag shields ¼" x 1½"	
Buildex Tapcon concrete anchor screw ¼" x 2¾"	24385

➤See assembly instructions on www.kimballoffice.com.

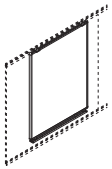
Minimum Requirements:

- Wood studs must be nominal 2" x 4" minimum.
- Metal studs must be "C" channel, 20 gauge minimum thickness.
- Metal or wood studs must be on centers no greater than 24" and have a maximum height of 14' restrained at floor and ceiling.
- Interior walls must be designed to resist not less than a force of 5 lbs. per sq. ft. applied perpendicular to the wall. The deflection of such walls under a load of 5 lbs. per square foot shall not exceed 1/240 of the span for walls with brittle finishes and 1/120 of the span for walls with flexible finishes (per International Building Code sections 1604.4 and 1607.13).
- Traxx may not extend more than 6" beyond the last solid attachment point.
- Minimum width of Traxx that can be attached to a wall is 16" mounted to studs 16" apart.
- If an overhead is being mounted, the minimum width for Traxx is 24" with the Traxx being centered on studs 16" apart, so as not to extend more than 6" beyond the last solid attachment point.

Presentation Tools

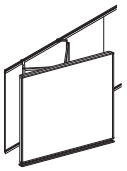
Features ➤See page 335
Traxx & Tiles Product Info 336
Installation & Planning 337

Details

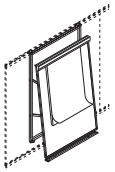


Flexboards provide tackable fabric or marker board surfaces that can be positioned easily for your convenience. Flexboards hang from the center reveal of the upper Traxx. They can also hang off the top edge of the upper Traxx; however, the anti-dislodgement feature will be inactive in this position.

Flexboards are reversible. They are available in fabric/marker board and marker board/ marker board combinations. Marker board surfaces are porcelain/magnetic.



Swivel marker board hangs from the upper Traxx channel which allows it to pass over flexboards, flip chart holder, and extendable flip chart holder. It will swivel 45° for maximum flexibility. Pen holder is included.



Extendable flip chart holder provides an ergonomically correct surface for writing on flip charts. It pulls out from the wall at a 20° angle for access and to allow pages to be flipped over the back of the chart and remain attached. Ships with one pad of paper. There is a marker board surface beneath the pad. Concealed rollers on extendable flip chart holder are standard to hold any pages that are torn from the flip chart pad. Pen holder is included.

Anti-dislodgement feature on all boards keeps them in place as they move along the Traxx. Boards may be used with or without tiles.

Presentation rail is 36"W and can be used on the lower Traxx to hold presentation materials. It can also be used as an eraser tray. End caps allow two rails to be joined together to create a longer display surface. A smooth transition is accomplished by removing one end cap and inserting the exposed rail into the end cap of another rail.

Flip chart holder hangs on upper Traxx and can be repositioned easily. It holds standard size flip chart pads. Pegs are adjustable. Flip chart holder is equipped with concealed rollers to hold any pages that are torn from the flip chart pad.

IMPORTANT: 37"H tiles correspond to 68"H Xsite and Cetra panels; 36"H tiles correspond to 66"H Interworks EQ panels.

Tiles can be field scribed (excluding porcelain marker board). Additional trim channels should be specified separately if additional tiles are created.

Expo or Expo2 dry erase markers are recommended for use on marker boards. Low-odor dry erase markers are not recommended, as they may leave undesirable results when erased.

Trim Channels
➤See page 346.

Standard Includes

Laminate Marker Board
- Markerboard tile: Icey White or Off White laminate
- 2 complementary trim channels

Magnetic Porcelain
- Magnetic porcelain tile: white
- 2 complementary trim channels

How to Specify

❶ Model
② Laminate finish designator (omit for porcelain marker board):
409M Icey White
483M Off White

Features

Overview

Statement of Line ➤See page 350
Product Information 357
Application Guidelines 358

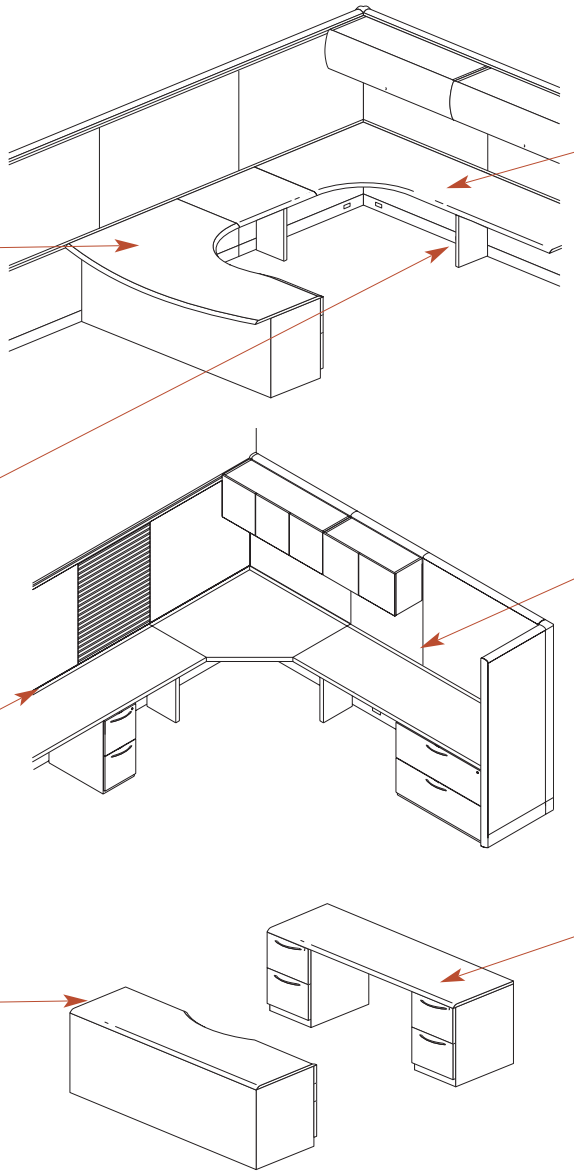
Worksurfaces can be panel-mounted, Traxx mounted, or used in freestanding applications. Two worksurface thicknesses are available: 1 3/16" and 1 9/16".

Worksurfaces have a solid core with a laminate (HPL), wood, or thermofoil surface. Thermofoil worksurfaces feature a protective polymer layer that is heat formed over an MDF core.

Additional support can be provided by mid-supports, cantilevers, pedestals, column legs, and support panels.

Traxx brackets attach worksurface to bottom Traxx in Traxx-mounted applications.

Corner and end supports are available to create freestanding modular casegoods.



Xsite Traxx-mounted worksurfaces allow for flexible horizontal positioning which provides exceptional off-modular capabilities.

Cetra and Interworks EQ panels feature slots to allow worksurfaces to be mounted at any height in 1" increments.

Freestanding applications can be created by combining undersurface storage and modesty panels.

1 3/16" Rim Profiles:

Plastic (P) | Wood Softened (F) | Sloped Edge (S)

Plastic rim is available on laminate worksurfaces only. The wood softened rim is available on laminate or wood worksurfaces. Sloped rim is available on thermofoil worksurfaces only.

1 9/16" Rim Profiles:

Self Edge (J) | Plastic (P) | Waterfall (K)

Wood Softened (F) | Wood Reed (W)

Wood Scalloped (X) | Wood Transitional (E)

Self edge, plastic, and waterfall rim profiles are available on laminate worksurfaces only. Wood softened, reed, scalloped, and transitional rim profiles are available on laminate or wood worksurfaces.
IMPORTANT: All rim profiles are not available on all worksurface shapes.
➤See pricing pages.

Worksurfaces

Features ➤See page 356
Application Guidelines 358

Details

Two worksurface thicknesses are available: 1 3/16" and 1 9/16". IMPORTANT: While the 1 3/16" and 1 9/16" worksurfaces are offered in the same materials, they are not interchangeable and cannot be used next to each other.

Wire manager profile worksurfaces have a flexible rubber trough that allows cords and cables to be routed along the back edge of the worksurface.

Tables are ideal for private offices and team work areas. Two table top thicknesses are available—1 3/16" and 1 9/16"—to complement the worksurface offering.

Cylinder and half-cylinder bases are available for use with table tops. Table support bases include an anti-tip weight.

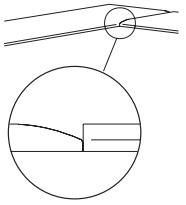
Finishes & Materials

Worksurfaces
- Thermofoil
- Laminate
- Wood

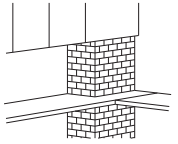
Rims
- Sloped on thermofoil worksurface
- Plastic on laminate worksurface
- Wood on laminate or wood worksurface
- Laminate on 1 9/16" laminate worksurface with self edge or waterfall rim

Wire Manager
- Plastic, specified to coordinate with worksurface

Connections

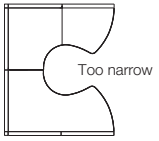


When using straight worksurfaces with sloped rims perpendicular to each other, there will be a valley where the slopes meet. It is recommended that extended worksurfaces be specified where possible to eliminate the valley between surfaces.



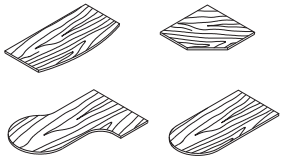
Worksurfaces can be scribed on site to conform to oblique angles, irregular column placement, and historical preservation guidelines.

Planning Factors



Workstations using curvilinear worksurfaces need special planning to ensure there is proper clearance. Some curved worksurfaces, such as the wedge or extended wedge, will extend into the workspace making the work area too narrow for a chair. Specify corner surface in appropriate size to provide ample workspace.
➤See pricing pages for dimensions.

IMPORTANT: When using curvilinear worksurfaces, it is recommended that mobile undersurface storage is used.



Standard grain direction for wood, woodgrain laminate, and woodgrain thermofoil worksurfaces runs the length of the worksurface. However, depending on the worksurface shape and the material, the direction can vary.
➤See pricing pages for grain direction on specific worksurface models.
Note: Special attention should be given to wood grain direction when specifying a corner worksurface in a U-configuration. If a different grain direction other than the standard is required, worksurfaces must be custom quoted.

Custom modifications can be specified using an electronic specification tool for select models without running through as a special order. These include factory-installed grommets, additional wire managers, rims, or mitering. Special dimensions are available on straight worksurfaces by specifying the next larger standard model and selecting the special cut down dimension option. Upcharges apply; not available on Kwik Office models.
Note: Special dimensions on worksurface shapes other than straight must be custom quoted.

Related Products

Brackets are available to attach worksurfaces to all Kimball Office Systems and adjacent worksurfaces.
➤See pages 458–460.

Support components are available to make worksurfaces freestanding.
➤See pages 463–470.

Accessories, including center drawer and keyboard trays, are available to add functionality to the work area.
➤See the Perks Price List.

Rim Options:

➤See appropriate pricing page for available rim options.

Wire Manager | Single Rim | Double Rim

Wire manager option has the selected rim detail on the front edge and a wire manager on the back edge. Side edges are finished to match the top surface.
Exception: Sides on 1 3/16" laminate surfaces with plastic rim (P) are finished to match the rim.

Single-rim option has the selected rim detail on the front edge only. Sides and back are finished to match the front rim.

Double-rim option has the rim detail on the front and back edges. Sides are finished to match the front and back rims.
Note: Only select shapes are available with double rim.

Grommets:

Factory-installed grommets are available through electronic specification tools for single and double rim worksurfaces. Factory-installed grommet option includes black plastic grommet (models 99KG50, 99KG60, 99KG80); upcharge of $68 per grommet applies.
Note: Not all grommet locations are available for all surfaces. Use electronic specification tools for available options.

Cetra-Supported Worksurfaces

Application Guidelines

Bracketry and Support Guidelines

Features ➤See page 356
Product Information 357
Application Guidelines

IMPORTANT: Supports and brackets must be specified separately for all worksurfaces. Specify the appropriate supports or brackets for the specific application.

Supports and brackets are packaged separately from worksurfaces.

IMPORTANT: Careful consideration must be given to dimensions when using curvilinear worksurfaces. It is recommended that mobile undersurface storage be used.

End-to-end panel-supported worksurfaces require the additional support of a cantilever, support panel, or undersurface storage at every joint.

Perpendicular panel-supported worksurfaces can use flat brackets and edge support brackets to provide adequate support at the worksurface joint.

Column or tapered legs can provide additional support for worksurfaces. Support panels may also be used. Verify dimensions before specifying.

Cetra panel-mounted worksurfaces must be supported by edge support brackets, flat brackets, cantilevers, support panels, undersurface storage units, or universal support components.
Note: When using 1 3/16" worksurfaces with Cetra sectional panels or midwireway panels, approximately 3/8" of the panel or bottom tile will be visible above the worksurface.

Unsupported span of 48" for 1 3/16" worksurfaces or 60" for 1 9/16" worksurfaces requires additional support, such as a cantilever, support panel, or undersurface storage.

Brackets should be utilized at every panel joint to fully support the surface and to tie the panels to the worksurface.

Edge support brackets attach to the panel's slotted vertical channel and provide the most secure method of supporting a worksurface. They must be secured to the underside of the worksurface. The supporting panel width must be equal to the worksurface depth. They also provide corner support for corner worksurfaces and are used as additional support behind an attached storage unit.

Drop brackets are used to attach adjacent worksurfaces at varying heights. They provide a 3" height change.

Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.

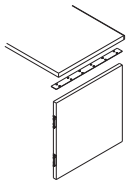
Cetra-Supported Worksurfaces

continued

Features ➤See page 356
Product Information 357
Application Guidelines 358



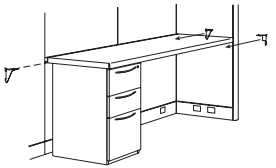
Cetra panel-mounted support panels are 1¼" thick and are available in four depths—12", 18", 24", and 30".

18", 24", and 30"D support panels are used on the end of worksurfaces that are not panel wrapped. Support panels can also be used as additional support for worksurfaces that exceed the recommended kneespace. They should be attached to the panel in back of the worksurface and to the underside of the worksurface to provide maximum strength. Panel and worksurface brackets are attached; however, they can be reversed for left- or right-hand applications.

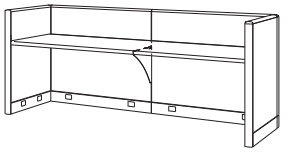
12"D support panels are intended for use as additional support in the middle of a run when kneespace exceeds the recommended span. 12"D support panels do not attach to panel reveals.

Support panels may be used in freestanding or Traxx applications when modesty panels are not used as long as the back edges are not exposed. Back edges of support panels are unfinished.
If the back edge of the support panel will be exposed, request that it be finished. Support panels are equipped with adjustable leveling glides to align the worksurfaces. They provide 1¼" of adjustment.

Note: Cetra support panels may be used in Interworks EQ, freestanding, or Traxx applications by removing panel brackets and ordering a support panel bracket or gusset bracket for additional support as needed. If back edge of support panel will be exposed, request that it be finished. If modesty panel is required, specify a freestanding support panel.



Pedestals provide support for the front edge of worksurfaces. A back bracket must also be used to attach the surface to the panel.



Cantilevers are used as support in the center of long worksurfaces or in configurations where other support methods are not possible. They may be used as support when placing two surfaces end to end. Cantilevers may be used as sole support when wing panel width is different than worksurface depth. A pedestal or support panel must be used if there is no wing panel. Cantilevers are handed, however, they can share the load of the adjacent worksurface with use of flat brackets.

Universal support components are available for use as additional alternative support solutions.

Xsite-Supported Worksurfaces

Bracketry and Support Guidelines

Features ➤See page 356
Product Information 357
Application Guidelines 358

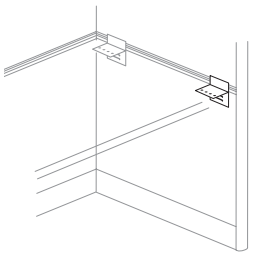
IMPORTANT: Supports and brackets must be specified separately for all worksurfaces. Specify the appropriate supports or brackets for the specific application. Supports and brackets are packaged separately from the worksurfaces.

IMPORTANT: Careful consideration must be given to dimensions when using curvilinear worksurfaces. It is recommended that mobile undersurface storage be used.

End-to-end panel-supported worksurfaces require the additional support of a mid-support, support panel, or undersurface storage at every joint.

Perpendicular panel-supported worksurfaces can use flat brackets and edge support brackets to provide adequate support at the worksurface joint.

Column, stick, or tapered legs can provide additional support for worksurfaces. They can provide support to the front edge of a worksurface, but do not stabilize adjacent loadbearing panels. Support panels may also be used. Verify dimensions before specifying.



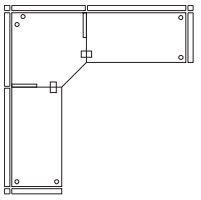
Xsite-mounted worksurfaces must be supported on the ends by edge support brackets, full-depth support panels, end-support legs, or undersurface storage unit.

Unsupported span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, or undersurface storage.

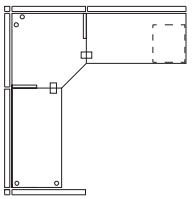
Flat brackets, 12"D support panels, or mid-supports should be used as additional support at every worksurface joint. Additional support is also required every 48" on 1 3/16" worksurfaces and every 60" on 1 9/16" worksurfaces.

Use Xsite Traxx with edge support brackets to support the ends of worksurfaces whenever possible. This ties the station together providing more rigidity for the structure.

➤Continued on next page.



Corner and straight worksurfaces



Corner and straight worksurfaces

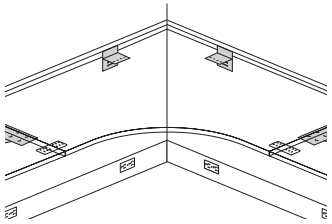
Xsite-Supported Worksurfaces

continued

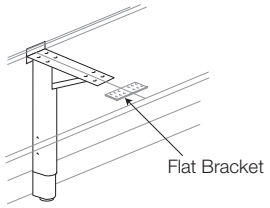
Features ➤See page 356
Product Information 357
Application Guidelines 358

Brackets adjust for worksurface heights from 27¾" to 29", at ⅝" increments, measured from the floor to the top of the 1³⁄₁₆" worksurface.



Two edge support brackets are required for the back corner of corner surfaces, one on each side.

Specify quantity of worksurface edge support brackets to match worksurface size and type.



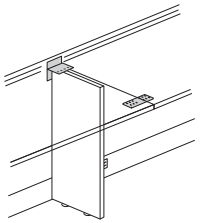
Adjustable Mid-Support

Adjustable worksurface mid-supports may be used as additional support. They cannot provide support at the end of a worksurface and can only be used with an end-support leg in balanced configurations. They do not extend far enough under the worksurface to provide sufficient support in one-sided configurations. Adjustable mid-supports are not visually compatible with end-support legs.

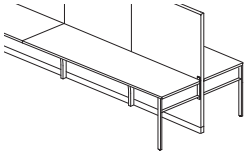
2-high adjustable mid-supports will adjust vertically from 27¾" to 29", at ⅝" increments, measured from the floor to the top of the worksurface.

3-high adjustable mid-supports will adjust vertically from 40¼" to 41½", at ⅝" increments, measured from the floor to the top of the 1³⁄₁₆" worksurface.

Specify adjustable mid-supports to match worksurface depth.



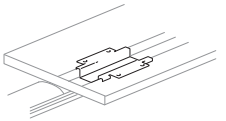
Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.



End-support legs are for use at the end of panel run or in the middle of a run in place of a mid-support. They must be used with a worksurface and be attached vertically with two screws to the panel frame (through the tile) and to the worksurface. The worksurface conceals the attachment holes in the top of the leg.

End support legs are not applicable to 6- and 7-high configurations.

Mid-support legs are visually compatible with end-support legs. They require a flat bracket, specified separately, and must be secured to the worksurface but not to the tile and frame.



Transaction counter brackets recess into Xsite's top channel and are screwed to the frame.

Top cap is required beneath a transaction counter. The width of the top cap should match the width of the frame to which the transaction counter will be mounted. Top cap must be modified in the field to accommodate transaction counter brackets.

Specify two transaction counter brackets for 24" to 60"W counters. Specify four brackets for 66" to 96"W counters.

Transaction counter brackets will not interfere with cables routed through the top channel.

Interworks EQ-Supported Worksurfaces

Application Guidelines

Bracketry and Support Guidelines

Features ➤See page 356
Product Information 357
Application Guidelines 358

IMPORTANT: Supports and brackets must be specified separately for all worksurfaces for the specific application. Supports and brackets are packaged separately from the worksurfaces.

IMPORTANT: Careful consideration must be given to dimensions when using curvilinear worksurfaces. It is recommended that mobile undersurface storage be used.

End-to-end panel-supported worksurfaces require the additional support of a cantilever, support panel, or undersurface storage at every joint.

Perpendicular panel-supported worksurfaces can use flat brackets and edge support brackets to provide adequate support at the worksurface joint.

Column or tapered legs can provide additional support for worksurfaces. Support panels may also be used. Verify dimensions before specifying.

Interworks EQ panel-mounted worksurfaces should be supported by edge support brackets, flat brackets, support panels, cantilevers, undersurface storage units, or universal support components.

Edge support brackets attach to the panels slotted vertical channel and provide the most secure method of supporting a worksurface. They must be secured to the underside of the worksurface.

Unsupported span of 48" for 1 3/16" worksurfaces or 60" for 1 9/16" worksurfaces requires additional support, such as a cantilever, support panel, or undersurface storage.

Edge support brackets should be used at every panel joint to fully support the worksurfaces and to tie the panels to the worksurface. They manually hook into the panel side rail to prevent accidental removal. They support the worksurface at the front and back corners. The supporting panel width should be equal to the worksurface depth. They also provide corner support for corner worksurfaces and are used as additional support behind an attached storage unit.

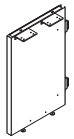
Interworks EQ-Supported Worksurfaces

continued

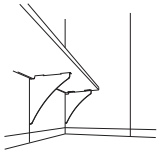
Features ➤See page 356
Product Information 357
Application Guidelines 358

Drop brackets are used to attach adjacent worksurfaces at varying heights. They provide a 2" height change.

Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.



Interworks EQ panel-mounted support panels are available in four depths—12", 18", 24", and 30". They are used on the end of worksurfaces that are not panel wrapped. Support panels can also be used as additional support for worksurfaces that exceed the recommended kneespace. They should be attached to the panel in back of the worksurface and to the underside of the worksurface to provide maximum strength. Panel and worksurface brackets are attached, however, they can be reversed for left- or right-hand applications. They are equipped with adjustable leveling glides that provide 1" of adjustment to align the worksurfaces.



Cantilevers are available 24"D. They are used as added support in the center of long worksurfaces or in configurations where other support methods are not possible. They may be used as support when placing two surfaces end to end or with suspended pedestals. A pedestal or support panel must be used if there is no wing panel. Cantilevers are handed, however they can share the load of adjacent worksurface with the use of flat brackets.

Pedestals provide support for the front edge of worksurfaces. A back edge support bracket must also be used to attach the surface to the panel.

Universal support components are available for use as additional alternative support solutions.

Traxx-Supported Worksurfaces

Application Guidelines

Bracketry and Support Guidelines

Features ➤See page 356
Product Information 357
Application Guidelines 358

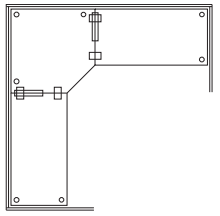
Traxx worksurface brackets attach worksurfaces to bottom Traxx. Traxx-mounted worksurfaces must be supported by worksurface brackets, flat brackets, support panels, undersurface storage units or universal support components. A bracket is required every 48" along back edge of worksurface in addition to corner and end locations.
Note: When using 1 3/16" worksurfaces with Traxx, approximately 3/8" of the bottom Traxx will be visible above the worksurface.

End-to-end worksurfaces require a support panel or undersurface storage for additional support of the front edge.

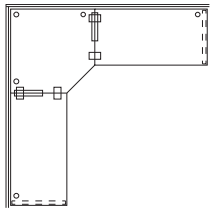
Perpendicular worksurfaces can use flat brackets and Traxx brackets to provide adequate support from one surface to the other at the worksurface joint.

Universal support components, such as tapered, stick, or column legs, are available as alternative support solutions for worksurfaces. ➤See page 467.

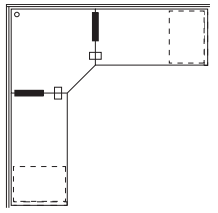
Worksurface brackets have an anti-kickout design that provides secure attachment without pre-determined positioning.



Corner and straight worksurfaces; Traxx wrapped



Corner and straight worksurfaces; support panels



Corner and straight worksurfaces; storage

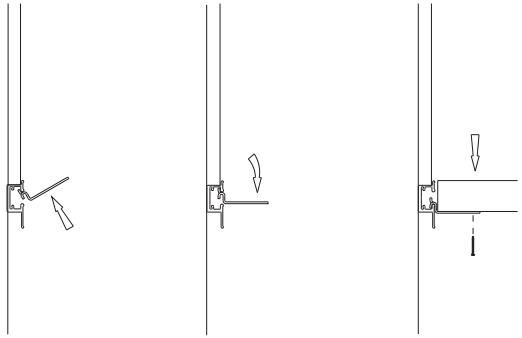
LEGEND

- = Traxx bracket
- = Pedestal
- = 12" support panel
- = 10" mid-support
- = Support panel
- = Flat bracket

Note: 12" support panels and 10" mid-supports are inter-changeable. If 10" mid-support is used, only one flat bracket is required; 12" support panels, require two flat brackets, and a Traxx bracket.

Note: Worksurface spans greater than 48"W for 1 3/16" surfaces and 60"W for 1 9/16" surfaces require additional support.

Traxx Worksurface Bracket Attachment:



Considerations:

- Worksurfaces may be used with all Kimball Office Systems. Specify appropriate bracketry and support for the application.
- Consider the worksurface load when planning support. For worksurfaces that will hold office equipment, such as laser printers and copiers, supplemental support other than bracketry is recommended.
- Undersurface storage and pedestals satisfy both storage and support needs.
- Reconfigurations of existing worksurfaces may require new supports or brackets.
- Supports may be positioned anywhere along the worksurface without the limitations of pre-drilled or pre-determined locations.

Freestanding Worksurfaces

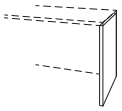
Application Guidelines

Bracketry and Support Guidelines

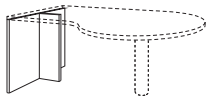
Features ➤See page 356
Product Information 357
Application Guidelines 358

Freestanding worksurfaces can be created by configuring a stable combination of freestanding support panels, freestanding end supports, freestanding corner supports, square or flat profile undersurface storage. *Note: Radius profile storage is designed to be positioned within a desk shell.*

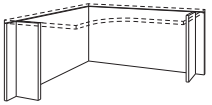
Wood and Laminate:



Freestanding undersurface support panels are used to support worksurfaces in freestanding applications. Their depth is 1⅛" less than the worksurface to accommodate a modesty panel.



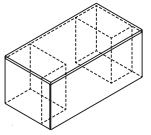
Freestanding end supports are used to support worksurfaces in a freestanding application. Worksurfaces used in freestanding applications must be attached to a return or extension worksurface for additional support.



Freestanding corner supports provide support for corner worksurfaces in freestanding applications.

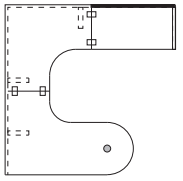
Universal support components, such as tapered or column legs, are available as alternative support solutions for worksurfaces.
➤See page 467.

Modesty panels provide undersurface privacy, additional support, and a finished appearance. They may be used in freestanding applications. Hardware is included for attachment to the underside of the worksurface. *Note: When using a modesty panel with a 30"D radius-profile pedestal, the worksurface must be 36"D.*

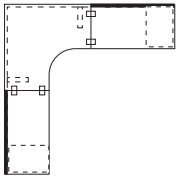


Flush appearance is achieved by specifying the modesty panel to be the same width as the worksurface. It will cover the back of storage units or supports.

➤Continued on next page.



Extended U-top, corner, and straight worksurfaces



Corner and straight worksurfaces

LEGEND

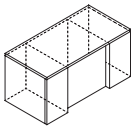
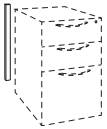
Freestanding Worksurfaces

continued

Features ➤See page 356
Product Information 357
Application Guidelines 358



Breakfront appearance is achieved by specifying three modesty panels. Two 18"W modesty panels to cover the backs of square profile pedestals and one equal to the width of the space between the pedestals.
Note: Breakfront appearance can only be achieved with square profile storage.



Modesty filler strip is used if a modesty panel is not specified. It maintains space for cable routing behind the pedestal and fills the 1⅛" difference in depth.

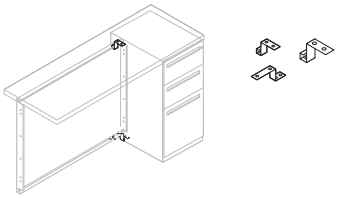
Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.

Drop brackets are used to attach adjacent worksurfaces at varying heights. They provide a 3" height change.

Column, stick, and tapered legs cannot be used in freestanding applications.

Metal Support:

Metal modesty panels attach 4" inset from the approach side of the pedestal or support panel. Wire management is achieved via a 1½" space between the top of the modesty panel and the underside of the surface as well as a 3" gap from the bottom of the modesty panel to the floor.



Pedestal non-deface kit allows attachment of metal modesty panel to metal pedestals without drilling holes in the sides.

End panels are used to support worksurfaces in freestanding applications. They are equipped with adjustable leveling glides that provide 1" of adjustment for aligning worksurfaces. They are designed to secure metal modesty panels.

8" return support can be used as support for corner surfaces or as additional support for 24"D worksurfaces that exceed the recommended kneespace.

8"D support panels cannot support any worksurface deeper than 24". They are equipped with one leveling glide that provides 1" of adjustment for aligning worksurfaces.

Corner posts are used to create freestanding corner units. They are equipped with one leveling glide that provides 1" of adjustment for aligning worksurfaces. They are designed to secure metal modesty panels.

Filler strip is used if a metal modesty panel is not specified. It maintains space for cable routing behind the pedestal and fills the 1⅛" difference in depth for wood or laminate applications.

Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.

Drop brackets are used to attach adjacent surfaces at varying heights. They provide a 2" height change.

Metal Support Common Applications:

8"D support panel applies to 24"D (return) worksurface.

7"D corner post applies to freestanding corner surfaces.

12"D support panel applies to any depth corner worksurface, providing it is bracketed to adjacent unit, and 30"D (return) worksurface, providing additional support is used to match surface depth.

18"D half end panel applies to any depth corner worksurface.

18"D undersurface lateral file applies to any depth worksurface, providing full end panel is included to match surface depth.

24"D pedestal and full end panel apply to 24"D or 30"D worksurfaces.

30"D pedestal and full end panel apply to 30"D or 36"D worksurfaces.

36"D full end panel applies to 36"D worksurfaces.

90 " Straight	2 Support Panels	2"	88"
96" Straight	2 Peds.	30"	66
96" Straight	1 Ped., 1 Support Panel	16"	80"
96" Straight	2 Support Panels	2"	94"

Notes:

** Freestanding corner units require 2 modesty panels. Corner Post is 7"W (nominal) and is inset 4" (actual); total of 11". When combined with the support panel (1"), support width is 12" (nominal). When combined with the pedestal (15"), support width is 26" (nominal).*

Unsupported surface span cannot exceed 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces.

To determine the metal modesty panel width, subtract the total nominal width of support (pedestal and/or end panel) from the nominal worksurface width.

Example:

60"W worksurface
– 30"W support (2 pedestals)
= 30"W modesty panel

For planning purposes, the chart at right uses the term support panel to refer to full support panels, return support panels, and worksurface support panels since all are nominally 1" wide.

Support depth underneath the left and right side of the worksurface must be equal unless the unit is secured to an adjacent, freestanding unit such as a return.

Universal Supports

Application Guidelines

Bracketry and Support Guidelines

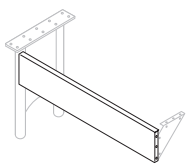
Features ➤See page 356
Product Information 357
Application Guidelines 358

Universal supports can be used in any panel-mounted, Traxx-mounted, or freestanding application.

Support panel brackets and gusset brackets provide additional stability between a worksurface and support panel when the support panel is not attached to a panel.

Adjustable column base provides 4" of adjustment. It is equipped with a glide.

Decorative support leg includes glides and carpet grippers. Inserts are specified separately.



Metal modesty panel can be secured to decorative support leg and/or gusset bracket on either end. Gusset bracket must be specified separately.

Static and adjustable-height mobile table legs are available for use with worksurfaces and table tops.

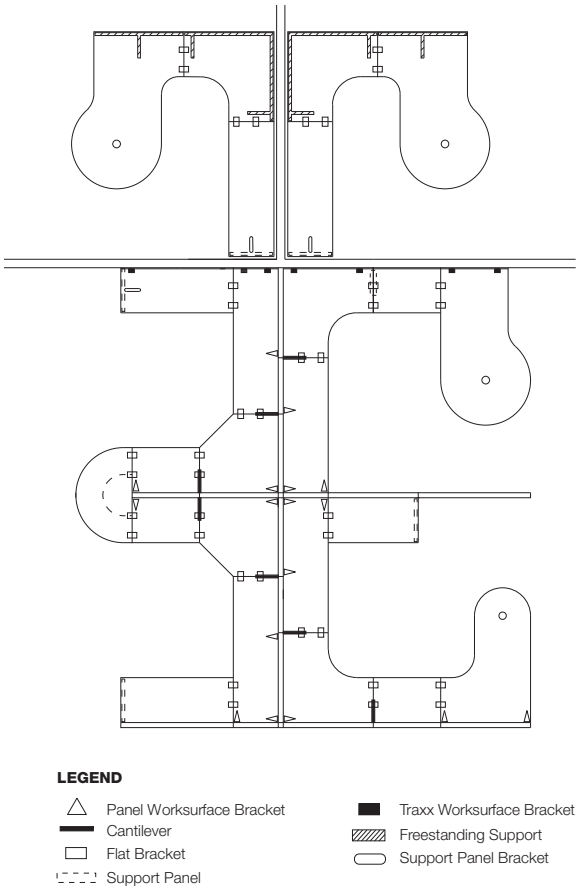
Units using tapered leg, column leg, adjustable column base, or decorative support leg must be secured to an adjacent worksurface for stability.

Cylinder and half-cylinder bases are available for use with table tops and worksurfaces. Table support bases include anti-tip weight.

Adjustable base, X-base and T-base are available for use with table tops and worksurfaces.

Note: Review support recommendations on the pricing pages when specifying tops and support for table use.

The illustration below shows a variety of worksurface configurations and support options. Please use these examples to aid you in specifying appropriate support for specific applications.
Note: Worksurface spans greater than 48"W for 1 3/16" surfaces and 60"W for 1 9/16" surfaces require additional support.



Desking Configuration Thought Starters

Features ➤See page 356
Product Information 357
Application Guidelines 358

Desking configurations can be created using spine walls or Traxx, and for freestanding and mobile applications

Rim Profiles:

Plastic (P)

Softened (F)

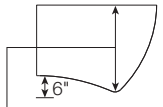
Dimensions for Space Planning:



- 30" on 24"D worksurface
  36" on 30"D worksurface

IMPORTANT: Brackets must be specified separately.

Mobile undersurface storage units are recommended for use with wedge worksurfaces.

Side edges are finished to match the top; wire manager is on the back edge.
Exception: Side edges on worksurfaces with plastic rim option (P) are finished to match the front plastic rim.

Standard Includes

- Worksurface

How to Specify

1. Model
2. Material:
   L = Laminate
   LW = Laminate with wood rim
   W = Wood
3. Rim option:
   3 = Wire manager
4. Rim profile:
   P = Plastic rim (available on laminate surface only)
   F = Wood, softened rim
5. Surface finish price group:
   STD = Group 1
   STD2 = Group 2 (+20%)
   FSCW = FSC-certified group 1 wood (+3%)
6. Surface finish designator
7. Rim finish price group (include for laminate with wood rim only):
   STD = Group 1
   STD2 = Group 2 (+20%)
8. Rim finish designator (include for laminate with wood rim or P rim only)
9. Wire manager finish designator

(FSC) = FSC-certified wood option available.

IMPORTANT: Brackets must be specified separately.

Mobile undersurface storage units are recommended for use with serpentine corner worksurface.

Side edges are finished to match the top; wire manager is on the back edge.
Exception: Side edges on worksurfaces with plastic rim option (P) are finished to match the front plastic rim.

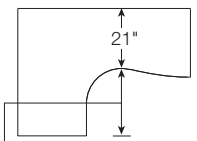
Return combo dimensions are determined from left to right when seated at the worksurface.

IMPORTANT: If using support at the narrowest point of the surface, consider the depth of the support.

Rim Profiles:

Sloped (S) Plastic (P) Softened (F)

Dimensions for Space Planning:



- 21" on 42"D worksurface
  27" on 48"D worksurface

Standard Includes

- Worksurface

How to Specify

	95 7/8"				**SS30489624WSSE** (FSC)	1573	1801	2228	2210

Rim Profiles:

Sloped (S)

Plastic (P)

Softened (F)

IMPORTANT: Brackets must be specified separately.

Return combo dimensions are determined from left to right when seated at the worksurface.

Side edges are finished to match the top; wire manager is on the back edge.
Exception: Side edges on worksurfaces with plastic rim option (P) are finished to match the front plastic rim.

Standard Includes

- Worksurface

How to Specify

❶ Model
❷ Material:
T = Thermofoil
L = Laminate
LW = Laminate with wood rim
W = Wood
❸ Rim option:
3 = Wire manager
④ Rim profile:
S = Sloped rim (available on thermofoil surface only)
P = Plastic rim (available on laminate surface only)
F = Wood, softened rim
⑤ Surface finish price group:
STD = Group 1
STD2 = Group 2 thermofoil (+$60); Group 2 wood (+20%)
FSCW = FSC-certified group 1 wood (+3%)
⑥ Surface finish designator
⑦ Rim finish price group (include for laminate with wood rim only):
STD = Group 1
STD2 = Group 2 (+20%)
⑧ Rim finish designator (include for laminate with wood rim or P rim only)
⑨ Wire manager finish designator

(FSC) = FSC-certified wood option available.

Rim Profiles:

Plastic (P) Softened (F)

IMPORTANT: Brackets must be specified separately.

Return combo dimensions are determined from left to right when seated at the worksurface.

Side and back edges are finished to match front rim.

Standard Includes

- Worksurface

How to Specify

❶ Model
❷ Material:
L = Laminate
LW = Laminate with wood rim
W = Wood
❸ Rim option:
1 = Single rim
④ Rim profile:
P = Plastic rim (available on laminate surface only)
F = Wood, softened rim
⑤ Surface finish price group:
STD = Group 1
STD2 = Group 2 (+20%)
FSCW = FSC-certified group 1 wood (+3%)
⑥ Surface finish designator
⑦ Rim finish price group (include for laminate with wood rim only):
STD = Group 1
STD2 = Group 2 (+20%)
⑧ Rim finish designator (include for laminate with wood rim or P rim only)

FSC = FSC-certified wood option available.

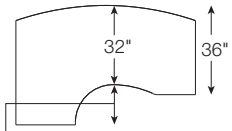
	83 7/8"			27 1/8"		**SS24488430WSAE**	—	1638	2259	2079

Rim Profiles:

Sloped (S) Plastic (P) Softened (F)

Dimensions for Space Planning:



16" on 42"D worksurface
22" on 48"D worksurface

Note: Dimensions for thermofoil worksurfaces are 1/2" less than shown.

IMPORTANT: Brackets must be specified separately.

Side "A" dimension for thermofoil worksurfaces is 40 9/32".

Consider dimension "E" when specifying pedestals for use with extended arc worksurfaces.

Extended arc worksurfaces with an "E" dimension of 15 1/8" are for use with 15"W pedestals only.

Side edges are finished to match the front and back rims.

Standard Includes

- Worksurface

How to Specify

1. Model
2. Material:
   T = Thermofoil
   L = Laminate
   LW = Laminate with wood rim
   W = Wood
3. Rim option:
   2 = Double rim
4. Rim profile:
   S = Sloped rim (available on thermofoil surface only)
   P = Plastic rim (available on laminate surface only)
   F = Wood, softened rim
5. Surface finish price group:
   STD = Group 1
   STD2 = Group 2 thermofoil (+$60); Group 2 wood (+20%)
   FSCW = FSC-certified group 1 wood (+3%)
6. Surface finish designator
7. Rim finish price group (include for laminate with wood rim only):
   STD = Group 1
   STD2 = Group 2 (+20%)
8. Rim finish designator (include for laminate with wood rim or P rim only)

(FSC) = FSC-certified wood option available. ➤See page 15.

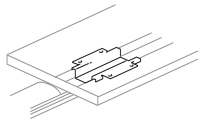
Adjustable Mid-Support



IMPORTANT: Brackets and support must be specified separately.
➤See page 360 for proper bracket/support application.

Adjustable mid-supports are used when placing two worksurfaces end to end or when kneespace exceeds 48". Adjustable mid-support cannot provide support at the end of a worksurface. Bracket is exposed above the worksurface.

One flat bracket is required to properly join two flush, adjacent/perpendicular worksurfaces when an adjustable mid-support or mid-support leg is used; two flat brackets are required to properly secure and support when undersurface support panels or pedestals are used.

Features

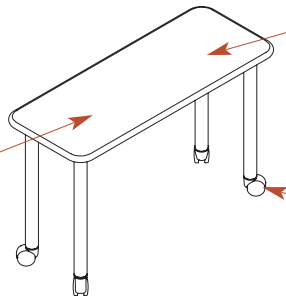
Overview

Statement of Line ➤See page 471
Pricing 473
Finishes & Materials 573

Mobile tables are available in six different top shapes and with a wood or thermofoil surface. All models are available in a top-only model to allow attachment of an alternate base in the field or to replace an existing table top.

Tear-drop and rectangular mobile tables are standard with fixed-height column legs (29⅛") or adjustable-height column legs (26⅝"–30½").

Fixed-height and adjustable-height mobile column legs can be specified separately and used with other table tops, including those listed in the worksurfaces section in accordance with the guidelines listed.



Wood table tops feature a wood bullnose rim and are 1 3/16" thick.

Locking casters are standard on all mobile column legs.

Rim Profiles:

Wood Bullnose (N) | Sloped Edge (S)

Wood bullnose is available on wood tops only. Sloped rim is available on thermofoil tops only.
Note: Due to different material composites, wood finishes may vary slightly between the top and the bullnose rim.

Cord Management:

A variety of accessories may be added in the field to help manage cords and cables, including

Tear-Drop and Rectangular

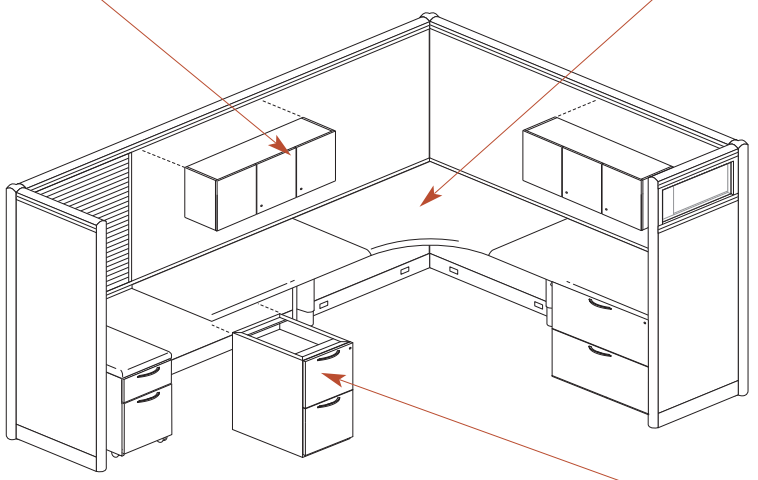
Features

Overview

Locking Info ➤See page 501
Lock Core Requirements 502

Overhead storage is available in wood, laminate, metal, metal/laminate, metal/wood, and laminate/metal combinations.
Note: Not all profiles are available in all materials.

Overhead storage can be can be mounted on panels, Traxx, building walls, mounted between storage units in freestanding applications.
➤See chart on page 489 for possible applications by storage profile.



1³⁄₁₆" and 1⁹⁄₁₆" worksurfaces may be used with all undersurface storage. Mobile storage units are recommended when specifying curvilinear worksurfaces.

Undersurface storage is available in wood, laminate, metal, and metal/thermofoil combination.
Note: Not all profiles are available in all materials.

All undersurface storage may be used with any Kimball Office panel system.

Specifying Checklist:

- ❑ Pull options
- ❑ Pedestal reveal strips and modesty filler strips when side of square profile pedestal is exposed
- ❑ Tops for square profile freestanding lateral files
- ❑ Back panels for any storage units that have unfinished backs that will be exposed
- ❑ Pedestal spacers for radius profile pedestals with vertical pulls or hinged door units when placed side by side
- ❑ Change key
- ❑ Lock cores if key specific option is selected
- ❑ Additional file bars if required
- ❑ Appropriate support brackets for panel system or Traxx application
- ❑ Traxx when wall mounting overheads
- ❑ Vertical cord managers
- ❑ Ganging kit when mounting overheads side-by-side.

Product Information

Square Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details

Square profile undersurface storage is available in wood or laminate.

Arc, bar, dome, span, and wire pulls are available on wood or laminate square profile storage.

Pedestals are 18"W with finished sides. They can be used at the ends of storage arrangements for a finished look without using support panels.

1½" glides provide 1¼" of adjustment.

Filing hardware for front-to-back and side-to-side filing is included for pedestals and lateral files. Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file holders to utilize strength of the drawer sides. Drawer interiors are black.
➤See page 482 for filing capacities.

Backs and tops of undersurface units are unfinished and must be concealed in application. Tops are not enclosed. Worksurfaces attach directly to horizontal frame.

Backs can be finished with a full width modesty panel for freestanding applications. For breakfront applications, specify two 18"W modesty panels for backs of pedestals and an additional modesty panel equal to the width of the kneespace between pedestals.

Mobile pedestals are finished on the top and all sides.

Locks are standard. They are black and located on front of cabinet.
➤See page 501 for keying.

- Satin Nickel Metallic
- Carbon Metallic

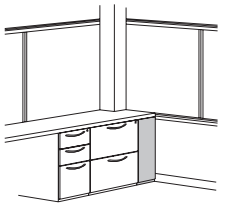
Connections

Pedestals are 23"D or 29"D. They are sized 1" less than worksurface depths to accommodate cable access when placed against a wall, or for the addition of a modesty panel.

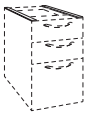
Planning Factors

Undersurface pedestals and lateral files provide support for worksurfaces. They are not intended to be used as freestanding units. 29"H worksurfaces can be supported by file/file, box/box/file, lateral file, and hinged door pedestals.

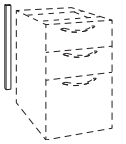
Related Products



Filler panels are available in wood or laminate. They can be scribed in the field to finish out cabinetry for a custom fit.



Pedestal reveal strips should be specified when the side of a pedestal is exposed. It conceals the small space between the top of the pedestal and the underside of the worksurface.



Modesty filler strip should be specified if a modesty panel is not used or if the storage component is not panel wrapped. Modesty filler strip maintains space for cabling behind pedestal while filling in the difference in storage and worksurface depth.

Undersurface Storage

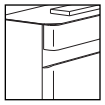
Product Information

Radius Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Radius profile undersurface storage is available in wood or laminate.

Waterfall or horizontal pulls are available on wood or laminate radius profile storage.

Vertical pulls are available on wood radius profile pedestals only. Vertical pulls run along the side edges of drawer fronts.

1½" glides provide 1¼" of adjustment.

Filing hardware for front-to-back and side-to-side filing is included for pedestals and lateral files. Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file holders to utilize strength of the drawer sides. Drawer interiors are black.
➤See page 484 for filing capacities.

Backs and tops of undersurface units are unfinished and must be concealed in application. Tops are not enclosed. Worksurfaces attach directly to horizontal frame.

Locks are standard on undersurface storage. They are black and located on front of cabinet.
➤See page 501 for keying options.

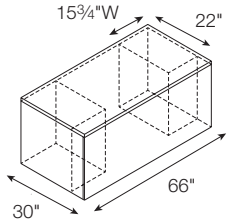
Finishes & Materials

Radius Profile Storage
- Wood
- Laminate

Waterfall and Horizontal Pulls (on radius profile)
- Black

Pedestal Spacers
- Wood
- Laminate

Connections

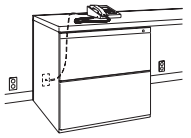


Pedestals are 15¾"W and are designed to be positioned within a desk shell or surrounded by panels.

Full width modesty panel and support panels must be specified for freestanding applications.

Planning Factors

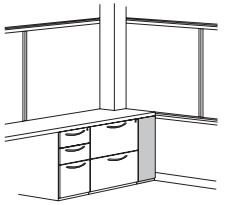
Undersurface pedestals and lateral files provide support for worksurfaces. They are not intended to be used as freestanding units. 29"H worksurfaces can be supported by file/file, box/box/file, lateral file, and hinged door pedestals.



16"D or 22"D pedestals are sized 2" less than worksurface depths to accommodate cable access when placed against a wall or panel.

30"D pedestals do not allow for cable access clearance or a modesty panel if used with 30"D worksurface.

Related Products



Filler panels are available in wood or laminate. They can be scribed in the field to finish out cabinetry for a custom fit.

Pedestal spacer is required between side-by-side pedestals with vertical pulls to provide access to the pull. It can also be used for clearance when two hinged door cabinets with waterfall pulls are placed next to each other or a wall.

Undersurface Storage

Product Information

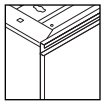
Flat Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Flat profile undersurface storage features a drawer-front-over-case design. Flat profile storage is available in all metal or with metal chassis and wood fronts.

Pedestals are 15"W. Suspended box/file pedestals are mounted beneath the worksurface. File/file and box/box/file pedestals support worksurfaces at 29"H.

Glides provide 1" of adjustment.

File drawers accommodate front-to-back filing by suspending hanging files from the drawer sides. For side-to-side filing, additional file bars are required.
➤See the Perks Price List.

Box and file drawer suspensions allow full extension.

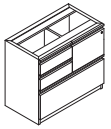
Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Lateral files includes two side-to-side file bar per drawer for letter filing. Front-to-back file bars are specified separately.
➤See the Perks Price List.

Tops are not enclosed. Worksurfaces attach directly to the horizontal frame.

Backs and sides are finished.

Mobile pedestals are finished on all sides and are available with painted or cushion top. Cushion top pedestal seated capacity is 225 lbs.



File center consists of box, file, and lateral file drawers. Box drawers can be specified in either the left or right drawer locations. One lock secures all drawers.

Locks are standard on undersurface storage. They are black and located on front of cabinet.
➤See page 501 for keying options.

Bookcases feature an enclosed back and include one adjustable shelf. Shelf adjusts in ½" increments. Glides on bookcases provide 1" of adjustment

Overhead Storage

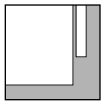
Product Information

Square Profile

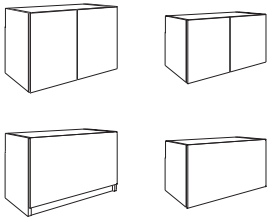
Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Square profile overheads are available in wood, laminate, wood chassis with a glass front, or laminate chassis with a glass front, and in hinged or flipper door models.

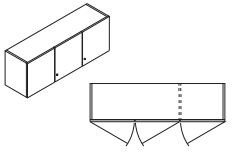
Overhead cabinets and highback organizers ship pre-assembled.



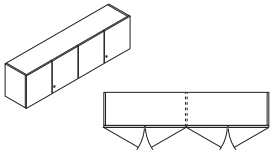
19"H 16"H

16"H overheads feature a smaller profile and accommodate standard-size binders.

Flipper doors include easy-down mechanism. 7" clearance above the cabinet is required.



42"W and 48"W hinged door overheads have three doors with a single door on the right. A support panel divides the overhead into two separate sections as indicated above.



60"W and 72"W hinged door overheads have four doors.

60"W and 72"W flipper door overheads have two doors.

Backs of overheads are unfinished and may be visible when used on panels that are 61"H or less. Backs are partial height in flipper and hinged door overheads.

Highback organizers have an unfinished back. Task light and tackboard must be specified separately. Cord exit is centered directly above tackboard through the back panel. Panel fabric is turned 90° and applied railroad style on 72"W tackboards.

Locks are optional on square profile overhead storage. Locks are located on the front of the cabinet. All locks are black.
➤See page 501 for keying options.

Finishes & Materials

Square Profile Overheads
- Wood
- Laminate
- Glass front

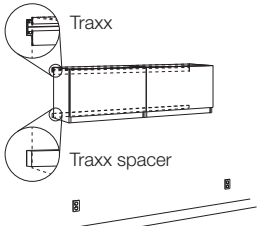
Square Profile Highback Organizers
- Wood
- Laminate

Square Profile Filler Panels
- Wood
- Laminate

Waterfall pulls
- Black

Connections

Xsite, Cetra, and Traxx can support square profile overheads.



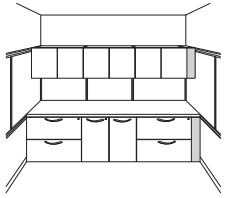
Wall mounted cabinets are hung from a single upper Traxx channel. Traxx spacer (5⁄8" full length shim), specified separately, is required when wall mounting overheads without using Traxx tiles. Traxx full end trim should be specified when the end of wall mounted overhead is exposed.
➤See page 347 for Traxx spacer.
➤See page 345 for end trim.

In freestanding applications, a single overhead unit can be supported by two angle brackets attached to short storage cabinets, vertical storage cabinets, or a combination of both.

Related Products

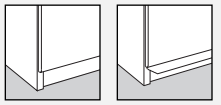
Overhead mounting brackets must be specified separately.
➤See pages 541–545.

Ganging kit is required when hanging overheads side-by-side. When mounted on Cetra panels, the inside left and right overhead brackets are replaced by the ganging bracket.
➤See page 546.



Filler panels are available to build out cabinetry for a custom fit. Filler panels are scribed in the field.

Door Pulls:



Integrated Waterfall

Integrated and waterfall door pulls are available. Integrated pulls run the full length of the door along the bottom edge.

Overhead Storage

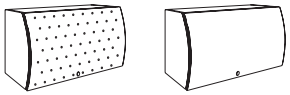
Curved Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Curved profile overheads are available with laminate chassis and painted metal fronts. Metal fronts are available with smooth or perforated metal. Curved profile overheads feature an easy-down mechanism and ship pre-assembled.

24"W–48"W units have a single door with black lock.

60"W–72"W units have two individually locking doors with black locks.

Locks are standard on curved profile overhead storage. Locks are located on the front of the cabinet. All locks are black.
➤See page 501 for keying options.

Finishes & Materials

Curved Profile Overhead Storage
- Laminate chassis: select solid laminates
- Metal front: paint

Connections

Xsite, Cetra, and Traxx can support curved profile overheads.

Related Products

Overhead mounting brackets must be specified separately.
➤See pages 541–544.

Ganging brackets are required when mounting overheads side by side on Xsite or Traxx.

Overhead Storage

Product Information

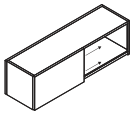
Flat Profile Sliding-Door Overheads

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details

Sliding-door overheads feature a metal chassis with metal, laminate or wood front. Units are available with one-sided or two-sided access. Units ship fully assembled.

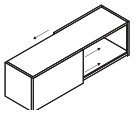
Locks are optional on sliding-door models; they are located on the bottom of the cabinet. Consider lock access when placing the overhead above other storage units or worksurfaces.



One-sided sliding-door models have one sliding door. A center panel divides the space; one compartment will be open at all times. Door can lock in either position. One-sided models are available for:

- Center mounting on Xsite panels, Xsede accessory rail, or Priority stanchions
- Center-mounting on Xsede accessory rail
- Wall mounting using wall standards
- Traxx mounting
- Panel-mount (face-mount) on Cetra, Xsite, and Interworks EQ

Note: Panel-mount model features a removable, full back for access and clean aesthetics.



Two-sided sliding-door models for use in center-mount applications only on Xsite panels, Xsede accessory rail, or Priority stanchions; they feature one-sliding door on each side. Center panel divides the space and each compartment features a fully finished back panel. Both sides can be locked independently on locking models; they must feature the same keying option.

Finishes & Materials

Flat Profile Overhead Storage

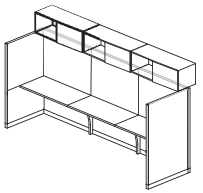
- Metal chassis/metal door
- Metal chassis/laminate door
- Metal chassis/wood door

Connections

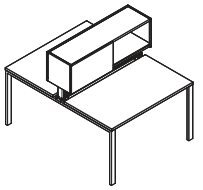
One-sided sliding-door overheads can be panel-mounted. Mounting and leveling brackets are included as standard. Overall depth of the overhead (front of the cabinet to the panel face) varies depending on the panel and it's applicable attachment brackets:

- 15 1/16"D on Cetra
- 14 15/16"D on Xsite
- 15"D on Interworks EQ

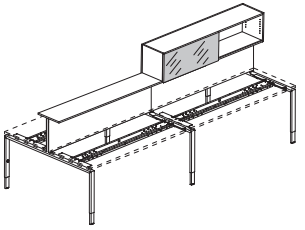
One-sided sliding-door overheads can be wall-mounted using Traxx or wall standards. Leveling bracket is standard on the back of the cabinet; Traxx spacers are not required.



Sliding-door overheads can be center-mounted on Xsite panels. Mounting brackets are included as standard. Consider coordinating the bracket color to Traxx color. ➤See page 133 for application guidelines.



Sliding-door overheads can be center-mounted on Xsede accessory rails. Mounting brackets are specified as an option; upcharge. applies.



Sliding-door overheads can be center-mounted on Priority stanchion U-legs and 90° or 120° corner support frames. Two overheads can be ganged together; however, attachment brackets must hit a stanchion on both sides and the overheads must be ganged together in the middle. When an overhead is used next to a Priority shelf as shown above, there must be a stanchion between the shelf and the cabinet.

Cubbies cannot be mounted below a center-mounted overhead due to interference in the shared Traxx.

Planning Factors

Brackets for panel-mount sliding-door models are standard and painted to match the chassis. The following options are available:

Designator	*Brackets Included*
For Xsite or Wall Traxx	
X	2 Xsite Traxx brackets
XG	2 Xsite Traxx brackets and 1 ganging bracket
For Interworks EQ or Wall Standards	
I	1 left and 1 right
IG	1 left, 1 right, and 1 ganging bracket
For Cetra	
C	1 left and 1 right
CG	1 left, 1 right, and 1 ganging bracket

Brackets for center-mount sliding-door models are standard. The following options are available:

Designator	*Brackets Included*
For Xsite Curved Profile Top Cap	
XC2C	2
For Xsite Flat Profile Top Cap	
XC2F	2
For Xsede	
XAR	2
For Priority	
PC1	1 end
PC2	2 end
PC3	1 end and 1 ganging

Note: If placing two overheads next to one another in a Priority center-mount or panel-mount application, specify one of the cabinets with an option that includes ganging bracket.

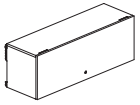
Overhead Storage

Product Information

Flat Profile Flipper-Door Overheads, Open Cabinets, and Cubbies

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

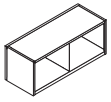
Details



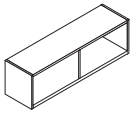
Flipper-door overheads have a metal chassis and wood doors with integrated pulls. Metal chassis is available in all paint finishes. Wood fronts are available in all standard wood finishes. Doors feature steel ball bearing, easy-down slides. Units ship fully assembled.

Locks are standard on flipper-door models; they are located on the front of the cabinet. Locks are black.

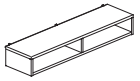
24"W–48"W flipper-door units have one door with lock. 54"W–72"W units have two individually locking doors.



One-sided open cabinets feature a finished back and center panel that divides space. They are available in center-mount models for use with Xsite panels; Xsede accessory rail, or Priority stanchions. Set-on-surface models and suspended models can be used at the end of worksurface



Two-sided open cabinets are for center mounting only on Xsite panels; Xsede accessory rail, or Priority stanchions. A center panel divides the space; each compartment features a finished back panel.



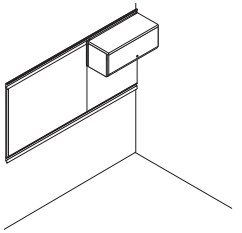
Cubbies have a metal chassis and are available in all paint finishes. Cubbies are standard with a Traxx bracket. Units ship fully assembled.

Finishes & Materials

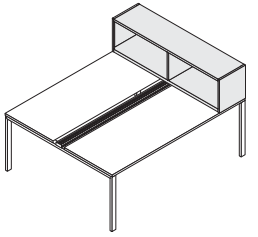
Flat Profile Overhead Storage

- Metal chassis/metal door
- Metal chassis/laminate door
- Metal chassis/wood door

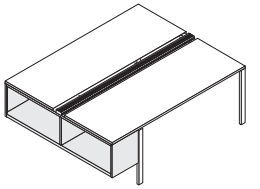
Connections



Flipper-door overheads and cubbies can be panel-mounted (on the face of the panel) on Cetra, Xsite, and Interworks EQ or hung on Traxx.



Set-on-surface open cabinets are intended for mounting on top of the worksurface at the end of a run. 57" and 63"W units can span back-to-back worksurfaces on Xsede U-legs.



Suspended open cabinets mount below the end of a worksurface. Worksurface supports will need to be inset to allow clearance for the cabinet.

Cubbies cannot be mounted below a center-mounted overhead due to interference.

Planning Factors

Overhead mounting brackets must be specified separately for flipper-door models based on the application.
Exception: No additional bracketry is required when hanging flat profile flipper-door overheads on Interworks EQ panels.
➤See pages 541–544.

Ganging kit is required when mounting overheads side-by-side in panel-mount or Traxx-mount applications.

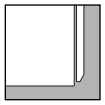
Overhead Storage

Product Information

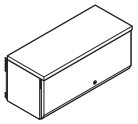
Bevel Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Bevel profile overheads are metal and are available in all paint finishes.

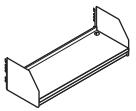


Receding door overheads are available in paint or with fabric covered doors. Door finish and chassis finish on painted units must be the same. Ships pre-assembled.

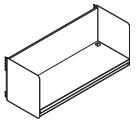
Doors operate on ball bearing slides that are fitted into the unit.

24"W–48"W units have one door with black lock.

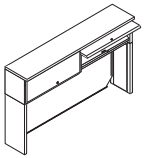
54"W–72"W units have two individually locking doors.



Half height shelf has a single compartment and an open back with a 1" binder stop. Ships ready-to-assemble. Half height shelves are for use on Interworks EQ panels only.



Full height shelf has a single compartment and full height back. Ships ready-to-assemble.



Highback organizers include two vertical end panels, back panel, overhead unit, and attachment hardware. Recesses at corners of back panel allow for wire management. Ships ready-to-assemble.

Highback organizer must be same nominal width as freestanding unit on which it will be attached.

Seating fabric is turned 90° and applied railroad style to 60"W and 72"W highback tackboards.

Panel fabric is turned 90° and applied railroad style to 72"W highback tackboards.
➤See page 586 for illustration of railroad application.

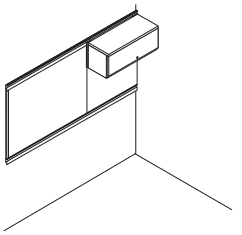
Tackboards and task lights must be specified separately for highback organizers.

Locks are standard. They are located on the front of the cabinet Locks are black.
➤See page 501 for keying options.

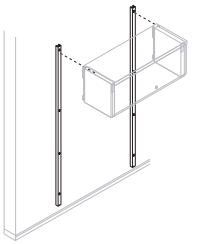
Finishes & Materials

Bevel Profile Overhead Storage
- Metal: paint
- Fabric door with metal chassis: panel or seating fabrics

Connections



Bevel profile overheads can be supported by Xsite, Cetra, Interworks EQ, and Traxx.



Wall standards can be used to mount bevel profile overheads to building walls. A maximum of two components may be attached to a set of wall standards, not to exceed 150 lbs. Blocking and bearing on floor is recommended.

Related Products

Overhead mounting brackets must be specified separately if mounting on Xsite, Cetra, or Traxx.
Note: No additional bracketry is required when hanging bevel profile overheads on Interworks EQ panels.
➤See pages 541–544.

Ganging kit is required when hanging overheads side-by-side.

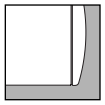
Overhead Storage

Product Information

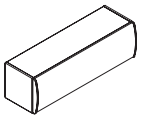
Lunar Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Lunar profile overheads are available with painted metal chassis and door. Flipper doors feature ball bearing slides. Lunar profile overhead units are shipped ready-to-assemble.



30"–48"W units have one door with black lock.

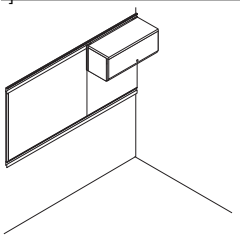
60" and 72"W units have two individually locking doors.

Locks are standard. They are located on the bottom of the cabinet. Locks are black.
➤See page 501 for keying options.

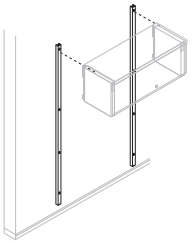
Finishes & Materials

Lunar Profile Overhead Storage
- Metal chassis/front: select paints

Connections



Lunar profile overheads can be supported by Xsite, Cetra, Interworks EQ, and Traxx.



Wall standards can be used to mount bevel profile overheads to building walls. A maximum of two components may be attached to a set of wall standards, not to exceed 150 lbs. Blocking and bearing on floor is recommended.

Related Products

Overhead mounting brackets must be specified separately if mounting on Xsite, Cetra, or Traxx.

Ganging kit is required when hanging overheads side-by-side.

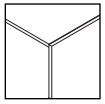
Vertical Storage

Product Information

Square Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Square profile vertical storage units are available in wood or laminate.

Drawer fronts are available with arc, bar, dome, span, and wire pulls.

Short storage cabinets are available in wood or laminate. Door may be hinged on the left or right. Short storage finish panel should be specified if back of short storage unit will be exposed.

Overall height of short storage cabinets is affected by worksurface thickness. When aligning short storage cabinets with other vertical or overhead storage units specify the 39"H models for use with 1 9/16" worksurfaces and 40"H models for use with 1 3/16" worksurfaces.

Lateral files feature a drawer interlock that prevents tipping.

Top and back of lateral files are unfinished. Specify a worksurface to cover an individual lateral file or to span multiple lateral files. Tops are not enclosed. Worksurfaces attach directly to the horizontal frame.

Two drawer lateral files with hinged doors include one adjustable shelf in hinged door storage area. Lateral file finish panel should be specified if back of unit will be exposed. Lateral file filler strip should be specified if side of unit will be exposed.

Filler panels are available in wood or laminate. They can be scribed in the field to finish out cabinetry for a custom fit.

All vertical storage units ship preassembled.

Vertical storage units are finished on the top and sides. Interiors are finished to match the exterior. 18"W units can be specified with finished or unfinished backs. Backs are unfinished on 30" and 36"W units. Specify a finish panel separately if back will be exposed.

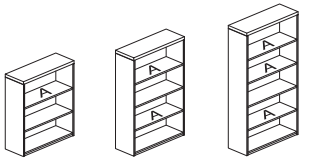
Wardrobes and storage cabinets are available with finished or unfinished backs. Finished back, if specified, matches the chassis.

6"W and 18"W wardrobes include hang bar. 18"W wardrobe also includes an adjustable shelf.

6"W wardrobe is not freestanding and must be attached to adjacent storage or wall.

Touch latch is standard on all doors.

Filing hardware for front-to-back and side-to-side filing is included. Drawer bottoms are not intended to support heavy loads. Drawer interiors are black.
➤See page 482 for filing capacities.



Bookcase shelves are spaced 12" apart. 42"H bookcase features three shelves; one is adjustable. 56"H bookcase features four shelves; two are adjustable. 68"H bookcase features five shelves; three are adjustable.

File drawers are designed to accommodate hanging files suspended from the drawer sides.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Wardrobe doors may be specified on the left or right of the unit.

Wardrobe bar is galvanized metal.

Wardrobe shelf is Cinder with ½" adjustability.

Locks are optional on doors and standard on pedestals. They are black and located on the front of the cabinet.
➤See page 501.

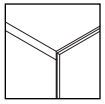
Vertical Storage

Product Information

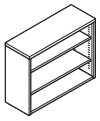
Flat Profile (12S)

Features ➤See page 480
Pull Options 500
Locking Information 501
Lock Core Requirements 502

Details

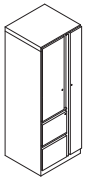


Flat profile vertical storage units are available in all metal or with a metal chassis and wood fronts.

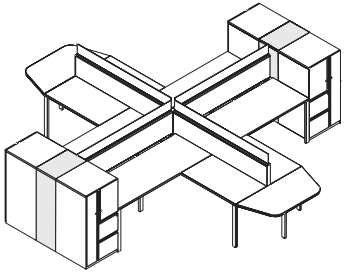


Bookcases include enclosed back and factory installed shelves.

Shelves adjust in ½" increments.



Storage towers include file/file cabinet, wardrobe/storage section, and/or open shelves. Sections have individual locks and can be keyed alike by selecting the key specific option.
➤See page 501 for keying options.



Storage tower spacers are metal. They fill the space between back-to-back storage towers used at the end of an Xsede workstation.

File drawers are designed to accommodate hanging files suspended from the drawer sides.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Wardrobe doors may be specified on the left or right of the unit.

Wardrobe bar is galvanized metal.

Wardrobe shelf is Cinder with ½" adjustability.

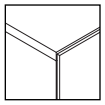
Vertical Storage

Product Information

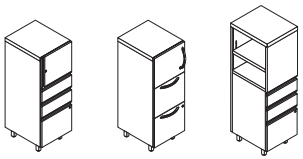
Flat Profile (14S)

Features ➤See page 480
Pull Options 500
Locking Information 501
Lock Core Requirements 502

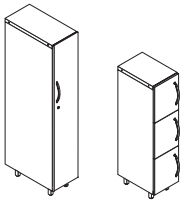
Details



Flat profile vertical storage units are available in all metal or with metal chassis and laminate (TFL) fronts.

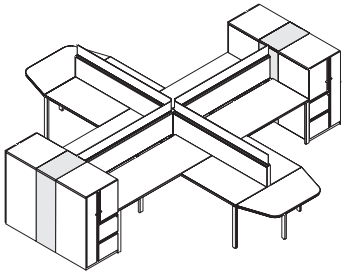


Storage towers include box/box/file or file/file and with hinged-door storage or open shelves.



Wardrobe and personal storage lockers are available.

Non-locking is standard on all 14S units. Locking options are available; upcharge applies.



Storage tower spacers are metal. They fill the space between back to back 24"D and/or 30"D storage towers used at the end of an Xsede workstation.

File drawers are designed to accommodate hanging files suspended from the drawer sides.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Wardrobe doors may be specified hinged right or left.

Wardrobe hooks are included and installed on the left side of 18"D units.

Wardrobe bar and adjustable metal shelves are available separately. Wardrobe bar is galvanized metal

Note: Linear pull wraps the drawer face and attaches on the backside of the drawer. Extended pulls, available on metal-front models only, are painted to match the chassis.

How to Specify

Specify pull option and finish together in one step. If pull finish designator is a number, insert an underscore between the pull designator and the finish designator. For finish designators that are letters, put the pull and finish together without a space or underscore.

Examples:
93_487 = Aero pull, Brushed Nickel
61SF = Helix, Silver Frost metallic

Note: Flat profile 12S Kwik Office vertical storage models available with extended (E) or arc (ARC462) pulls only.
➤See the Kwik Office Price List.

Locking Information

GSA SIN 711-1

Features ➤See page 480
Lock Core Requirements 502

Locking storage units can be specified as:
- Key random
- Key specific

Lock cores are shipped separately for field installation.

Black lock cores and hinged keys are identical to the ones available on the following Casegoods products:
- Definition
- Priority
- Transcend

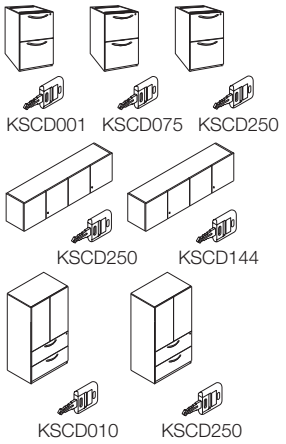
Silver lock cores and hinged keys are identical to the ones available on the following products:
- Definition
- Fluent
- Hum
- Priority

Key Random Option:

When key random option is selected, key numbers will be assigned arbitrarily at the factory with key numbers ranging from KSCD001 to KSCD300.

Randomly numbered lock core(s) will ship standard along with your order for field installation.

Exception: Randomly numbered lock cores on Kwik Office models are shipped installed.

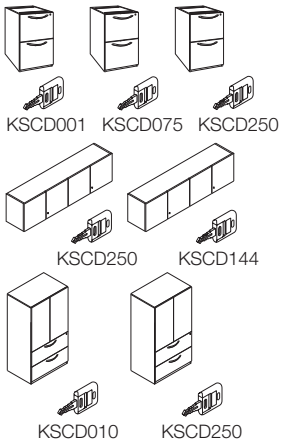


With random keying, different furniture units may or may not have the same key number. If you must have all locks keyed differently or all locks keyed the same, choose the key specific option.

Key Specific Option:

When key specific option is selected, the storage unit will be pre-drilled to accept a lock core; however, no lock cores will be shipped standard with the unit. If lock cores are standard on the unit, the price of the unit is reduced by the price of the lock core or cores.

You must specify lock core(s) separately for key specific option; specify any key number from KSCD001 to KSCD300.



To key all the furniture units in a workstation or department alike, choose the key specific option and order the quantity of locks needed for your installation.

Standard key that ships with the lock core can be used for the initial installation of the lock core in the field.

Change key model KCCB1CK allows removal of lock cores within KSCD001 to KSCD300 key range.

IMPORTANT: A change key, specified separately, is required to remove lock cores in the field.

Master key model KC2GMK will unlock any lock within KSCD001 to KSCD300 key range.

Model/Key Range *Price*

Black Lock Cores

KSCD001 to KSCD300	$21
For Kwik Office Models	
QKSCD001 to QKSCD025 K	$21

Silver Lock Cores

KCCG001 to KCCG100	$21

Change Key

KCCB1CK	$5
For Kwik Office Models	
QKCCB1CK K	$5

Master Key

KC2GMK	$11

How to Specify

❶ Specify exact key number for lock cores as the model number or model number for change or master key

Short Storage Finish Panel						
For Use with H1839 Model Short Storage Cabinets						
3/4"	18"	38 1/8"	**N1839Y** (FSC)		$453	$414

Specify short storage finish panel when the back of the unit is exposed; field-installation only.

When using 1 3/16" thick worksurfaces, you must use H1840 models if aligning short storage units with overheads or freestanding vertical storage units.

Standard Includes

- Chassis: wood or laminate
- Unfinished back

How to Specify

Short Storage Units or Finish Panel

❶ Model
❷ Material:
W = Wood
L = Laminate
❸ Profile (omit for finish panel):
S = Square
④ Lock option (omit for finish panel):
KRB = Key random (+$56 per lock)
KSB = Key specific (+$35 per lock); specify lock cores separately.
X = No lock
⑤ Finish price group (omit for laminate):
STD = Group 1
STD2 = Group 2 (+20%)
FSCW = FSC-certified group 1 wood (+3%)
⑥ Finish designator

(FSC) = FSC-certified wood option available.

		53 15/16"	**12S2454VHHL2MW**	3501
		65 15/16"	**12S2466VHHL2MW**	3776

Standard Includes

- Chassis: metal
- Door and drawer fronts: wood
- Coat hook in 42"H unit; wardrobe bar in 50"H–66"H units: galvanized finish
- Three locks: black
- One adjustable shelf in 50"H and 54"H models; two adjustable shelves in 66"H model

How to Specify

❶ Model
② Pull option:
➤See page 500 for designators.
Note: Upcharge of +$15 applies for Arc, Dome, and Span pulls.
③ Lock option:
KRB = Key random
KSB = Key specific (-$63); specify 3 lock cores separately
④ Metal finish price group:
STD = Group 1
STDM = Group M (+10%)
⑤ Metal finish designator
⑥ Wood finish price group:
STD = Group 1
STD2 = Group 2 (+20%)
⑦ Wood finish designator

49 1/16"H models will align with 3.5-high Xsite frames and are compatible with 50"H Cetra panels.

* Depth dimension listed represents storage unit with TFL front; metal-front models are 1/16" less deep.
**Height dimensions represent storage unit with leg support option. Deduct 3 23/32" for floor glide support option.

➤See previous page for models with shelves on right.

42 1/16"H models will align with 3-high Xsite frames and are compatible with 42"H Cetra panels.

49 1/16"H models will align with 3.5-high Xsite frames and are compatible with 50"H Cetra panels.

Tower Spacers
➤See page 566.

Standard Includes

- Chassis: metal
- Door: metal or TFL
- Floor glides
- One adjustable shelf in 50" and 54"H models; two adjustables shelves in 66"H model.

Task Lights

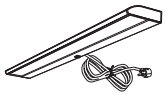
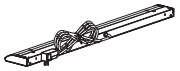
Statement of Line ➤See page 567
Pricing 569

Details



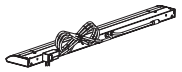
Task lights mount under overhead storage units (excluding center-mount and cubby storage). They feature a 9' cord with 90° plug and southwest oriented prongs. Electronic ballast minimizes flicker and is less susceptible to voltage variations. The T5 cool white, single tube lamp is energy efficient and has a color rendering index of 85 and a color temperature of 3500k.



Task lights for use in Chicago have a fused plug.

Starter

Middle



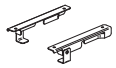
End

Daisy-chain task lights are specified based on their location within the chain. The starter model has a 9' power cord with 90° southwest-oriented, fused plug that plugs into a standard power outlet and a 6" female ganging connector. The middle model has two jumper cords: one 70" cord with a male plug and one 6" female cord. The end model has a 70" jumper cord with male plug. The maximum distance between two T5 fixtures is 20".

All lighting components are U.L. approved.

Connections

Wood screws and spring bars are standard with task lights to attach the fixture to wood or metal overhead storage units.



Quick release brackets are available, if required by local codes.

Mounting requirements, cord lengths, and cord access restrictions vary according to local standards. Consult local codes prior to specifying.

Power & Data

Task lights can be master controlled from a switch at the entrance panel by reserving one of the available circuits in the panel wiring system for lighting only.

Daisy chaining task light units together allows multiple fixtures to access a single power outlet.

A maximum of five task light fixtures can be linked to a single power source.

Related Products

Vertical cable managers are available separately to conceal task light cords.

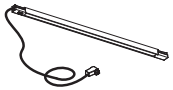
LED Lights

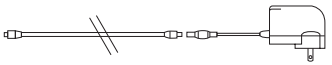
Details



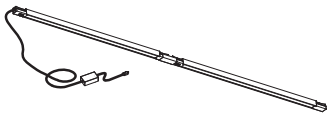
LED lights are a low-profile, linear solution for overhead cabinets, center-mount overheads, highback organizers, cubby storage, and shelves. LED lights provide a 3300K color temperature and consume less power; rated at 50,000 life hours. They utilize the latest technology for high light output with nearly no heat production. LEDs do not produce UV emissions.

Number of LED lights varies by fixture width:
16"W models include 56 LEDs
24"W models include 104 LEDs
30"W models include 132 LEDs
62"W models include 264 LEDs

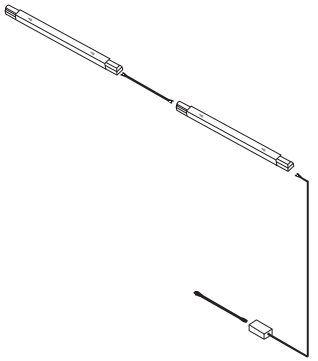
All units feature a silver aluminum finish and a toggle switch. 62"W models have two toggle switches.



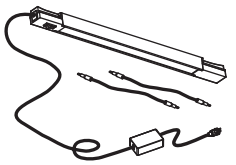
16", 24", and 30"W LED light fixtures include a 6' cord with an 3¼"W x 1½"D x 1½"H plug featuring a built-in UL1310 class II power supply. Standard models plug directly into power receptacle; they cannot be daisy chained.



62"W LED light fixture includes a two-piece 12' cord with an in-line 4⅛"W x 1¼"D x 1¾"H UL1310 class II power supply. 62"W standard models cannot be daisy chained.



Daisy chain application requires a starter unit and is limited to 2 add-on units (3 fixtures total) per power source. A combination of fixture widths can be combined to obtain the desired length.



Daisy chain starter unit includes the fixture, a two-piece 12' cord with an in-line 4⅛"W x 1¼"D x 1¾"H UL1310 class II power supply, two 6' interconnect cords (black), and two jumper pins.

Black power cords are removable and can be plugged into either end of the fixture.

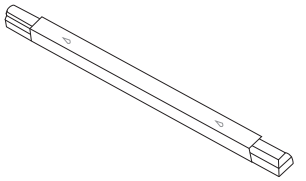
Daisy chain add-on units do not include a power supply or cords and must be used in conjunction with a starter unit.

Meets California Title 24.

Assembled in the USA.

Connections

Magnetic mounting concealed inside the fixture allows attachment to the underside of metal overhead storage cabinets.



Woods screws are included for attaching fixtures to wood overhead storage.

Mounting requirements, cord lengths, and cord access restrictions vary according to local standards. Consult local codes prior to specifying.

Kimball Office offers a diverse collection of surface materials. Please see descriptions below to ensure that you are choosing the materials that best support your requirements.

Fabric Collection:

Our collection of fabrics offers a wide variety of materials that include both timeless classics, as well as a selection of trendy colors and patterns to keep the offering fresh and current.

The classic patterns are perfect for establishing new standard color palettes, while the trendy patterns are great for adding accents and pops of color to make a statement and to show that you are in tune with the pulse of today's fast-paced world.

The fabric collection was developed with an international flare to make it easy for global companies to standardize in all locations. It contains both standard in-line and alliance patterns. Our alliance partners are chosen with great care to give us the best selections and service in the industry.

You will find that colors were developed to coordinate very well between the in-line and alliance offerings, as well as between the seating and panel fabric offerings.

The fabric collection will provide options for the discerning client for many years to come.

Wood Collection:

Our wood finishes offer fresh options that provide natural-looking finishes to meet today's design expectations. From the lightest Brighton Maple to the darkness of Urban Walnut, these finishes were chosen with great attention to offer a complete range of color options making it simple to specify the look you want. You can achieve contemporary or transitional looks, or choose to update your traditional style by selecting one of the newer walnut or cherry finishes.

Kimball Office carefully selects veneers and solid woods to provide high quality wood furniture. Variations in color, grain, and texture occur naturally in all wood species, but are most apparent in lighter colored woods, and especially in natural finishes.

The wood collection offers a number of light finishes that will not hide or mask the natural characteristics of wood. Mineral streaks, pitch pockets, and color variations from piece to piece are all characteristics that occur in natural veneers and are what make each piece unique. While the finishing process is identical for all pieces, each finished piece accepts the stain differently to create its own individual beauty. These characteristics are part of the inherent natural beauty of wood and are not considered defects.

Darker finishes can be selected to hide more of the veneer's characteristics. Several beautiful coordinating woodgrain laminate options are also available for the customer who wants complete color and grain consistency throughout.

Two surfaces with grain directions that are at different angles to a light source will reflect the light differently and look a slightly different color. This natural phenomenon is called flip. This can happen within a single piece as alternating veneer leaves are placed side by side or from piece to piece. Flip is often noticed on worksurfaces installed at a 90° angle to each other.

Two premium veneers—Sapele and Zebrawood—are part of the standard offering to provide options for high impact styles without having to quote custom veneers. Premium veneers could receive extended lead times based on supplier availability at the time the order is placed.

Generations Collection:

The Generations Collection is comprised of tried and true materials that have been in the Kimball Office offering for many years. This collection is designed to support long-standing customers and to help transition you to the current offering. ➤Visit kimballoffice.com to see the Generations Collection.

IMPORTANT: Materials in this collection should not be used to set standard color palettes for new installations.

Materials in this offering can be ordered using the standard process, however, extended lead times and minimum order quantities may apply. For best results, pre-planning orders with your Customer Service Representative is recommended.

Discontinuation Policy:

Kimball Office strives to give all business partners advanced notification of surface materials that are scheduled for discontinuation. Efforts will be made to support discontinued materials as specified in the deletion announcement. Pricing cannot be guaranteed. Extended leadtimes and minimum order requirements may apply.

Disclaimer:

Kimball Office will make every reasonable effort to maintain our commitments. If surface material changes must occur due to unforeseen circumstances, we will work with you on an alternative recommendation. Kimball Office reserves the right to cancel or make changes to standard products and surface materials.

Warranty:

Fabrics and leathers are not warranted against fading and wear, discoloration from contact with liquids, or change in color or texture caused by application of finishes (flame proofing, stain resistance).
➤See page 609 for complete warranty information.

Special Wood Finishes

Matrix

Wood Finishes	➤See page 575
Paints, Plastic, & Polymer	578
Laminates	581
Fabrics	585

Previously developed and custom finishes are available for special requirements. Kimball Office has an extensive library of previously developed special finishes which may be an acceptable match for your application. If not, a custom finish can be developed to meet specific needs.

Samples of previously developed special finishes are available from Customer Service upon request.

Applicability of special finish colors depends on the wood species to which they are applied. The matrix at right shows the types of woods used for each series.

IMPORTANT: Kimball Office reserves the right to decline the opportunity to match a finish color.

	Cherry	*Maple*	*Walnut*	*Sapele*
Price Group	*1*	*1*	*1*	*2*
Cetra	•	•	•	•
Xsite	•	•	•	•
Footprint	•	•	•	•

• = standard wood species

Note: Special finishes are not available on Zebrawood.

Approval Process:

① Send desired finish sample (no smaller than 3" x 5"), along with a purchase order for the $300 (net) special finish development fee, to Customer Service along with a complete list of the products and wood species to which the special custom finish is to be applied. Include dealer name, contact, and project reference.

② If a previously developed sample is found to be compatible, a sample will be sent for customer approval. Custom finishes will generally require at least a week for a matched sample. Samples sent to the customer will advise of any restrictions that may apply.

③ Customer signs off on the sample and returns the approval form to Customer Service. Approval is required prior to order entry.

Upcharges:

A one-time fee of **$300** (net) will be billed for the development of each new custom finish. This fee covers all Kimball Office product lines on which the finish may be used. Models receiving a special finish will also be assessed an upcharge.

A **10%** upcharge per line item (model number) for special wood finishes applies. Upcharge is calculated on the base price, before other option upcharges are added.

.

How to Specify

① **Model:**
Build the complete model specification by following the How to Specify steps on the pricing page for the product that is to receive the special finish.

② **Finish type:**
For the "Finish type" step, insert a special code (in place of STD):
ZCHY1 = Special cherry finish
ZMAP1 = Special maple finish
ZWAL1 = Special walnut finish
ZSAP1 = Special sapele finish
Note: Choose the special finish code based on the standard wood species used in the case-goods line (see matrix at left).

③ **Finish designator:**
For the "Finish designator" step, insert the designator provided to you by Customer Service.

Wood Finish Characteristics

Including Care and Maintenance Tips

Wood Finishes	➤See page 575
Paints, Plastic, & Polymer	578
Laminates	581
Fabrics	585

Kimball Office's experience in wood finishing extends from past generations of craftsmen to present day state-of-the-art technology.

Our Pura® finish is a proprietary, water-based, ultraviolet (UV) wood finish that has virtually no volatile organic compounds (VOCs). It uses less energy than our conventional finishing process and meets or exceeds BIFMA Furniture Emission Standards (FES) and U.S. Green Building Council LEED requirements for indoor air quality. Pura is exceptionally clear and durable and allows the beauty of our wood to shine through. The durability, depth, clarity, and beauty of Pura meets the high expectations customers have of Kimball Office finishes.

Cetra, Xsite, and Footprint wood surfaces feature a semi-open pore finish with 50 sheen.

All wood products are very susceptible to darkening from age and exposure to UV rays (sunlight and other sources), especially cherry and maple. Although a special UV inhibitor is added to finishes, care in placement of furniture near light sources and elimination of prolonged covering of surfaces is necessary to reduce uneven color change of the wood.

Grain characteristics of cherry veneer such as gum streaks and gum pockets occur naturally and add to the authentic look and feel of natural veneer. These are inherent to this veneer and should not be considered defects.

Brighton maple is a clear finish for those who appreciate the inherent beauty of wood. Differences in grain character and color are natural characteristics of wood and will show through in the finished product.

All walnut veneers are flat cut and applied book and center matched.

Maple and cherry veneers are slip matched. However, there may be a slight difference in the color of adjacent leaves and perpendicular arrangements.

Fine scratches from everyday use may be more visible on furniture with dark finishes. Darker finishes absorb more light, while fine scratches reflect the light. Therefore, scratches can be more emphasized due to this contrast. The use of a desk pad is recommended to keep scratching to a minimum.

The beauty of wood is that it is a natural product that will have differences in grain characteristics, color, and other features among wood species. For the majority of our customers, the characteristics of our top grade veneers are appreciated and welcomed; it's the differences in characteristics that offer each office a unique look.

Specification of particular cuts, characteristics, or wood species can be accommodated. For example, a customer may ask for a limited amount of cathedrals or very limited variation in color from one veneer flitch to the next. Kimball Office systems products are able to satisfy those expectations, as long as we are notified prior to order placement. Depending on the request, the higher grade veneer may require an upcharge. Orders would also need to be handled through our custom quote process.

To Maximize Longevity and Beauty of the Wood Finish:

- Clean all surfaces frequently with a water dampened soft cloth following direction of the grain.
- Dry with a separate cloth if needed.
- Avoid exposure to strong sunlight or extremes in temperature or humidity.
- Avoid exposure to harsh solvents and always remove any spilled liquids immediately.
- Use a desk pad. This will help protect against possible damage and imprinting caused by writing instruments and sharp objects.
- Pads with foam backing are not recommended.
- If using a protective glass top, always place felt spacer pads under the glass to allow the wood to breathe.
- Do not leave plastic, vinyl, or rubber items on finished wood surfaces. Sustained contact could damage the finish.

Customer-Specified Paint

GSA Non-Contract

Wood Finishes	➤See page 575
Paints, Plastic, & Polymer	578
Laminates	581
Fabrics	585

Customer-Specified Paint (CSP) is available on systems products that require specification of a paint color, with the exception of Interworks EQ panels and Lunar profile storage.

Customer-specified metallic paint is not available on Xsite end trim and connector top caps.

Pricing:

A **one-time fee of $300** (net) will be billed for the development of each new custom (customer specified) paint. This fee covers all Kimball Office product lines on which the paint may be used. Models receiving a custom paint will also be assessed an upcharge.

A **10% upcharge per line item** (model) for customer specified non-metallic paint applies. Upcharge is calculated on the base price, before other option upcharges are added.

A **20% upcharge per line item** (model) for customer specified metallic paint applies. Upcharge is calculated on the base price, before other option upcharges are added.

The process:

① Send desired paint sample (no smaller than 3" x 5") to Customer Service along with a complete list of the products to which the custom paint is to be applied. **Include dealer name, contact, and project reference.**

② Custom paints will generally require at least a week for a matched sample. Samples sent to the customer will advise of any restrictions that may apply.

③ Customer signs off on the sample and returns the approval form to Customer Service. Approval is required prior to order entry.

IMPORTANT: Kimball Office reserves the right to decline the opportunity to match a paint color.

How to Specify:

① **Model:**
Build the complete model specification (excluding finish type and finish designator) by following the "How to Specify" on the appropriate pricing page for the product that is to receive the custom paint.

② **Finish type:**
For the “Finish type” step, insert a special paint code (in place of STD):
ZPNT1 = Special non-metallic paint
ZPNTM1 = Special metallic paint

③ **Finish designator:**
For the “Finish designator” step, insert the designator provided to you by Customer Service.

Sample (base model underlined):

Woodgrain laminate is a commercially compatible match to the wood finish of the same name and designator with consideration for the most common application—laminate surfaces on a wood chassis. When laminate and wood are mixed in other applications, the flip that occurs naturally in veneer may influence the overall match from piece to piece. Xsite tiles up to 57"W are available in woodgrain laminate.

➤See page 583 for customer-specified laminate.
➤See page 582 for pattern laminates.

Customer-Specified Laminate

Matrix

GSA Non-Contract

Wood Finishes	➤See page 575
Paints, Plastic, & Polymer	578
Laminates	581
Fabrics	585

Customer-specified laminate (CSL) is available on select laminate products. ➤Contact your Customer Service Team to initiate approval.

Kimball Office reserves the right to decline a customer specified laminate which may not be suitable for application.

Kimball Office assumes no responsibility for the durability, consistent coloration or any other performance characteristic of a customer specified laminate.

Metal, embossed, specialty, and supplier discontinued laminates must be custom quoted. ➤Contact ***By Design*** at 800.482.1616, extension 6001.

Kimball Office orders and procures all customer specified laminates.

Laminate sheen level must not exceed 60° for maximum durability of worksurfaces.

Lead times may vary for certain laminates. Minimum order quantities may apply.

UL approved suppliers for Xsite tiles are:

- Wilsonart
- Nevamar
- Lamitech
- Formica
- Pionite

Pricing:

A **20% upcharge** applies to approved CSL orders for supplier standard laminates.

How to Specify

① **Model:** Build the complete model specification (excluding the finish type and finish designator) by following the How to Specify on the appropriate pricing page for the product that is to receive the special finish.

② **Finish type:** For the "Finish type" step, insert a special finish code (in place of STD).
ZFMA1 = Formica
ZLMT1 = Lamin-Art
ZLTC1 = Lamitech
ZNEV1 = Nevamar
ZPTE1 = Pionite
ZWST1 = Wilsonart

③ **Finish designator:** For the "Finish designator" step, insert the laminate designator (color number) of the laminate to be applied to the product.

Application Matrix	586

All Kimball Office fabrics meet, and in most cases exceed, the minimum requirements set up by ACT. For the purpose of uniformity in the industry, Kimball Office will be utilizing the ACT icons on swatchcards and related materials.

The Association for Contract Textiles (ACT) has developed voluntary performance guidelines to make fabric specification easier. The five symbols give architects, designers, and end-users a vast amount of performance information in a succinct visual way. Look for these symbols on ACT member company sampling to assure that the fabrics you specify perform up to contract standards and pass all applicable testing.

These categories describe a material's performance features as measured by specified methods under standard laboratory conditions. All tests referenced here are intended to represent the most current version of a test method. Note: Individual ACT member product information may represent a different version of a test method depending on the date the product was introduced to the market.

IMPORTANT: These tests represent minimum requirements which are subject to change without notice and may not reflect requirements or laws in all locations.

Flammability:

The measurement of a fabric's performance when it is exposed to specific sources of ignition. Note: ACT guidelines specify different flammability tests dictated by the intended end use for the fabric.

Upholstery
California Technical Bulletin #117
Section E—Class 1 (Pass)

Wrapped Panels and Upholstered Walls
ASTM E 84 (Unadhered Mounting Method)—Class A or Class 1

Wet & Dry Crocking:

Transfer of dye from the surface of a dyed or printed fabric onto another surface by rubbing.

Upholstery
AATCC 8—
Dry Crocking, Grade 4 minimum
Wet Crocking, Grade 3 minimum

Wrapped Panels and Upholstered Walls
AATCC 8—
Dry Crocking, Grade 3 minimum
Wet Crocking, Grade 3 minimum

Colorfastness to Light:

A material's degree of resistance to the fading effect of light.

Upholstery
AATCC 16—Option 1 or 3
Grade 4 minimum at 40 hours

Wrapped Panels and Upholstered Walls
AATCC 16—Option 1 or 3
Grade 4 minimum at 40 hours

Physical Properties:

Pilling is the formation of fuzzy balls of fiber on the surface of a fabric that remain attached to the fabric. Breaking strength is the measurement of stress exerted to pull a fabric apart under tension. Seam slippage is the movement of yarns in a fabric that occurs when it is pulled apart at a seam.

Upholstery
Brush pill—ASTM D3511, Class 3 minimum or Martindale Tester ASTM D4970, Class 3 minimum

Breaking strength ASTM D5034 (Grab Test)—50 lbs. minimum in warp and weft

Seam slippage ASTM D4034—
25 lbs. minimum in warp and weft

Wrapped Panels and Upholstered Walls
Breaking strength ASTM D5034 (Grab Test)—35 lbs. minimum in warp and weft

Abrasion Resistance:

The surface wear of a fabric caused by rubbing and contact with another fabric.

General Contract Upholstery
ASTM D4157 (ACT approved #10 Cotton Duck)—15,000 double rubs Wyzenbeek method

ASTM D4966 (12 KPa pressure)—20,000 cycles Martindale method

Heavy Duty Upholstery
ASTM D4157 (ACT approved #10 Cotton Duck)—30,000 double rubs Wyzenbeek method

ASTM D4966 (12 KPa pressure)—40,000 cycles Martindale method

End use examples of heavy-duty installations where upholstery fabrics rated at 30,000 double rubs should be appropriate are single shift corporate, hotel rooms/suites, conference rooms and dining area usage.

ACT acknowledges that there are extreme wear situations that may require higher levels of abrasion resistance. End use examples that may require higher than 30,000 double rubs include: 24 hour transportation terminals, 24 hour telemarketing, 24 hour healthcare emergency rooms, 24 hour casino gambling areas, and such public gathering places as theatres, stadiums, lecture halls and fast food restaurants.

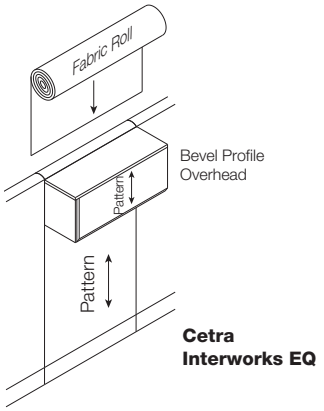
It is strongly suggested that double rubs exceeding 100,000 are not meaningful in providing additional value in use. Higher abrasion resistance does not necessarily indicate a significant extension of the service life of the fabric.

The Wyzenbeek and Martindale tests are the two methods commonly used to predict wearability. Actual performance is determined by many factors such as fiber content, weaves, finishes, furniture design, maintenance, cleaning, and usage. Durability of an upholstery fabric is a complex interaction (combination) of a number of performance tests that, in addition to abrasion, includes seam slippage, pilling, tensile strength, and usage.

There is no correlation between the Wyzenbeek and Martindale tests so it is not possible to estimate the number of cycles that would be achieved on one test if the results from the other test were known.

Wood Finishes	➤See page 575
Paints, Plastic, & Polymer	578
Laminates	581
Fabrics	585

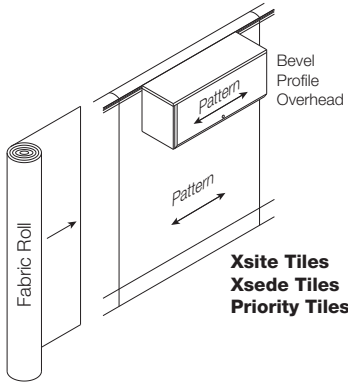
Standard Application:



Cetra
Interworks EQ

Directional fabrics are “cut up the roll” for standard application unless specified differently.

Railroad Application:



Xsite Tiles
Xsede Tiles
Priority Tiles

All fabrics will be applied in railroad (horizontal) fashion to Xsite tiles and larger-size tackboards. When viewing swatch cards or memo samples, turn 90° to get an accurate indication of how the fabric will appear on Xsite tiles.
➤See pricing pages for product application.

Railroad application of Kimball Office panel fabrics and COM requires a custom quote for all systems products that do not have railroading listed as an option in the price list.
➤Please contact ***By Design.***

Alliance Fabrics:

Kimball Office has formed partnerships with top textile companies in the industry to provide a broad range of design-oriented fabrics. These fabrics can be specified using our standard ordering process, eliminating the need for additional expense and efforts required for COMs.

IMPORTANT: Orders cannot be cancelled for alliance program fabrics.

Lead times for alliance fabrics are based on supplier availability. Pre-planning orders can help facilitate arrival of products as needed. Each supplier reserves the right to discontinue patterns or colors. Kimball Office will not be held responsible for supplying discontinued patterns/colors or when minimum order quantities apply.
➤Contact Customer Service for availability before finalizing orders.

The information provided in this section is the most current information available at the time this price list was printed.

Application of Alliance Program upholstery will be as depicted on the swatch card unless otherwise instructed on the order.

For memo samples of Alliance fabrics, contact our alliance partners directly.

Terratex is a registered trademark of True Textiles, Inc. Each Terratex fabric must meet these four criteria:

- Made of 100% post-consumer and/or post-industrial fiber, or compostable materials
- Made using processes that reduce waste, emissions, energy, water usage, and toxic by-products
- Meets or exceeds the same quality standards of fabrics manufactured using virgin materials and conventional processes
- Made of a single fiber type, without backcoating, so that it too can be recycled or composted.

Green-e
100% of the electricity used to make these products is matched by Green-e certified renewable energy certificates.
➤www.green-e.org

Key:

Cleaning Fabrics:

Cleaning Code B
- Cleanable with diluted bleach solution

Cleaning Code S
- Use only mild, pure water-free cleaning solvents.
- Cleaning by a professional furniture service is recommended.

Cleaning Code WS
- Use water-based cleaning agents or foam. Mild water-free solvents may also be used.
- Cleaning by a professional furniture service is recommended.

➤See swatch card for additional cleaning information.

Cleaning Code W
- Use water-based cleaning agents or foam.

Fire Retardant Fabrics
- Solvent-based fabric cleaning or dry cleaning are recommended.
- Cleaning with water or water-based cleaners could result in salt ringing.
- Test proposed cleaning procedure on a small portion of fabric before cleaning entire piece.

Cleaning Leather:

Regular Cleaning

- Remove as much soil or staining as possible by carefully vacuuming or brushing.
- Dust with a dry or damp cloth.

Deep Cleaning

- Use mild non-detergent soap or cleaner. Wipe surface with a light circular motion. Repeat with clean water.
- Do not soak leather.
- Air dry.

Note: Never use furniture polishes, oils, solvents, varnishes, abrasive cleaners, ammonia, wax, or saddle soaps on leather.

Characteristics:

Leather is a natural product. Healed scars, scratches, cuts, and stretch marks are natural markings and are characteristic of leather.

Wood Finishes	➤See page 575
Paints, Plastic, & Polymer	578
Laminates	581
Fabrics	585

COM Policy:

While Kimball Office inspects fabrics for mill imperfections, some are difficult to recognize. Kimball Office is solely responsible for upholstery workmanship and cannot assume responsibility or liability for the durability, tailoring, appearance, or other qualities such as color inaccuracies, dye lot variations, and other such flaws or defects of customer furnished coverings.

Customers are responsible for ordering COM fabrics and expediting delivery of the material to Kimball Office.

IMPORTANT: Kimball Office reserves the right to decline a fabric that may not be suitable for application to product.

COM Application Testing:

Application testing on product for non-preapproved fabrics is required. ➤Contact your Customer Service Team for the appropriate forms to initiate application testing.

The application test will render your fabric either:
- Approved
- Not recommended
- Restricted

A "not recommended" result is usually due to questionable construction of the material or pattern that is difficult to align. You will be required to sign a waiver to use any "not recommended" COM.

U.L. Listing/Flammability:

COM must be U.L. listed for use on Xsede, Cetra, Xsite, and Interworks EQ panels before Kimball Office accepts and enters an order which will have COM fabrics. All COM testing and processing costs are the responsibility of the customer. A minimum of 2 yards of production run yardage is required for U.L. testing and flammability testing. Approval of a COM fabric may result in extended lead times. For cost estimates, yardage requirements and project lead times, consult your Customer Service Team.

Yardage/Measurements

Directional and non-directional yardage requirements have been calculated based on 66"W panel fabrics for Tiles, Panels, Overheads, Highback Organizers, and Tackboards. Directional and non-directional yardage requirements have also been calculated based on 54"W seating fabric for Overheads, Highback Organizers, and Tackboards.

If your fabric is less than 66"W, some size restrictions may apply.

COM yardage listed in the Resource section of the price list reflects the amount of fabric required to upholster one panel. Additional yardage may be required if patterns require matching.

Shipment of COM

After the fabric has passed the approval process described, Kimball Office will enter the product order and send an acknowledgement of the tentative ship date. A notification will be sent giving the date the COM must be received. If it is not received by the specified date, your ship date will be reassigned.

Where to ship COM:

Applies to:
- Xsede Tiles
- Cetra panels
- Tackboards compatible with Cetra
- Cable managers compatible with Cetra or Xsite
- Tiles compatible with Cetra
- Tiles compatible with Xsite
- Seat cushions for flat profile storage (14S)

Kimball Office, Jasper
COM Department—Kimball Office
Dock 5
1037 East 15th Street
Jasper, IN 47549

Applies to:
- Interworks EQ panels
- Interworks EQ or Conferencing Solutions
- Tackboards compatible with Interworks EQ
- Cable managers compatible with Interworks EQ
- Flat profile cushion-top pedestals (12S)
- Bevel profile overheads
- Bevel profile highback organizers
- Bevel profile highback tackboards

Kimball Office, Post Falls
COM Department—Kimball Office
1881 West Seltice Way
Post Falls, ID 83854

Production of Order:

When COM production yardage is received, COM is cut for the order and inspected for flaws. If flaws are found, you will be notified of the additional fabric required.

A return tag (e.g. COD shipment, UPS call tag) is required from the specifier within 45 days of the acknowledged ship date or all excess COM yardage will be discarded.

Preapproved COM:

➤Contact your Customer Service Team to obtain information on preapproved COMs.

Repeat Fabrics:

It is Kimball Office standard process to match repeat fabrics on fabric covered Overhead and Highback Organizer doors.

Repeat fabrics will be matched in what Kimball Office deems the best possible application of the pattern.

Additional COM yardage is required for repeat fabrics.

Repeat	*Additional Yardage required per Overhead Door*
0–6"	None
6"–12"	0.166 yards
12"–18"	0.500 yards
18"–24"	0.666 yards
24" or more	1.000 yard

Note: If the customer requires that the repeat fabric be applied in a random fashion, Kimball Office requires written notification in advance of order processing to that effect. ➤Contact your Customer Service Team to obtain necessary waiver.

Checklist:

When ordering COM for Kimball Office products, please make sure you have done the following:
- Supplied vendor name, fabric name, color name and number.
- Supplied arrival date of COM to Kimball Office.
- Received application testing approval before sending purchase order (or signed waiver if not approved for application).
- Received U.L. listing before sending purchase order.

Wood Finishes ➤See page 575
Paints, Plastic, & Polymer 578
Laminates 581
Fabrics 585

Kimball Office has analyzed each model to most accurately reflect the yardage requirements.

The yardage requirement for each model is listed for 66"W directional, 66"W non-directional, and 54"W directional, where applicable.

How to Use this Table

① Locate the model number
② Select yardage from the appropriate column for non-directional or repeat. For fabrics with nap, use the 1"–4" repeat column.

If you specify different panel fabrics for opposite sides of a panel, additional yardage may be required. ➤Contact Customer Care.

If COM fabric is to be "railroaded," contact Customer Care for yardage requirements.

➤See page 594 for COM policy and additional information.

How to Use this Table

① Locate the model number
② Select yardage from the appropriate column for non-directional or repeat. For fabrics with nap, use the 1"–4" repeat column.

If you specify different panel fabrics for opposite sides of a panel, additional yardage may be required. ➤Contact Customer Care.

If COM fabric is to be "railroaded," contact Customer Care for yardage requirements.

➤See page 594 for COM policy and additional information.

How to Use this Table

① Locate the model number
② Select yardage from the appropriate column for non-directional or repeat. For fabrics with nap, use the 1"–4" repeat column.

If you specify different panel fabrics for opposite sides of a panel, additional yardage may be required. ➤Contact Customer Care.

If COM fabric is to be "railroaded," contact Customer Care for yardage requirements.

➤See page 594 for COM policy and additional information.

Operating Load Capacities

Terms & Conditions ➤See page 607
Asset Tag Locations 607
Product Warranty 609
Model Number Index 611

Component	Operating Load Capacity (Functional Loads)	Examples
Worksurface	200 lb.s over 12" diameter area, concentrated loading; 1.5 lb. per inch of perimeter, distributive loading	24"D x 72"W = 288 lbs. total weight (t.w.)
Transaction counter	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	12"D x 60"W = 147 lbs. t.w.
Round and rectangular tables	1.5 lb. per inch of perimeter, distributive loading	36" dia. = 170 lbs. t.w. 36"D x 60"W = 288 lbs. t.w.
Pedestal drawer	.017 lb. per cubic inch of drawer interior filing space (hanging load on file hangers)	24"D x 18"W x 12"H wood = 88 lbs. t.w. 24"D x 15"W x 12"H metal = 73 lbs. t.w.
Pedestal shelves	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	22"D x 30"W = 134 lbs. t.w
Center-mount cabinet	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	36"W x 12"H metal = 163.5 lbs. t.w
Flipper door cabinet	Top shelf—NO load	
	Bottom shelf—.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading*	36"W x 16"H metal = 117 lbs. t.w. 36"W x 19"H wood = 140 lbs. t.w.
Open shelves	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	36"W x 8"H metal = 59 lbs. t.w. 36"W x 19"H wood = 140 lbs. t.w.
Lateral file drawers	.017 lb. per cubic inch of drawer interior filing space (hanging load on file hangers)	30"W x 18"D x 12"H metal = 110 lbs. t.w. 30"W x 24"D x 12"H wood = 147 lbs. t.w.
Bookcase and wardrobe shelves	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	36"W x 8"D metal = 59 lbs. t.w. 36"W x 12"D wood = 88 lbs. t.w.

Cubic inches should be calculated using this formula:
Surface length x surface depth x height of available storage above the surface (limited to 12 inches above the surface)

The table at left lists the operating load capacities of various Kimball Office components. All components meet or exceed the ANSI/BIFMA Functional and Proof Loading requirements X5.6 2010 Panel System Test, X5.5 2008 Desk/Tables Products Test, and X5.9 2012 Storage Unit Test. The Operating Load Capacities listed represent the BIFMA functional loads which are equivalent to loads that can be expected in normal use of the component.

SYSTEMS PRICE LIST

Revision Summary

April 2014

This document provides a summary of revisions made to the Systems Price List since December 2, 2013. **These revisions are effective April 15, 2014.**

Additions

Xsite frameless glass and applicable top caps with rail are now available in additional sizes up to 96"W.
➤See pages 129, 193–194.

Changes

Xsite frameless glass and applicable top caps shown in the December 2, 2013 printed price list (24", 30", 36", 42", 48" and 60"W) are now on GSA contract.
➤See pages 193–194.

All 18¾"D flat-profile metal undersurface and mobile pedestals are now on GSA contract.
➤See pages 506 and 510.

All 42⅛"H flat-profile metal storage towers are now on GSA contract.
➤See pages 539 and 541.

Clarifications

Xsite punched (power and power & data) covers include two wireway cover doors.
➤See page 146.

Kimball Office panel fabric restrictions added:
- Crossroards is not available on Perks tackboards
- Sprite is not available on fabric-covered overheads
- Basket is not available on fabric-covered overheads

➤See page 563.

Kimball Office upholstery fabric restrictions added:
- Dolce (polyurethane) is not available on tackboards or fabric-covered overheads
- Ezra not available on fabric-covered overheads

➤See pages 566 and 568.

Corrections

Interworks EQ privacy panels upcharge for platinum paint has been corrected to “10%.”
➤See page 306.

Footprint 24"D straight 1⁹⁄₁₆" single-rim worksurfaces feature side and back edges that match the front rim.
➤See page 437.

Depth dimensions for full end panels (models IF2427F and IF3027F) have been corrected.
➤See page 465.

Flat profile 24"W metal storage towers with wardrobe include a coat hook for 42"H units and a wardrobe bar for 50"–66"H units.
➤See page 541.

Disperse seating upholstery abrasion test rating has been corrected to 100,000 double rubs.
➤See page 566.

Deletions

None.

Kimball® Office

SYSTEMS PRICE LIST

June 2014

Revision Summary

This document provides a summary of revisions made to the Systems Price List since April 15, 2014. **These revisions are effective June 23, 2014.**

Additions

Footprint flat profile metal storage offering has been expanded to include:

- Low storage with metal or TFL fronts, including 18"D tops and cushions
- Open overhead storage cabinets for center-mount, set-on-surface, or suspended applications
- Vertical storage with metal or TFL fronts with glide and leg options
- Tower spacers (12S and 14S) for use with Xsede

➤See pages 476, 478, and 479 for statement of line with links to planning and pricing pages.

Xsite frameless glass is now available with an etched finish.

➤See page 129 for product information.
➤See page 194 for pricing.

Three new woodgrain laminates have been added and are available on Footprint flat profile storage with TFL fronts and sliding-door overheads. New patterns include:

- Canyon Oak
- Monterey Oak
- Tuscan Walnut

➤See page 581.

Changes

Kimball Office upholstery colorways list has been updated to reflect the current offering.

➤See page 15.

Clarifications

BIFMA/ANSI: 100% of the products manufactured by Kimball Office are level® certified.

➤See page 15.

Electrical service information for Cetra has been updated for 8-wire and 10-wire configurations.

➤See pages 40–41.

Information for where to ship COM yardage for 12S cushion-top pedestals and 14S cushions for low storage has been provided. For 12S models, ship COM to the Post Fall, ID address; for 14S models, ship COM to the Jasper address.

➤See page 594 for complete information.
➤See page 604 yardage requirements.

Product warranty has been updated to reflect that Itsa and Campos seating lines have a "normal" use classification and warranted for 3-shift, 24/7 service. Itsa Mesh and Campos Mesh models have a warranty period of 3 years.

➤See page 609.

Corrections

Xsite technology tiles with markerboard header are UL listed in Class B.

➤See page 156.

Deletions

None.

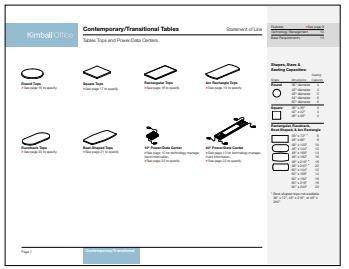
How to Use this Price List

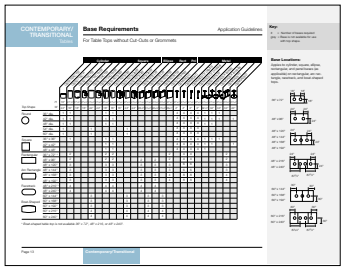
Kwik Office Program ➤See page 4
How to Specify Our Products 3
Sustainability 5

Kimball Office has made every effort to make this price list accurate and complete with all of the information you need to specify our products.

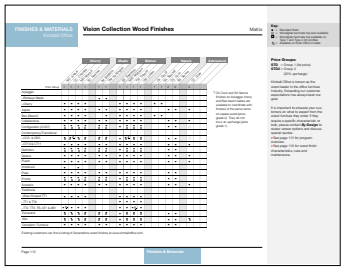
We suggest that you become familiar with the format of this price list. You'll find information about the product line, planning guidelines, pricing, and how to specify the product.



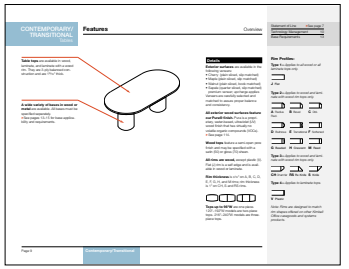
Statement of Line provides a snapshot of the entire product line. We've included an illustration and page cross references to the applicable pricing and how to specify pages.



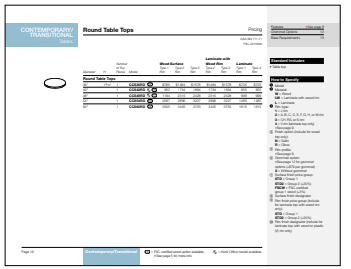
Product Information and Application Guidelines pages provide detailed information about the product, connections that can be made with other models, and planning factors.



Look in the Finishes and Materials section to see what materials and finishes are available. Matrices for wood finishes, laminate, paint, fabrics, and other surface materials offer a quick reference by product.



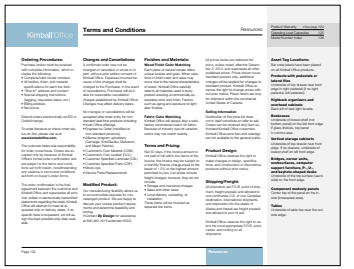
Overviews offer a quick look at the distinguishing features of the product line.



Pricing pages list each model individually along with its list prices. How to Specify steps instruct you how to build a complete model that includes all of its options and materials.

KJ icon indicates models that are available for quick shipment.
➤See the Kwik Office Price List.

(FSC) icon indicates models available with the FSC option (3% upcharge) at standard leadtime to meet FSC certification.



Use the Resources in the back of the price list. This repository of useful information includes Terms and Conditions, Warranty, Operating Load Capacities. You'll also find a model number index with references to the appropriate pricing page.

Dimensions provided in this price list are nominal. Products are manufactured to meet standard industry tolerances.

Illustrations and specifications contained in this price list are based on the latest product information at time of publication. Kimball Office reserves the right to make changes at any time without notice.

Standard product modifications are available on select products.
➤See the Product Modifications Price List at www.kimballoffice.com

Items listed herein are considered by Kimball Office as portable furniture and as such are subject to local fire, electrical, and building codes applicable to portable furniture.

How to Specify Our Products

Kwik Office Program ➤See page 4
How to Use this Price List 2
Sustainability 5

Complete specifications are built by following a set of steps. These "How to Specify" steps are located in the far right column of each pricing page and are specific to the models found on that page. These steps will guide you in the proper order to specify the base model, materials, finishes, options, etc.

Base model numbers may be comprised of two or more steps. For concise presentation, some models numbers have been truncated within the pricing table.

- The steps numbered using a solid circle with a white number inside (e.g., ❶, ❷, or ❸) make up of the base model number.
- Steps numbered using an outlined circle with black number inside (e.g., ④, ⑦, or ⑨) are required to complete the specification.

Kimball Office promotes the use of electronic drawing and specification tools to automate the furniture sales, design, and specification process. We provide our symbol and product information to industry leading design and specification software companies. We work closely with 20-20 Technologies Inc. to develop additional automation routines for our products; these are available in CAP and Giza software tools. We also partner with KISP and all of our products are available in The KITS *collaborator*™. As noted in our Terms and Conditions, the customer bears the responsibility for order correctness.

Kwik Office Program

Sustainability ➤See page 5
How to Use this Price List 2
How to Specify Our Products 3

Kwik Office casegoods are available to ship within five business days upon receipt of a credit-approved order.

Specific models and options from the following lines are available:
- Contemporary/Transitional Tables
- Traditional Tables

Model Numbers:

Models and finishes that are available on Kwik Office have been marked with a K icon in this price list.

Kwik Office model numbers are different from standard model numbers. Base model numbers for Kwik Office products include all options and finish designators.

The K icon on standard lead-time pricing pages indicates availability; it does not provide the correct model numbers and option designators for specifying. You must use the complete model numbers listed i the Kwik Office Price List.

Include only Kwik Office models on your order. Any orders containing non-Kwik Office products will be treated as such and entered at standard lead times. Indicate clearly at the top of your order “Kwik Office.”

Changes and Cancellations:

No changes or cancellations will be accepted after order entry for Kwik Office products.

Order Size:

The Kwik Office program has a limited weekly volume capacity, with orders being entered on a first come, first served basis. Contact Customer Service for availability.

Sustainability

Enhancing the Home We All Share

Kwik Office Program ➤See page 4
How to Use this Price List 2
How to Specify Our Products 3

At Kimball Office, we are proud of our environmental stewardship. We are committed to sustainable business practices and continuous improvement. It's part of our heritage to take initiative, to reduce waste, to conserve energy, to commit fully, and to lead by example. It's not enough to simply sustain. We strive to enhance our world.

Throughout our more than 40 years of documented environmental actions, we've made perpetual progress as a responsible steward of resources and an agent of sustainable change in our industry.

In the end, we're just beginning. Yes, the efforts we've made have the clear intention of minimizing our impacts on the planet in order to preserve a healthy world for future generations. Ultimately, the more we do in the area of sustainability, the more it helps you to achieve your environmental aims. Let us show you just how easy it is with Kimball Office.

➤Find more specific details regarding the environmental aspects of our product offerings at: **www.kimballoffice.com**

ANSI/BIFMA level™
100% of the products manufactured by Kimball Office are level® certified. We offer the most sustainable portfolio in the industry, which includes systems, casegoods, tables, and seating. Our product testing team evaluates all Kimball Office products, ensuring they meet and exceed ANSI/BIFMA Standards. Our team members regularly participate on BIFMA and USGBC committees to contribute to industry-wide standards.

ecoScorecard℠
Through this free online tool, you have quick, simple, 24/7 access to the environmental attributes of our products. By partnering with ecoScorecard, we are enabling speed and accuracy in the calculation of environmental credits, like LEED®, as well as saving you time and ultimately, money.
➤See how easy it is at kimballoffice.ecoscorecard.com.

ecoScorecard contains credit and other information for the following environmental rating systems:
- LEED for New Construction
- LEED for Commercial Interiors
- LEED for Existing Buildings
- CHPS
- LABS21
- Green Guide for Healthcare

LEED® Certification
Kimball Office offers furniture solutions which may contribute toward achieving U.S. Green Building Council certification status in your facilities. The LEED® Green Building Rating System™ is the nationally accepted benchmark for design, construction, and operation of high performance green buildings. Kimball Office has sought and received LEED certification for several of its facilities across the country.

LEED-CI Gold:
- Jasper, IN showroom
- San Francisco, CA showroom

LEED-CI Silver:
- Atlanta, GA showroom
- Chicago, IL showroom

LEED-CI:
- Corporate Headquarters
- New York, NY showroom
- R&D Team Rooms

Surface Materials Program
As the industry's first comprehensive offering to be designed around sustainability, our offering includes environmentally friendly textiles, woods, laminates, and paint finishes.

SCScertified™ INDOOR AIR QUALITY
Indoor Advantage | Furniture

Indoor Air Quality
One of the largest contributions office furniture can make to a building's LEED certification is indoor air quality via low-emitting products. For certification of our product lines, Kimball Office uses the Indoor Advantage program from Scientific Certification Systems (SCS). Several of our Indoor Advantage Gold products also meet the more stringent CAL 01350 requirements.

Design for the Environment (DfE)
is our approach to product development to ensure the inherent sustainability of our new offerings. By considering a full continuum of environmental factors—including durable engineering, recycled and recyclable materials, indoor air quality, packaging, and beyond, we have greatly improved the life cycle performance of our furniture.
➤For environmental data, visit our website at www.kimballoffice.com.

Pura® is our proprietary wood finish that has virtually no volatile organic compounds (VOCs). Pura is a key part of our sustainability story, enabling a broader range of products to meet or exceed indoor air quality standards and help our customers achieve LEED credits.

FSC www.fsc.org FSC® C010590
The mark of responsible forestry

FSC-Certified Wood
Due to our roots in crafting fine wood furniture, we have a natural respect for responsible forestry. Several series in our offering give you the option (denoted by (FSC) next to the model number) to specify FSC wood. A 3% upcharge applies to FSC models and FSCW must be specified as the finish price group. The FSC option is not currently available on Sapele or Zebrawood veneers, laminate, thermofoil, or laminate with wood rim worksurfaces. Standard lead times apply to FSC orders.

ANEW

Asset Network for Education Worldwide, Inc. (ANEW) is an easy, effective way to responsibly disposition surplus furniture, fixtures and equipment (FF&E). Through our partnership with this third-party foundation, you can repurpose FF&E to benefit those in need, while diverting materials from landfills. ANEW calls it "Doing what's right with what's left." We call it smart.

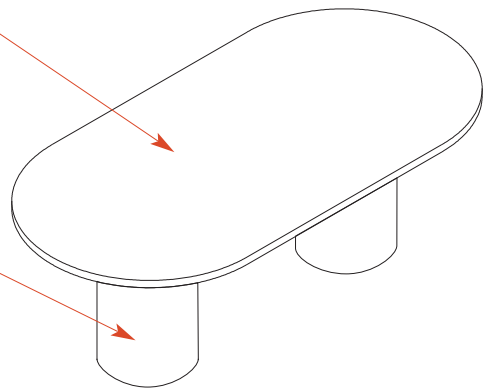
Statement of Line ➤See page 7
Technology Management 10
Base Requirements 13

Table tops are available in wood, laminate, and laminate with a wood rim. They are 3-ply balanced construction and are 1 9/16" thick.

A wide variety of bases in wood or metal are available. All bases must be specified separately.
➤See pages 13–15 for base applicability and requirements.



Details

Exterior surfaces are available in the following veneers:
- Cherry (plain sliced, slip matched)
- Maple (plain sliced, slip matched)
- Walnut (plain sliced, book matched)
- Sapele (quarter sliced, slip matched) premium veneer; upcharge applies

Veneers are carefully selected and matched to assure proper balance and consistency.

Wood tops feature a semi-open pore finish and may be specified with a satin (50) or gloss (70) sheen.

All rims are wood, except plastic (V). Flat (J) rim is a self edge and is available in wood or laminate.

Rim thickness is 5/16" on A, B, C, D, E, F, G, H, and M rims; rim thickness is 1" on CH, S and RS rims.

Tops up to 96"W are one piece. 120"–192"W models are two-piece tops. 216"–240"W models are three-piece tops.

Rim Profiles:

Type 1—*Applies to all wood or all laminate tops only.*

J Flat

Type 2—*Applies to wood and laminate with wood rim tops only.*

A Radius **B** Bevel **C** Double Radius

D Bullnose **E** Transitional **F** Softened

G Beaded **H** Crescent **M** Reed

Type 3—*Applies to wood and laminate with wood rim tops only.*

CH Chamfer **RS** Rv. Knife **S** Knife

Type 4—*Applies to laminate tops.*

V Plastic

Note: Rims are designed to match rim shapes offered on other Kimball Office casegoods and systems products.

Technology Management

Product Information

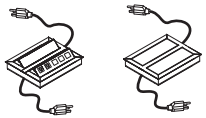
Power and Data

Features	➤See page 9
Power/Data Cut-Outs	11
Grommet Options	12
Base Requirements	13

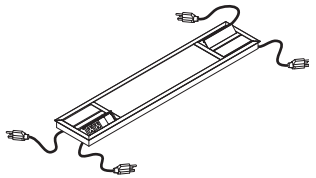
Details

Two power/data center models are available for use with:

- Rectangular table tops
- Racetrack table tops
- Boat-shaped table tops
- Arc rectangle table tops



10" power/data center features two power receptacles, three blank data ports, and one 10' power cord on each side, for a total of four power receptacles, six data ports, and two power cords per unit. Voice/adapter kit is included to accept couplers and jacks when required. Top opens and closes with a touch-pivot action. Clear anodized aluminum.



40" power data center features two power/data centers separated by a decorative resin center with a white frost appearance. Includes a total of eight power receptacles, eight blank data ports, and four 10' power cords. Voice/adapter kit is included to accept couplers and jacks when required. Top opens and closes with a touch-pivot action. Clear anodized aluminum.

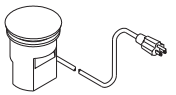
Power/data cutout option must be specified for the table top; field scribing of the surface to accept power/data centers is not recommended.

➤See page 11.

Grommets may be specified for factory installation on all table tops in predetermined locations.
Grommets are matte black plastic.

➤See page 12.

Grommet lid raises up for cord access; push down to close.



Round power/communication grommet is available for field installation into a standard grommet opening to provide power, voice, or data directly to the table top. It includes two power outlets, one RJ11 voice jack, and one RJ45
data jack.

➤See the Perks Price List.

Undersurface wire managers are available to route cables underneath tables.

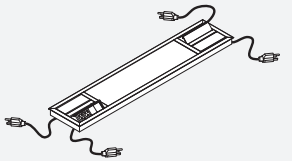
Features ➤See page 9
Technology Management 10
Base Requirements 13

Factory-installed C2 cut-outs are sized to fit 10" power/data centers (model KCU0810ELPDC and KCU0810ELPDCH), specified separately.



Factory-installed C3 cut-outs are sized to fit 40" power/data centers (model KCU0840ELPDC), specified separately.

How to Specify

Insert the location designator for step ⑥ in the table top's model number sequence.

Note: G10 grommets cannot be specified along with C2 or C3 power/data cutouts.

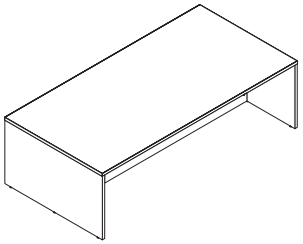
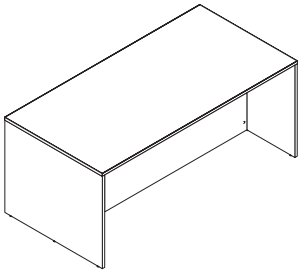
Statement of Line

Tables

Features ➤See page 32
Technology Management 33



Seating-Height (29”H) Tables
➤See page 34 to specify.



Standing-Height (41”H) Tables
➤See page 34 to specify.

10" Power/Data Center
➤See page 34 to specify.

Features

Statement of Line ➤See page 31
Technology Management 33

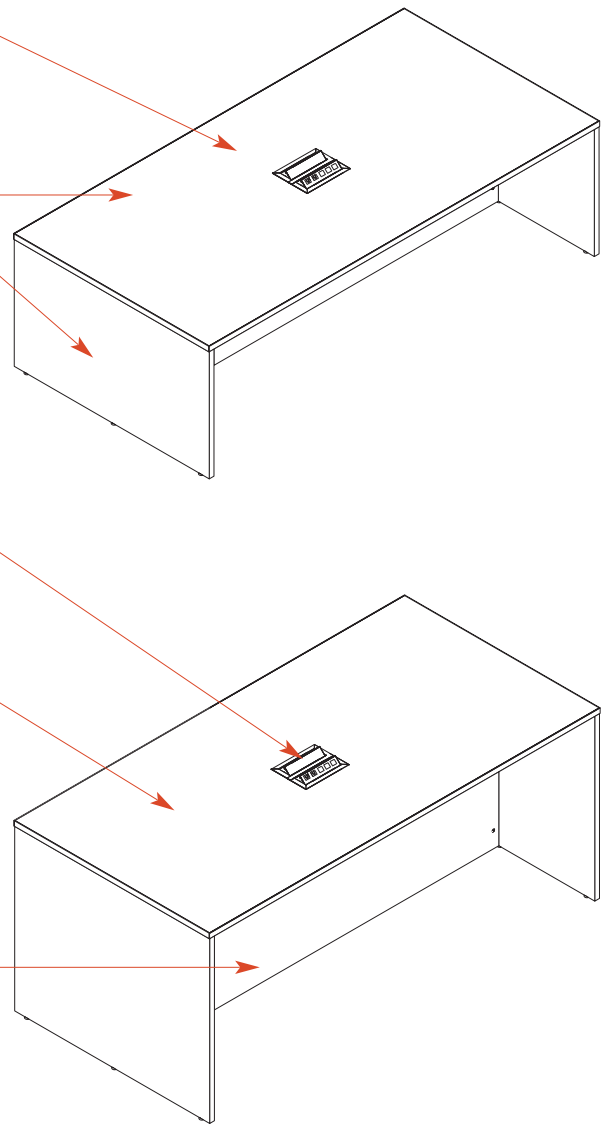
Seating-height tables are 29"H and available 78" or 96"W (nominal).

Table worksurfaces and end panels are 1 3/16" thick. Worksurface is 3-ply, balanced construction in wood or laminate.

Optional power/data center cut-outs are available factory installed. Upcharge applies.

Standing-height tables are 41"H and available 78" or 96"W (nominal).

Center modesty panels are ¾" thick. They extend from the underside of the worksurface to the floor for strength and stability. It is notched at the top to accommodate a power/data center.



Details

Exterior surfaces are available in the following veneers:

- Cherry (plain sliced, slip matched)
- Maple (plain sliced, slip matched)
- Walnut (plain sliced, book matched)
- Sapele (quarter sliced, slip matched) premium veneer; upcharge applies
- Zebrawood premium composite veneer; upcharge applies

Veneers are carefully selected and matched to assure proper balance and consistency.

Wood worksurfaces feature a semi-open pore finish with a satin (50) sheen.

Joints are securely fastened with dowels and mechanical fasteners to ensure maximum strength.

Two short modesty panels (4"H on 29"H table and 10"H for 41"H table) are included to create a trough to hide the power/data center.

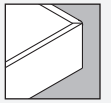
Materials:

W Wood worksurface, rim, end panels, and modesty panel

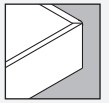
LW High-pressure laminate (HPL) worksurface, wood rim, wood end panels, and wood modesty panel

L High-pressure laminate (HPL) worksurface, plastic rim, low-pressure laminate (LPL), end panels, and low-pressure laminate (LPL) modesty panel

Rim Profiles:



P Softened plastic rim



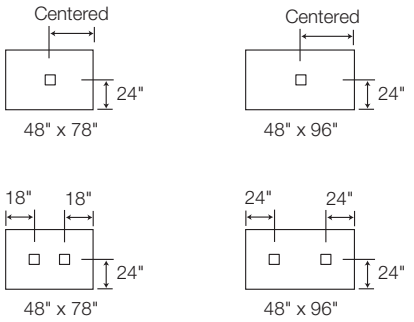
F Softened wood rim

Rim profile is ⅛" thick and appears on all edges of the worksurface. Wood and laminate with wood rim models are available with a softened wood rim. Laminate models are available with a softened plastic rim.

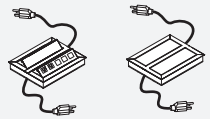
Power/Data Cut-Out Options

Top Size	*Cut-Out Location Designators*
48" x 78" 48" x 96"	**C2C** = One C2 cut-out, center location **C2LR** = Two C2 cut-outs, both left and right end locations **X** = No cut-outs

Location of Cut-Outs



Statement of Line ➤See page 31
Features 32



Factory-installed C2 cut-outs are sized to fit 10" power/data centers (model KCU0810ELPDC and KCU0810ELPDCH).

10" power/data center, specified separately, features two power receptacles, three blank data ports, and one 10' power cord on each side, for a total of four power receptacles, six data ports, and two power cords per unit. Voice/adapter kit is included to accept couplers and jacks when required. Top opens and closes with a touch-pivot action. Clear anodized aluminum.

How to Specify

Insert the location designator for step ④ in the table top's model number sequence.

Features

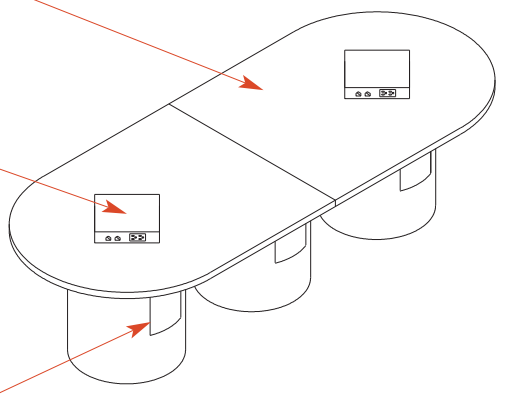
Statement of Line	➤See page 35
Rectangular Tops	37
Racetrack Tops	38
Power/Data Center	39

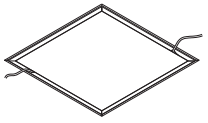
Power/data table tops are available in wood, laminate, and laminate with a wood rim. They are 3-ply balanced construction and are 1 9/16" thick.

Power/data centers, specified separately, are available for field installation in power/data table tops. Cut-outs are standard on power/data table tops

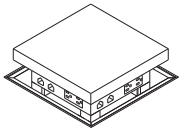
On wood veneer tops, top for the retractable power/data center is cut from the same piece of wood as the table top to ensure a matching grain.

Specially designed bases facilitate easy access to cables and floor monuments, and provide cut-outs for horizontal cord management.
➤See page 40.





While in use, the retractable power center can be lowered to fit flush with the table top to conceal excess cabling. Black brushes on all four sides allow cords to pass through easily, while helping to keep foreign objects out.



Retractable power/data center is designed to be concealed within the table top; a simple touch raises the spring-activated unit exposing power communication and data connections on all four sides. Includes:
- Four duplex receptacles
- Four RJ11 (voice)
- Four RJ45 (data) couplers
- One 15 amp/125 volt circuit breaker for overload protection
- One six foot power cord

All components and wiring of the power/data center are UL listed or recognized.

Details

Exterior surfaces are available in the following veneers:
- Cherry (plain sliced, slip matched)
- Maple (plain sliced, slip matched)
- Walnut (plain sliced, book matched)
- Sapele (quarter sliced, slip matched) premium veneer; upcharge applies

Veneers are carefully selected and matched to assure proper balance and consistency.

Wood tops feature a semi-open pore finish and may be specified with a satin (50) or gloss (70) sheen.

Rim thickness is 5/16" on A, B, C, D, E, F, G, H, and M rims; rim thickness is 1" on CH, S and RS rims.

All rims are wood, except plastic (V). Flat (J) rim is a self edge and is available in wood or laminate.

72"W and 96"W tops are one piece.

120"W, 144"W, 168"W, and 192"W tops are two-piece tops.

Rim Profiles:

Type 1—*Applies to all wood or all laminate tops only.*

J Flat

Type 2—*Applies to wood and laminate with wood rim tops only.*

A Radius **B** Bevel **C** Dbl. Rad.

D Bullnose **E** Transitional **F** Softened

G Beaded **H** Crescent **M** Reed

Type 3—*Applies to wood and laminate with wood rim tops only.*

RS Rv. Knife **S** Knife

Type 4—*Applies to laminate tops.*

V Plastic

Note: Rims are designed to match rim shapes offered on other Kimball Office casegoods and systems products.

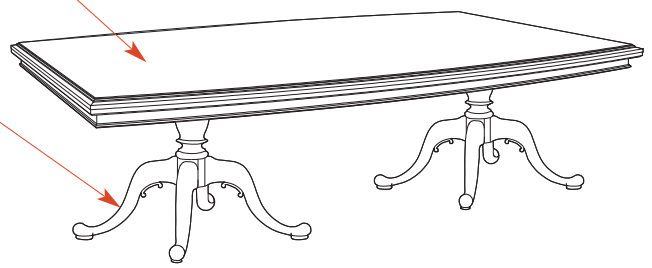
Overview

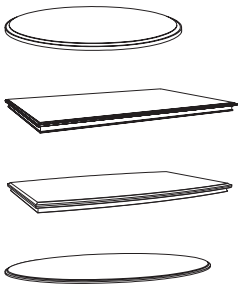
Statement of Line ➤See page 41
Base Requirements 43

Tops feature walnut or cherry veneers.
Note: Cherry veneer is available on select models.

A variety of bases are available. All bases must be specified separately.



Details

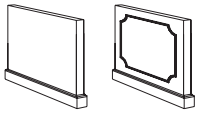


Round, rectangular, boat, and elliptical table shapes are available.

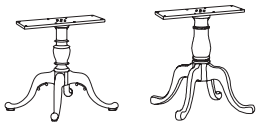
Round table top with pie-cut pattern walnut veneer is available.

Grain runs vertical on apron rails on boat-shaped and rectangular tops

Wood tops have a semi-open pore finish with a lustrous sheen (70).



Panel bases may be used with boat-shaped and rectangular tops.



Queen Anne bases may be used with any traditional top, except round tops with ash burl center (AT1).

The number of bases required varies depending on the size and shape of the top.
➤See page 43.

Base Requirements

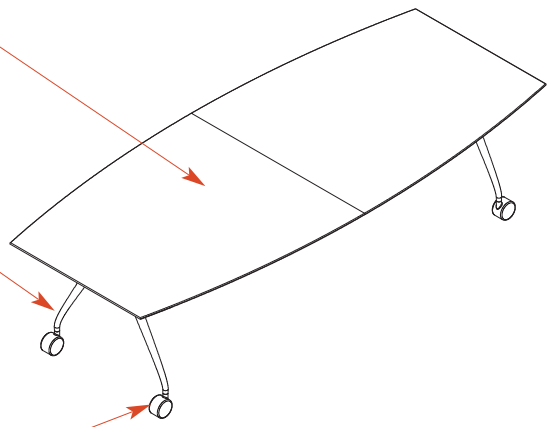
Statement of Line ➤See page 53
Pricing 55

Tops feature 3-ply balanced construction and are 1 1/16" thick.

Base legs are polished aluminum.



4" dual wheel locking casters are standard on folding tables. Casters are black.

Details

Exterior surfaces are available in the following veneers:

- Cherry (plain sliced, slip matched)
- Maple (plain sliced, slip matched)
- Walnut (plain sliced, book matched)
- Sapele (quarter sliced, slip matched) premium veneer; upcharge applies
- Zebrawood premium composite veneer; upcharge applies

Veneers are carefully selected and matched to assure proper balance and consistency.

Table top support understructure is black metal.

Folding table tops are fully finished on top and underneath side.

Folding tables ship fully assembled. *Note: Folding tables lock into position when unfolded.*

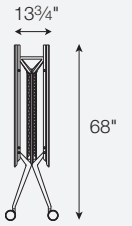
Power/data center is available to bring power directly to the table. It mounts under the table top and includes one grounded electrical outlet, one RJ11 telephone jack, one RJ45 data jack, and a 10 foot power cord. Power/data center has a 13 amp rating and is U.L. listed.

Rim Profiles:

Knife Rim

Softened Rim

Folding and Storing:



Folding tables store upright when folded and are 68"H. Casters remain functional when table is folded for easy movement and storage.

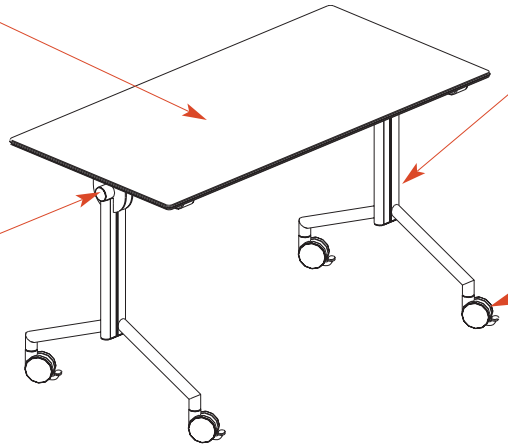
Overview

Statement of Line	➤See page 57
1/2" Tops Product Info	59
1 3/16" Tops Product Info	60
Power Guidelines	63

Tops are available in 1/2"- and 1 3/16"-thick models.
- 1/2"-thick tops (shown) feature a phenolic core and a high-pressure laminate (HPL) surface.
- 1 3/16" models feature 3-ply, balanced construction. They are available in wood veneer or high-pressure laminate (HPL).

Crossbar provides support for the table top and a similar aesthetic for nesting and non-nesting bases.



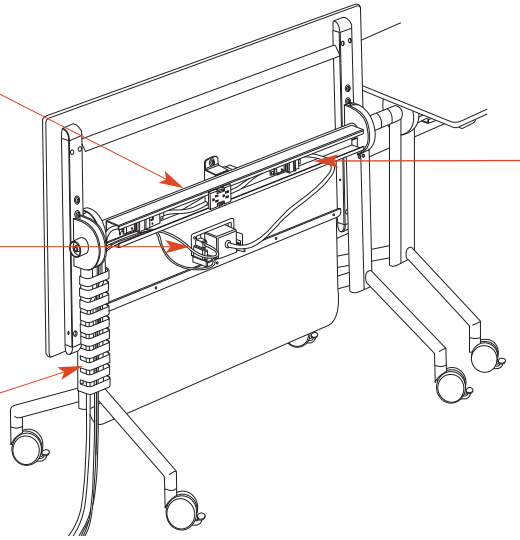
Nesting, non-nesting, and X-bases are constructed of 1 1/4"-diameter tubular steel and are available in 462 Cinder, 405 Designer White, 501 Platinum Metallic, or 514 Carbon Metallic finishes. Bases are specified separately from tops.

Mobile bases feature 3" locking casters. Non-nesting bases and X-bases are available with or without casters.

Power/cable management channel, on specific nesting and non-nesting base models, attaches to the cross bar to accept power components and cable routing.

Power/data center recesses flush with the worksurface top. It includes a duplex receptacle and two knockouts for data/communication ports.

Vertical cable managers snap onto leg of nesting, fixed, or X-bases.



Duplex receptacles allow power to be accessed below the worksurface.

Telephone and data faceplates can also snap into the power/cable management channel, and are available directly from Panduit or AMP/Tyco.

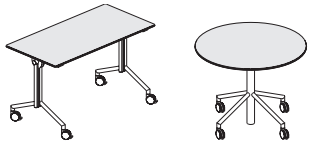
Planning Steps:

① Determine the configuration and select tabletop shapes and sizes.
② Select cord escape(s) and grommets (as applicable), or power/data center cutout locations.
➤See pages 68 and 72.
③ Select the base style and functionality: nesting, non-nesting, or X; mobile or static; with or without power/cable management channel.
④ Determine if and where modesty panels are needed.
⑤ Determine if and where ganging mechanisms are required for your installation.
⑥ Determine the type of electrical circuitry required: single-circuit or multi-circuit. Select components to power your installation.

½" Tops

Features ➤See page 58
Power Guidelines 63
Cut-Out Locations 68

Details

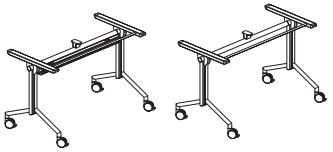


High-pressure laminate (HPL) surface is durable and available in a variety of standard colors. Underside is 462 Cinder laminate.

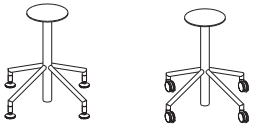
Black phenolic core creates an exposed rounded edge and provides excellent durability and wear resistance.

Tops shapes include:
- Rectangular
- Round
- Square
- Trainer cart/podium

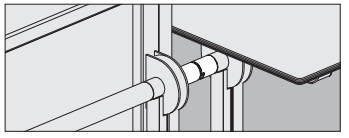
Connections



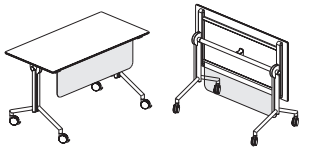
Rectangular tops mount to nesting or non-nesting base in the field. Tops are pre-bored to accept hardware to attach base.
➤See page 61.



Round, square and trainer cart/podium tops mount to an X-base in the field.
➤See page 62.



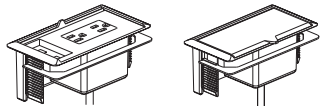
Ganging mechanisms, specified separately, are available to link rectangular tables end to end. Width of the base must match the width of the worksurface. Ganging is required when jumper cables are used to connect power from table to table.



Modesty panels are available for rectangular tables. They are frosted, opaque polycarbonate and swing to allow nesting when used with a flipping/nesting base. Specify modesty panels to correspond with the width of the base. Modesty panels attach to base without tools.

Related Products

Scenario rectangular power/ data center, specified separately, may be field installed in a power/data center cutout. Cutout MUST be specified as a factory-installed option on the top.



Open Closed

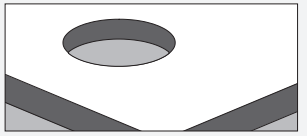
Lid of Scenario power/data center lifts up and slides down to store out of site within the unit. The power/data center is 5⅞"W x 2¾"D and is black plastic. It features a 3-prong plug for a wall outlet or to plug into the outlets of a multi-circuit installation.

Undersurface-mounted products (e.g., keyboard arms, drawers etc.) cannot be accommodated due to the table understructure and thickness of the top.

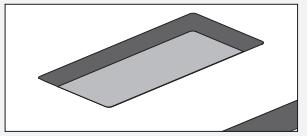
Scenario accessories, such as vertical cable managers and marker-board/flip chart are also available.

Cut-Out Options:

Applies to rectangular and trainer card/podium tops only; up-charge applies.



Factory-installed cord escapes feature black, radiused, phenolic edges. No grommet insert is required.



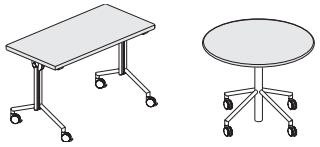
Factory-installed rectangular power/data center (PDC) cutout is required for the field-installation of a rectangular power/data center.

IMPORTANT: Cord escapes and power/data center cutouts CANNOT be field installed due to the density of the phenolic core material.
➤See page 68 for cutout locations and pricing.

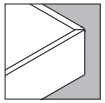
1 3/16" Tops

Features ➤See page 58
Power Guidelines 63
Cut-Out Locations 72

Details



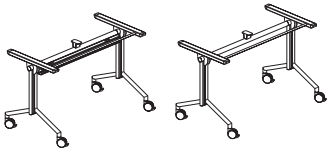
1 3/16"-thick tops are available in wood veneer or laminate.



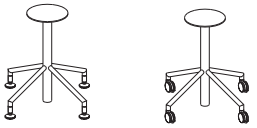
Rim profile is 1/8" thick and appears on all edges of the top. Wood models feature a softened wood rim; laminate models feature a softened plastic rim. Wood rim finish will always match the finish selected for the top. Plastic rims may be specified in a contrasting to the surface if desired.

Tops shapes include:
- Rectangular
- 120° corner
- Round
- Square

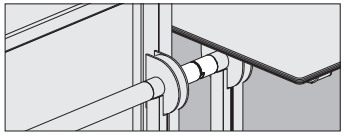
Connections



Rectangular and 120° corner tops mount to nesting or non-nesting base in the field.
➤See page 61.

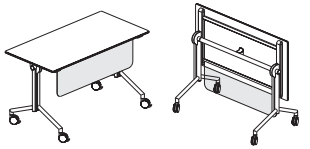


Round and square tops mount to an X-base in the field.
➤See page 62.



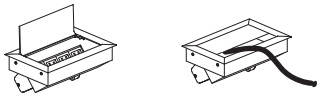
Ganging mechanisms, specified separately, are available to link rectangular tables end to end. Width of the base must match the width of the worksurface. Ganging is required when jumper cables are used to connect power from table to table.

120° corner tops, although available for nesting applications, cannot be ganged and therefore power cannot be jumped to adjacent tables.



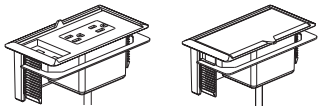
Modesty panels are available for rectangular tables. They are frosted, opaque polycarbonate and swing to allow nesting when used with a flipping/nesting base. Specify modesty panels to correspond with the width of the base. Modesty panels attach to base without tools.

Related Products



Open Closed

Perks® rectangular above-mount power/data center (model 99KPD-CAM), specified separately, is required for field installation in a G20 cutout.
➤See the Perks Price List.



Open Closed

Scenario rectangular power/ data centers, specified separately, may be field installed in a PDC cut-out. Lid of power/data center lifts up and slides down to store out of site within the unit. The power/data center is 5 7/8"W x 2 3/4"D and is black plastic. Depending on the model selected, it will feature a 3-prong plug for a duplex receptacle or a single-circuit double-out interface.

Undersurface-mounted products (e.g., keyboard arms, drawers etc.) cannot be accommodated due to the table understructure.

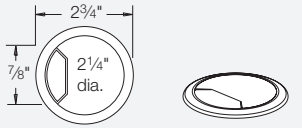
Scenario accessories, such as vertical cable managers and marker-board/flip chart are also available.

Grommets for field installation are also available. Round and square tops cannot accommodate a center grommet location due to the X-base attachment point.
➤See the Perks Price List.

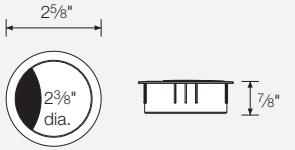
Priority resin privacy screens are compatible with 1 3/16"-thick tops in non-nesting applications.
➤See the Priority Price List.

Grommet/Cut-Out Options:

Applies to rectangular and 120° corner tops only; upcharge applies.



G1 plastic grommet is a two-piece unit with locking cap and black brush access. Powdercoat finish: matte black



G19 metal grommet is a two-piece unit with black brush access. Powdercoat finish in three colors:

G20 cut-out is designed to accept Perks above-mount power/data center, specified separately.

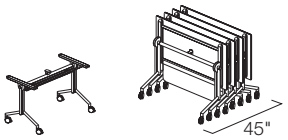
PDC cut-out is designed to accept a Scenario rectangular power/data center, specified separately.
➤See page 72 for grommet cutout locations and pricing.

Nesting and Non-Nesting Bases

Features ➤See page 58
1/2" Tops Product Info 59
1 3/16" Tops Product Info 60
Power Guidelines 63

Details

Scenario bases are constructed of 1¼"-diameter tubular steel and are available in 462 Cinder, 405 Designer White, 501 Platinum Metallic, or 514 Carbon Metallic finishes. Bases are specified separately from tops.

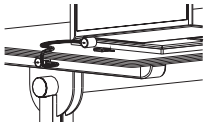


Nesting base allows the rectangular or 120° corner top to flip up for nesting. Nesting bases feature casters and are available with or without an power/cable management channel. Four tables can be nested in 45"D area.

Non-nesting base for rectangular or 120° corner top is available with or without casters, and with or without an power/cable management channel.
Note: The appearance of nesting and non-nesting bases is the same, but table top will not flip up.

Two depths are available:
- 17¾"D for use with 18"D tops
- 24"D for use with 24" and 30"D rectangular tops and 120° corner tops.

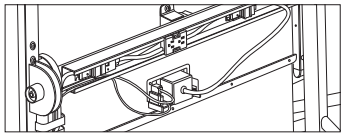
Three widths are available:
48", 60", and 72"W.
➤See base application chart at right.



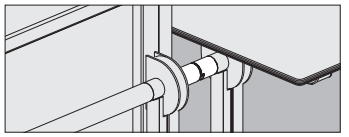
Built-in lock port is standard on nesting and non-nesting bases. It accepts laptop/equipment lock, specified separately.
➤See the Perks Price List for laptop/equipment lock.

Connections

Legs on nesting and non-nesting bases ship assembled, but must be attached to the crossbar in the field. Bases cannot be used with table tops from other series.



Bases with an power/cable management channel accept single-circuit or multi-circuit power components.
➤See page 63 for power application guidelines for single-circuit.
➤See page 64 for power application guidelines for multi-circuit.



Ganging mechanisms, specified separately, are available to link rectangular tables end to end.
IMPORTANT: Ganging mechanisms are required at all junctions where jumper cables are used to pass power to an adjacent table. Width of the base must match the width of the worksurface in order to be ganged and to jump power.

Ganged tables may be moved or nested in a straight line while ganged. Power components remain intact. Mechanism does not affect the ability of nesting tables to flip up or down. Tools are not required to separate or gang once the mechanism is installed. There is no limit to the number of non-electrified tables that can be ganged.

120° corner tops, while available for nesting applications, cannot be ganged and therefore power cannot be jumped to adjacent tables.

Technology Management

Vertical cable managers snap onto leg of nesting, fixed, or X bases.

Telephone and data faceplates can also snap into the power/cable management channel, and are available directly from Panduit or AMP/Tyco.

Base Application Chart:

	Nesting and Non-Nesting Bases		
	48"W	*60"W*	*72"W*

60"W	○	●	
72"W		○	●
120° Corner Tops			
48" (E)	○		

● = Applicable; gangable
○ = Applicable; will not gang

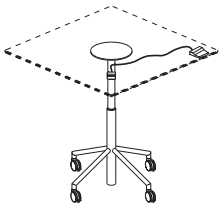
X-Bases

Features ➤See page 58
1/2" Tops Product Info 59
1 3/16" Tops Product Info 60
Power Guidelines 63

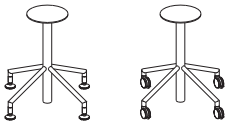
Details

Scenario X-bases are constructed of 1¼"-diameter tubular steel and are available in 462 Cinder, 405 Designer White, 501 Platinum Metallic, or 514 Carbon Metallic finishes. Bases are specified separately from tops.

Round, square, and trainer cart/podium tops require an X-base. X-bases do not allow the top to flip.



Height-adjustable model features casters. Release paddle to adjust height on adjustable-height model is factory-installed on the X-base.



Fixed-height model is available with or without casters.

Connections

For ½"-thick top applications, X-base must be attached to the factory pre-bored holes in the top.

Ganging tables together is not possible with X-base supported tables.

Table tops from other series cannot be used with X-bases.

Power components are not compatible with X-bases.

Technology Management

Vertical cable manager snaps onto the center column on X-bases to route cords and cables.

Single-Circuit Power

Features ➤See page 58
1/2" Tops Product Info 59
1 3/16" Tops Product Info 60

Single-circuit components access power from a standard wall or floor electrical outlet. This flexible, non-sequential, daisy-chaining system allows power to be distributed to a maximum of six tables with a maximum of eight duplex receptacles per power in-feed.

The following components comprise the single-circuit system:

- Power in-feed
- Duplex receptacles with an attached 12" modular feed
- Table-to-table jumper cables
- Receptacle-to-receptacle jumper cables
- Power/data center

For ease in installation, the connectors will only plug in one way.

Power in-feed is a 10' cord with a "smart box" that monitors the number of tables connected. The system will automatically shut off if more than six tables (or more than 8 receptacles) are plugged into the power in-feed. One end of the cord features a three-prong plug that plugs into any 110 volt, 15 amp wall or floor outlet.
Note: This system should not be plugged into a GFCI outlet receptacle. The single-circuit system contains an overload breaker, and the sensing circuit in the "smart box" can affect the sensitivity of a GFCI power feed, causing the GFCI duplex receptacle to trip.

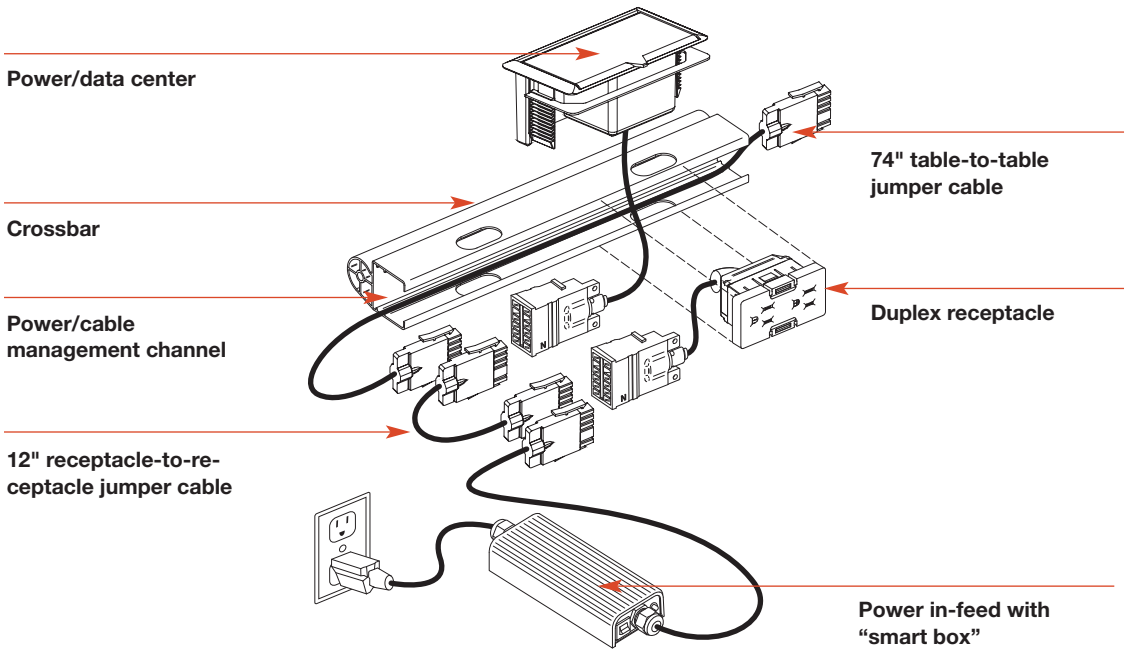
Duplex receptacles snap into the electrical/cable management channel on the base. Receptacles feature a 12" modular feed with a double-out interface. Power is brought to the receptacle by a power in-feed or jumper cable, and power is passed to adjacent components by a jumper cable forming a daisychain.

Table-to-table jumper cables are 74" and feature a squeeze-latch connector on each end. They are used to pass power from one table to an adjacent table.

IMPORTANT: Ganging mechanism, specified separately, is required when passing power from table to table. 120° corner tops cannot be ganged and therefore power cannot be jumped to adjacent tables.

Receptacle-to-receptacle jumper cables are 12" and feature a squeeze-latch connector on each end. They pass power from one receptacle or power/data center to another receptacle on a single table.

Power/data center (model KCUELPDC1) features an 24" modular feed with a double-out interface, similar to receptacles. Model



Circuitry Options:

Nesting and non-nesting bases with an power/cable management channel accept single-circuit or multi-circuit power components. Components are specific to either single or multi-circuit; they cannot be used interchangeably.
➤See page 64 for multi-circuit power application guidelines.

Approval/Compliance:

All Scenario single-circuit components and fully assembled tables are U.L. 962 Recognized and comply with the National Electrical Code (NEC). Consult a qualified electrical contractor or engineer for proper installation of electrical equipment. The customer is responsible for the proper application of products to the local codes under which installation must be made.
Note: Any field modification of the electrical components voids the U.L. listing.

c UL US LISTED

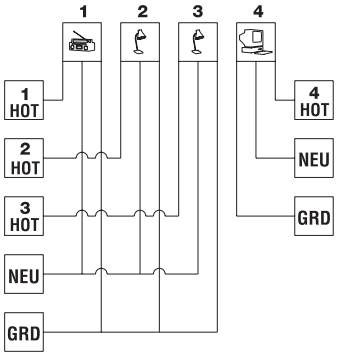
Multi-Circuit Power

Features ➤See page 58
1/2" Tops Product Info 59
1 3/16" Tops Product Info 60

Multi-circuit components combine to form an 8-wire, 4-circuit, hardwired system that must be installed by a licensed electrician. The number of rectangular tables that can be connected will be determined by the building's supply limitations.

The 8-wire, multi-circuit configuration provides up to four circuits. Ideally a 4-wire, WYE, 208 volt service provides the best utilization.
➤See wiring schematic below.

Scenario electrical components are not compatible with Cetra, Xsite or Interworks electrical components.



Circuits 1, 2, and 3 share a neutral and common ground and can be used for general electrical needs.

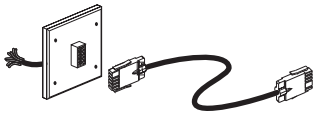
Circuit 4 consists of three separate increased-size conductors (hot, neutral, and ground) and meets the BIFMA/ANSI definition for a dedicated circuit.

The following components comprise the multi-circuit system:
- Hardwire power in-feeds (two options)
- Power distribution assemblies
- Duplex receptacles
- Table-to-table jumper cable
- Power/data center

For ease in installation, the connectors will only plug in one way.

There are two ways to bring power to the system:
- 15' hardwire power in-feed; or
- Modular wall starter and modular 15' power in-feed.

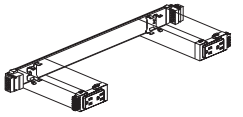
Hardwire power in-feed features a 15' liquid tight conduit with a pigtail on one end that must be wired by a licensed electrician to a wall or floor-mounted junction box. The other end features a single squeeze-latch connector to attach to a power distribution assembly.



Modular hardwire power in-feed features a 15' modular conduit, with a squeeze-latch connector on each end. One end must connect to modular wall starter, specified separately, the other end connects to a power distribution assembly. Modular wall starter must be wired to building power by licensed electrician.
Note: This modular power in-feed option allows you to unplug the cable from the wall and store away when not in use.

Multi-circuit hardwire power in-feed or modular starter must be installed by a licensed electrician.

Power distribution assembly is field-installed into the electrical/cable management channel and supplies power for receptacles in the table. One power distribution assembly is required for each table. They are available in three lengths to correspond to the length of the table base:
- 24"W power distribution assembly fits a 48"W base.
- 36"W power distribution assembly fits a 60"W base.
- 48"W power distribution assembly fits a 72"W base.



Duplex receptacles snap into the power distribution assembly. Each power distribution assembly can accommodate one or two duplex receptacles, up to a maximum of 13 duplex receptacles per circuit.

➤Guidelines continued on next page.

Circuitry Options:

Nesting and non-nesting bases with an electrical/ cable management channel accept single-circuit or multi-circuit electrical components. Components are specific to either single or multi-circuit; they cannot be used interchangeably.
➤See page 63 for single-circuit power application guidelines.

Approval/Compliance:

All Scenario multi-circuit components are U.L. 1286 Listed and comply with the National Electrical Code (NEC). Consult a qualified electrical contractor or engineer for proper installation of electrical equipment. The customer is responsible for the proper application of products to the local codes under which installation must be made.
Note: Any field modification of the electrical components voids the U.L. listing.

IMPORTANT: Due to U.L. 1286 code restrictions for assembled tables, multi-circuit components can only be used with static (non-mobile) bases.

c UL US LISTED

Multi-Circuit Power

continued

Features ➤See page 58
1/2" Tops Product Info 59
1 3/16" Tops Product Info 60

Receptacles models are numbered 1, 2, 3, or 4, to correspond to the circuit to which they will provide access.

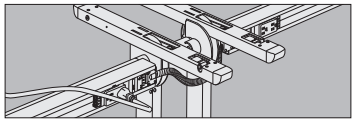


Table-to-table jumper cables are 28" and feature a single connector at both ends that connect the power distribution assemblies of two adjacent tables. Jumper is encased in a galvanized metal conduit. IMPORTANT: Ganging mechanism, specified separately, is required when passing power from table to table. 120° corner tops cannot be ganged and therefore power cannot be jumped to adjacent tables.

Scenario power/data center (model 77KELPDC2) features an 8' cord that plugs into one of the duplex receptacles below the worksurface. It can also be used as a stand-alone unit.

Perks above-mount power/data center (model 99KPDCAM) may also be used in 1 3/16"-thick top applications.

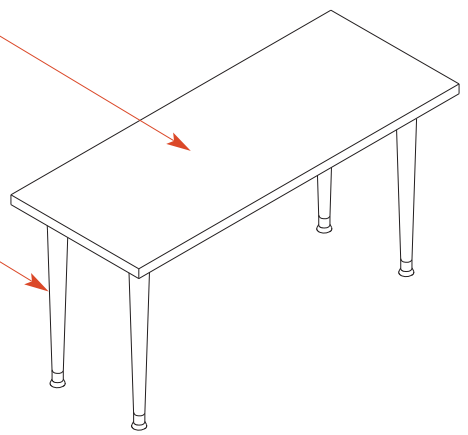
Folding T-Legs
➤See page 87 to specify.

Features

Statement of Line ➤See page 83
Base Requirements 85

Table tops are available in wood, laminate, and laminate with a wood rim. They are 3-ply balanced construction and are 1 3/16" thick.

Support is specified separately. Select from several column and T-leg models.
➤See page 85 for base requirements.



Details

All exposed wood surfaces are available in the following veneers:
- Cherry (plain sliced, slip matched)
- Maple (plain sliced, slip matched)
- Walnut (plain sliced, book matched)
- Sapele (quarter sliced, slip matched) premium veneer; upcharge applies

Veneers are carefully selected and matched to assure proper balance and consistency.

Rim profile appears on all sides of table top for the following rim profiles:
- Radius (A)
- Bevel (B)
- Double Radius (C)
- Bullnose (D)
- Transitional (E)
- Softened (F)
- Beaded (G)
- Crescent (H)
- Flat (J)
- Reed (M)
- Plastic (V)

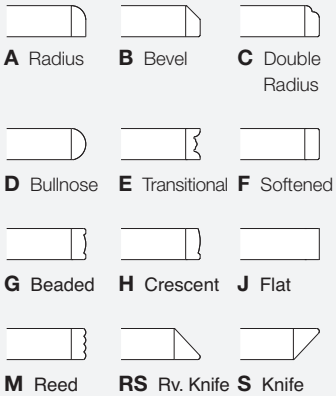
Knife (S) and reverse knife (RS) rim profiles on rectangular tops appear on the front and back edges; end edges have a flat profile for a flush fit when positioning tables end to end.

Rim thickness is 5/16" on A, B, C, D, E, F, G, H, and M rims; rim thickness is 1" on S and RS rims.

All rims are wood, except plastic (V). Flat (J) rim is a self edge and is available in wood or laminate.

Rim Profiles:

Rims for Wood Tops and Laminate Tops with Wood Rim



Rims for Laminate Tops

Note: Rims are designed to match rim shapes offered on other Kimball Office casegoods and systems products.

Base Requirements

Top Shape		Static Tapered Column Leg	Mobile Tapered Column Leg	Static Column Leg	Mobile Column Leg	Static T-Leg	Mobile T-Leg	Folding T-Leg
Rectangular	48"W	4	4	4	4			
	60"W	4	4	4	4			
	66"W	4	4	4	4	2	2	2
	72"W	4	4	4	4	2	2	2

Key:

\# = Number of bases required
grey = Base is not available for use with top shape.

This chart lists the number of bases that must be used with each top size for proper stability.

Configuration table bases are designed specifically for use with Configuration Tables and are not recommended for use with any other Kimball Office tables.

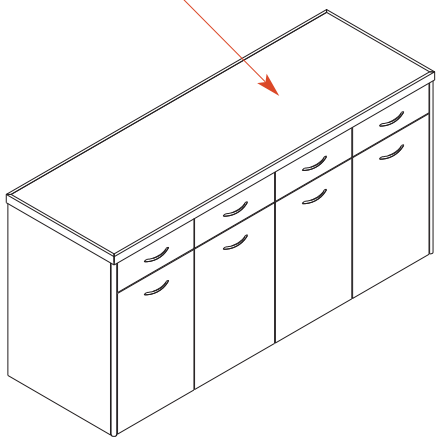
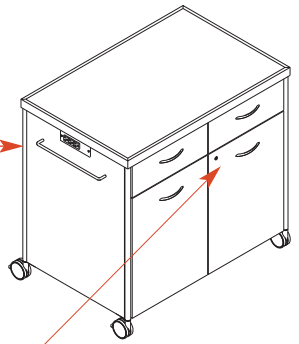
Features

Statement of Line ➤See page 103
Pull Options 105

Tops on credenzas, carts and telephone stand are available in wood or laminate with wood rim.





Metal corner posts are standard on vertical storage, credenzas, carts, telephone stand, and floor lectern. Available in three paint colors:
- 462 Cinder
- 501 Platinum Metallic
- 503 Satin Nickel

Locking is standard on utility/AV cart, hospitality cart, and telephone stand. Locks are available keyed randomly or keyed specific. Specify lock cores separately for key specific option.
➤See page 104 for lock information.

Details

Buffet credenza's lower left compartment features a pull-out door with black trash container.

Utility/AV cart is a multi-functional unit that serves as a serving cart, projector stand, or mobile TV cart. Lower section is locking. Includes cut-out in back panel for cable management and a side handle. Interior dimensions of open shelf are 34½"W x 22"D x 5½"H.

Serving cart features a hinged drop-leaf surface on all four sides, one fixed shelf, and a side handle.

Hospitality cart includes side handle and two box drawers with a black silverware organizer Lower left compartment features a pull-out door with black, 24 quart trash disposal container. Lower right section is locking. Power strip, located on left side of cart, includes three power outlets and a 10' cord. Black grommet for routing cord is located in the back panel.

Telephone stand features a hinged drop-leaf surface on both sides that extends 7". There is one adjustable shelf behind locking hinged door.

Floor lectern includes an adjustable shelf behind a non-locking hinged door. Presentation surface includes a cut-out for cable management.

Carts, telephone stand, and floor lectern are mobile and include four locking, dual-wheel casters.

All exposed wood surfaces are available in the following veneers:
- Cherry (plain sliced, slip matched)
- Maple (plain sliced, slip matched)
- Walnut (plain sliced, book matched)
- Sapele (quarter sliced, slip matched) premium veneer; upcharge applies

Veneers are carefully selected and matched to assure proper balance and consistency.
➤See page 113 for finish selections.

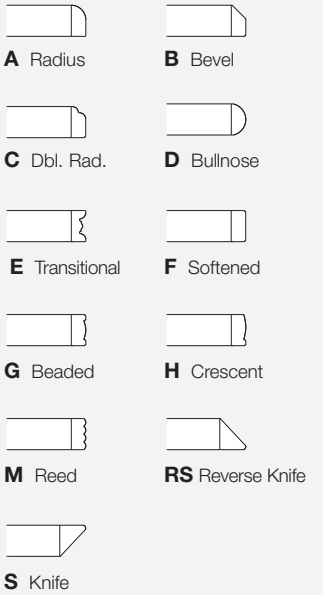
Wood tops on credenzas, carts, and stands feature a semi-open pore finish with a satin (50) or gloss (70) sheen.

Woodgrain laminate top with wood rim is also available in select finishes on all models, except serving cart.
➤See page 117.

Drawer suspensions feature black, precision steel ball bearings to ensure long lasting, quiet, and smooth operation. Box drawers are ¾ extension and have a 75 lb. load rating.

Rim Profiles:

Rims are designed to match rim shapes offered on other Kimball Office casegoods and systems products. All rims are wood.



Knife (S) and reverse knife (RS) rim profiles on vertical storage units, buffet credenzas, utility/AV cart, and hospitality cart appear on the front edge only; sides and back are flat. All other rim profiles appear on all four sides of the top.

Pull Size:

	Width	*Height*	*Projection*
Studio	7⅞"	⅜"	1⅛"
Niche	5⅜"	⅞"	⅞"
Trinity	9¼"	⅜"	⅞"

Finishes:
Paint—
405 Designer White
462 Cinder
501 Platinum Metallic
514 Carbon Metallic

SF Silver Frost Metallic

Boring Patterns:

Helix	160 mm
Link	160 mm
Wisp	190 mm

Pull Size:

	Width	*Height*	*Projection*
Helix	7⅝"	½"	1¼"
Link	6⅝"	1⅛"	1"
Wisp	9⅞"	⅝"	1⅛"

How to Specify

Specify pull option and finish together in one step.
If pull finish designator is a number, insert an underscore between the pull designator and the finish designator. For finish designators that are letters, put the pull and finish together without a space or underscore.

Examples:
93_487 = Aero pull, brushed nickel
61SF = Helix pull, silver frost metallic

Locking Information

GSA SIN 711-8
FSC-C010590

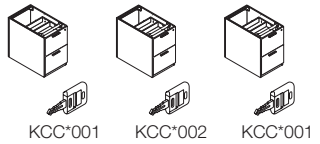
Features ➤See page 104
Pull Options 105

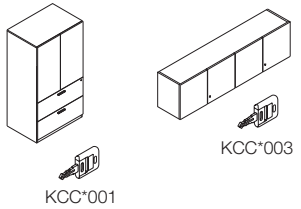
Locking units can be specified as:
- Key random with a black lock core and hinged key (KRB); or
- Key specific (KS)

Key Random Option:

When key random option is selected, key numbers will be assigned arbitrarily at the factory with key numbers ranging from KCCB001 to KCCB300.

Randomly numbered lock core(s) will ship standard along with your order for field installation.
Exception: Randomly numbered lock cores on Kwik Office models are shipped installed.



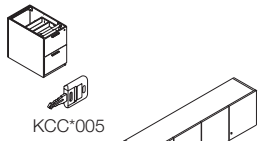


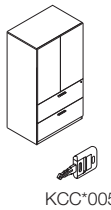
With random keying, different furniture units may or may not have the same key number. If you must have all locks keyed differently or all locks keyed the same, choose the key specific option.

Key Specific Option:

When key specific option is selected, the storage unit will be pre-drilled to accept a lock core; however, no lock cores will be shipped standard with the unit. If lock cores are standard on the unit, the price of the unit is reduced by the price of the lock core or cores.

You must specify lock core(s) separately for key specific option; specify any key number from KCCB001 to KCCB300.





To key all the furniture units in a workstation or department alike, choose the key specific option and order the quantity of locks needed for your installation.

Black lock cores and hinged keys are identical to the ones used with other casegoods and systems products.

Standard key that ships with the lock core can be used for the initial installation of the lock core in the field.

Change key model KCCB1CK allows removal of lock cores for key numbers ranging from KCCB001 to KCCB300.

IMPORTANT: A change key, specified separately, is required to remove lock cores in the field.

Master key model KC2GMK will unlock any lock with key numbers ranging from KCCB001 to KCCB300.

Model/Key Range	*Price*
Black Lock Cores	
KCCB001 to KCCB300	$21
Change Key	
KCCB1CK	$5
Master Key	
KC2GMK	$11

How to Specify

❶ Specify exact key number for lock cores as the model number or model number for change or master key

FINISHES & MATERIALS

Table of Contents

Samples:

Samples of wood finishes, paints, and laminates are available upon request. Samples are to be used as guidelines only. Slight variations within commercial tolerance may occur in color and texture.

Swatch cards and memo samples of Kimball Office fabrics are available upon request. There may be slight differences between samples and actual yardage as a result of variations in dye lots.

To order samples:

- Visit the Partner web site at www.kimballoffice.com to order materials electronically
- Contact your Kimball Office Sales Representative or the nearest Kimball Office Showroom
- For Alliance program fabrics, contact our Alliance partner directly.

Kimball Office offers a diverse collection of surface materials. Please see descriptions below to ensure that you are choosing the materials that best support your requirements.

Fabric Collection:

Our collection of fabrics offers a wide variety of materials that include both timeless classics, as well as a selection of trendy colors and patterns to keep the offering fresh and current.

The classic patterns are perfect for establishing new standard color palettes, while the trendy patterns are great for adding accents and pops of color to make a statement and to show that you are in tune with the pulse of today's fast-paced world.

The fabric collection was developed with an international flare to make it easy for global companies to standardize in all locations. It contains both standard in-line and alliance patterns. Our alliance partners are chosen with great care to give us the best selections and service in the industry.

You will find that colors were developed to coordinate very well between the in-line and alliance offerings, as well as between the seating and panel fabric offerings.

The fabric collection will provide options for the discerning client for many years to come.

Wood Collection:

Our wood finishes offer fresh options that provide natural-looking finishes to meet today's design expectations. From the lightest Brighton Maple to the darkness of Urban Walnut, these finishes were chosen with great attention to offer a complete range of color options making it simple to specify the look you want. You can achieve contemporary or transitional looks, or choose to update your traditional style by selecting one of the newer walnut or cherry finishes.

Kimball Office carefully selects veneers and solid woods to provide high quality wood furniture. Variations in color, grain, and texture occur naturally in all wood species, but are most apparent in lighter colored woods, and especially in natural finishes.

The wood collection offers a number of light finishes that will not hide or mask the natural characteristics of wood. Mineral streaks, pitch pockets, and color variations from piece to piece are all characteristics that occur in natural veneers and are what make each piece unique. While the finishing process is identical for all pieces, each finished piece accepts the stain differently to create its own individual beauty. These characteristics are part of the inherent natural beauty of wood and are not considered defects.

Darker finishes can be selected to hide more of the veneer's characteristics. Several beautiful coordinating woodgrain laminate options are also available for the customer who wants complete color and grain consistency throughout.

Two surfaces with grain directions that are at different angles to a light source will reflect the light differently and look a slightly different color. This natural phenomenon is called flip. This can happen within a single piece as alternating veneer leaves are placed side by side or from piece to piece. Flip is often noticed on worksurfaces installed at a 90° angle to each other.

Two premium veneers—Sapele and Zebrawood—are part of the standard offering to provide options for high impact styles without having to quote custom veneers. Premium veneers could receive extended lead times based on supplier availability at the time the order is placed.

Generations Collection:

The Generations Collection is comprised of tried and true materials that have been in the Kimball Office offering for many years. This collection is designed to support long-standing customers and to help transition you to the current offering.
➤Visit kimballoffice.com to see the Generations Collection.

IMPORTANT: Materials in this collection should not be used to set standard color palettes for new installations.

Materials in this offering can be ordered using the standard process, however, extended lead times and minimum order quantities may apply. For best results, pre-planning orders with your Customer Service Representative is recommended.

Discontinuation Policy:

Kimball Office strives to give all business partners advanced notification of surface materials that are scheduled for discontinuation. Efforts will be made to support discontinued materials as specified in the deletion announcement. Pricing cannot be guaranteed. Extended leadtimes and minimum order requirements may apply.

Disclaimer:

Kimball Office will make every reasonable effort to maintain our commitments. If surface material changes must occur due to unforeseen circumstances, we will work with you on an alternative recommendation. Kimball Office reserves the right to cancel or make changes to standard products and surface materials.

Warranty:

Fabrics and leathers are not warranted against fading and wear, discoloration from contact with liquids, or change in color or texture caused by application of finishes (flame proofing, stain resistance).
➤See page 124 for complete warranty information.

Price Groups:

STD = Group 1 (list price)
STD2 = Group 2 (20% upcharge)

Kimball Office is known as the wood leader in the office furniture industry. Exceeding our customer expectations has always been our goal.

It is important to educate your customers on what to expect from the wood furniture they order. If they require a specific characteristic or look, please contact ***By Design*** to review veneer options and discuss special quotes.

➤See page 112 for program overview.
➤See page 116 for wood finish characteristics, care and maintenance.

† CX Coco and SX Sienna finishes on Arpeggio cherry and Beo beech tables are available to coordinate with finishes of the same name on sapele wood (price grade 2). They do not incur an upcharge (price grade 1).

Special Wood Finishes

Matrix

Standard Finishes on Alternate Wood Species

Standard finish colors on alternate wood species are available. Samples are available from Customer Service upon request.

Applicability of special finish colors depends on the wood species to which they are applied. The matrix below shows the types of woods used for each series.

	Cherry	*Maple*	*Walnut*	*Sapele*
Price Group	*1*	*1*	*1*	*2*
Arpeggio	•	•		
Collaborative	•	•	•	•

Pose	•	•	•	•
Scenario	•	•	•	•
Traditional	•		•	
Transcend	•	•	•	•
Villa Tables	•	•	•	•

• = standard wood species
Note: Special finishes are not available on Zebrawood.

If one of our standard finishes is not appropriate, Kimball Office also has a library of previously developed special finishes which may be an acceptable match for your application. A custom finish can also be developed to meet specific needs.
➤See next page for previously developed and custom finishes.

Upcharges:

A **10% upcharge** per line item (model) for special wood finishes applies. Upcharge is calculated on the base price, before other option upcharges are added.

Example:
48" round table top (model CCS48RDW1) in special finish and factory-installed grommet—

Base price	$1194.00
	x .10
Special finish	$ 119.40
Base price	+1194.00
Grommet option	+ 79.00
List price	$1392.40

Special Finish Designators:

	Wood Species		
Color	*Cherry*	*Maple*	*Walnut*
Amber	Standard/MC	MA00174KOG	WA02905KOG
Espresso	×	×	Standard/ES
Mocha	Standard/MH	×	WA02920KOG

Note: We have not yet developed special finish designators for standard finishes on alternate wood species for all wood finishes.

Key:
× = Not feasible on wood species

How to Specify

① **Model:**
Build the complete model specification by following the How to Specify steps on the pricing page for the product that is to receive the special finish.

② **Finish type:**
For the "Finish type" step, insert a special code (in place of STD):
ZCHY1 = Special cherry finish
ZMAP1 = Special maple finish
ZWAL1 = Special walnut finish
ZSAP1 = Special sapele finish
Note: Choose the special finish code based on the standard wood species used in the case-goods line (see matrix at left).

③ **Finish designator:**
For the "Finish designator" step, insert the designator from the table at left.

Sample:
① ②
CCS48RDW1 ZCHY1
③

Special Wood Finishes

Matrix

Previously Developed and Custom Finishes

Wood Finishes ➤See page 113
Woodgrain & Solid Lam. 117
Pattern 118
Paint & Plastic 120

Previously developed and custom finishes are available for special requirements. Kimball Office has an extensive library of previously developed special finishes which may be an acceptable match for your application. If not, a custom finish can be developed to meet specific needs.

Samples of previously developed special finishes are available from Customer Service upon request.

Applicability of special finish colors depends on the wood species to which they are applied. The matrix at right shows the types of woods used for each series.

IMPORTANT: Kimball Office reserves the right to decline the opportunity to match a finish color.

	Cherry	*Maple*	*Walnut*	*Sapele*
Price Group	*1*	*1*	*1*	*2*
Arpeggio	•	•		
Collaborative	•	•	•	•
Contemporary	•	•	•	•
Priority	•	•	•	•

Fluent	•	•	•	•
Innsbruck	•			
Pose	•	•	•	•
Scenario	•	•	•	•
Traditional	•		•	
Transcend	•	•	•	•
Villa Tables	•	•	•	•

• = standard wood species

Note: Special finishes are not available on Zebrawood.

Approval Process:

① Send desired finish sample (no smaller than 3" x 5"), along with a purchase order for the $300 (net) special finish development fee, to Customer Service along with a complete list of the products and wood species to which the special custom finish is to be applied. Include dealer name, contact, and project reference.

② If a previously developed sample is found to be compatible, a sample will be sent for customer approval. Custom finishes will generally require at least a week for a matched sample. Samples sent to the customer will advise of any restrictions that may apply.

③ Customer signs off on the sample and returns the approval form to Customer Service. Approval is required prior to order entry.

Upcharges:

A one-time fee of **$300** (net) will be billed for the development of each new custom finish. This fee covers all Kimball Office product lines on which the finish may be used. Models receiving a special finish will also be assessed an upcharge.

A **10%** upcharge per line item (model number) for special wood finish is calculated on the Grade 1 upholstery price, then added to the price for the selected fabric grade, to arrive at the list price.

Example:
48" round table top (model CCS48RDW1) in special finish and factory-installed grommet—

Base price	$1194.00
	x .10
Special finish	$ 119.40
Base price	+1194.00
Grommet option	+ 79.00
List price	$1392.40

How to Specify

① **Model:**
Build the complete model specification by following the How to Specify steps on the pricing page for the product that is to receive the special finish.

② **Finish type:**
For the "Finish type" step, insert a special code (in place of STD):
ZCHY1 = Special cherry finish
ZMAP1 = Special maple finish
ZWAL1 = Special walnut finish
ZSAP1 = Special sapele finish
Note: Choose the special finish code based on the standard wood species used in the case-goods line (see matrix at left).

③ **Finish designator:**
For the "Finish designator" step, insert the designator provided to you by Customer Service.

Wood Finish Characteristics

Including Care and Maintenance Tips

Wood Finishes	➤See page 113
Woodgrain & Solid Lam.	117
Pattern	118
Paint & Plastic	120

Kimball Office's experience in wood finishing extends from past generations of craftsmen to present day state-of-the-art technology.

Our Pura® finish is a proprietary, water-based, ultraviolet (UV) wood finish that has virtually no volatile organic compounds (VOCs). It uses less energy than our conventional finishing process and meets or exceeds BIFMA Furniture Emission Standards (FES) and U.S. Green Building Council LEED requirements for indoor air quality. Pura is exceptionally clear and durable and allows the beauty of our wood to shine through. The durability, depth, clarity, and beauty of Pura meets the high expectations customers have of Kimball Office finishes.

Finish fill and sheen level for the top surfaces is appropriate for the design and wood species. If different specifications are required, contact Customer Service.
➤See the individual chapters for fill and sheen information by line.

All wood products are very susceptible to darkening from age and exposure to UV rays (sunlight and other sources), especially cherry and maple. Although a special UV inhibitor is added to finishes, care in placement of furniture near light sources and elimination of prolonged covering of surfaces is necessary to reduce uneven color change of the wood.

Grain characteristics of cherry veneer such as gum streaks and gum pockets occur naturally and add to the authentic look and feel of natural veneer. These are inherent to this veneer and should not be considered defects.

Brighton maple is a clear finish for those who appreciate the inherent beauty of wood. Differences in grain character and color are natural characteristics of wood and will show through in the finished product.

Fine scratches from everyday use may be more visible on furniture with dark finishes. Darker finishes absorb more light, while fine scratches reflect the light. Therefore, scratches can be more emphasized due to this contrast. The use of a desk pad is recommended to keep scratching to a minimum.

To Maximize Longevity and Beauty of the Wood Finish:

- Clean all surfaces frequently with a water dampened soft cloth following direction of the grain.
- Dry with a separate cloth if needed.
- Avoid exposure to strong sunlight or extremes in temperature or humidity.
- Avoid exposure to harsh solvents and always remove any spilled liquids immediately.
- Use a desk pad. This will help protect against possible damage and imprinting caused by writing instruments and sharp objects.
- Pads with foam backing are not recommended.
- If using a protective glass top, always place felt spacer pads under the glass to allow the wood to breathe.
- Do not leave plastic, vinyl, or rubber items on finished wood surfaces. Sustained contact could damage the finish.

† *Woodgrain, solid, and pattern laminates are available on base models CBS2716 and CBS2724 only.*

Woodgrain laminate is a commercially compatible match to the wood finish of the same name and designator with consideration for the most common application—laminate surfaces on a wood chassis. When laminate and wood are mixed in other applications, the flip that occurs naturally in veneer may influence the overall match from piece to piece.

Customer Specified Laminate

GSA Non-Contract

Wood Finishes	➤See page 113
Woodgrain & Solid Lam.	117
Pattern	118
Paint & Plastic	120

Customer specified high-pressure laminate (CSL) is available on:
- Definition
- Fluent
- Priority
- Scenario table tops
- Collaborative (LW model tops only)
- Complementary Furniture
- Configuration table tops
- Contemporary table tops
- Villa table tops

➤Contact Customer Service to initiate approval.

Kimball Office reserves the right to decline a customer specified laminate which may not be suitable for application.

Kimball Office assumes no responsibility for the durability, consistent coloration or any other performance characteristic of a customer specified laminate.

Metal, embossed, specialty, and supplier discontinued laminates must be custom quoted.
➤Contact ***By Design*** at 800.482.1616 extension 6002.

CSL on products not listed above must be custom quoted.
➤Contact ***By Design*** at 800.482.1616 extension 6002.

Kimball Office orders and procures all customer specified laminates.

Laminate sheen level must not exceed 60° for maximum durability of worksurfaces.

Lead times may vary for certain laminates. Minimum order quantities may apply.

Pricing:

A **20% upcharge per line item** (model) for CSL orders for supplier standard laminates applies. Upcharge is calculated on the base price, before other option upcharges are added.

Example:
48" round table top (model CCS48RDL1) with CSL and factory-installed grommet—

Base price	$999.00
	x .20
Special finish	$ 199.80
Base price	+999.00
Grommet option	+ 79.00
List price	$1277.80

How to Specify

① **Model:** Build the complete model specification (excluding the finish type and finish designator) by following the How to Specify on the appropriate pricing page for the product that is to receive the special finish.

② **Finish type:** For the "Finish type" step, insert a special finish code (in place of STD).
ZFMA1 = Formica
ZLMT1 = Lamin-Art
ZLTC1 = Lamitech
ZNEV1 = Nevamar
ZPTE1 = Pionite
ZWST1 = Wilsonart

③ **Finish designator:** For the "Finish designator" step, insert the laminate designator (color number) of the laminate to be applied to the product.

Sample (base model underlined):

The table at right lists the operating load capacities (functional load) of various Kimball Office components. All components meet or exceed the ANSI/BIFMA Functional and Proof Loading requirements X5.5 (2008 Desk and Table Products Tests) and X5.9 (2004 Storage Units Tests). The Operating Load Capacities listed represent the BIFMA functional loads which are equivalent to loads that can be expected in normal use of the component.

BIFMA

MEMBER
THE BUSINESS AND INSTITUTIONAL FURNITURE MANUFACTURER'S ASSOCIATION

Component	**Operating Load Capacity**	**Examples** (total weight [t.w.])
Desk/table <45"W	200 lbs. over 12" diameter area, concentrated loading	
Desk/table 45"W–72"W	200 lbs. over 12" diameter area, concentrated loading 1.5 lbs. per inch of perimeter, distributive loading	24"D x 72"W = 288 lbs.
Desk/table >72"W	Two 200 lb. loads over two 12" diameter areas, concentrated loading 1.5 lbs. per inch of perimeter, distributive loading	24"D x 84"W = 324 lbs.
Pedestal drawer	.017 lb. per cubic inch of drawer interior filing space *Note: File drawers are to support hanging files only; they are not intended for bottom loading.*	24"D x 18"W x 12"H = 88 lbs.
Transaction counter,	.017 lb. per cubic inch above surface secondary surface <16"D, (not to exceed 12"H), distributive loading or and shelf	12"D x 60"W = 147 lbs. t.w.
Adjustable keyboard	66 lbs. over 12" diameter area, concentrated loading <36"W 66 lbs., distributive loading	
Writing shelf	25 lbs., distributive loading	
Extendible elements	.017 lb. per cubic inch of drawer interior filing space, (drawer, shelves, etc.) distributive loading	24"D x 15"W x 12"H = 73 lbs.
Center/pencil drawers	5 lbs., distributive loading	
Storage or bookcase	200 lbs. concentrated loading top <38"H distributive loading	.26 lb. per square inch of surface area, 24"D x 36"W = 225 lbs.
Storage or bookcase	.26 lb. per square inch of surface area, distributive loading top 38"H–72"H	24"D x 36"W = 225 lbs.
Storage or bookcase	.09 lb. per square inch of surface area, distributive loading top >72"H	24"D x 36"W = 78 lbs.
Storage or bookcase	.017 lb. per cubic inch above surface, distributive loading bottom	24"D x 36"W x 18"H = 264 lbs. (not more than 18" in height)

Square inches should be calculated using this formula: Surface depth x surface width of available storage

Cubic inches should be calculated using this formula: Surface length x surface depth x height of available storage above the surface (limited to 18 inches above the surface)

U.L. Information:

Only Underwriters' Laboratory (U.L.) listed electrical components are used in electrical devices and are so labeled.

The customer is responsible for the proper application of products to the local codes under which installation must be made. Further specifications are available on request.

TABLES PRICE LIST

Revision Summary

June 2014

This document provides a summary of revisions made to the Tables Price List since April 15, 2014.
These revisions are effective June 23, 2014.

Additions

None.

Changes

U.L. information has been moved to the Resources chapter.
➤See page 125.

Updates to the Finishes and Materials chapter have been made to reflect the current offering.
➤See page 111.

Clarifications

BIFMA/ANSI: 100% of the products manufactured by Kimball Office are level® certified.
➤See page 5.

Product warranty has been updated to reflect that Itsa and Campos seating lines have a "normal" use classification and warranted for 3-shift, 24/7 service. Itsa Mesh and Campos Mesh models have a warranty period of 3 years.
➤See page 124.

Corrections

Innsbruck pedestal table base features an upper platform (mounting pad) that is 413⁄4” in diameter. Illustrations have been revised and dimension added to the pricing table.
➤See page 52.

Deletions

None.

Kimball® Office

XSEDE™ Price List

This price list is effective June 9, 2014.

Xsede provides a balance of focus and collaboration in the open plan.

Xsede was designed to bring diversity to the open plan; combining the openness of a bench with the visual privacy of a panel system. Configure Xsede to support the way you work, whether functioning independently or with a team. Xsede is ANSI/BIFMA level certified and may contribute to LEED credits.

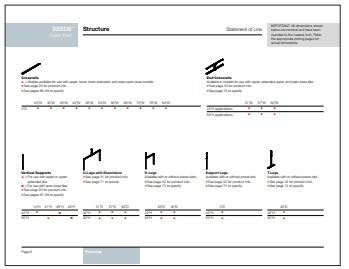
How to Use this Price List

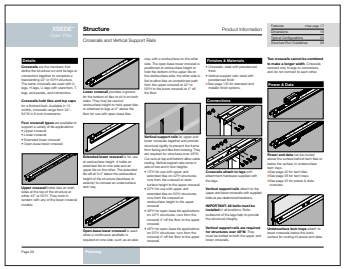
How to Specify	➤See page 3
Sustainability	4
Product Positioning	5

Kimball Office has made every effort to make this price list accurate and complete with all of the information you need to specify our products.

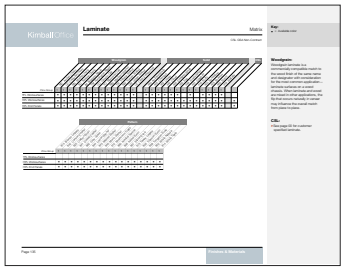
We suggest that you become familiar with the format of this price list. You'll find information about the product line, planning guidelines, pricing, and how to specify the product.



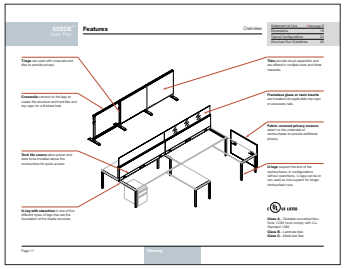
Statement of Line provides a snapshot of the entire product line. We've included an illustration and page cross references to the applicable pricing and how to specify pages.



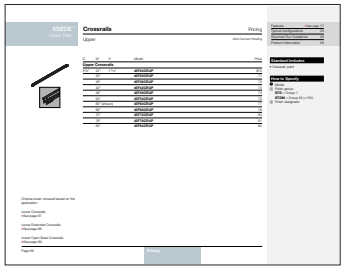
Product information pages provide detailed information about the product, connections that can be made with other models, and planning factors, and applications guidelines.



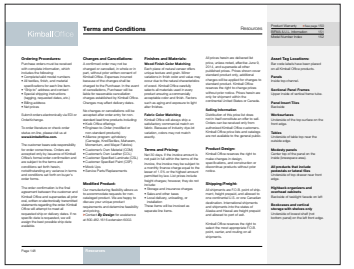
Look in the Finishes and Materials section to see what materials and finishes are available. Matrices for wood finishes, laminate, paint, fabrics, and other surface materials offer a quick reference by product.



Features overview offers a quick look at the distinguishing features of the product line.



Pricing pages list each model individually along with its list prices. How to Specify steps instruct you how to build a complete model that includes all of its options and materials.



Use the Resources in the back of the price list. This repository of useful information includes Terms and Conditions, Warranty, Operating Load Capacities. You'll also find a model number index with references to the appropriate pricing page.

Dimensions provided in this price list are nominal. Products are manufactured to meet standard industry tolerances.

Illustrations and specifications contained in this price list are based on the latest product information at time of publication. Kimball Office reserves the right to make changes at any time without notice.

Items listed herein are considered by Kimball Office as portable furniture and as such are subject to local fire, electrical, and building codes applicable to portable furniture.

How to Use this List ➤See page 2
Sustainability 4
Product Positioning 5

Complete specifications are built by following a set of steps. These "How to Specify" steps are located in the far right column of each pricing page and are specific to the models found on that page. These steps will guide you in the proper order to specify the base model, materials, finishes, options, etc.

Base model numbers may be comprised of two or more steps. For concise presentation, some models numbers have been truncated within the pricing table.

- The steps numbered using a solid circle with a white number inside (e.g., ❶, ❷, or ❸) make up of the base model number.
- Steps numbered using an outlined circle with black number inside (e.g., ④, ⑦, or ⑨) are required to complete the specification.

Standard Includes

Tech Tile Cover
• Cover: paint

Data Plate
• One plate with two openings
• Voice/data adapter kit with two of each style: black with Cinder plate or white with Designer White plate (PVC-free plastic)

Cover Plate (no cut-outs)
• Set of 10 plates: paint

How to Specify

Tech Tile Cover
❶ Model
❷ Cut-out option:
X = No cut-outs (none)
2 = 2 cut-outs
3 = 3 cut-outs
4 = 4 cut-outs
5 = 5 cut-outs
6 = 6 cut-outs
➤See pricing table at left (availability by model.
❸ Material:
P = Paint
④ Finish group:
STD = Group 1
STDM = Group M (+10%)
⑦ Finish designator

Data Plates or Cover Plates
❶ Model
⑦ Finish type:
STD = Group 1
STDM = Group M (+10%)
⑦ Finish designator
④ Adapter kit color (omit for cover plate):
462 = Cinder
405 = Designer White

Refer to the "standard includes" list to see what ships standard as part of the base model.

Follow these steps to build a complete model specification.

Options that incur an upcharge or decrease the base price are noted within the "How to Specify" steps.

Sample Specification:

ED = End Depth

KW = Kneespace Width

KH = Kneespace Height

WC = Worksurface Clearance

Electronic Catalog and Specification Software:

Kimball Office promotes the use of electronic drawing and specification tools to automate the furniture sales, design, and specification process. We provide our symbol and product information to industry leading design and specification software companies. We work closely with 20-20 Technologies Inc. to develop additional automation routines for our products; these are available in CAP and Giza software tools. We also partner with KISP and all of our products are available in The KITS *collaborator*™.
As noted in our Terms and Conditions, the customer bears the responsibility for order correctness.

Product Positioning 5

At Kimball Office, we are proud of our environmental stewardship. We are committed to sustainable business practices and continuous improvement. It's part of our heritage to take initiative, to reduce waste, to conserve energy, to commit fully, and to lead by example. It's not enough to simply sustain. We strive to enhance our world.

Throughout our more than 40 years of documented environmental actions, we've made perpetual progress as a responsible steward of resources and an agent of sustainable change in our industry.

In the end, we're just beginning. Yes, the efforts we've made have the clear intention of minimizing our impacts on the planet in order to preserve a healthy world for future generations. Ultimately, the more we do in the area of sustainability, the more it helps you to achieve your environmental aims. Let us show you just how easy it is with Kimball Office.

➤Find more specific details regarding the environmental aspects of our product offerings at: **www.kimballoffice.com**

ANSI/BIFMA level™
100% of the products manufactured by Kimball Office are level® certified. We offer the most sustainable portfolio in the industry, which includes systems, casegoods, tables, and seating. Our product testing team evaluates all Kimball Office products, ensuring they meet and exceed ANSI/BIFMA Standards. Our team members regularly participate on BIFMA and USGBC committees to contribute to industry-wide standards.

ecoScorecard℠

Through this free online tool, you have quick, simple, 24/7 access to the environmental attributes of our products. By partnering with ecoScorecard, we are enabling speed and accuracy in the calculation of environmental credits, like LEED®, as well as saving you time and ultimately, money.
➤See how easy it is at kimballoffice.ecoscorecard.com.

ecoScorecard contains credit and other information for the following environmental rating systems:
- LEED for New Construction
- LEED for Commercial Interiors
- LEED for Existing Buildings
- CHPS
- LABS21
- Green Guide for Healthcare

LEED® Certification
Kimball Office offers furniture solutions which may contribute toward achieving U.S. Green Building Council certification status in your facilities. The LEED® Green Building Rating System™ is the nationally accepted benchmark for design, construction, and operation of high performance green buildings. Kimball Office has sought and received LEED certification for several of its facilities across the country.

LEED-CI Gold:
- Jasper, IN showroom
- San Francisco, CA showroom

LEED-CI Silver:
- Atlanta, GA showroom
- Chicago, IL showroom

LEED-CI:
- Corporate Headquarters
- New York, NY showroom
- R&D Team Rooms

Surface Materials Program
As the industry's first comprehensive offering to be designed around sustainability, our offering includes environmentally friendly textiles, woods, laminates, and paint finishes.

SCScertified™
INDOOR AIR QUALITY
Indoor Advantage | Furniture

Indoor Air Quality
One of the largest contributions office furniture can make to a building's LEED certification is indoor air quality via low-emitting products. For certification of our product lines, Kimball Office uses the Indoor Advantage program from Scientific Certification Systems (SCS). Several of our Indoor Advantage Gold products also meet the more stringent CAL 01350 requirements.

Design for the Environment (DfE) is our approach to product development to ensure the inherent sustainability of our new offerings. By considering a full continuum of environmental factors—including durable engineering, recycled and recyclable materials, indoor air quality, packaging, and beyond, we have greatly improved the life cycle performance of our furniture.
➤For environmental data, visit our website at www.kimballoffice.com.

Pura® is our proprietary wood finish that has virtually no volatile organic compounds (VOCs). Pura is a key part of our sustainability story, enabling a broader range of products to meet or exceed indoor air quality standards and help our customers achieve LEED credits.

FSC
www.fsc.org
FSC® C010590
The mark of responsible forestry

FSC-Certified Wood
Due to our roots in crafting fine wood furniture, we have a natural respect for responsible forestry. Several series in our offering give you the option (denoted by FSC next to the model number) to specify FSC wood. A 3% upcharge applies to FSC models and FSCW must be specified as the finish price group. The FSC option is not currently available on Sapele or Zebrawood veneers, laminate, thermofoil, or laminate with wood rim worksurfaces. Standard lead times apply to FSC orders.

ANEW

Asset Network for Education Worldwide, Inc. (ANEW) is an easy, effective way to responsibly disposition surplus furniture, fixtures and equipment (FF&E). Through our partnership with this third-party foundation, you can repurpose FF&E to benefit those in need, while diverting materials from landfills. ANEW calls it "Doing what's right with what's left." We call it smart.

Product Positioning

Xsede by Kimball Office

How to Use this List ➤See page 2
How to Specify 3
Sustainability 4

The modern workspace is calling for a diverse environment that allows people to work multiple ways. By combining the openness of a bench with the visual privacy of a panel system, Xsede balances focus and collaboration by providing the freedom to develop the space you need.

Consciously using the most necessary materials in the most efficient ways, Xsede is refined to provide a valued economic solution. A minimalistic approach and common kit of parts keep Xsede simple and intuitive.

Effortlessly create and construct your ideal workspace—from heads down focus to lively collaboration…and everything in between.

Features

Overview

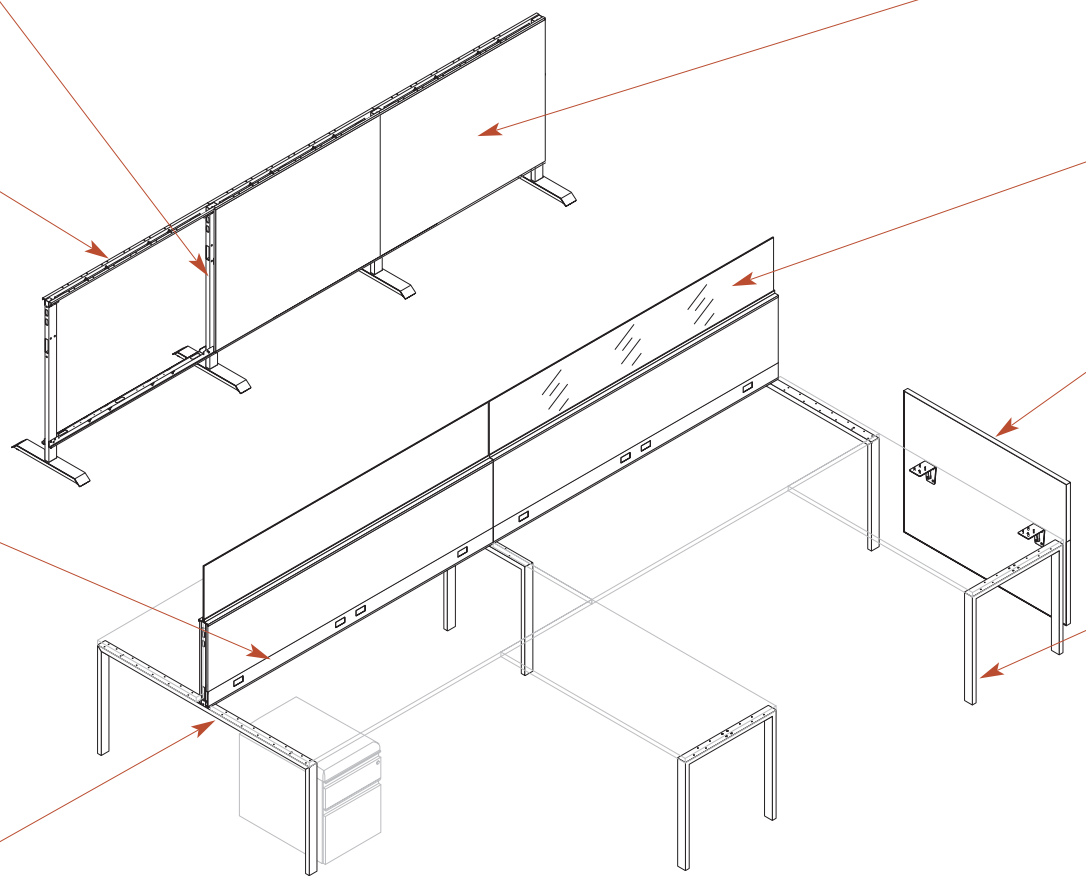
Statement of Line	➤See page 8
Dimensions	19
Typical Configurations	20
Structure Run Guidelines	28

T-legs are used with crossrails and tiles to provide privacy.

Crossrails connect to the legs to create the structure and hold tiles and top caps for a finished look.

Tech tile covers allow power and data to be installed above the worksurface for quick access.

U-leg with stanchion is one of five different types of legs that are the foundation of the Xsede structure.



Tiles provide visual separation and are offered in multiple sizes and three materials.

Frameless glass or resin inserts are installed into applicable top caps or accessory rails.

Fabric-covered privacy screens attach to the underside of worksurfaces to provide additional privacy.

U-legs support the end of the worksurfaces. In configurations without stanchions, U-legs can be used as mid-support for longer worksurface runs.

c UL US LISTED

Class A—Tackable acoustical tiles.

Features

Overview

continued

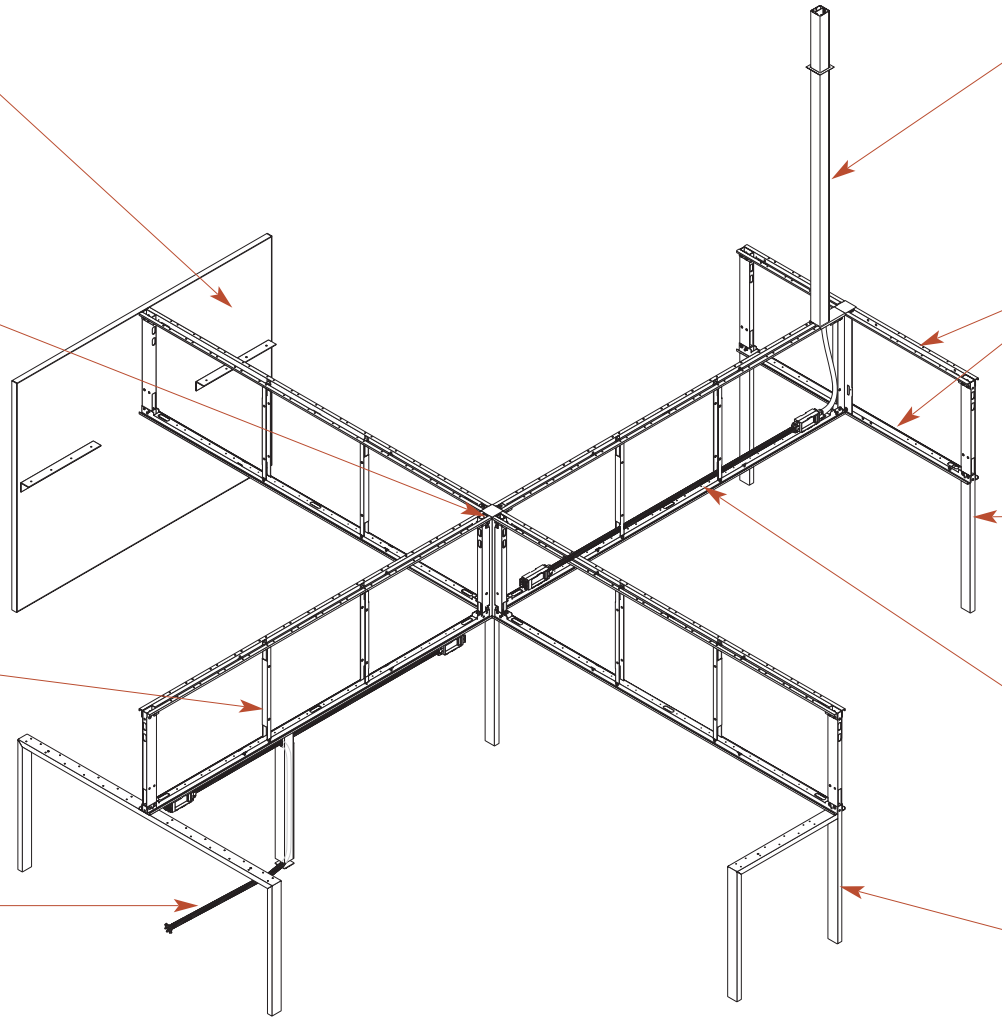
Statement of Line ➤See page 8
Dimensions 19
Typical Configurations 20
Structure Run Guidelines 28

Full-height end panel provides a clean aesthetic without visible connectors. Worksurface-height end panels are also available.

X-Connector provides the ability for the structure to change direction.

Vertical support rails tie upper and lower crossrails together providing structure rigidity.

Power in-feed models include 8-wire ceiling and floor entry, single-circuit in-feed to plug into a building outlet, New York power entry, and Chicago hardwire components.



Ceiling power pole allows power and data to be routed from the ceiling to the station.

End crossrail set can be used to finish a configuration with a wing wall arrangement without a visible T-post.

Support legs combined with crossrails finish off the end of a structure run.

Power kit and jumpers distribute power through the structure.

H-legs, when used with crossrails, allow for a single-sided, open-base application.

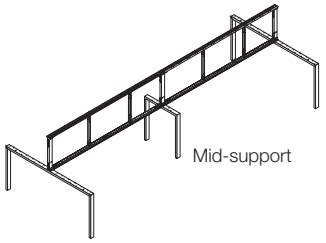
Structure Run Guidelines

Statement of Line	➤See page 8
Features	17
Dimensions	19
Typical Configurations	20

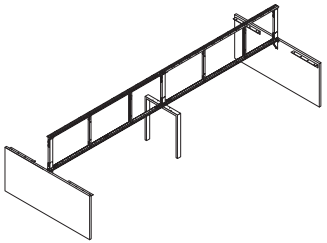
U-Leg or U-Leg with Stanchion:



Structures can span up to 84" from U-leg to U-leg, and can continue to any length of run when all U-legs are full depth. U-legs can span 84" to mid-support and then 84" to the next U-leg and continue to any length as long as every other U-leg is full depth.

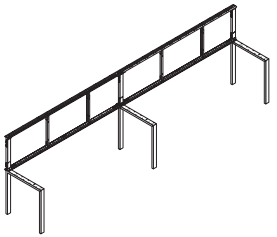
IMPORTANT: Unsupported worksurface spans over 48"W require additional center support.

End Panels:



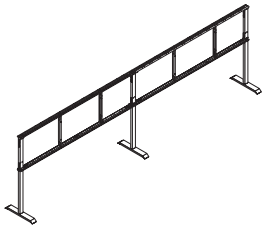
Structures can span up to 84" from end panel to end panel. Runs can continue indefinitely between two end panels with the use of U-legs with stanchions in between as long as every other U-leg is full depth.

H-Legs:

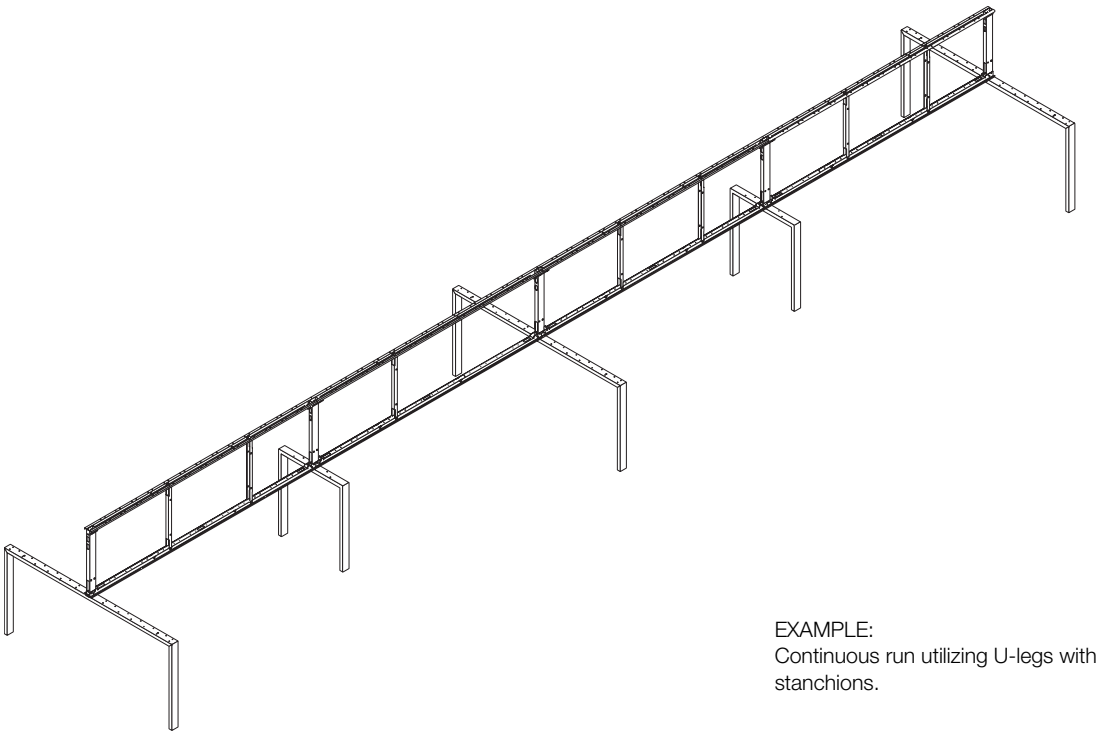


Structures can run indefinitely when an H-leg is placed every 84".

T-Legs:



Structures can run indefinitely when a T-leg is placed every 84".



EXAMPLE:
Continuous run utilizing U-legs with stanchions.

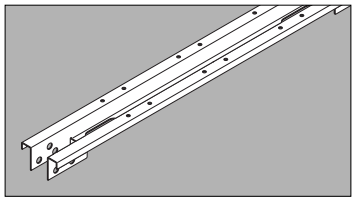
Features ➤See page 17
Dimensions 19
Typical Configurations 20
Structure Run Guidelines 28

Details

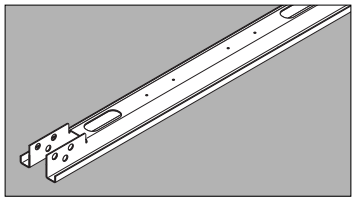
Crossrails are the members that define the structure run and tie legs or connectors together to complete a freestanding 42" or 50"H structure. The same crossrails are used with U-legs, H-legs, U-legs with stanchion, T-legs, end panels, and connectors.

Crossrails hold tiles and top caps for a finished look. Available in 15 widths, crossrails range from 24"–84"W in 6-inch increments.

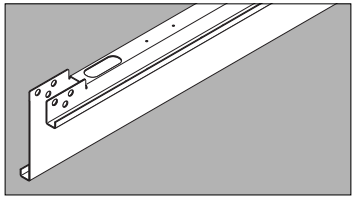
Four crossrail types are available to support a variety of tile applications:
- Upper crossrail
- Lower crossrail
- Extended lower crossrail
- Open-base lower crossrail



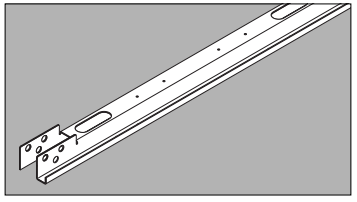
Upper crossrail holds tiles on both sides at the top of the structure at either 42" or 50"H. They work in tandem with any of the lower crossrail models.



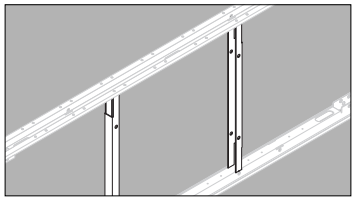
Lower crossrail provides a groove for the bottom of tiles to sit in on both sides. They may be used at worksurface height to hold upper tiles or attached to legs at 4" above the floor for use with open-base tiles.



Extended lower crossrail is for use at worksurface height. It holds an extended tile on one side and an upper tile on the other. The extended tile will sit 3½" below the worksurface height of the structure (backface or exterior) to conceal an undersurface tech tray.



Open-base lower crossrail is used when a continuous aesthetic is required on one side, such as an aisle way, with a worksurface on the other side. The open-base lower crossrail is positioned at worksurface height to hold the bottom of the upper tile on the worksurface side; the other side is flat to allow tiles an unrestricted path from the upper crossrail at 42" or 50"H to the lower crossrail at 4" off the floor.



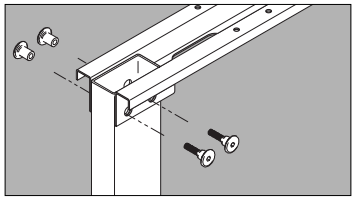
Vertical support rails tie upper and lower crossrails together and provide structural rigidity to prevent the frame from flexing and tiles from bowing. They are required for structures over 48"W. Cut-outs at top and bottom allow cable routing. Vertical support rails come in sets of two and in four heights:
- 15"H for use with upper and extended tiles on 42"H structures; runs from the crossrail at work-surface height to the upper crossrail
- 22"H for use with upper and extended tiles on 50"H structures; runs from the crossrail at worksurface height to the upper crossrail
- 38"H for open-base tile applications on 42"H structures; runs from the crossrail 4" off the floor to the upper crossrail
- 46"H for open-base tile applications on 50"H structures; runs from the crossrail 4" off the floor to the upper crossrail

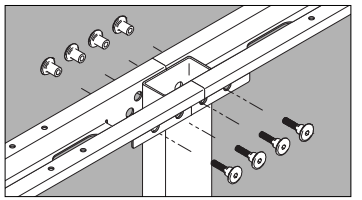
Finishes & Materials

- Crossrails: steel with powdercoat finish
- Vertical support rails: steel with powdercoat finish

➤See page 133 for standard and metallic finish options.

Connections





Crossrails attach to legs with attachment hardware supplied with the legs.

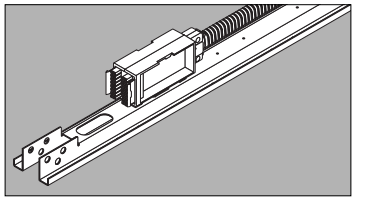
Vertical support rails attach to the upper and lower crossrails with supplied bolts at pre-determined locations.

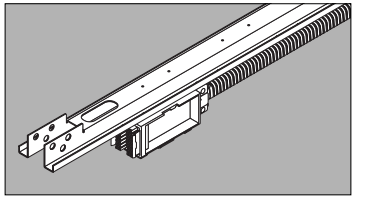
IMPORTANT: All bolts must be installed in all locations. Bolts outbound of the legs help to provide the structural integrity.

Vertical support rails are required for structures over 48"W. They must be bolted to both the upper and lower crossrails.

Two crossrails cannot be combined to make a longer width. Crossrails connect only to legs or connectors, and do not connect to each other.

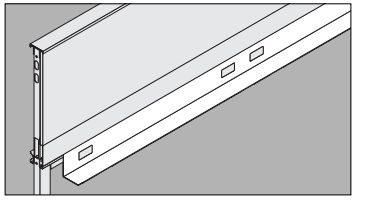
Power & Data





Power and data can be routed above the surface behind tech tiles or below the surface in undersurface tech trays.

➤See page 40 for tech tiles.
➤See page 38 for tech trays.
➤See page 45 for power & data overview.



Undersurface tech trays attach to lower crossrails below the work-surface for routing of power and data.

Structure

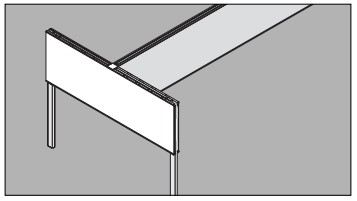
Product Information

End Crossrail Sets

Features ➤See page 17
Dimensions 19
Typical Configurations 20
Structure Run Guidelines 28

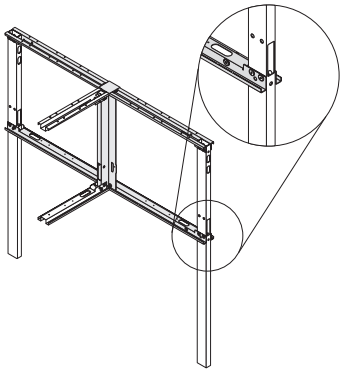
Details

End crossrails sets can be used to finish a configuration with a wing-wall arrangement without exposed T-connectors.



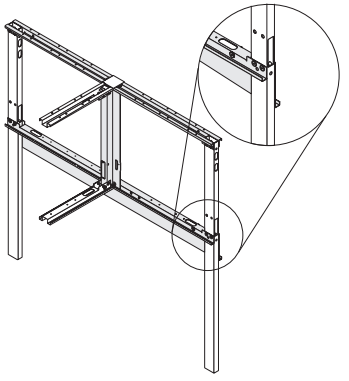
End crossrail sets are available for 42" and 50"H applications and in three widths: 50⅝" (for two 24"D worksurfaces back to back), 56½" (for 24"D and 30"D worksurfaces back to back) and 62⅝" (for two 30"D worksurfaces back to back. Sets are specified based on the tile application; models available include:

- Upper end crossrail set
- Extended end crossrail set
- Open-base end cross rail set



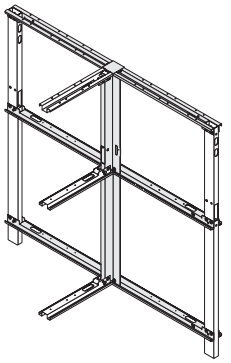
Upper end crossrail set includes:

- Upper crossrail
- Lower crossrail
- Vertical support rail
- Transition top cap
- Attachment hardware



Extended end crossrail set includes:

- Upper crossrail
- Extended lower crossrail
- Vertical support rail
- Transition top cap
- Attachment hardware



Open-base end crossrail set includes:

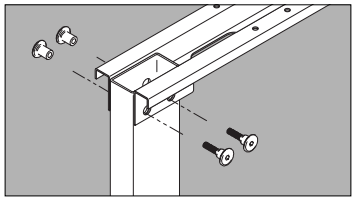
- Upper crossrail
- Open-base lower crossrail for worksurface height
- Lower crossrail for 4" off the floor
- Vertical support rail
- Transition top cap
- Attachment hardware

Finishes & Materials

- Crossrails: steel with powdercoat finish
- Vertical support rails: steel with powdercoat finish
- Top cap: extruded aluminum with powdercoat finish

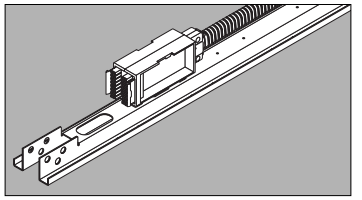
➤See page 133 for standard and metallic finish options.

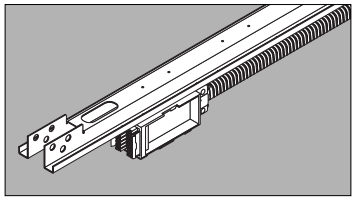
Connections



End crossrail sets attach to support legs, specified separately, on each end using the connector bolts and nuts supplied with the legs.

Power & Data





Power and data can be run above or below crossrail end sets.
Note: Power run above the crossrail cannot be connected to power run below the crossrail; separate power entries would be required.

Planning Factors

End crossrail set can be used in place of a T-connector, U-leg with stanchion, H leg at the end of run.

Support legs and tiles must be ordered separately.

IMPORTANT: End crossrail sets must be used with the same type of leg applications (e.g., upper end crossrail set is used when center structure uses upper tiles).

Structure

Product Information

U-Legs with Stanchions

Features ➤See page 17
Dimensions 19
Typical Configurations 20
Structure Run Guidelines 28

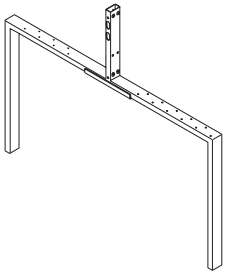
Details

Legs are the foundation of the Xsede structure and are available in five different types:

- U-legs with stanchions
- H-legs
- Support legs
- T-legs
- U-legs

➤See page 32 for H-legs, support legs, and T-legs.
➤See page 33 for U-legs.

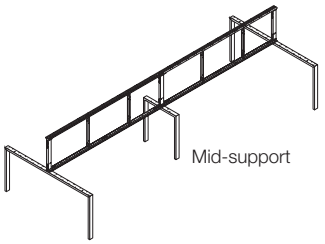
Continuous-worksurface applications require the use of U-legs with stanchions, H-legs, or U-legs.



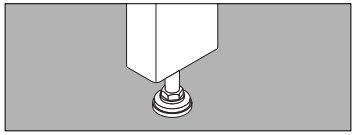
U-legs with stanchions feature a vertical member that, with upper and lower crossrails and a choice of tiles, provide fixed-height space division and a support for worksurfaces. Upper tiles, tech tiles and tech tile covers mount to each side of the stanchion. Posts and stanchions are 1 3/16"D x 2 3/8"W.

U-legs with stanchions are available in the two heights—42" and 50"—and in three depths:

- 50 5/8" (for two 24"D worksurfaces back to back)
- 56 1/2" (for 24"D and 30"D worksurfaces back to back)
- 62 5/8" (for two 30"D worksurfaces back to back)



Mid-support U-legs with stanchion ties two smaller structure runs together that, when combined, can span 168".



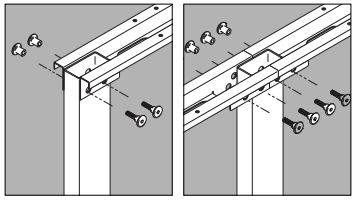
Floor glides are standard on all legs. Glides on U-legs with stanchions provide 2 3/4" height adjustment.

Finishes & Materials

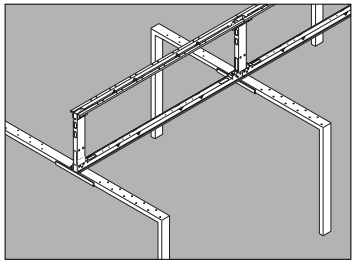
- 14-gauge steel with powdercoat finish

➤See page 133 for standard and metallic finish options.

Connections



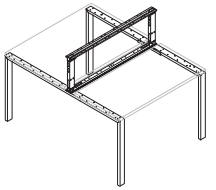
Bolts, standard with legs, are used to connect legs to upper and lower crossrails providing consistent alignment, strength, and rigidity to the run.



U-legs with stanchions are connected to each other with an upper crossrail at the top of the stanchion and with a double-sided lower crossrail at worksurface height. These legs can be used at the end of a run or shared between two worksurfaces.

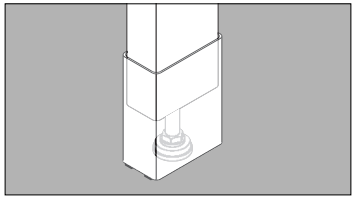
Planning Factors

Structures created using U-legs with stanchions can span from 24" to 84". The run can continue further if a full-depth U-leg with stanchion is used every 168" and a mid-support U-leg with stanchion is used every 84".



When ordering a 56 1/2"D U-leg with stanchion for a 24" worksurface and a 30" worksurface, specify one left-hand model and one right-hand model.

Related Products



4"H glide cover provides a cosmetic leg sleeve that can be added to all legs (except for the T-legs) to hide extended leveling glides. If used with legs that have a power slot, glide cover will cover most of the power slot opening. Glide cover is made of aluminum and can be painted same color as the leg.

Structure

Product Information

H-Legs, Support Legs, and T-Legs

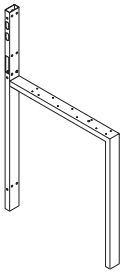
Features	➤See page 17
Dimensions	19
Typical Configurations	20
Structure Run Guidelines	28

Details

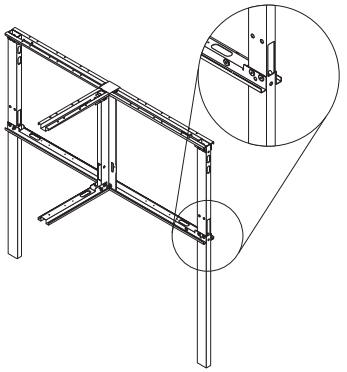
Legs are the foundation of the Xsede structure and are available in five different types:

- U-legs with stanchions
- H-legs
- Support legs
- T-legs
- U-legs

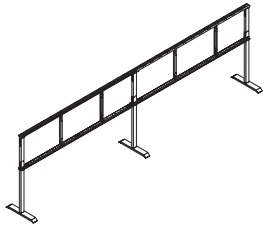
➤See page 31 for U-legs with stanchions.
➤See page 33 for U-legs.



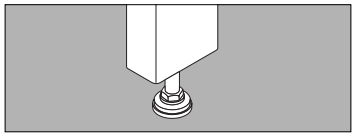
H-legs are for use with one-sided benching with tiles and are perfect along an aisle or at the end of a run. They are available for 24" and 30"D worksurfaces and 42" or 50"H applications.



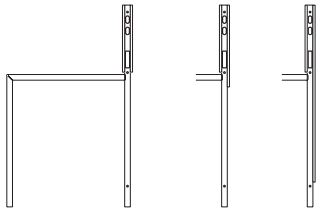
Support legs are available in 42" and 50" heights and are for use with end cross rail sets.



T-legs are available in 42" and 50" heights. They are designed to free span an infinite width, providing space division. T-legs are non-supporting.



Floor glides are standard on all legs. Glides on H-legs and support legs provide 2¾" height adjustment (shown); glides on T-legs provide ¾" height adjustment.



Upper Both Sides Extended Open-Base

H-legs, support legs and T-legs are available in models for use with upper, extended, or open-base tiles. Models for use with upper and extended models can be specified with power slots for routing cables within the leg.

Finishes & Materials

H-legs and support legs

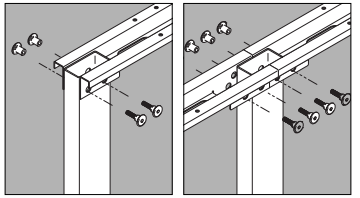
- 14-gauge steel with powdercoat finish

T-legs

- Post: 14-gauge steel with powdercoat finish
- Base: 8-gauge steel with powdercoat finish
- Cap: 12-gauge steel with powdercoat finish

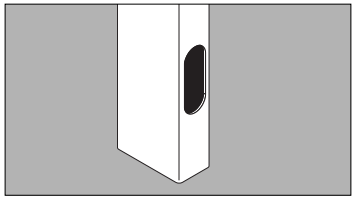
➤See page 133 for standard and metallic finish options.

Connections



Bolts, standard with legs, are used to connect legs with upper and lower crossrails, providing consistent alignment, strength, and rigidity to the run.

Power & Data



Models with power slot allow power and/or data to be routed from the floor to below the worksurface within the leg. The design of the structure provides physical separation of electrical and data if required by bringing electrical in through one leg and data through another.

➤See page 40 for tech tiles.
➤See page 38 for tech trays.
➤See page 45 for power & data overview.

Planning Factors

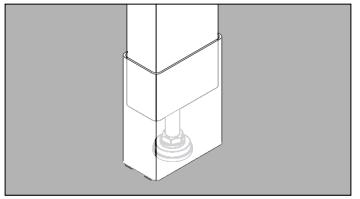
Structures created with H-legs or support legs can span from 24" to 84". The run can continue further if a shared support leg (not a mid-support) is provided at least every 84"

Runs with mobile tables require T-legs. There is no limit to run length.

Worksurface planning information

➤See page 58.

Related Products



4"H glide cover provides a cosmetic leg sleeve that can be added to all legs (except for the T-legs) to hide extended leveling glides. If used with legs that have a power slot, glide cover will cover most of the power slot opening. Glide cover is made of aluminum and can be painted same color as the leg.

Structure

Product Information

U-Legs

Features ➤See page 17
Dimensions 19
Typical Configurations 20
Structure Run Guidelines 28

Details

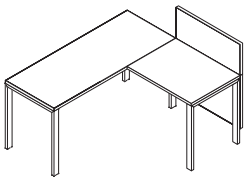
Legs are the foundation of the Xsede structure and are available in five different types:

- U-legs
- U-legs with stanchions
- H-legs
- Support legs
- T-legs

➤See page 32 for product information on H-legs, support legs, and T-legs.

Continuous-worksurface applications require the use of U-legs, U-legs with stanchions, or H-legs.

U-legs are 27¾"H and intended for undersurface applications. They may be used for benching, tables, and returns. Posts are 1 3/16"D x 2⅜"W.

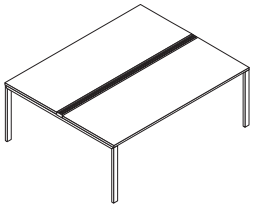


24" and 30"D U-legs are for use in table and return applications.

Return support U-legs are used to support the end of a return surface.

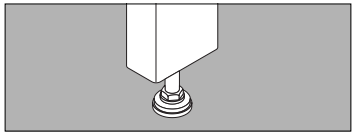
Mid-support U-legs are used for center support in back-to-back applications:

➤See page 28 for structure run guidelines.



50⅝" U-legs are for use with two back-to-back 24"D worksurfaces separated by an accessory rail.

62⅝" U-legs are for use with two back-to-back 30"D worksurfaces separated by an accessory rail



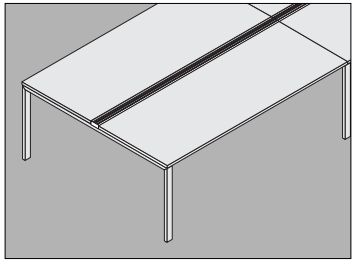
Floor glides are standard on all legs. Glides on U-legs provide 2¾" height adjustment.

Finishes & Materials

- 14-gauge steel with powdercoat finish

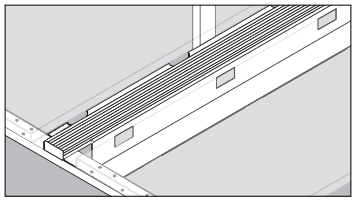
➤See page 133 for standard and metallic finish options.

Connections



U-legs for use with accessory rail ship with attachment hardware. All U-legs ship with screws to secure worksurfaces.

Power & Data



Power and data can be routed below the surface in tech trays.

➤See page 38 for tech trays.
➤See page 45 for power & data overview.

Planning Factors

Structures created with U-legs can span from 24" to 84".

Worksurface planning information

➤See page 58.

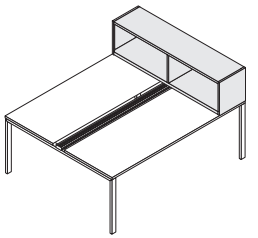
Back-to-back worksurfaces supported by U-legs require an accessory rail between the two worksurfaces.

Dual-sided U-leg configurations require an accessory rail between the two worksurfaces.

Related Products

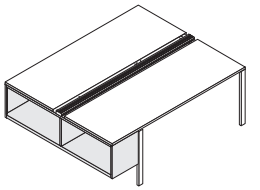
Accessory rails

➤See page 35.



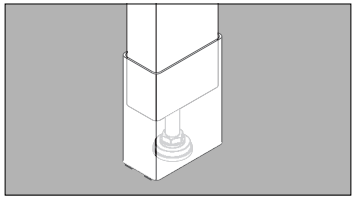
Set-on-surface open cabinets are intended for mounting on top of the worksurface at the end of a run. 57" and 63"W units can span back-to-back worksurfaces on U-legs.

➤See the Systems Price List.



Suspended open cabinets mount below the end of a worksurface. Worksurface supports will need to be inset to allow clearance for the cabinet.

➤See the Systems Price List.



4"H glide cover provides a cosmetic leg sleeve that can be added to all legs (except for the T-legs) to hide extended leveling glides. If used with legs that have a power slot, glide cover will cover most of the power slot opening. Glide cover is made of aluminum and can be painted same color as the leg.

Structure

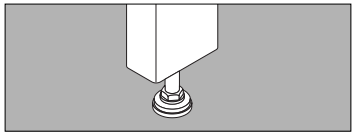
Product Information

Undersurface Support Legs

Features ➤See page 17
Dimensions 19
Typical Configurations 20
Structure Run Guidelines 28

Details

Undersurface support legs are 27½" tall and are used to support the center of worksurfaces in unsupported spans over 60"W.



Floor glides are standard on all legs. Glides on support legs provide 2¾" height adjustment.

Finishes & Materials

- 14-gauge steel with powdercoat finish

➤See page 133 for standard and metallic finish options.

Connections

Undersurface support leg is screwed to the underneath side of a worksurface providing additional support.

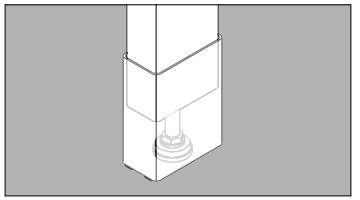
Planning Factors

Undersurface support legs are recommended for U-tops when used as a return. If storage is required, it is recommended that mobile storage be used.

Boomerang worksurfaces are used as returns. The end can be supported with a U-leg or two undersurface support legs.

Touchdown worksurfaces attach to the end of a dual-sided station with the touchdown worksurface mounting kit, specified separately. Touchdown mounting kit includes a support leg, support rail, and two attachment brackets.

Related Products



4"H glide cover provides a cosmetic leg sleeve that can be added to all legs (except for the T-legs) to hide extended leveling glides. If used with legs that have a power slot, glide cover will cover most of the power slot opening. Glide cover is made of aluminum and can be painted same color as the leg.

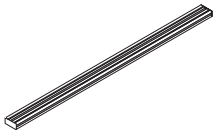
Structure

Product Information

Accessory Rails

Features ➤See page 17
Dimensions 19
Typical Configurations 20
Structure Run Guidelines 28

Details

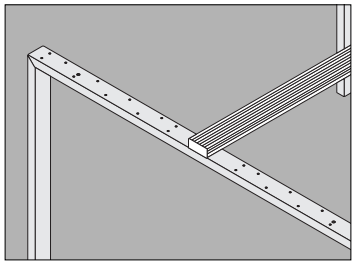


Accessory rail is a component that provides much flexibility to a work station. It can be used to attach monitor arms, frameless glass or resin divider screens, center mount overheads or shelves. Accessory rail is 1 3⁄16"D by 2 11⁄16"W and is available in 9 widths from 36"–84" in 6" increments. Accessory rails are finished off with a complimentary color cap on each end.

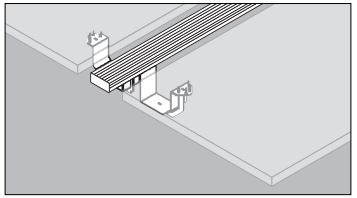
Finishes & Materials

- Accessory rail: anodized aluminum with a satin finish

Connections

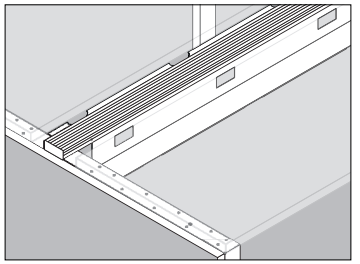


Accessory rail attaches to U-legs with four button-head cap screws on each end.



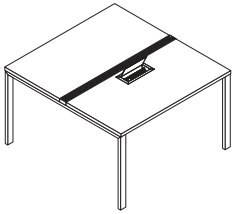
Accessory rail attaches to the rear edge of the worksurface with a crossrail bracket or a double-sided tray bracket.

Power & Data



When wire-gap worksurfaces are used with an accessory rail, tech trays can be used under the worksurface for power and data.

Tech trays hang from an accessory rail or crossrail and can hold power and data.



When full-depth worksurfaces are used, worksurface power/data grommets or power/data centers are recommended.

Planning Factors

50½" and 62½"D U-legs must have an accessory rail located between the two worksurfaces.

Accessory rails can only be used in straight-run configurations as they cannot turn corners.

24" and 30"D return legs cannot be used with accessory rails.

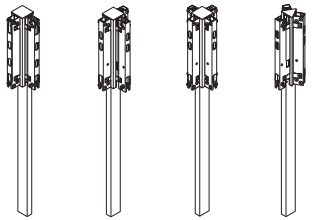
Features	➤See page 17
Dimensions	19
Typical Configurations	20
Structure Run Guidelines	28

Details

Connectors provide the ability for the structure to turn a corner for a change of direction. Connectors are available in two heights—42" and 50"—and four directional styles:

- L (2-way 90°)
- T (3-way 90°)
- X (4-way 90°)
- Y (3-way 120°/120°/120°)



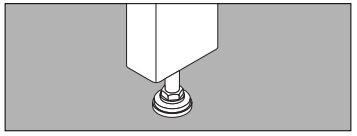
L- and T-connectors are available in models for use with upper and open-base tiles. Models for use with upper or extended models can be specified with power slots for routing cables within the leg.

L-connectors are specified as left or right handed, but can be reversed in the field with no additional parts.

X- and Y-connectors are available for use with upper tiles; models are available with or without power slots. *Note: X- and Y-connectors do not have extended model options because they are not on the outside of the structure.*

Each connector model includes**:**

- Two-piece leg assembly consisting of a lower leg that is $1^{3}/_{16}$" x $2^{3}/_{8}$" tubular steel and an extruded aluminum upper column
- Fabric on upper column on L- and T-connectors
- Transition top cap
- Attachment hardware consisting of connector bolts and nuts



Floor glides are standard on all connectors. Glides on connectors provide 2¾" height adjustment.

Finishes & Materials

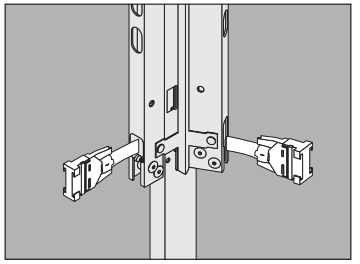
- Lower leg: 14-gauge steel with painted finish
- Upper column: extruded aluminum
- Top cap: aluminum with same painted finish and lower leg

➤See page 133 for standard and metallic finish options.

Connections

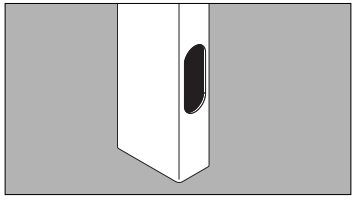
Bolts, standard with each model, are used to connect legs with upper and lower crossrails, providing consistent alignment, strength, and rigidity to the run.

Power & Data



Cut-outs allow electrical and data cabling to be routed through the top of the connector and into the space behind tiles. These cut-outs allow pass through at 42"H or 50"H for a continuous flow.

Electrical jumpers, when making a turn in above-surface applications, must be installed through a connector prior to assembling the connector.

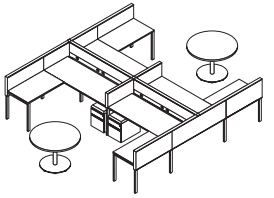


Power-slot models feature cut-outs at the base for in-feed of power and data.

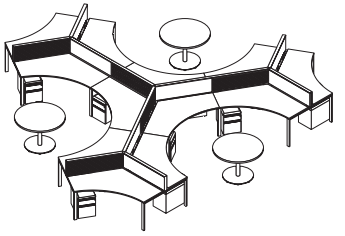
Planning Factors

Specify appropriate connectors based on the application:

- L (2-way)
- T (3-way)



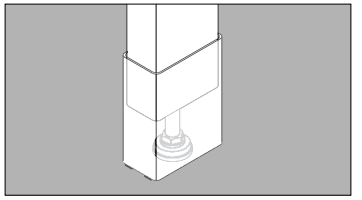
- X (4-way)



- Y (3-way)

Connectors can be used in conjunction with U-legs with stanchions, H-legs, support legs, and T-legs.

Worksurfaces must be used for rigidity when using connectors to make a structure.



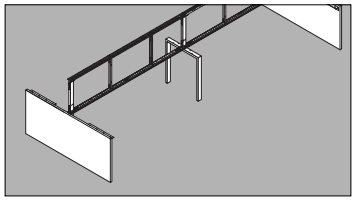
4"H glide cover provides a cosmetic leg sleeve that can be added to all legs (except for the T-legs) to hide extended leveling glides. If used with legs that have a power slot, glide cover will cover most of the power slot opening. Glide cover is made of aluminum and can be painted same color as the leg.

Structure

End Panels

Features ➤See page 17
Dimensions 19
Typical Configurations 20
Structure Run Guidelines 28

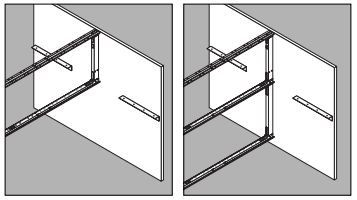
Details



End panels provide an option for an uninterrupted, clean aesthetic without visible connectors in configurations created with U-legs with stanchions or H-legs.

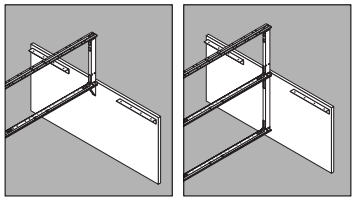
End panel widths are designed to match the depths of U-legs with stanchions (50½", 56½", and 62½"D) or H-legs (25¾" or 31¾"). They take the place of a U-leg with stanchion or an H-leg at the end of a run.

Glides are standard on all end panels and provide 1" height adjustment.



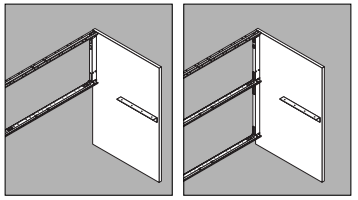
Upper-tile-only applications *Open-base-tile applications*

Full-height end panels for use in dual-sided applications are available in 42" or 50"H for upper-tile-only applications or open-base tile applications, providing the appropriate bracketry for attachment of crossrails and worksurfaces.



Upper-tile-only applications *Open-base-tile applications*

Worksurface-height end panels for use in dual-sided applications provide 42" or 50"H stanchion for the connection of upper and lower crossrails and worksurfaces.



Upper-tile-only applications *Open-base-tile applications*

Full-height end panels for use in single-sided applications are available in 42" or 50"H for upper-tile-only applications or open-base tile applications, providing the appropriate bracketry for attachment of crossrails and worksurfaces.

3mm edge banding finishes all edges; available in colors to match or complement laminate colors.

Finishes & Materials

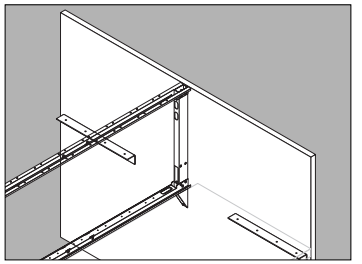
- End panels: particle board with high-pressure laminate (HPL) on both sides with 3mm edge banding *Note: Different laminate colors may be specified for the inside or aisle side.*

➤See page 135 for laminate color choices.

- 3mm edge banding: plastic

➤See page 138 for color choices.

Connections



Brackets on the back side of end panels connect to crossrails and worksurfaces.

Power & Data

End panels conceal power and data within adjacent structures. Power and data are not applicable to end panels.

Planning Factors

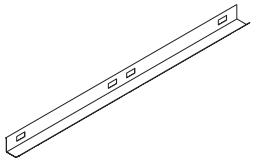
Grain direction on laminate end panels runs horizontally.

Left and right hand models are available to correspond to 24"D and 30"D dual-sided worksurface combinations.

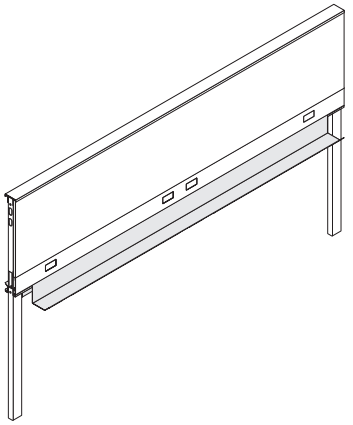
Two single-sided end panels cannot be used to create a dual-sided application.

Features	➤See page 17
Dimensions	19
Typical Configurations	20
Structure Run Guidelines	28

Details



Tech trays provide a trough for cords and cables under the worksurface. Trays are specified to match the width of the crossrails or accessory rails to which they attach up to 84"W.



Tech trays are available with or without cut-outs. Trays can be used for single- or dual-sided applications. Tech trays with cut-outs for basic or expanded options must match power kit configurations.

➤See page 39 for configurations.
➤See page 49 for power kits.

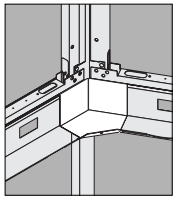
Finishes & Materials

- Tray: 20-gauge painted steel

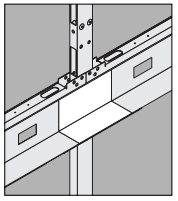
➤See page 133 for standard and metallic finish options.

- Data plates: powder-coated steel
- Cover plates: steel

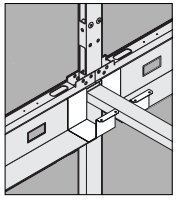
Connections



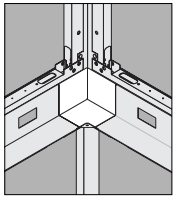
120°



Spanner

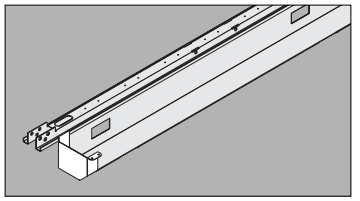


Extended

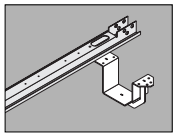


90°

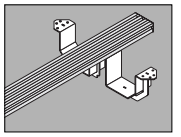
Connector brackets are used to hold and transition one tray to another and around corners. Specify separately according to the application: 120°, spanner, extended, or 90°. Spanner bracket connects two side-by-side trays; extended bracket connects two trays with a leg between.



Tray end caps and extended end caps provide a finished look. End caps are right or left handed. Extended end caps are only used when multiple accessory rails are used with a shared leg in the center.

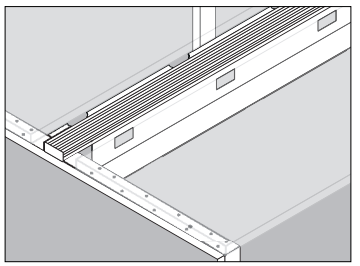


Single-sided



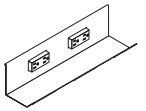
Dual-sided

Tech tray surface bracket attaches to crossrails or accessory rails and supports the back edge of worksurfaces. Use two tech tray brackets for surfaces up to 60"; use three tech tray brackets for surfaces over 60".



When wire-gap worksurfaces are used with an accessory rail, tech trays can be used under the worksurface for power and data.

Power & Data



Power and data kits are used with the tech tray.

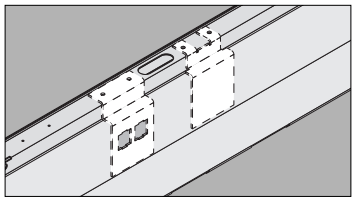
➤See page 49.

Connector brackets are recommended when jumping power from one tray to another.

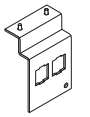
Planning Factors

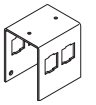
Tech trays can be added to both sides of the crossrail or accessory rail in a dual-sided application to provide maximum capacity for power and data cabling.

Related Products

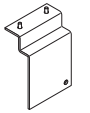


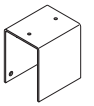
Data plates and cover plates for undersurface applications are available. Plates sit behind the tech tray and are affixed to the underside of the cross rail.





Data plates, which include an adapter kit, are available in single-sided and double-sided models.





Cover plates are available in single-sided and double-sided models to conceal unused openings.

Specify a single-sided cover plate for every undersurface hardwire box utilized.

Power leg (non-supporting) for bringing in power or data from the floor.

Structure

Tech Trays, continued

KEY:
▬ = Power
▭ = Data or Blank

Basic tray for single-sided application offers:
- Two receptacle openings
- One data/blank openings on 36"–54"W trays; two data/blank openings on 60"W and wider trays

**30"W single-sided basic tray provides no data accessible opening.*

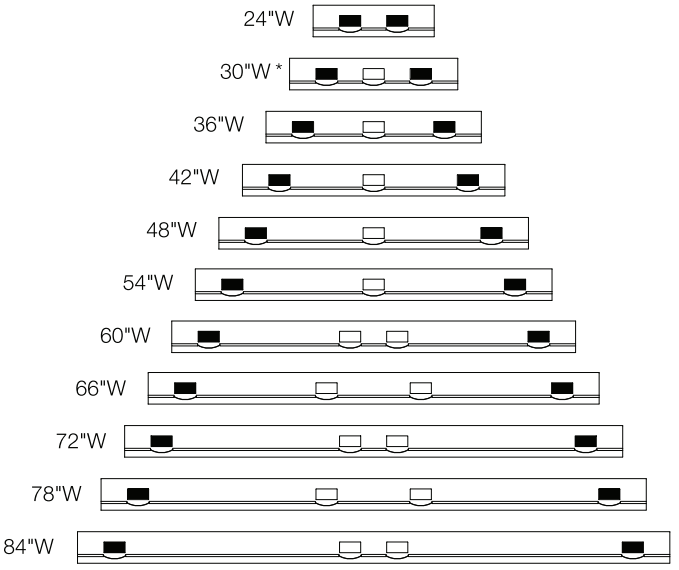
Basic tray for double-sided application offers:
- Four receptacles openings (two per side)
- Two data/blank openings (one per side) on 30"–54"W trays; four data/blank openings (two per side) on 60"W and wider trays

Expanded trays provide two additional power receptacle openings per side.

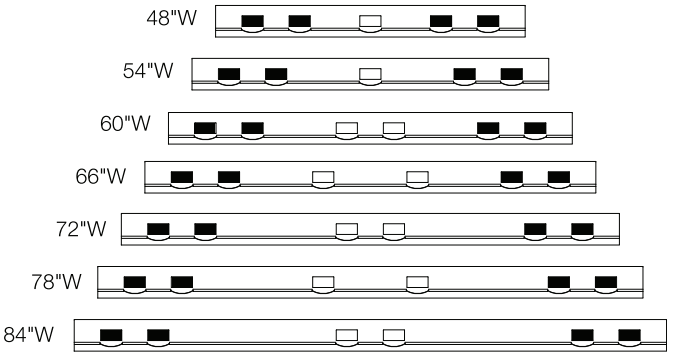
Note: Data could be placed in the receptacle opening if no power kit is installed in the tech tray.

Tech tile covers feature the same cut-out locations.

Basic Trays



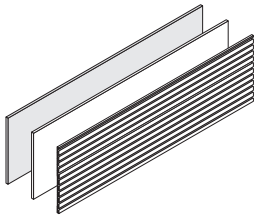
Expanded Trays



Tiles

Features	➤See page 17
Dimensions	19
Typical Configurations	20
Structure Run Guidelines	28

Details



Xsede tiles provide visual separation and define the boundaries of the work-space. Tiles are available in sizes up to 96"W and in three material options to meet different user work needs:
- Tackable Fabric
- Markerboard
- Slat

➤See the applicable pricing pages for available sizes by size and application.

Tile height options include:
- Upper tiles
- Extended upper tiles
- Open-base tiles
- Tech tiles

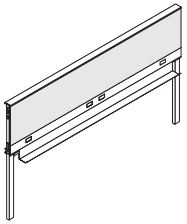
➤See page 41 for tile selection guide.

Upper tiles are 17"H for use on 42"H structures or 21"H for use on 50"H structures. Upper tiles install flush with the bottom of the surface and extend above the worksurfaces.

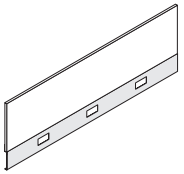
Extended upper tiles are used on the outside of 42" and 50"H single-sided structures and extend below the worksurfaces 3½" to conceal tech tray. They can be used with extended end crossrail sets to conceal tech trays on the spine run for a clean visual.

Open-base tiles sit at 4" off the floor and are available for 42H and 50H applications, as well as undersurface applications with or without a tech tray.

End-of-run models are available for upper, extended upper, and open-base tile height applications.



Tech tiles, available in fabric, marker, and slat models, are for use above the worksurface as an upper tile on 42" and 50"H structures. They are 4" shorter than standard upper tiles to accommodate a tech tile cover, specified separately.



Tech tile covers are 4"H attach directly to legs and are painted steel. They are available in widths from 24"–84" and may be specified with cut-outs to provide options that match the users needs or without cut-outs (blank). Covers have 2 to 6 cutouts depending on the width of the cover to accommodate duplex receptacles and/or data ports.

There are basic and expanded options to match the configurations outlined in the power kit section.

Finishes & Materials

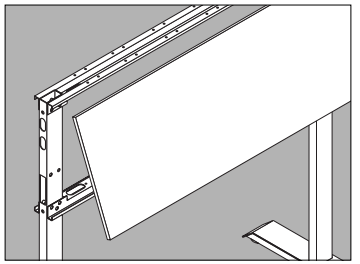
- Fabric tiles: panel fabrics (railroaded)

➤See page 141 fabric colorways.

- Markerboard tiles: Icey White or Off White laminate with edge banding all 4 sides
- Slat tiles: aluminum
- Tech tile covers: Painted steel

➤See page 133 for standard and metallic finish options.

Connections



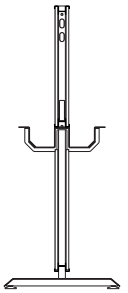
Tiles fit into the grooves of upper and lower crossrails.

Power & Data

Power and data can be routed horizontally and vertically behind the tiles in the structure's interior.

Power and data kits are available, specified separately, for use with tech tile covers.

➤See page 49.

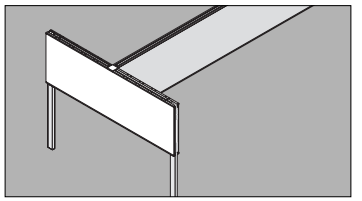


Undersurface tiles, where used with tech trays, fit into the groove of the tech tray bracket.

Planning Factors

Specify tiles for both sides of the structure.

90"W and 96"W tiles can be specified to span multiple legs and crossrails that equal these widths (e.g., a 90"W tile can cover three 30"W spans).



Specify fabric end-of-run tiles along with end cross rail sets to create a wingwall arrangement.

Tech tile cover can be used in single-sided application or may be placed back to back for shared power/data for optimum component utilization.

Tech tile covers without cut-outs must be specified where pass-thru jumpers are used. Covers without cut-outs may also be used with nothing routed behind it for a seamless appearance.

Undersurface tile brackets are required when structure is assembled using three crossrails (upper, lower, and extended lower or open-base) to install undersurface open-base tiles; specified separately.

Related Products

Hole cover plates, specified separately (10 per package), are recommended to cover unused cut-outs in tech tile cover.

Data plates with adapter kit are required for access to data at worksurface height.

Perks work tools are compatible with Xsede slat tiles.

➤See the Perks Price List.

Trim

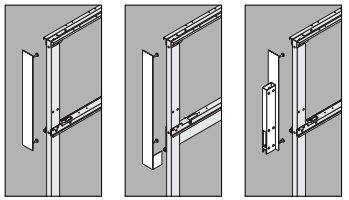
Product Information

Top Caps and End Trim

Features ➤See page 17
Dimensions 19
Typical Configurations 20
Structure Run Guidelines 28

Details

Top caps complete the top of the structure and conceal crossrails. They are made of extruded aluminum with a powdercoat finish. Top caps are available in flat profile or frameless glass or resin insert models, which come in widths 18"–96"; both are 2¾"D and sit down over the crossrail ½".



Upper Extended Hi-Lo

End trim conceals the legs at the end of the runs and is bolted to the stanchion for a finished look. End trim is constructed of 12-gauge sheet metal and is available in all paint colors. Attachment bolts are standard. End trim is available for 42"H and 50"H applications in the following models:

- 14" or 22"H for use with upper tiles
- 17" or 26"H for use with extended upper tiles
- 37" or 41"H for use with open-base tiles
- 8"H for use in hi-lo applications

End trims for use with extended upper tiles feature a metal blinder that is welded on the back side, making them either left- or right-handed. Blinder height is 41½" or 45½".

Hi-lo end trim is available to complete the transition from 50" to 42". Hi-lo end trims are bolted onto the adjacent structure.

Finishes & Materials

- Top cap: extruded aluminum with powdercoat finish
- End trim: 12-gauge sheet metal

➤See page 133 for standard and metallic finish options.

Connections

Flat profile top caps fit securely onto crossrails using a pressure-fit attachment method.

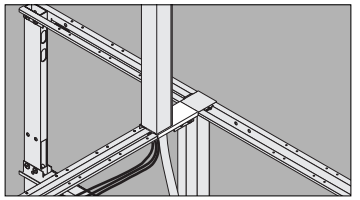
Top caps for frameless inserts are held in place with nylon retainer clips and through-bolts that ship with the glass or resin inserts.

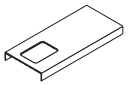
Planning Factors

Top caps are designed to span the width of the structure up to 84" for a seamless appearance. 90" and 96"W top caps will cover smaller spans in a run. For example, a 90"W top cap can be used to cover three 30" spans and a 96"W top cap can be used to cover two 48" spans.

When using a ceiling power entry pole, the top cap must be 6" shorter than the structure. For example, use the 18"W top cap for 24" structure and power pole.

Related Products





Topcap for use with ceiling power entry ships with the power pole.

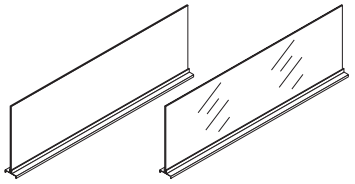
Screens

Product Information

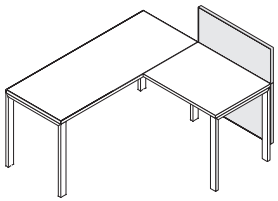
Frameless Resin or Glass Inserts and Privacy Screens

Features	➤See page 17
Dimensions	19
Typical Configurations	20
Structure Run Guidelines	28

Details



Frameless inserts—available in resin or glass—provide space division without impacting or compromising the open feel and the access to daylight views. Quarter-inch thick inserts are available in 7" and 14" heights; glass inserts are tempered for safety.



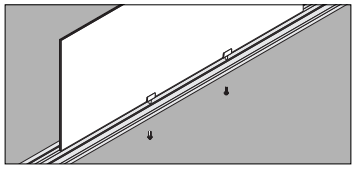
Privacy screens provide upper and lower privacy specifically where it is required. They are 36"H and extend 12" above the worksurface and 24" below the worksurface. These fabric screens are available in widths from 24"–60".

Finishes & Materials

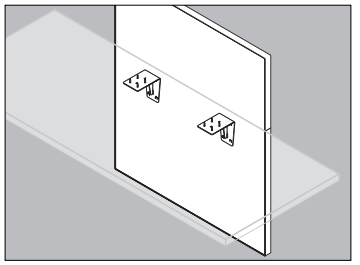
- Resin inserts: mist
- Glass inserts: clear, tempered float glass with a high-polish aris edge
- Screens: painted frame with panel fabric on both sides (railroaded)

➤See page 141 fabric colorways.

Connections



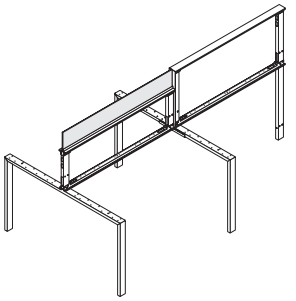
Inserts are held in place in the top cap or accessory rail. with nylon retainer clips, which ship standard with the insert.



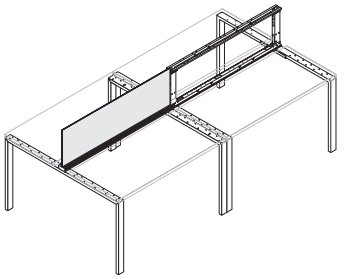
Privacy screens attach to the underside of the worksurface with two “L” brackets that ship standard with the screens.

Planning Factors

Frameless inserts are designed to span the width of the structure up to 84" for a seamless appearance. 90" and 96"W frameless inserts will span multiple structures in a run. For example, a 90"W frameless insert can be used to span three 30"W crossrails or accessory rails and a 96"W frameless insert can be used to span two 48"W crossrails or accessory rails.



7" inserts, when mounted on top of a 42" high structure, will line-up with a 50" structure



14" inserts, when mounted in an accessory tool rail, will line-up with the 42" structure. The accessory rail is not attached to the 42"H structure

Frameless glass cannot be scribed in the field, nor is it loadbearing. Components or accessories cannot hang on frameless glass.

Power & Data

Overview

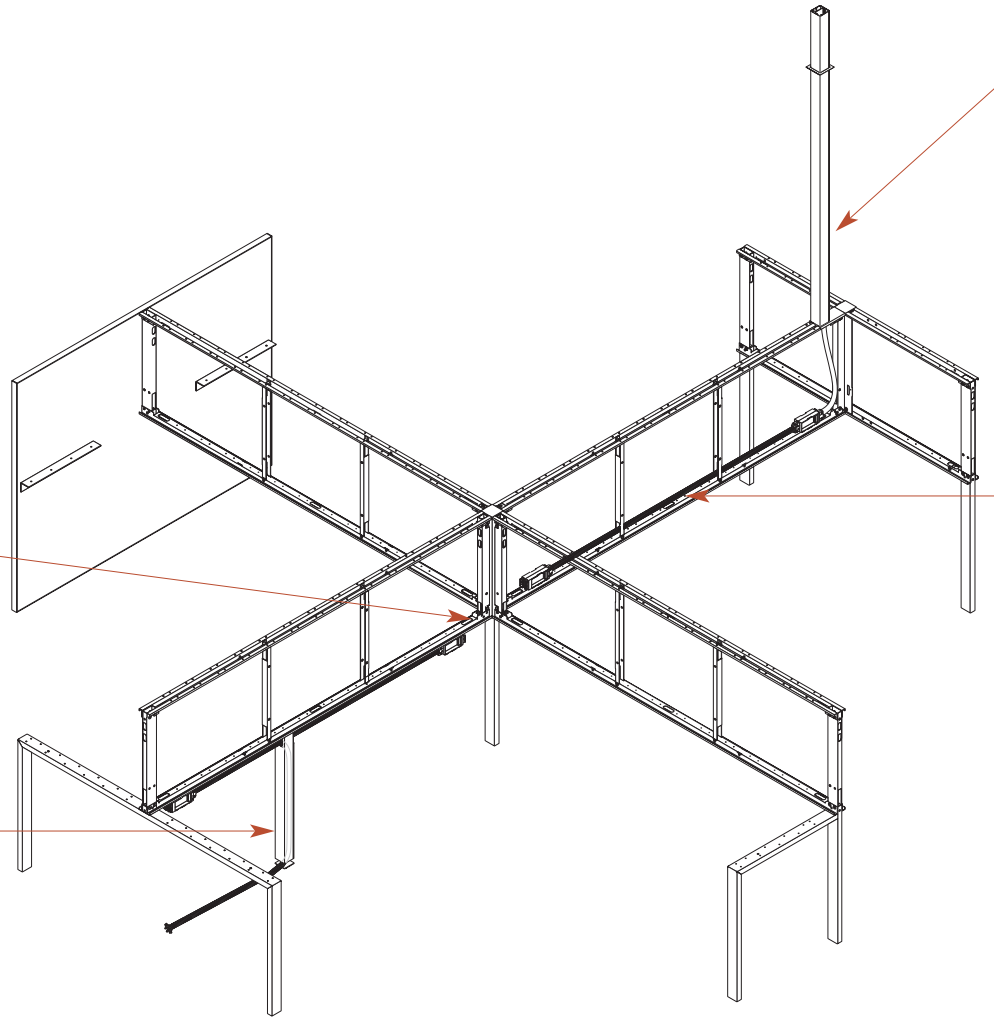
Statement of Line	➤See page 13
8-Wire Circuit Config	46
Wiring Diagrams	47
Cable Management	56

Xsede provides many options for power and data so that specific needs can be addressed and reconfigured as the requirements evolve.

Xsede offers two power entry options:
- 8-wire, 4-circuit (3+1 or 2+2)
- Circuit-1 only, which plugs into a 20-amp building receptacle.

Xsede is approved to accept Chicago and New York electrical.

The building's power capability should be determined before power is configured and components are specified.



Power and data entry can be brought from the ceiling pole and includes divider to provide separation between power and data.

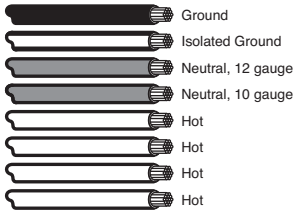
Power kits are available for either above or below the worksurface with a choice of receptacles per user.

Xsede structure provides cut-outs for the routing of cables and wires behind the scene.

Power/data leg accommodates power and data with physical separation.

Cat5, Cat6, Cat6A, fiber optics, and powered USB have been designed into the Xsede capability. ➤See page 55.

Statement of Line ➤See page 13
Power & Data Overview 45
Wiring Diagrams 47
Cable Management 56



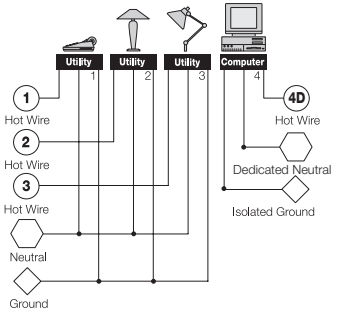
8-wire power entry allows power to enter from the floor, ceiling, wall, or column. Power can be distributed either above or below worksurfaces. If power is required above and below, two separate power entries are required. 8-wire systems accommodate up to 13 duplex receptacles per circuit and include four 12-gauge hot wires, one 12-gauge neutral wire, one 10-gauge shared neutral wire, and two 12 gauge ground wires.
➤See wiring configurations at right and wiring diagrams on the next page.

Xsede's electrical system is rated for 20-amp service. To support the usage, 15-amp convenience receptacles can be placed anywhere along the leg of the electrical connection. In the event that an appliance, such as a larger printer/copier/plotter needs to have a 20-amp receptacle, it is recommended to use a dedicated circuit with a 20-amp receptacle. Using 15-amp convenience receptacles will aid in ensuring that no one leg of the system can pull too much current, which could potentially cause the system to trip out and lose power across the entire system.

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided here is intended to assist specifiers.

IMPORTANT: Xsede electrical components are UL listed under the Xsede name and are not inter-changeable with other Kimball Office series.

3 and 1 (8-wire):

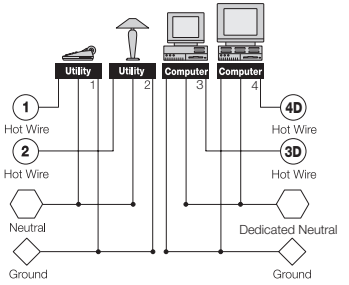


Circuits 1, 2, and 3 share a neutral and common ground, providing circuits for general electrical needs. Customarily, one or more of the circuits are reserved for lighting or other everyday uses, which allows control by central or master switching.

Circuit 4 consists of three separate conductors (hot, neutral, and ground) and meets the BIFMA/ANSI definition for a dedicated circuit.

Cir.	*15-amp Model*	*20-amp Model*
1	45FER1815	45FER1820
2	45FER2815	45FER2820
3	45FER3815	45FER3820
4	45FER4D815	45FER4D820

2 and 2 (8-wire):



Circuits 1 and 2 provide a pair of designated circuits for general electrical needs.

Circuits 3 and 4 provide a pair of designated circuits for computer applications.

Cir.	*15-amp Model*	*20-amp Model*

Power & Data

Product Information

Power Entries

Statement of Line ➤See page 13
Power & Data Overview 45
8-Wire Circuit Config 46
Cable Management 56

Details

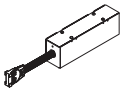
8-wire floor/ceiling power entry is 12' long. Connection is made by snapping into the end of a power kit.

Circuit-1-only power entry is 10' long and can be a quick solution for a maximum of 12 receptacles. It can only be used with the power in-feed leg. Circuit-1-only power entry includes a 20-amp plug, which can only plug into a 20-amp building outlet.

Ceiling power/data pole is 78"H and features a snap-on cover that can be oriented in four different directions relative to the structure. Power pole features a moveable divider inside that can create physical separation between power and data. Ships standard with a 6" top cap.

Hardwire box allows hardwiring of power to comply with local codes. Choose the hardwire box that fits the application, either above or below surface. Hardwire boxes allow one receptacle per box.

Power in-feed leg can be placed under the crossrail or accessory rail to bring power and data to the workspace. The power in-feed leg does not provide structure or support, but does provide physical separation of power and data.



New York power entry allows hardwiring of power to comply with local codes.

Finishes & Materials

- Electrical components: metal conduit and PVC-free plastic

Planning Factors

Both 8-wire and circuit-1-only systems utilize the same electrical components, except for the power entries.

Statement of Line ➤See page 13
Power & Data Overview 45
8-Wire Circuit Config 46
Cable Management 56

Details

Power kits are used with tech tile covers above the worksurface and with tech trays below the worksurface. Power kits utilize an 8-wire, 4-circuit electrical system or circuit-1-only (single circuit) power entry.

Eight types of power kits are available:

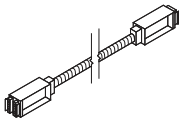
Single-sided—
- Above surface, basic
- Above surface, expanded
- Below surface, basic
- Below surface, expanded

Double-sided—
- Above surface, basic
- Above surface, expanded
- Below surface, basic
- Below surface, expanded

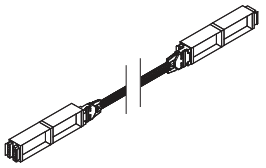
The difference between above-surface kits and below-surface kits are the type of mounting brackets that are included.

Single-sided kits feature power blocks for receptacles (specified separately) on one side

Double-sided kits feature power blocks on both sides.



Basic power kits provide two duplex receptacles per tech tray or cover

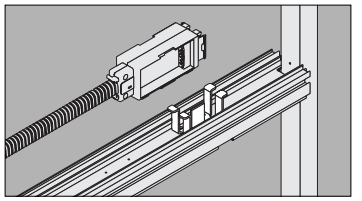


Expanded power kits provide four duplex receptacles per tech tray or cover

Power kits are specified by application and include the appropriate components, which include:
- Power blocks
- Mounting brackets and hardware
- Harnesses

Note: 30" kits consist of a 7" male-to-male connector instead of a harness.

Power blocks are either single- or double-sided and can hold a duplex receptacle in the opening:
- Single-sided single power block holds one duplex receptacle
- Single-sided double power block holds two duplex receptacles
- Double-sided single power block holds one duplex receptacle per side; total of two
- Double-sided double power block holds two duplex receptacles per side; total of 4



Mounting brackets hold power blocks and are standard with the kit. Also included is attachment hardware to install the mounting brackets to pre-drilled holes in the crossrail or to the accessory rail.

Finishes & Materials

- Electrical components: metal conduit and PVC-free plastic
- Mounting brackets and hardwire Boxes: formed steel

Connections

8 wire electrical can tie to the building in-feed either at the base or at the ceiling entry.

Circuit-1-only power entry is applicable for a maximum of 12 circuit-1 15 or 20-amp duplex receptacles and can be plugged into an existing building outlet. Building outlet must be 20-amp to accept this power entry.

Planning Factors

Specify the power kit to match the width of the crossrail.

Same arrangement of duplex receptacles and data should be used on both sides. Accessory rail utilizes below-surface applications only,

Jumpers must be specified for power-kit-to-power-kit, power-kit-to-connector, and tech-tile-to-tech-tile connections.

Power & Data

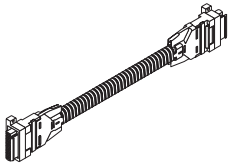
Product Information

Jumper Kits

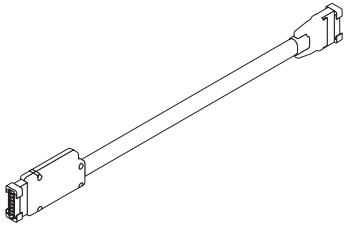
Statement of Line ➤See page 13
Power & Data Overview 45
8-Wire Circuit Config 46
Cable Management 56

Details

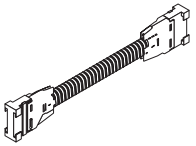
Jumpers connect power kits through vertical supports and structure.



Pass-thru jumpers kits are used to continue the flow of electricity between power kits within a workstation. Pass-thru jumper kits replace power kits where receptacles are not needed. Kits must equal the length of the crossrail.



Adjustable power-kit-to-power-kit jumpers connect one power kit to another.
IMPORTANT: Once extended, they cannot return the original length.



Power-kit-to-power-kit jumpers route power from one power kit through a connector to the next power kit.
➤See page 51 for jumper selection guide for even-width power kits
➤See matrix at www.kimballoffice.com for odd-width power kits.

Finishes & Materials

- Electrical components: metal conduit and PVC-free plastic

Connections

Undersurface J-hook brackets are used to hold the conduit of the power kit or the pass-thru jumper kit.
- Two brackets are recommended for power kits 48"–84"W
- Two brackets are ecommended for pass-thru jumper kits 24"–42"W
- Four brackets are are recommended for pass-thru jumper kits 48"–84"W
- Two brackets are recommended for New York City power entry
- Can be used to route communications cabling below accessory rails or crossrails

Planning Factors

Jumpers must be specified for power-kit-to-power-kit and tech-cover-to-tech-cover connections, as well as for going through a connector.

When jumping from a power kit through a connector to another power kit, the model selection is dependent upon the type of power kit power is being jumped from—single-sided or double-sided; basic or expanded, the type of connector the jumper is going through (X, L, Y, or T)—and the type of power kit to which it is connecting.

Jumpers must be routed through connectors when making a turn in above-surface applications before the connector is assembled and attached to the crossrails.

Power cannot be jumped (routed) from below surface to above or vice versa. A separate power source is required for each.

Power-kit-to-power-kit jumper, specified separately, is required to connect pass-thru jumper to an adjacent power kit.

Power & Data

Product Information

Receptacles and Data Components

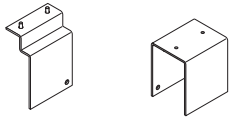
Statement of Line ➤See page 13
Power & Data Overview 45
8-Wire Circuit Config 46
Cable Management 56

Details

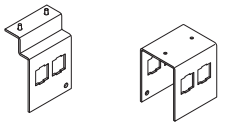
Duplex receptacles are rated at 15 or 20 amps. 20-amp models are required for some large equipment applications and have a keyed-slot on the Hot side of the receptacle. Duplex receptacles are available in black or white and the designated/dedicated models have a **Δ** imprinted on them for use as a visual aid.

Universal serial bus (USB) receptacles are 2-amp, circuit-1-only. They can be used anywhere a circuit-1-only receptacle is used. The USB is the only PVC component.

USB passive adapter is 72" long. One end plugs into a laptop and the other is used to connect to another device, such as a printer.
to conceal unused openings.



Tech tray cover plates, specified separately are recommended to cover unused power blocks or where a cut-out is not being used for data in the tech tile cover.

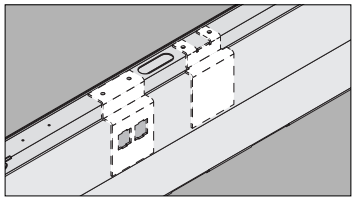


Tech tray data plates have two openings and come with a voice/data adapter kit to accommodate couplers/jacks from multiple suppliers. Two of each style of adapter are standard in the kit.

Tech tile cover plates, specified separately, are recommended to cover unused power blocks or where a cut-out is not being used for data in the tile.

Tech tile data plates, specified separately, have two openings and come with a voice/data adapter kit to accommodate couplers/jacks from multiple suppliers. Two of each style of adapter are standard in the kit.

Connections



Data plates and cover plates sit behind the tech tray and are affixed to the underside of the cross rail.

Finishes & Materials

- Electrical components: metal conduit and PVC-free plastic
- Cover plates: all standard paint colors
- Data plates: white or black adapters
- Tech trays: powder-coated metal

Related Products

Tech trays, available with or without cut-outs, provide quick access to power supplies and cables.

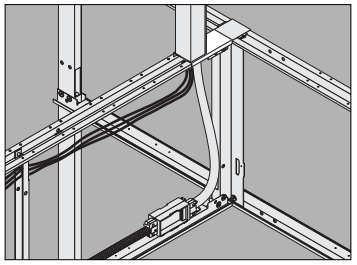
Application Guidelines

Cable Management

Statement of Line ➤See page 13
Power & Data Overview 45
8-Wire Circuit Config 46

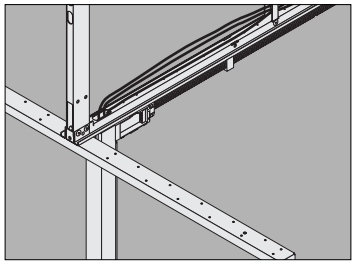
Cables may enter the structure through a power-infeed leg (non-powered), an H-leg, T-leg, or support leg with power slot, or through a ceiling power/data pole.

Ceiling Entry:



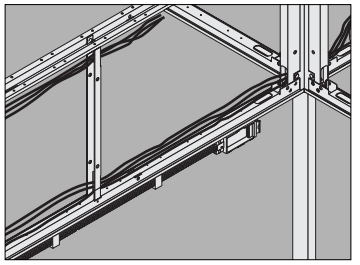
Ceiling entry applications utilize a ceiling power/data pole. Pole features an adjustable divider to separate power and data cabling. Cables are routed behind the tiles and can be accessed in a tech tile above the surface or can drop down below the crossrails to be accessed in the tech tray.

Floor Entry:

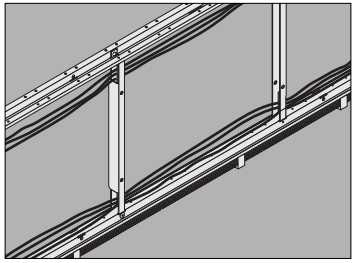


In floor entry applications, cables enter through the power in-feed leg or power slots available in applicable T-leg, H-leg, or support leg models. Cables are routed up to the underneath side of the crossrail or through the crossrail to the area behind tiles to be accessed in the tech tile.

Horizonal Routing:



Cables may be routed through the structure behind tiles or behind the tech tray.



Undersurface hook brackets attach to the crossrail or accessory rail to allow cables ot run horizontally below the surface. Vertical support rails help route cables behind tiles above worksurface height.

Power & Data

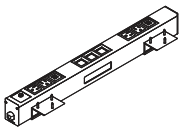
Product Information

Worksurface-Mounted Components

Statement of Line ➤See page 13
Power & Data Overview 45
8-Wire Circuit Config 46
Cable Management 56

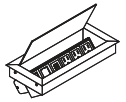
Details

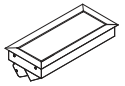
Worksurface-mounted components offer another option for power and data to customize a workspace for an individual or to meet the needs of a group. Options of trim finish color and wiring configurations make these components a well-rounded choice for changing layout requirements. All components ship with data adapter kits.



Power/data bar mounts flush to the back edge of the worksurface in the 2" wire gap with provided brackets. Power/data bar comes standard with two powered USB, four outlets, and three openings for data. Wiring options include single-circuit, hardwire, and 8-wire electrical.

Power/data grommet sits flush with the worksurface inside a G27 factory cutout. Power/data grommet features three spill-proof outlets, one powered USB outlet, and two data openings. Wiring options include single-circuit, hardwire, and 8-wire electrical.





Power/data center is recessed in the worksurface in a G28 factory cutout. The lid sits flush with the worksurface top. Inside features three outlets, one powered USB, and two data openings. Wiring options include single-circuit, hardwire, and 8-wire electrical.

Finishes & Materials

- Power/data bar trim: anodized aluminum or anodized black
- Power/data grommet trim: black or white
- Power/data center trim: anodized aluminum or anodized black

Planning Factors

When using circuit-1-only power entry, you must utilize circuit-1-only components. The in-feed plug is 20-amp and must plug into a 20-amp outlet; however, 15-amp receptacles and jumpers can be utilized.

Related Products

Additional power/data options
➤See the Perks Price List.

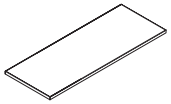
Worksurfaces

Features	➤See page 17
Dimensions	19
Typical Configurations	20
Cord Management	63

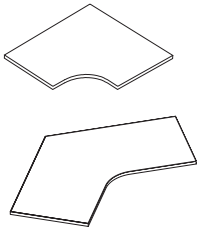
Details

Xsede worksurfaces are 1 3/16" thick high-pressure laminate (HPL) or 1 1/8" thick thermally-fused laminate (TFL); both laminate options feature a plastic 3mm rim on all four sides. For easy planning the rectangular surfaces come in widths of 30" to 84" in 6" increments.

Six shapes are available**:**
- Rectangular
- Curved corner
- Boomerang
- U-shaped
- Taper
- Touchdown

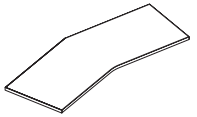


Rectangular worksurfaces are available in full-depth (24" and 30"D) and wire-gap depth (22" and 28"D) models. The gap is used for:
- Dropping cables behind the worksurface
- Access to the below surface power trays
- Mounting of the power/data bar that sits flush with the worksurface

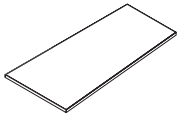


90° and 120° curved corner worksurface are available in full-depth and wire gap models. Full-depth models are available 24"D, 30"D or combination of 24"/30" returns or 30"/24" returns; wire-gap models offer 22"D, 28"D or combination 22"/28" or 28"/22" returns.

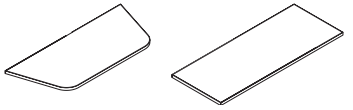
U-shaped worksurfaces are 30"D and in 48"–72" widths in 6" increments.



Boomerang worksurfaces are available as 24"D or 30"D return. Full-depth only.



Taper worksurfaces are 30"D on one side and 24"D on the other. They are available 60", 66", and 72"W and in left- and right-handed models; full-depth only.



Touchdown worksurfaces are available in 24" and 30"D and 30", 56", and 62"W, in trapezoid or rectangular shapes. Touchdown worksurfaces are for placement at the end of a dual-sided run for quick meeting or shared surface. The 56"W HPL touchdown surfaces feature the same laminate on the top and bottom, so they can be flipped based on the application so that the end trim notch doesn't make the surface handed.

Finishes & Materials

- Worksurface: solid core with HPL or TFL
  ➤See page 135 for laminate colors.
- Rim: 3mm plastic rim in matching/complimentary solid colors
  ➤See page 138 for color choices.

Connections

Worksurfaces attach to each other with flat steel brackets and to lower crossrails with worksurface mounting brackets.
➤See page 59.

Touchdown worksurfaces attach to the end of a dual-sided run with a touchdown worksurface mounting kit, specified separately.

Curved corner worksurfaces must be attached to the structure on two sides and if returns are adjacent, flat brackets to tie the surfaces together must be used.

When U legs, U-legs with stanchions, H legs, support legs, and undersurface storage are used, the worksurface is screwed to the leg or storage.

Undersurface support can be accomplished with a number of options:
- Undersurface support rails
  ➤See page 59.
- Undersurface support legs
  ➤See page 32.
- Footprint undersurface storage
  ➤See the Systems Price List.
- Priority storage
  ➤See the Priority Price List.

Power & Data

Power and data can be dropped into the undersurface tech tray or accessed with the power data centers.

Planning Factors

Worksurfaces should match the width of the structure. Combined width must match the structure. If combined widths are used, mid-supports and flat brackets are required.

Related Products

Brackets are available to attach worksurfaces to the structure and to adjacent worksurfaces.
➤See page 59.

Factory-installed grommets are available.
➤See pages 127.

Accessories that add functionality and personalization to worksurfaces include:
- Accessory rail that is used between two worksurfaces supported by U-legs
  ➤See page 35.
- Xsede keyboard kits
  ➤See page 64.
- Clamp-mount monitor arm kits for use with the wire gap surfaces
  ➤See Perks Price List

Power/data centers are available to sit on the surfaces, mount into grommets, or attach with brackets to the back side of worksurfaces in the wire gap.
➤See page 63.

➤See the Perks Price list for other accessories.

Worksurfaces

Product Information

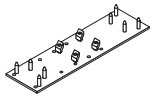
Worksurface Brackets and Undersurface Support Rails

Features ➤See page 17
Dimensions 19
Typical Configurations 20
Cord Management 63

Details

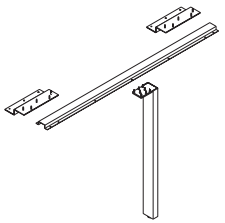
IMPORTANT: Brackets are specified separately for attaching worksurfaces to the structure and to each other.

Flat brackets are used to connect two adjacent worksurfaces together at a worksurface joint.



Worksurface/crossrail brackets are used to connect worksurfaces to the structure where there is no tech tray. Bracket can be used with H-legs (single-sided application/worksurface on one side), U-legs with stanchions (dual-sided applications/worksurfaces on both sides), or with U-legs with an accessory rail.

Tile mounting bracket holds open-base undersurface tiles in place when there is no tech tray.



Mounting kit for touchdown surfaces includes two mounting brackets for adjacent surfaces, a support leg, and a support rail.

Undersurface support rails can be used underneath the worksurface when undersurface leg support is not desired and additional support is required. Undersurface support rails are 48"W and are ¾"H.

Finishes & Materials

- Flat brackets: 13-gauge galvanized steel
- Undersurface support rails: 16-gauge sheet metal with a Cinder powdercoat finish

➤See page 133 for standard and metallic finish options.

Connections

Attachment screws ship with all bracket and undersurface support rail models.

IMPORTANT: Undersurface support rails are required where the unsupported span is greater than 48"W and an undersurface support leg is not used. They are to be centered in the open span 6" off the user edge of the worksurface.

Planning Factors

Use two worksurface/crossrail brackets on the end of each worksurface when attached to end crossrail sets.

Use one wrksurface/crossrail brackets per surface, plus one shared between surfaces, when ends are supported by connectors and crossrails.

Use one tile-mounting bracket per worksurface/crosssrail bracket specified to hold open-base undersurface tiles where there is no tech tray.

Worksurfaces

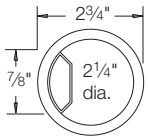
Cord Management

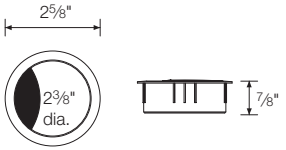
Features ➤See page 17
Dimensions 19
Typical Configurations 20

Xsede provides several flexible options for routing and concealing cords and cables. These include:
- Factory-installed worksurface grommet options (G1 and G19)
- Factory-installed G27 and G28 cut-out for power/data center
- Undersurface tech trays with or without cutouts
- Wire-gap worksurfaces

Factory-installed grommets and cutouts are available as an option on worksurfaces in pre-determined worksurface locations.
➤See pages 127–128 for specification information, upcharges, and locations by worksurface shape or type.



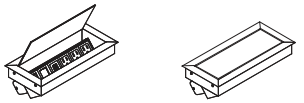
G1 plastic grommet is a two-piece unit with snap-in lid. Lid cutout slides open to route cables or can be closed when not in use. Matte black.



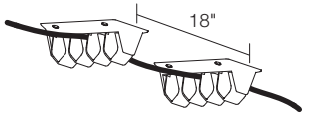
G19 metal grommet is a two-piece unit with black brush access. Top locks in place. Powdercoat finish in the following colors:
405 Designer White
501 Platinum Metallic
514 Carbon Metallic
490 Polished Chrome
487 Brushed Nickel
544 Silver Pearl

Grommets for field installation are also available (models 99KG7MB, 99KG7PL, 99KG19PL, 99KG19DW, 99K19CM, 99KB19490, and 99KG19487).
IMPORTANT: Note the location of support legs to ensure they do not interfere with grommet locations.
➤See the Perks Price List.

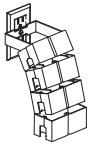
G27 cut-outs are designed to accept surface-mount power/data grommets (models 45A0307PDG8, 45A0307PDGS, and 45A0307PDGH), specified separately, for applications where connections are required at the worksurface.
➤See page 128.



G28 cut-outs are designed to accept surface-mount power/data centers (models (45APDC8, 45APDCS, and 45APDCH), specified separately, for applications where connections are required at the worksurface.
➤See page 128.



Perks undersurface cable manager is available to manage cords and cables under the worksurface. Cables pressure fit between loops.
➤See the Perks Price List.



Perks flexchain manages cables and power-in feeds from under the surface to the floor. Flexchain U-bracket, specified separately, mounts to a standard wall outlet to manage cords from the outlet to under the surface.
➤See the Perks Price List.

Power in-feed leg manages power-in-feeds and cables from the floor to under the worksurface and includes a divider for separation of power and data. Power in-feed leg is non-supporting.
➤See page 48.

Ceiling power/data pole manages power and cables from the ceiling to the structure and includes a divider for separation of power and data.
➤See page 48.

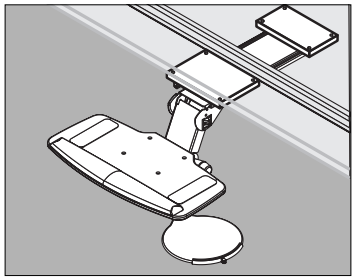
Details



Keyboard kits are available specific to Xsede. Includes:

- Adjustable (manual or intuitive) black arm
- Black foam, gel wrist rest
- Mouse tray (can be mounted on either side)
- Blocks for use when attached the the keyboard tray to worksurfaces with support rails to provide clearance.

Single-sided data plates and cover plates are for use with crossrails only. Double-sided data plates and cover plates can be used with crossrails or accessory rails.

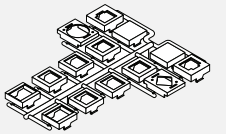
Specify a single-sided cover plate for each below-surface hardwire box.

Tech Trays with Cut-Outs
➤See page 85.

Tech Trays without Cut-Outs
➤See page 86.

Standard Includes

- Plate: paint
- Data adapter kit with data plate: white or black plastic



How to Specify

Data Plate

❶ Model
② Finish group:
STD = Group 1
STDM = Group M (+10%)
③ Finish designator
④ Data adapter kit color:
B = Black
W = White

Cover Plate

Available Finishes

G1 Grommets:
MB Matte Black

G19 Grommets:
405 Designer White
487 Brushed Nickel
490 Polished Chrome
501 Platinum Metallic
514 Carbon Metallic
544 Silver Pearl

➤See page 63 for complete description of G1 and G19 grommets.

How to Specify

① Insert the location *and* finish designator into model number sequence as indicated on the corresponding pricing page.

Note: Specify grommet location and finish together in one step without a space between the location and the finish designators. For example:
G1LMB = G1 grommet, left, matte black
G19R501 = G19 grommet, right, platinum metallic

IMPORTANT: Only the grommet locations shown in the matrix at left with a designator and price are available.

Planning Factors

22"D adjustable keyboard kits can be used in corner-mount applications.

Width of keyboard kits includes mouse tray. Mouse tray is non-handed and can be mounted on the left or right.

Manual and intuitive adjustable keyboard kits slide in and out under the surface.

Keyboard kits will not be flush with the worksurface edge (when in the stored, recessed position). It extends past the front edge approximately 2" in the recessed position. Rotate under surface to store completely.

Adjustable keyboard kit models comply with ANSI/HFES Method 2.

Standard Includes

- Keyboard arm: black
- Foam gel wrist rest: black
- High-density polyethylene tray and ABS mouse tray: black
- Mounting block

FINISHES & MATERIALS

Table of Contents

Samples:

Samples of wood finishes, paints, and laminates are available upon request. Samples are to be used as guidelines only. Slight variations within commercial tolerance may occur in color and texture.

Swatch cards and memo samples of Kimball Office fabrics are available upon request. There may be slight differences between samples and actual yardage as a result of variations in dye lots.

To order samples:

- Visit the Partner web site at www.kimballoffice.com to order materials electronically
- Contact your Kimball Office Sales Representative or the nearest Kimball Office Showroom
- For Alliance program fabrics, contact our Alliance partner directly.

Kimball Office offers a diverse collection of surface materials. Please see descriptions below to ensure that you are choosing the materials that best support your requirements.

Fabric Collection:

Our collection of fabrics offers a wide variety of materials that include both timeless classics, as well as a selection of trendy colors and patterns to keep the offering fresh and current.

The classic patterns are perfect for establishing new standard color palettes, while the trendy patterns are great for adding accents and pops of color to make a statement and to show that you are in tune with the pulse of today's fast-paced world.

The fabric collection was developed with an international flare to make it easy for global companies to standardize in all locations. It contains both standard in-line and alliance patterns. Our alliance partners are chosen with great care to give us the best selections and service in the industry.

You will find that colors were developed to coordinate very well between the in-line and alliance offerings, as well as between the seating and panel fabric offerings.

The fabric collection will provide options for the discerning client for many years to come.

Wood Collection:

Our wood finishes offer fresh options that provide natural-looking finishes to meet today's design expectations. From the lightest Brighton Maple to the darkness of Urban Walnut, these finishes were chosen with great attention to offer a complete range of color options making it simple to specify the look you want. You can achieve contemporary or transitional looks, or choose to update your traditional style by selecting one of the newer walnut or cherry finishes.

Kimball Office carefully selects veneers and solid woods to provide high quality wood furniture. Variations in color, grain, and texture occur naturally in all wood species, but are most apparent in lighter colored woods, and especially in natural finishes.

The wood collection offers a number of light finishes that will not hide or mask the natural characteristics of wood. Mineral streaks, pitch pockets, and color variations from piece to piece are all characteristics that occur in natural veneers and are what make each piece unique. While the finishing process is identical for all pieces, each finished piece accepts the stain differently to create its own individual beauty. These characteristics are part of the inherent natural beauty of wood and are not considered defects.

Darker finishes can be selected to hide more of the veneer's characteristics. Several beautiful coordinating woodgrain laminate options are also available for the customer who wants complete color and grain consistency throughout.

Two surfaces with grain directions that are at different angles to a light source will reflect the light differently and look a slightly different color. This natural phenomenon is called flip. This can happen within a single piece as alternating veneer leaves are placed side by side or from piece to piece. Flip is often noticed on worksurfaces installed at a 90° angle to each other.

Two premium veneers—Sapele and Zebrawood—are part of the standard offering to provide options for high impact styles without having to quote custom veneers. Premium veneers could receive extended lead times based on supplier availability at the time the order is placed.

Generations Collection:

The Generations Collection is comprised of tried and true materials that have been in the Kimball Office offering for many years. This collection is designed to support long-standing customers and to help transition you to the current offering.
➤Visit kimballoffice.com to see the Generations Collection.

IMPORTANT: Materials in this collection should not be used to set standard color palettes for new installations.

Materials in this offering can be ordered using the standard process, however, extended lead times and minimum order quantities may apply. For best results, pre-planning orders with your Customer Service Representative is recommended.

Discontinuation Policy:

Kimball Office strives to give all business partners advanced notification of surface materials that are scheduled for discontinuation. Efforts will be made to support discontinued materials as specified in the deletion announcement. Pricing cannot be guaranteed. Extended leadtimes and minimum order requirements may apply.

Disclaimer:

Kimball Office will make every reasonable effort to maintain our commitments. If surface material changes must occur due to unforeseen circumstances, we will work with you on an alternative recommendation. Kimball Office reserves the right to cancel or make changes to standard products and surface materials.

Warranty:

Fabrics and leathers are not warranted against fading and wear, discoloration from contact with liquids, or change in color or texture caused by application of finishes (flame proofing, stain resistance).
➤See page 150 for complete warranty information.

Metallic:

10% upcharge applies for price group M metallic finishes.

IMPORTANT: Due to the reflective qualities of metallic paints, variations in color may occur.

Customer-Specified Paint

Paint	➤See page 133
Laminate	135
Molded Plastic	138
Panel Fabrics	141

Customer-specified paint (CSP) is available on products that require specification of a paint color.

Pricing:

A **one-time fee of $300** (net) will be billed for the development of each new custom (customer specified) paint. This fee covers all Kimball Office product lines on which the paint may be used. Models receiving a custom paint will also be assessed an upcharge.

A **10% upcharge per line item** (model) for customer specified non-metallic paint applies. Upcharge is calculated on the base price, before other option upcharges are added.

A **20% upcharge per line item** (model) for customer specified metallic paint applies. Upcharge is calculated on the base price, before other option upcharges are added.

The process:

① Send desired paint sample (no smaller than 3" x 5") to Customer Service along with a complete list of the products to which the custom paint is to be applied. **Include dealer name, contact, and project reference.**

② Custom paints will generally require at least a week for a matched sample. Samples sent to the customer will advise of any restrictions that may apply.

③ Customer signs off on the sample and returns the approval form to Customer Service. Approval is required prior to order entry.

IMPORTANT: Kimball Office reserves the right to decline the opportunity to match a paint color.

How to Specify:

① **Model:**
Build the complete model specification (excluding finish type and finish designator) by following the "How to Specify" on the appropriate pricing page for the product that is to receive the custom paint.

② **Finish type:**
For the “Finish type” step, insert a special paint code (in place of STD):
ZPNT1 = Special non-metallic paint
ZPNTM1 = Special metallic paint

③ **Finish designator:**
For the “Finish designator” step, insert the designator provided to you by Customer Service.

Sample (base model underlined):

Woodgrain:

Woodgrain laminate is a commercially compatible match to the wood finish of the same name and designator with consideration for the most common application—laminate surfaces on a wood chassis. When laminate and wood are mixed in other applications, the flip that occurs naturally in veneer may influence the overall match from piece to piece.

CSL:

➤See page 137 for customer specified laminate.

Customer-Specified Laminate

Matrix

GSA Non-Contract

Paint	➤See page 133
Laminate	135
Molded Plastic	138
Panel Fabrics	141

Customer-specified laminate (CSL) is available on select laminate (HPL) products.
➤Contact your Customer Service Team to initiate approval.

Kimball Office reserves the right to decline a customer specified laminate which may not be suitable for application.

Kimball Office assumes no responsibility for the durability, consistent coloration or any other performance characteristic of a customer specified laminate.

Metal, embossed, specialty, and supplier discontinued laminates must be custom quoted.
➤Contact ***By Design*** at 800.482.1616, extension 6001.

Kimball Office orders and procures all customer specified laminates.

Laminate sheen level must not exceed 60° for maximum durability of worksurfaces.

Lead times may vary for certain laminates. Minimum order quantities may apply.

Upcharges:

A **20%** upcharge per line item (model) for CSL orders for supplier standard laminates applies. Upcharge is calculated on the base price, before other option upcharges are added.

How to Specify

① **Model:** Build the complete model specification (excluding the finish type and finish designator) by following the How to Specify on the appropriate pricing page for the product that is to receive the special finish.

② **Finish type:** For the “Finish type” step, insert a special finish code (in place of STD).
ZFMA1 = Formica
ZLMT1 = Lamin-Art
ZLTC1 = Lamitech
ZNEV1 = Nevamar
ZPTE1 = Pionite
ZWST1 = Wilsonart

③ **Finish designator:** For the “Finish designator” step, insert the laminate designator (color number) of the laminate to be applied to the product.

ACT Performance Icons

Paint	➤See page 133
Laminate	135
Molded Plastic	138
Panel Fabrics	141

All Kimball Office fabrics meet, and in most cases exceed, the minimum requirements set up by ACT. For the purpose of uniformity in the industry, Kimball Office will be utilizing the ACT icons on swatchcards and related materials.

The Association for Contract Textiles (ACT) has developed voluntary performance guidelines to make fabric specification easier. The five symbols give architects, designers, and end-users a vast amount of performance information in a succinct visual way. Look for these symbols on ACT member company sampling to assure that the fabrics you specify perform up to contract standards and pass all applicable testing.

These categories describe a material's performance features as measured by specified methods under standard laboratory conditions. All tests referenced here are intended to represent the most current version of a test method. Note: Individual ACT member product information may represent a different version of a test method depending on the date the product was introduced to the market.

IMPORTANT: These tests represent minimum requirements which are subject to change without notice and may not reflect requirements or laws in all locations.

Flammability:

The measurement of a fabric's performance when it is exposed to specific sources of ignition. Note: ACT guidelines specify different flammability tests dictated by the intended end use for the fabric.

Upholstery
California Technical Bulletin #117
Section E—Class 1 (Pass)

Wrapped Panels and Upholstered Walls
ASTM E 84 (Unadhered Mounting Method)—Class A or Class 1

Wet & Dry Crocking:

Transfer of dye from the surface of a dyed or printed fabric onto another surface by rubbing.

Upholstery
AATCC 8—
Dry Crocking, Grade 4 minimum
Wet Crocking, Grade 3 minimum

Wrapped Panels and Upholstered Walls
AATCC 8—
Dry Crocking, Grade 3 minimum
Wet Crocking, Grade 3 minimum

Colorfastness to Light:

A material's degree of resistance to the fading effect of light.

Upholstery
AATCC 16—Option 1 or 3
Grade 4 minimum at 40 hours

Wrapped Panels and Upholstered Walls
AATCC 16—Option 1 or 3
Grade 4 minimum at 40 hours

Physical Properties:

Pilling is the formation of fuzzy balls of fiber on the surface of a fabric that remain attached to the fabric. Breaking strength is the measurement of stress exerted to pull a fabric apart under tension. Seam slippage is the movement of yarns in a fabric that occurs when it is pulled apart at a seam.

Upholstery
Brush pill—ASTM D3511, Class 3 minimum or Martindale Tester ASTM D4970, Class 3 minimum

Breaking strength ASTM D5034 (Grab Test)—50 lbs. minimum in warp and weft

Seam slippage ASTM D4034—
25 lbs. minimum in warp and weft

Wrapped Panels and Upholstered Walls
Breaking strength ASTM D5034 (Grab Test)—35 lbs. minimum in warp and weft

Abrasion Resistance:

The surface wear of a fabric caused by rubbing and contact with another fabric.

General Contract Upholstery
ASTM D4157 (ACT approved #10 Cotton Duck)—15,000 double rubs Wyzenbeek method

ASTM D4966 (12 KPa pressure)—20,000 cycles Martindale method

Heavy Duty Upholstery
ASTM D4157 (ACT approved #10 Cotton Duck)—30,000 double rubs Wyzenbeek method

ASTM D4966 (12 KPa pressure)—40,000 cycles Martindale method

End use examples of heavy-duty installations where upholstery fabrics rated at 30,000 double rubs should be appropriate are single shift corporate, hotel rooms/suites, conference rooms and dining area usage.

ACT acknowledges that there are extreme wear situations that may require higher levels of abrasion resistance. End use examples that may require higher than 30,000 double rubs include: 24 hour transportation terminals, 24 hour telemarketing, 24 hour healthcare emergency rooms, 24 hour casino gambling areas, and such public gathering places as theatres, stadiums, lecture halls and fast food restaurants.

It is strongly suggested that double rubs exceeding 100,000 are not meaningful in providing additional value in use. Higher abrasion resistance does not necessarily indicate a significant extension of the service life of the fabric.

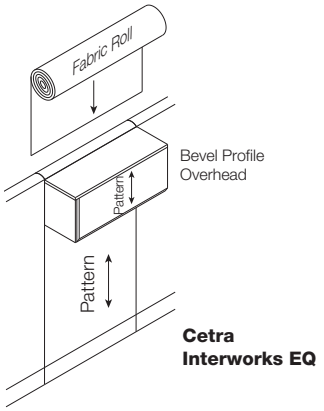
The Wyzenbeek and Martindale tests are the two methods commonly used to predict wearability. Actual performance is determined by many factors such as fiber content, weaves, finishes, furniture design, maintenance, cleaning, and usage. Durability of an upholstery fabric is a complex interaction (combination) of a number of performance tests that, in addition to abrasion, includes seam slippage, pilling, tensile strength, and usage.

There is no correlation between the Wyzenbeek and Martindale tests so it is not possible to estimate the number of cycles that would be achieved on one test if the results from the other test were known.

Fabric Application

Paint	➤See page 133
Laminate	135
Molded Plastic	138
Panel Fabrics	141

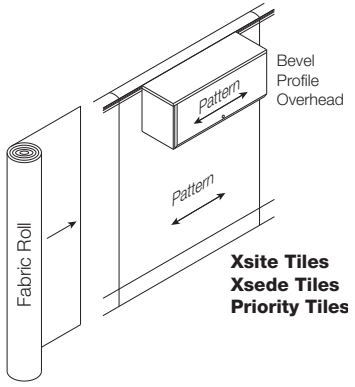
Standard Application:



Cetra
Interworks EQ

Directional fabrics are “cut up the roll” for standard application unless specified differently.

Railroad Application:



Xsite Tiles
Xsede Tiles
Priority Tiles

All fabrics will be applied in railroad (horizontal) fashion to Xsede, Priority, and Xsite tiles and larger-size tackboards. When viewing swatch cards or memo samples, turn 90° to get an accurate indication of how the fabric will appear.
➤See pricing pages for product application.

Railroad application of Kimball Office panel fabrics and COM requires a custom quote for all other products that do not have railroading listed as an option in the price list.
➤Please contact ***By Design.***

No fabrics available in price grade C at this time.

Price Grade D

No fabrics available in price grade D at this time.

Price Grade E

Alliance Fabrics:

Kimball Office has formed partnerships with top textile companies in the industry to provide a broad range of design-oriented fabrics. These fabrics can be specified using our standard ordering process, eliminating the need for additional expense and efforts required for COMs.

IMPORTANT: Orders cannot be cancelled for alliance program fabrics.

Lead times for alliance fabrics are based on supplier availability. Pre-planning orders can help facilitate arrival of products as needed. Each supplier reserves the right to discontinue patterns or colors. Kimball Office will not be held responsible for supplying discontinued patterns/colors or when minimum order quantities apply.
➤Contact Customer Service for availability before finalizing orders.

The information provided in this section is the most current information available at the time this price list was printed.

Application of Alliance Program upholstery will be as depicted on the swatch card unless otherwise instructed on the order.

For memo samples of Alliance fabrics, contact our alliance partners directly.

Terratex is a registered trademark of True Textiles, Inc. Each Terratex fabric must meet these four criteria:
- Made of 100% post-consumer and/or post-industrial fiber, or compostable materials
- Made using processes that reduce waste, emissions, energy, water usage, and toxic by-products
- Meets or exceeds the same quality standards of fabrics manufactured using virgin materials and conventional processes
- Made of a single fiber type, without backcoating, so that it too can be recycled or composted.

Green-e
100% of the electricity used to make these products is matched by Green-e certified renewable energy certificates.

Customer's Own Material (COM)

GSA Non-Contract

Paint	➤See page 133
Laminate	135
Panel Fabrics	141
COM Yardage Req.	145

COM Policy:

While Kimball Office inspects fabrics for mill imperfections, some are difficult to recognize. Kimball Office is solely responsible for upholstery workmanship and cannot assume responsibility or liability for the durability, tailoring, appearance, or other qualities such as color inaccuracies, dye lot variations, and other such flaws or defects of customer furnished coverings.

Customers are responsible for ordering COM fabrics and expediting delivery of the material to Kimball Office.

IMPORTANT: Kimball Office reserves the right to decline a fabric that may not be suitable for application to product.

COM Application Testing:

Application testing on product for non-preapproved fabrics is required. ➤Contact your Customer Service Team for the appropriate forms to initiate application testing.

The application test will render your fabric either:
- Approved
- Not recommended
- Restricted

A "not recommended" result is usually due to questionable construction of the material or pattern that is difficult to align. You will be required to sign a waiver to use any "not recommended" COM.

U.L. Listing/Flammability:

COM must be U.L. listed for use on Xsede, Cetra, Xsite, and Interworks EQ panels before Kimball Office accepts and enters an order which will have COM fabrics. All COM testing and processing costs are the responsibility of the customer. A minimum of 2 yards of production run yardage is required for U.L. testing and flammability testing. Approval of a COM fabric may result in extended lead times. For cost estimates, yardage requirements and project lead times, consult your Customer Service Team.

Yardage/Measurements

Directional and non-directional yardage requirements have been calculated based on 66"W panel fabrics for Tiles, Panels, Overheads, Highback Organizers, and Tackboards. Directional and non-directional yardage requirements have also been calculated based on 54"W seating fabric for Overheads, Highback Organizers, and Tackboards.

If your fabric is less than 66"W, some size restrictions may apply.

COM yardage listed in the Resource section of the price list reflects the amount of fabric required to upholster one panel. Additional yardage may be required if patterns require matching.

Shipment of COM

After the fabric has passed the approval process described, Kimball Office will enter the product order and send an acknowledgement of the tentative ship date. A notification will be sent giving the date the COM must be received. If it is not received by the specified date, your ship date will be reassigned.

Where to ship COM:

Applies to:
- Xsede Tiles
- Cetra panels
- Tackboards compatible with Cetra
- Cable managers compatible with Cetra or Xsite
- Tiles compatible with Cetra
- Tiles compatible with Xsite

Kimball Office, Jasper
COM Department—Kimball Office
Dock 5
1037 East 15th Street
Jasper, IN 47549

Applies to:
- Interworks EQ panels
- Interworks EQ or Conferencing Solutions
- Tackboards compatible with Interworks EQ
- Cable managers compatible with Interworks EQ
- Flat profile cushion-top pedestals
- Bevel profile overheads
- Bevel profile highback organizers
- Bevel profile highback tackboards

Kimball Office, Post Falls
COM Department—Kimball Office
1881 West Seltice Way
Post Falls, ID 83854

Production of Order:

When COM production yardage is received, COM is cut for the order and inspected for flaws. If flaws are found, you will be notified of the additional fabric required.

A return tag (e.g. COD shipment, UPS call tag) is required from the specifier within 45 days of the acknowledged ship date or all excess COM yardage will be discarded.

Preapproved COM:

➤Contact your Customer Service Team to obtain information on preapproved COMs.

Repeat Fabrics:

It is Kimball Office standard process to match repeat fabrics on fabric covered Overhead and Highback Organizer doors.

Repeat fabrics will be matched in what Kimball Office deems the best possible application of the pattern.

Additional COM yardage is required for repeat fabrics.

Repeat	*Additional Yardage required per Overhead Door*
0–6"	None
6"–12"	0.166 yards
12"–18"	0.500 yards
18"–24"	0.666 yards
24" or more	1.000 yard

Note: If the customer requires that the repeat fabric be applied in a random fashion, Kimball Office requires written notification in advance of order processing to that effect.
➤Contact your Customer Service Team to obtain necessary waiver.

Checklist:

When ordering COM for Kimball Office products, please make sure you have done the following:
- Supplied vendor name, fabric name, color name and number.
- Supplied arrival date of COM to Kimball Office.
- Received application testing approval before sending purchase order (or signed waiver if not approved for application).
- Received U.L. listing before sending purchase order.

Paint ➤See page 133
Laminate 135
Panel Fabrics 141
COM 144

Kimball Office has analyzed each model to most accurately reflect the yardage requirements.

The yardage requirement for each model is listed for 66"W directional, 66"W non-directional, and 54"W directional, where applicable.

How to Use this Table

① Locate the model number
② Select yardage from the appropriate column for non-directional or repeat. For fabrics with nap, use the 1"–4" repeat column.

If you specify different panel fabrics for opposite sides of a panel, additional yardage may be required. ➤Contact Customer Care.

If COM fabric is to be "railroaded," contact Customer Care for yardage requirements.

➤See page 144 for COM policy and additional information.

How to Use this Table

① Locate the model number
② Select yardage from the appropriate column for non-directional or repeat. For fabrics with nap, use the 1"–4" repeat column.

If you specify different panel fabrics for opposite sides of a panel, additional yardage may be required. ➤Contact Customer Care.

If COM fabric is to be "railroaded," contact Customer Care for yardage requirements.

➤See page 144 for COM policy and additional information.

The table at right lists the operating load capacities (functional load) of various Kimball Office components. All components meet or exceed the ANSI/BIFMA Functional and Proof Loading requirements X5.6 2010 Panel System Test, X5.5 2008 Desk/Tables Products Test, and X5.9 2012 Storage Unit Test. The Operating Load Capacities listed represent the BIFMA functional loads which are equivalent to loads that can be expected in normal use of the component.

BIFMA

MEMBER
THE BUSINESS AND INSTITUTIONAL FURNITURE MANUFACTURER'S ASSOCIATION

Component	**Operating Load Capacity**	**Examples** (total weight [t.w.])
Worksurface	200 lbs. over 12" diameter area, concentrated loading 1.5 lb. per inch of perimeter, distributive loading	24"D x 72"W = 288 lbs. t.w.
Transaction counter	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	12"D x 60"W = 147 lbs. t.w.
Round and rectangular tables	1.5 lb. per inch of perimeter, distributive loading	36" dia. = 170 lbs. t.w. 36"D x 60"W = 288 lbs. t.w.
Pedestal drawer	.017 lb. per cubic inch of drawer interior filing space (hanging load on file hangers)	24"D x 18"W x 12"H wood = 88 lbs. t.w. 24"D x 15"W x 12"H metal = 73 lbs. t.w.
Pedestal shelves	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	22"D x 30"W = 134 lbs. t.w
Center-mount cabinet	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	36"W x 12"H metal = 163.5 lbs. t.w
Flipper door cabinet	Top shelf—NO load	
	Bottom shelf—.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading*	36"W x 16"H metal = 117 lbs. t.w. 36"W x 19"H wood = 140 lbs. t.w.
Open shelves	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	36"W x 8"H metal = 59 lbs. t.w. 36"W x 19"H wood = 140 lbs. t.w.
Lateral file drawers	.017 lb. per cubic inch of drawer interior filing space (hanging load on file hangers)	30"W x 18"D x 12"H metal = 110 lbs. t.w. 30"W x 24"D x 12"H wood = 147 lbs. t.w.
Bookcase and wardrobe shelves	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	36"W x 8"D metal = 59 lbs. t.w. 36"W x 12"D wood = 88 lbs. t.w.

Cubic inches should be calculated using this formula:
Surface length x surface depth x height of available storage above the surface (limited to 12 inches above the surface)

U.L. Information:

Only Underwriters' Laboratory (U.L.) listed electrical components are used in electrical devices and are so labeled. Xsede complies and is listed to U.L. 1286.

The customer is responsible for the proper application of products to the local codes under which installation must be made. Further specifications are available on request.
