
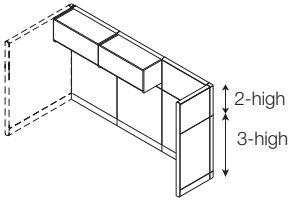
Hi-lo applications can be created by using a 1-high stacking frame next to a 2-high stacking frame. Specify appropriate hi-lo vertical trim for end of the run.

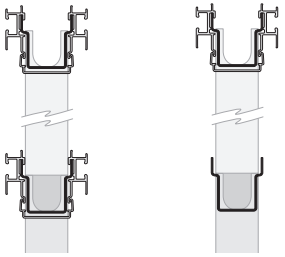
Planning Factors



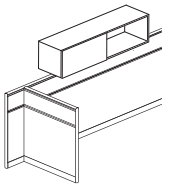
Stacking frames are loadbearing when same-height return runs are used at each end.

In hi-lo applications, stacking frames can be loadbearing, but require overheads on both sides.

Components must be hung on a top channel of either the base or stacking frame.



Xsite Traxx must be used at the top of the stacking frame on both sides. When stacking, the top of the base frame must have Xsite Traxx on both sides or neither side.



Center-mounted overheads can be positioned on top of stacking frames up to 4-high.

Technology tiles can be used on stacking frames where data is required; electrical cannot be accommodated because the power block mounting brackets must attach to the mid channel.

Specify mid-frame supports separately if using Xsite Traxx at the 1-high segment on a 2-high stacking frame.

Related Products

Stacking 3" extenders are available in 1-high and 2-high segments and may be added to base extenders of any height. They are available for use in straight panel runs (in-line), next to a connector, or at the end of a panel run; specify the appropriate designator for the application type. Base and stacking extender heights must be equal to the base and stacking frame heights to which they are attached. Specify top caps, Traxx and tiles to span across extenders for a seamless look.

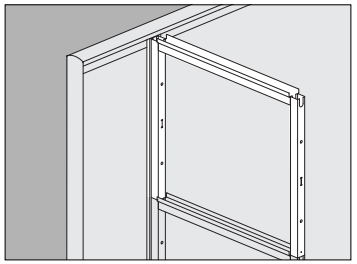
Vertical end trim and connectors must be specified to equal the combined height of the base and stacking frames.

Xsite Traxx and tiles complete the panel frame.
➤See page 137.

Stacking Off-Module Frames

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Details



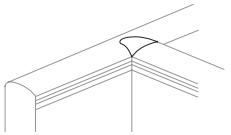
Stacking off-module frame is used to increase the height of a 2-high, 3-high, 4-high, or 5-high base off-module frame.
IMPORTANT: 3.5-high base off-module frames cannot accept stacking off-module frames.

Stacking off-module frames are available in 1-high and 2-high segments. They include:
- Welded frame
- Attachment hardware

Finishes & Materials

- Vertical frame: 16 gauge cold-rolled steel, black
- Horizontal frame: 14 gauge cold-rolled steel, black

Connections



Top cap splice, shipped standard with the stacking off-module frame, transitions the top cap at the connection point.

One 1-high or 2-high stacking off-module frame may be added to the base off-module frame (except 3.5-high).

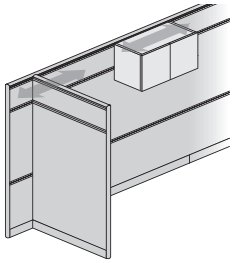
Stacking frame must attach to at least one Xsite Traxx in the spine run.

Power & Data

Power and data cannot be routed from the spine run into an off-module run.

Planning Factors

Stacking frames are loadbearing when wing panels are used at each end.



Height of off-module run (base plus stacking frame height) must be equal to the loadbearing height of the spine run.

Specify mid-frame supports separately if using Xsite Traxx at the 1-high segment of a 2-high stacking frame.

Full-width tiles positioned on the spine run behind the off-module frame allow the off-module run to be easily reconfigured.

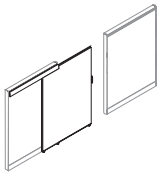
Related Products

Xsite Traxx and tiles complete the panel frame.
➤See page 137.

Sliding Privacy Door

Features ➤See page 116
Door Placement 130
Locking Information 123

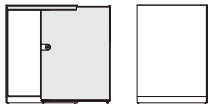
Details



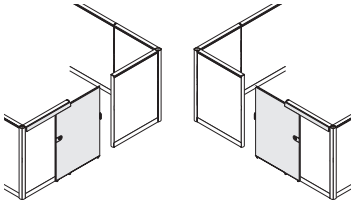
Sliding privacy doors provide a visual signal for heads down and uninterrupted work. Privacy doors are lightweight and do not have a threshold or header for a sleek design. They are not intended for use as a security door. Models include:

- Door frame and insert
- Hardware kit:
  - –Two roller wheels and attachment hardware
  - –Top guide assembly
  - –Bottom guide with alignment bracket and guide rod

Five heights are available: 3.5-high, 4-high, 5-high, 6-high, and 7-high to correspond to Xsite frame heights.

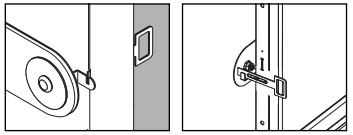


Two widths are available: 36"W and 42"W. Actual door width is 6” wider so that when closed, the door overhangs the host frame to which it is attached. Both widths meet ADA requirements for 5 lb. pull force to open and 32" minimum clearance.



Left-Hand Right-Hand

Doors are specified to open left or right. The host frame to which the sliding privacy door’s top guide is attached determines handedness.



Locking models feature a drilled hole, into which lock assemblies, included but shipped separately, are field installed on the outside of the door. Lock engages in the end trim of the host panel on the back side of the door face at 38½" from the floor. A safety release latch is installed on the inside. Locking models include:

- Lock housing, core, and key (key random option): black or matte nickel (silver)
- Safety release latch
- Lock plate
- End trim with notch for lock engagement for the host panel

Note: Key specific option is available.

➤See page 123 for more detailed locking information.

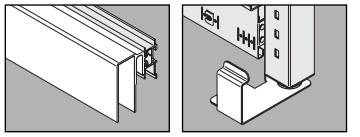
ADA-compliant door handle is available for field installation; specified separately.

U.L. listing 1286.

Finishes & Materials

- Frame: painted aluminum
- Insert: reeded polycarbonate
- Roller wheels: medium-hard durometer
- Top guide: painted steel
- Bottom guide: painted steel

Connections



Top and bottom guides affix to the panel frame. Top guide attaches to Traxx and adds 1⅝" to the overall panel thickness. Bottom guide is installed under the wireway and panel glide and prevents over extension.

Privacy doors can be added into an existing installation with 42" or 48"W panels. The wireway cover on the panel will have to be removed so the bottom glide can be installed.

➤See planning factors.

Stacking frames can be used with privacy doors. Specify end trim to match the full height of the panel.

Frames with glass tiles can be used with privacy door; however, when the door is open, the glass will be covered.

Planning Factors

Width of the panel frame to which the door attaches must be 6" wider than the door opening. For example, a 42"W door is installed on a 48"W; a 36"W door must be installed on a 42"W frame.

Height of the panel frame to which the door attaches must be equal to or taller than the privacy door. For example, a 5-high door can be used on a 7-high panel with Traxx at the 5-high position only. A 3.5-high can only be used with a 3.5-high frame.

Locking models overhang the door opening by 2" when in the open position; non-locking models recede fully over the host frame.

Electrical cannot be installed in the base wireway of the host frame.

Changing a non-locking privacy door to locking after installation is not recommended.

When installing on carpeted floors, the carpeting should have a face weight of more than 24 oz and a density level above 6000 per square yard.

➤See page 122 for additional application guidelines

Sliding Privacy Door

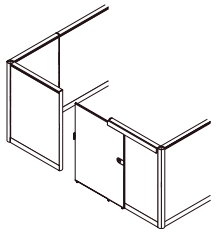
Application Guidelines

Door Placement Guidelines

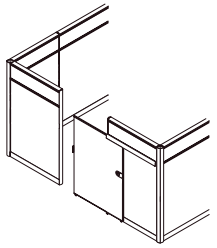
Features ➤See page 116
Product Information 125
Locking Information 123

IMPORTANT: Sliding privacy doors "float" in the top channel and will follow the slope (if any) of the Xsite frame and floor. Any unevenness of the floor will be reflected in how the door matches up against the abutting wall or panel, and may result in a less-than-true vertical line when the door is in the closed position against the abutting panel or wall.

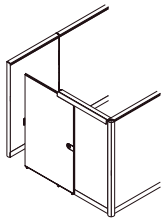
The door sits off the face of the host panel by ¾".

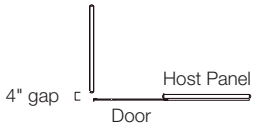


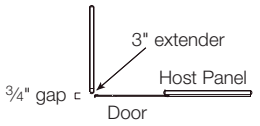
- Door may be the same height as the host frame or host frame plus a stacking frame.
  Note: 3.5H sliding privacy door can only be used on a 50"H frame.



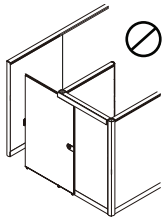
- Door may be shorter than host frame or host frame plus stacking a frame.
  Note: Must have Traxx at the door height to accept top guide.



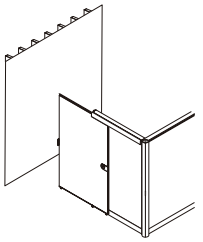




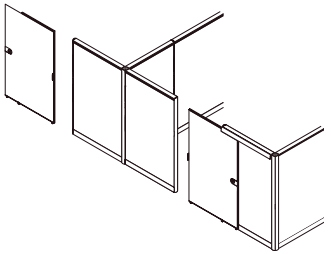
- Door may abut a perpendicular panel run. It is recommended that the abutting panel include a 3" extender to minimize gap.



- Door cannot travel across a connector due to the space consumed.

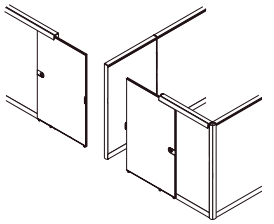


- Door can abut a building wall.
  ➤See note at far left.

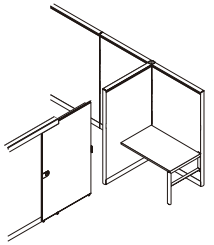


- Multiple doors may be installed in a panel run. Follow the same application guidelines for Xsite panel runs.
  ➤See page 130.

- Cannot be used on a host frame that is attached to a wall using a wall-mount channel due to interference with the top guide.



- Any floor variation will be reflected in the privacy doors as they come toward the center.



- Can be positioned inside the workstation; consider the location of worksurfaces, overhead storage and accessories.

Sliding Privacy Door

Application Guidelines

Locking Information

GSA SIN 711-1

Features ➤See page 116
Product Information 125
Door Placement 130

Locking privacy doors can be specified as:

- Key random with a black lock core and hinged key (KRB);
- Key random with a silver (matte nickel) lock core and round-head key (KRS); or
- Key specific black (KSB);
- Key specific silver (KSS)

Key Random Option:

When key random option is selected, key numbers will be assigned arbitrarily at the factory with key numbers ranging from KSCB001 to KSCB300 (black) or KSCG001 to KSCG100 (silver).

Randomly numbered lock core(s) will ship standard along with your order for field installation.

With random keying, different furniture units may or may not have the same key number. If you must have all locks keyed differently or all locks keyed the same, choose the key specific option.

Key Specific Option:

When a key specific option is selected, the sliding privacy door will be pre-drilled and fitted with hardware to accept either a black or silver lock core; however, no lock cores will be shipped standard with the unit. The price of the unit is reduced by the price of the lock core or cores.

You must specify lock core(s) separately for key specific option; specify any key number from KSCB001 to KSCB300 (black) or KSCG001 to KSCG100 (silver).

To key all the sliding privacy door units in a workstation or department alike, choose a key specific option and order the quantity of locks needed for your installation.

Black lock cores and hinged keys are identical to the ones used with Footprint storage.

Silver lock cores and round keys are matte nickel. These lock cores and keys are identical to the ones used with Definition, Fluent and Hum. Minds at Work. series.

Standard key that ships with the lock core can be used for the initial installation of the lock core in the field.

Change key model KSCD1CK allows removal of keys within these ranges:
KSCB001–KSCB300
KSCG001–KSCG100

IMPORTANT: A change key, specified separately, is required to remove lock cores in the field.

Master key model KS2GMK will unlock any lock within these key ranges:
KSCB001–KSCB300
KSCG001–KCCG100

Model/Key Range	*Price*
Black Lock Cores	
KCCB001 to KCCB300	$22
Silver Lock Cores	
KSCG001 to KSCG100	$22
Change Key	
KCCB1CK	$6
Master Key	
KC2GMK	$12

How to Specify

❶ Specify exact key number for lock cores as the model number or model number for change or master key

Hinged Door

Features	➤See page 116
Application Guidelines	130
Power & Data Overview	146
Electrical Guidelines	152

Details

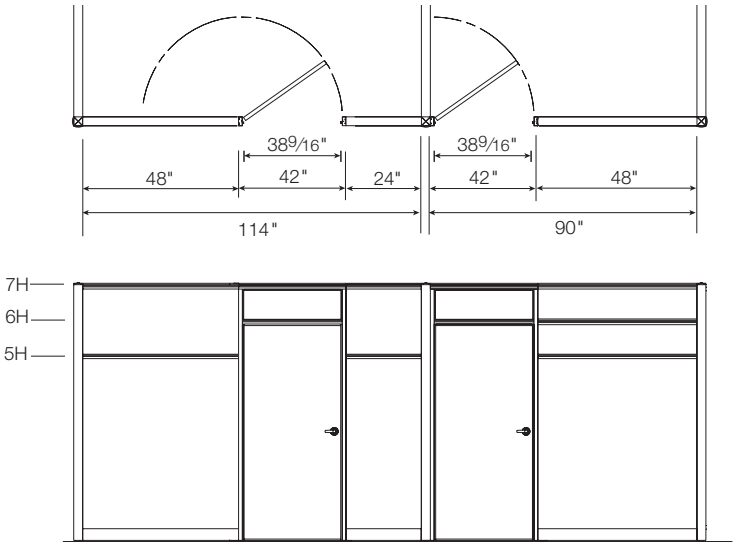
Hinged doors are available in 36" and 42"W models; both are available with a right or left hinge. Right-hinge model shown at left.

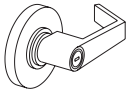
Actual door width for 36"W is 32 9/16"W; 42"W door is 38 9/16" (shown above). 42"W hinged doors are appropriate for ADA compliance.

Hinged door units are designed as 7-high to accommodate the 6-high door with a 1-high tile above it. Adjacent panels must also be 7-high.

The door assembly includes:
- Door
- Attachment hardware
- Door stop and pre-assembled frame
- Door frame consisting of rubber bumpers, threshold, and mid-header
- Top header
- Two-piece vertical door jamb

Top header and mid-header resemble Traxx, but will not support components.





Locking lever is available and is suitable for ADA guidelines.

Finishes & Materials

- Door: honeycomb core overlaid with veneered 5/16" MDF (paint or wood finish)
- Door frame: aluminum, paint
- Lever/lock: satin chrome
- Threshold: anodized aluminum, black

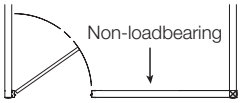
Connections

Door frames attach directly to the adjacent frame using frame-to-frame alignment bolts. Door frames attach to connectors using connector bolts.

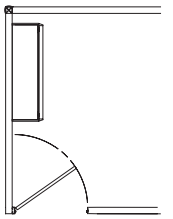
Use an adjustable wall-mount channel to attach a hinged door frame to a building wall. Connector will provide 3/4" of adjustability for out-of-plumb walls.
➤See page 127.

Planning Factors

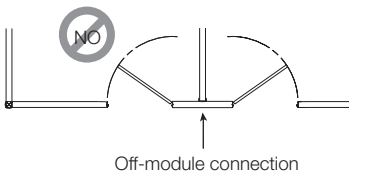
Off-module frames should not be used to support panel runs that include doors.



Panel runs with doors are not considered loadbearing.



Panel runs perpendicular to runs with doors are considered loadbearing, provided that panel run application guidelines are followed.
➤See page 130.



Off-module panel runs are not suitable to provide support for the door.

Related Products

Top cap must be specified separately to span across the door frame.
➤See page 128.

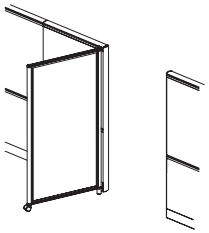
Tiles must be specified separately. Specify 33"W tile for 36"W doors and 39"W tile for 42"W doors.
➤See page 141.

Privacy Panels

Product Information

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Details



Privacy panels provide a non-latching, pivoting panel solution for added privacy in workstation environments.

Privacy panels are 5-high and available in 36" and 42" widths. They are available in three designs: fabric on both sides, fabric/marker board combination, or translucent.

Privacy panel models include:
- Top attachment bracket
- Base pivot bracket
- Caster

Fabric and fabric/marker board combination privacy panels have an extruded aluminum frame. Interior is fiberglass over a honeycomb panel.

Translucent privacy panels feature a ribbed pattern to provide privacy, yet allow light to pass through. Frame is extruded aluminum.

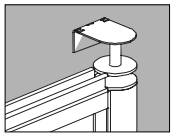
Single caster allows privacy panel to pivot open or closed.

Finishes & Materials

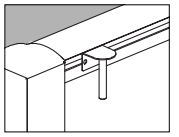
Privacy Panel Frame
- 462 Cinder paint
- 501 Platinum metallic paint

Privacy Panel Inserts
- Kimball Office panel fabric
- Marker board (488M Frosty White)
- Translucent

Connections

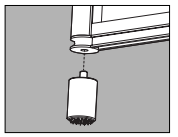


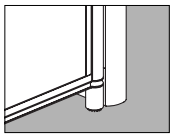
Top bracket



Top bracket shown on Xsite panel

Top attachment bracket is used to mount the privacy panel to any 5-high Xsite panel. Top bracket attaches into Xsite Traxx and can be easily relocated.





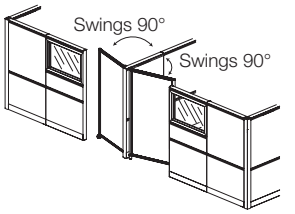
Base pivot bracket features a carpet gripper to hold bracket in place while allowing the privacy panel to swing.

Privacy panels abut the opposite panel, but do not latch.

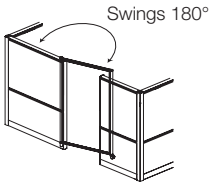
Non-handed and reversible, privacy panels can be mounted left or right, and can be flipped so the marker board or different fabrics can be positioned inside or outside the workstation.

Planning Factors

Privacy panels can be mounted in any 5-high or higher application, providing there is Xsite Traxx at the 5-high position.



When mounted to the perpendicular panel (on one or both sides) in an L or T configuration, panel swings 90°.



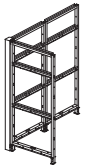
When mounting in a straight panel run, specify privacy panel to be wider than the opening to allow for proper clearance. Panel swings 180° to lay flat against the Xsite panel.

It is recommended that the privacy panel be specified to swing into the workstation.

Connectors

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Details



Connectors are available to join two or more panels when changing directions in a panel run. Connectors are constructed of extruded aluminum and have a flat profile. They are painted or covered with premium grade veneer.

Connectors can be used in the following configurations:
- L (2-way 90°)
- T (3-way 90°)
- X (4-way 90°)
- Straight (180°)
- V (2-way 120°)
- Y (3-way 120°/120°/120°)

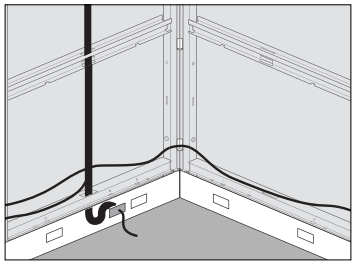
Top cap, vertical trim, and connecting bolts are included with each connector.

Connector top caps are curved profile to match panel top caps.

Finishes & Materials

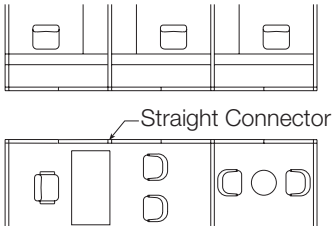
- Connector frame: extruded aluminum, black
- Connector (vertical trim): wood or paint
- Top cap: wood or paint

Power & Data



Cut outs are provided at 2-high just below the worksurface, and just above the wireway for routing cables through the connector.

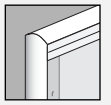
Planning Factors



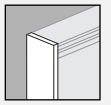
Straight connectors fill parallel panel runs where one panel run has a connector and the other does not. It is not required to join panels.

Specify appropriate connectors for the combined height of standard and stackable panels.

Trim Profiles:

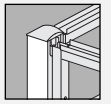


Curved



Flat

Applies to end trim, hi-lo end trim, and top caps.



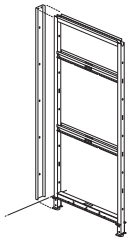
Flat

Applies to connectors (vertical trim) and frameless glass top caps.

Adjustable Wall-Mount Channels

Features	➤See page 116
Application Guidelines	130
Power & Data Overview	146
Electrical Guidelines	152

Details



Adjustable wall-mount channel is used to accommodate out-of-plumb wall conditions when attaching a panel run directly to a building wall. It allows for 3/4" adjustment.

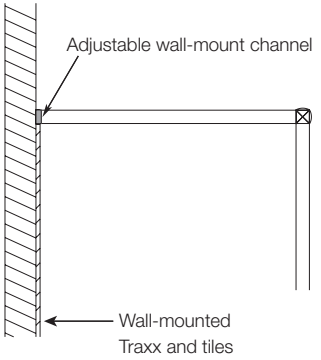
Finishes & Materials

- 20 gauge cold-rolled steel

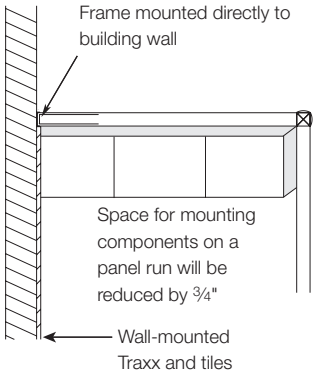
Connections

Attachment fasteners are not included. The installer should select and purchase the proper fasteners for the specific wall application.

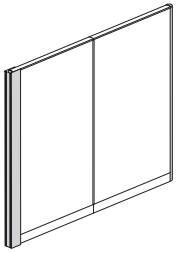
Planning Factors



Thickness of an adjustable wall-mount channel is the same as wall-mounted Traxx. The wall mount channel can be used to "shim out" from the wall in applications where Traxx will be adjacent too, but not used for attaching the frame to provide proper alignment.



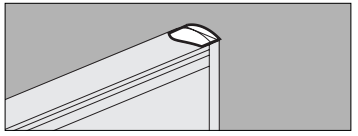
If you choose not to use an adjustable wall-mount channel in a wall-mount application, the available space for mounting components on the panel run perpendicular to the building wall will be reduced by 3/4" where wall-mounted Traxx and tiles extend from the wall and abut the frame.
Note: To eliminate this condition, use an adjustable wall-mount channel to shim out from the wall.



The panel run must consist of at least two tiles. Wall-mount channels are U-shaped and a single tile cannot be inserted once trim or connectors have been installed at the end of the run.

Not for use with sliding privacy doors.

Related Products



Top cap splice can be specified separately to cover the top of an adjustable wall-mount channel when using curved profile top caps.
➤See page 188.

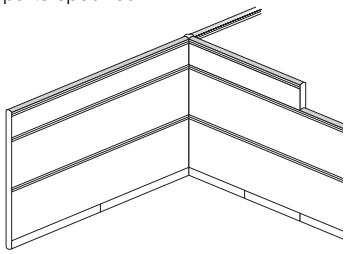
Top Caps and End Trim

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Details

Top caps finish the top of the frame and conceal data cables in the top channel.

Specify a monolithic top cap where possible to provide a seamless look and to reduce the number of parts specified.

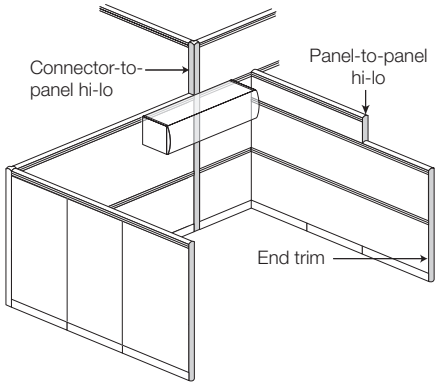


Top caps are available in widths up to 8'. They can be field scribed, if necessary.
Note: Top caps are available in additional widths in 3" increments up to the largest standard size. Use your electronic specification tools to specify.

End trim covers the vertical frame edge at the end of each panel run.

Hi-lo trim finishes off the vertical end of frames when transitioning heights.

Panel-to-panel and connector-to-panel hi-lo trims are available.



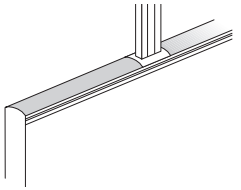
Finishes & Materials

- Top caps: wood or paint
- End trim: wood or paint

Connections

Top caps fit securely onto frames using a pressure-fit attachment method.

Related Products



Notched top cap, included with power/data pole, is available in 6" increments from 24" to 48"W.

Top caps for use with frameless glass are pre-drilled to accept frameless glass holders.
➤See page 129 for details.

Overall Panel Heights:

The chart below shows the overall panel height including the top cap, frame, and glides.

Panel Height	*with Curved Top Cap*	*with Flat Top Cap*
2-high	30"H	29¾"H
3-high	42 19/32"H	42⅜"H
3.5-high	49`17/32"H	49 9/32"H
4-high	55 7/32"H	54 29/32"H
5-high	67 13/16"H	67 17/32"H
6-high*	80⅜"H	80 3/16"H
7-high*	93"H	92¾"H

* 5-high base frame with stacking frame.

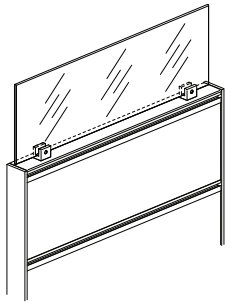
Frameless Glass

Product Information

Panes and Top Caps

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

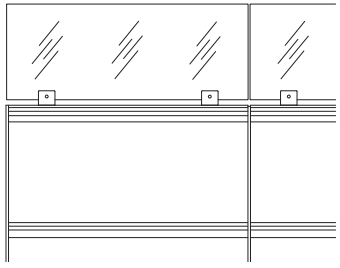
Details



Frameless glass is available as a clear or etched, 3⁄8"-thick, tempered glass pane with flat polished edges.

Top cap for use with frameless glass pane must be specified separately. Top cap model includes:

- Flat profile top cap with pre-drilled holes
- Choice of extruded aluminum rail or two aluminum brackets with attachment hardware

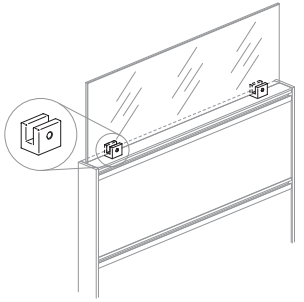


Glass sits 9⁄16" off the top cap when installed.

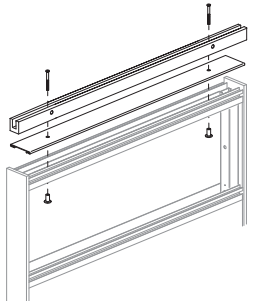
Finishes & Materials

- Pane: clear or etched, tempered glass
- Brackets or rail: aluminum, paint
- Top cap: metal, paint

Connections



Glass pane is centered between the two brackets (shown) or rail.

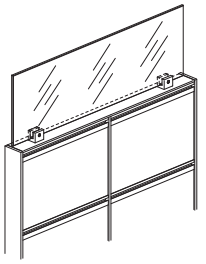


Top cap for use with frameless glass features pre-drilled holes, which allow the brackets or rail (shown) to be securely bolted to the panel frame in the field and facilitates correct placement.

Planning Factors

Frameless glass is not loadbearing. Hanging components or accessories on frameless glass is not recommended.

Frameless glass cannot be scribed in the field.



Width of the frameless glass pane must be the same width as the top cap. Both should be specified to match the width of the panel frame to which they will attach or the combined width if spanning over two or more frames up to 96"W. For example, a 96"W pane and top cap can span two 48"W frame or four 24"W frames.

Specify hi-lo models for the lower panel in a hi-lo application. Glass and top cap widths have been adjusted to accommodate the vertical hi-lo end trim.
Note: Hi-lo-hi application is not possible due to the width of the glass.

Lay-in cabling can be accommodated in the top channel. The frameless glass and glass holders will have to be removed to access the interior of the panel and cables.

3.5-high base frames can accept frameless glass, but the overall height will not line up with a 4-high panel.

Frameless glass is not recommended on low panels adjacent to high-traffic areas.

Xsite frameless glass models cannot be used on Cetra; likewise, Cetra frameless glass models cannot be used on Xsite.

Customer-supplied glass can be used with frameless glass top caps with brackets or rail. Customer's glass should be 3⁄8"-thick tempered glass or other safety material. The width of the glass should be 1⁄8" less than the width of the panel frame to which it will attach; for hi-lo applications, the glass should be 5⁄8" less wide than the panel.

Overall Heights:

Panel Height	*Overall Height incl. Frameless Glass*
2-high	42 3⁄8"
3-high	54 15⁄16"
3.5-high	61 29⁄32"
4-high	67 9⁄16"
5-high	80 1⁄8"
5-high + 1 stacking	92 3⁄4"
5-high + 2 stacking	105 3⁄8"

Codes:

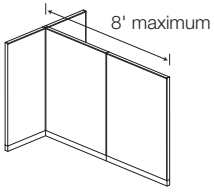
U.L. Listing 1286

Panel Configurations

Without Components

Features ➤See page 116
Power & Data Overview 146
Electrical Guidelines 152

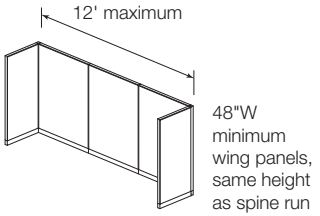
Unsupported Span:



- 8' maximum
- 2 panels maximum; and
- Minimum wing panels

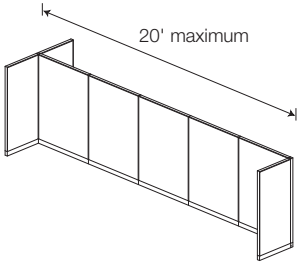
➤See minimum wing panel chart at right.

C-Shaped Workstation:



- 12' maximum
- 48"W minimum wing panels on both ends

T or Wall on One Side:



- 20' maximum
- Minimum wing panel on one end
- T or wall on at least one side

➤See minimum wing panel chart at right.

Note: Frameless glass does not affect application guidelines on this page.

Definitions:

Unsupported panel runs—
Runs not attached on BOTH ends to a wall, wing panel, or floor support.

Floor support—
Undersurface storage units, support panels, or column legs

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage.

Height of Panel Run	Minimum Wing Width
2-high (30")	30"
3-high (42")	30"
3.5-high (50")	36"
4-high (54")	36"
5-high (68")	36"
6-high (80")	48"
7-high (93")	48"

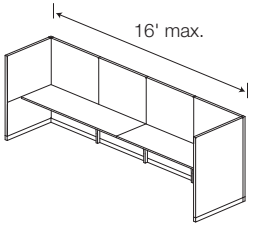
IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 6-high and 7-high runs and any height C-shaped workstations must be the same height as the spine run and 48"W.

Panel Configurations

Without Overhead Storage

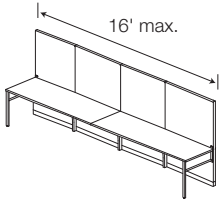
Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Supported Runs:



- 16' maximum
- Mid-supports
- Minimum wing panels or 2 support legs; and
- No overheads
- With or without frameless glass

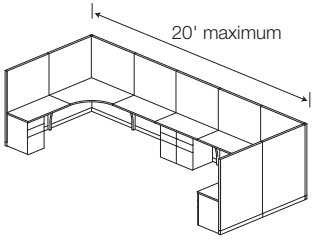
➤See minimum wing panel chart at right.



- 16' maximum
- Mid-supports
- Support legs or wing panels
- No overheads
- With or without frameless glass

Note: Not applicable with adjustable mid-supports.

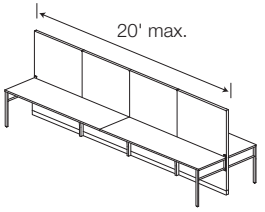
C-Shaped Workstation:



- 20' maximum
- Mid-supports
- Minimum wing panels
- 2 floor supports mid-run, minimum;
- Floor supports at end of wing panels, and
- No overheads
- With or without frameless glass

➤See minimum wing panel chart at right.

Balanced back-to-back:



- 20' maximum
- Balanced back-to-back
- Mid-supports
- Support legs, storage, or wing panels
- No overheads
- With or without frameless glass

IMPORTANT Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, support legs, or undersurface storage.

Definitions:

Unsupported panel runs—
Runs not attached on BOTH ends to a wall, wing panel, or floor support.

Floor support—
Undersurface storage units, support panels, or column legs

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage.

Height of Panel Run	Minimum Wing Width
2-high (30")	30"
3-high (42")	30"
3.5-high (50")	36"
4-high (54")	36"
5-high (68")	36"
6-high (80")	48"
7-high (93")	48"

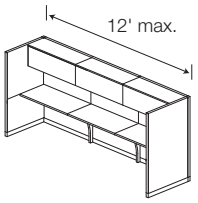
IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 6-high and 7-high runs and any height C-shaped workstations must be the same height as the spine run and 48"W.

Panel Configurations

With Overhead Storage

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

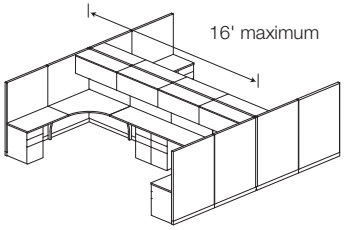
Supported Run:



- 12' maximum
- Mid-supports; and
- Minimum wing panels or one wing panel and one end-support leg
- With or without frameless glass
- For hi-lo applications with stacking frames: overheads balanced back to back (for hi-lo with full frames: overheads can be on one side only)

➤See minimum wing panel chart on page 130.

Balanced Back-to-Back:

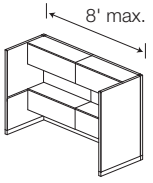


- 16' maximum
- Mid-supports
- Minimum wing panels; and
- Balanced back-to-back
- With or without frameless glass

➤See minimum wing panel chart on page 130.

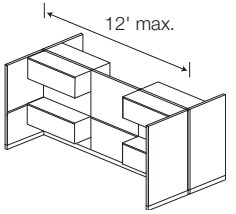
Note: Runs over 12' are required to be balanced back-to-back.

Stacked Overheads, Unbalanced:

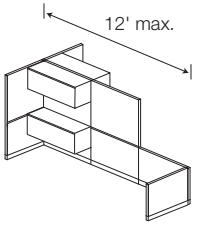


- 8' maximum
- 2 overheads stacked, maximum
- 4 overheads total
- Minimum wing panels
- With or without frameless glass

Stacked Overheads, Balanced Back-to-Back:



- 12' maximum
- 4 overheads per side maximum
- Balanced back to back
- Minimum wing panels
- With or without frameless glass



- 8' maximum stepped run
- Two overheads per side maximum;
- Balanced back to back
- Minimum wing panels
- With or without frameless glass

When stacking overheads, place the following at least two Traxx segments apart (e.g., at 3-high and 5-high):

- Square profile standard- or reduced-height hinged door overheads
- Square and radius profile reduced-height flipper door overheads
- Radius profile standard- or reduced-height hinged door overheads
- Lunar, curved, bevel overheads
- Flat profile overheads

When stacking overheads, place the following at least three Traxx segments apart (e.g., at 3-high and 6-high):

- Square profile standard-height flipper door overheads
- Radius profile standard-height flipper door overheads

➤See clearance chart at left.

IMPORTANT Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, support legs, or undersurface storage.

Definitions:

Unsupported panel runs—
Runs not attached on BOTH ends to a wall, wing panel, or floor support.

Balanced back-to-back—
Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Stacked Overhead Clearances:

These clearances apply between rows of overheads when placed two Traxx segments apart on 4- to 7-high panels or at 2-high and 3.5-high on a 3.5-high panel:

Overhead Profile	Clearance 4- to 7-high	Clearance 3.5-high
Square/Radius (19"H)		
–Hinged Doors	8.7"	3.0"
–Flipper Door*	19.1"	13.4"
Square/Radius (16"H)		
–Hinged Doors	8.7"	3.0"
–Flipper Door	8.7"	3.0"
Lunar	10.8"	5.1"
Curved	9.8"	4.1"
Bevel/Flat	8.7"	3.0"
Cubby	17.2"	11.5"

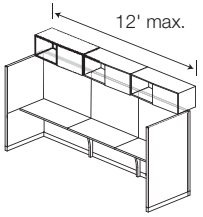
* Placed three segments apart. Not recommended on 3.5-high frames.

Panel Configurations

With Center-Mounted Overhead Storage

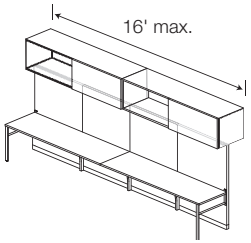
Features	➤See page 116
Application Guidelines	130
Power & Data Overview	146
Electrical Guidelines	152

Supported Run:



- 12' maximum
- Mid-supports; and
- Minimum wing panels or one wing panel and one end-support leg

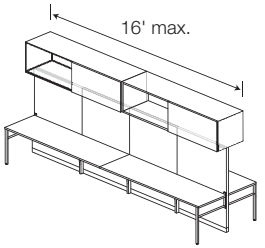
➤See minimum wing panel chart on page 130.



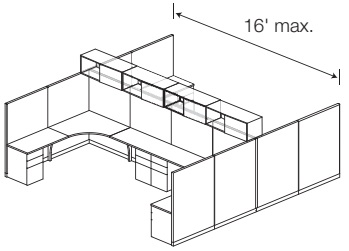
- 16' maximum
- Mid-supports
- Minimum wing panels; or
- Support legs, storage or wing panels

Note: Not applicable with adjustable mid-supports due to stability. Not recommended for 5H or stacking frames.

Balanced Back-to-Back:



- 16' maximum
- Balanced back-to-back
- Mid-supports
- Support legs, storage or wing panels

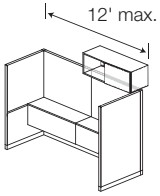


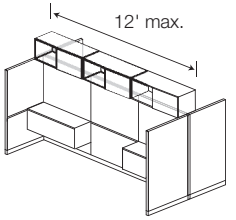
- 16' maximum
- Mid-supports
- Minimum wing panels; and
- Balanced back-to-back
- With or without frameless glass

➤See minimum wing panel chart.

Note: Runs over 12' are required to be balanced back-to-back.

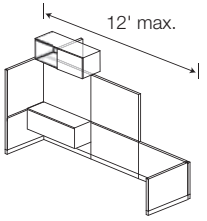
Stacked Overheads:





- 12' maximum
- Traxx-mount and center-mount overheads:
- Minimum wing panels
- With or without frameless glass

Note: Consider potential bracket interference if stacking center-mount above Traxx-mount overheads.



- 12' maximum stepped run
- Traxx-mount and center-mount overheads:
- Two overheads per side maximum;
- Balanced back to back
- Minimum wing panels
- With or without frameless glass

IMPORTANT Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, support legs, or undersurface storage.

Definitions:

Unsupported panel runs—
Runs not attached on BOTH ends to a wall, wing panel, or floor support.

Balanced back-to-back—
Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Center-Mount Overhead Heights:

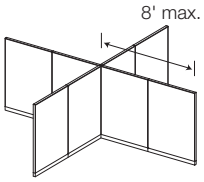
Panel		***Top Cap***	
Config.	Height	Flat	Curved
Floor to Top of Overhead			
2H	29 1/2"	44 3/16"	44 9/16"
3H	42 1/8"	56 13/16"	57 3/16"
3.5H	49 1/32"	63 11/16"	64 1/16"
4H	54 23/32"	69 3/8"	69 3/4"
5H	67 5/16"	82"	82 3/8"
5H+1H	79 15/16"	94 5/8"	95"
5H+2H	92 9/16"	107 1/4"	107 5/8"
Wskf. to Bottom of Overhead			
3H	42 1/8"	13 3/8"	13 3/4"
3.5H	49 1/32"	20 1/4"	20 5/8"
4H	54 23/32"	25 15/16"	26 5/16"
5H	67 5/16"	38 9/16"	38 15/16"
5H+1H	79 15/16"	51 3/16"	51 9/16"
5H+2H	92 9/16"	63 13/16"	64 3/16"

Panel Configurations

X Configurations

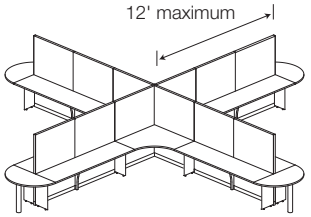
Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

Unsupported Run:



- 8' maximum
- With or without frameless glass

Without Overhead Storage:



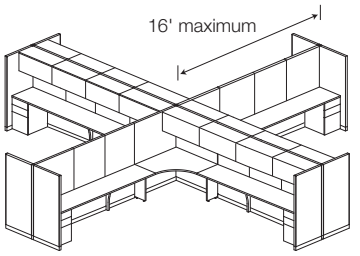
- 12' maximum
- Mid-supports;
- 12"D support panels;
- No overheads;
- Balanced back-to-back; and
- Column legs or stick legs for D-shape spanners
- With or without frameless glass

If adding center-mount or balanced, back-to-back overheads, or eliminating D-shape spanners, full-depth support panels are required on the ends of straight worksurfaces.

If adding overheads that will not be back to back, wing panels are required.
➤See minimum wing panel chart at right.

Mid-supports can also be used in place of 12"D support panels in balanced back-to-back applications.

With Overhead Storage:



- 16' maximum
- Mid-supports;
- Minimum wing panels or end-support legs; and
- Balanced back-to-back or center-mount overheads
- With or without frameless glass

➤See minimum wing panel chart at right. Total wing panel width must follow guidelines.

IMPORTANT Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, support legs, or undersurface storage.

Definitions:

Unsupported panel runs—
Runs not attached on BOTH ends to a wall, wing panel, or floor support.

Balanced back-to-back—
Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage.

Height of Panel Run	Minimum Wing Width
2-high (30")	30"
3-high (42")	30"
3.5-high (50")	36"
4-high (54")	36"
5-high (68")	36"
6-high (80")	48"
7-high (93")	48"

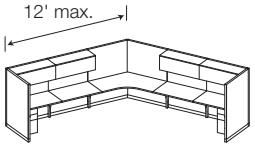
IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 6-high and 7-high runs and any height C-shaped workstations must be the same height as the spine run and 48"W.

Panel Configurations

120°/V and 120°/Y Configurations

Features	➤See page 116
Application Guidelines	130
Power & Data Overview	146
Electrical Guidelines	152

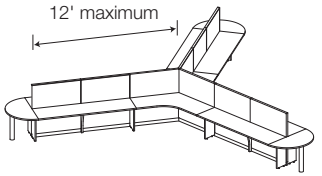
120°/V:



- 12' maximum
- Mid-supports; and
- Minimum wing panels or end-support legs;
- Floor supports on end of runs
- With or without frameless glass
- With or without face-mount or center-mount overheads

➤See minimum wing panel chart at right.

120°/Y without Overheads:

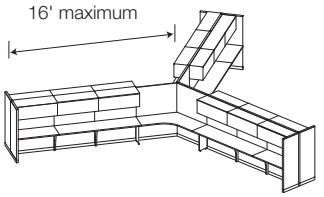


- 12' maximum
- Mid-supports;
- Minimum wing panels or floor supports on ends of runs;
- Column legs or stick legs for D-shaped spanners; and
- No overheads
- With or without frameless glass

➤See minimum wing panel chart at right.

Maximum run can be extended to 16' when panels are balanced back to back. Wing panels are required. Total wing panel width must follow guidelines.

120°/Y with Overheads:



- 16' maximum
- Mid-supports
- Minimum wing panels or end-support legs;
- Balanced back-to-back face-mount or center-mount overheads; and
- One floor support mid-run, minimum
- With or without frameless glass

➤See minimum wing panel chart at right.
at right. Total wing panel width must follow guidelines.

IMPORTANT Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, support legs, or undersurface storage.

Definitions:

Floor support—
Undersurface storage units, support panels, or column legs

Balanced back-to-back—
Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage.

Height of Panel Run	Minimum Wing Width
2-high (30")	30"
3-high (42")	30"
3.5-high (50")	36"
4-high (54")	36"
5-high (68")	36"
6-high (80")	48"
7-high (93")	48"

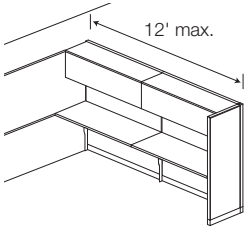
IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 6-high and 7-high runs and any height C-shaped workstations must be the same height as the spine run and 48"W.

Panel Configurations

Wall and Traxx-Mounted Configurations

Features ➤See page 116
Application Guidelines 130
Power & Data Overview 146
Electrical Guidelines 152

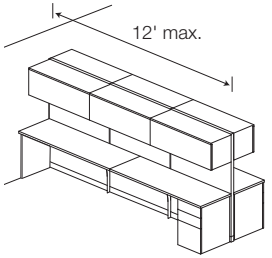
Unbalanced:



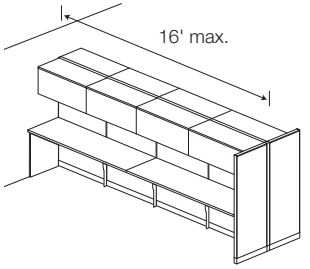
- 12' maximum
- Mid-supports;
- Floor support or wall-mounted Traxx to support worksurface end; and
- Minimum wing panel
- With or without frameless glass
- With or without face-mount or center-mount overheads

➤See minimum wing panel chart at right. Total wing panel width must follow guidelines.

Balanced Back-to-Back:

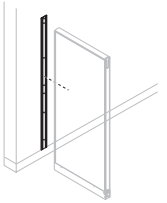


- 12' maximum
- Mid-supports
- Floor supports or wall-mounted Traxx to support worksurface end;
- Two minimum wing panels, support legs, or two full-depth support panels at the end of the run; and
- Balanced back-to-back
- With or without frameless glass
- With or without face-mount or center-mount overheads



- 16' maximum
- Mid-supports
- Floor supports or wall-mounted Traxx to support worksurface end;
- Two minimum wing panels at the end of the run; and
- Balanced back-to-back face-mount or center-mount overheads; and
- With or without frameless glass

➤See minimum wing panel chart at right. Total wing panel width must follow guidelines.



Wall-mount brackets and Traxx starter kits must be secured to the building wall by fastening into the stud or by using drywall fasteners. Selection and purchase of the proper attachment fasteners for your wall is the responsibility of the installer.

IMPORTANT Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, support legs, or undersurface storage.

Definitions:

Floor support—
Undersurface storage units, support panels, or column legs

Balanced back-to-back—
Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage.

Height of Panel Run	Minimum Wing Width
2-high (30")	30"
3-high (42")	30"
3.5-high (50")	36"
4-high (54")	36"
5-high (68")	36"
6-high (80")	48"
7-high (93")	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 6-high and 7-high runs and any height C-shaped workstations must be the same height as the spine run and 48"W.

Xsite Traxx and Tiles

Overview

Features ➤See page 116
Tile Height Relationships 138
Xsite Traxx 140
Tiles 141

Xsite tiles are available in widths ranging from 3" to 96" and in heights of 1- to 5-high segments. Segments are nominally 12⅝"H. Additional heights—.5-, 1.5-, and 3.5-high tiles—correspond to 3.5-high frames. Xsite tile types include:

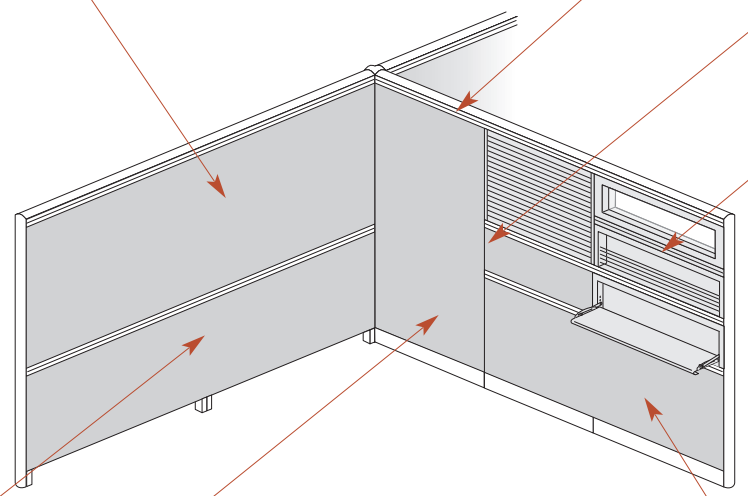
- Tackable acoustical
- To-the-floor tackable acoustical
- Glass
- Metal (perforated or embossed)
- Wood
- Laminate
- Paint
- Storage
- Fold-down
- Technology
- Power/data
- Marker board
- Slat
- Pass-thru

➤See page 138 for available sizes by tile type.

Tiles can span two or more frames on the interior or exterior of a workstation. Tiles cannot span over connectors.

Tile heights can be mixed on a panel run to create a segmented, vertical monolithic, or horizontal monolithic look.

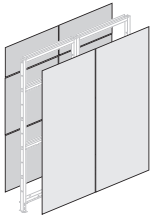
Note: Product information and application guidelines for technology tiles and power/data tiles are located in the Xsite Power and Data section.
➤See pages 156 and 162.



Xsite Traxx provides support for Xsite tiles, holding tiles in place at the top and bottom. They can also support worksurfaces, storage, and accessories.

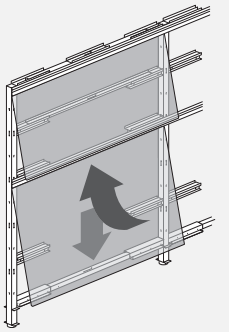
Tiles are installed side-by-side with no panel reveals to create a virtually seamless appearance.

3"D interior of frame can be utilized by specifying storage, fold-down, technology, power/data, or pass-thru tiles.



Tiles can vary in both height and width from one side of the frame to the other. Each side of the frame is independent of the other, allowing for different aesthetics and accommodating different functions. One side can provide a private office look while the other offers a segmented, highly personalized space.

How Tiles are Mounted:



Tiles lift in and lower into place. They are inserted into the Xsite Traxx at the top and rest on either a lower Xsite Traxx or the frame's bottom channel when in the 1st segment.

Xsite Traxx must extend the entire width of both the top and bottom of each tile. Mid-frame supports are required at each Traxx location that will support worksurfaces or storage. *Exception: Tiles that rest on the bottom channel use Traxx at the top of the tile only.*

Tiles may be omitted on panel runs where visually acceptable, provided no components are on the affected side of the frame.

Frame and Tile Height Relationships

Features	➤See page 116
Tile Availability Matrix	139
Xsite Traxx	140
Tiles	141

Illustrations at right show tile heights that match the frame height (monolithic panel plus stacking frames); however, many more tile combinations are possible.

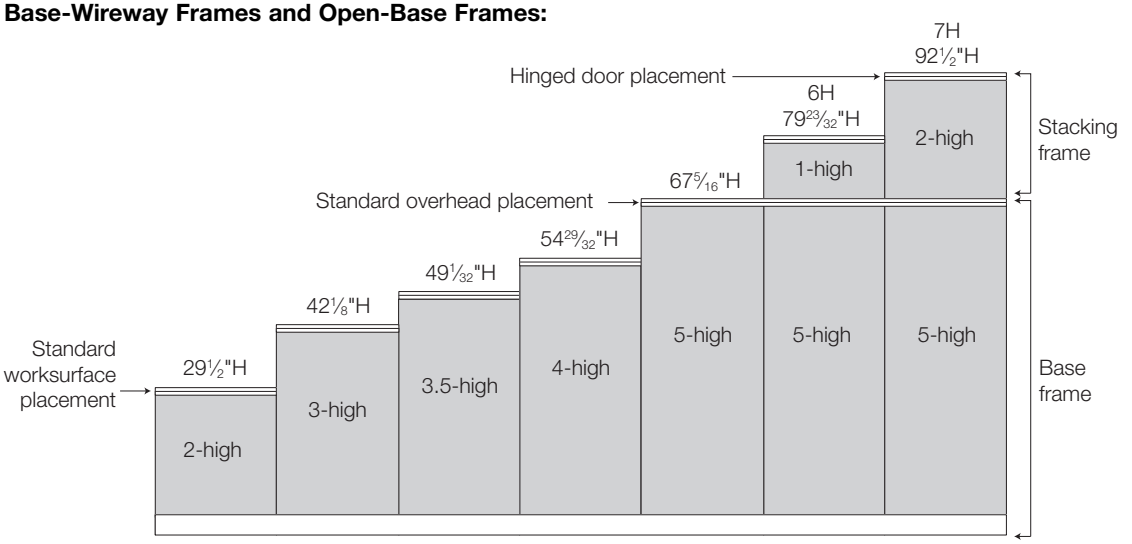
Dimensions are calculated to the top of the frame with glides fully recessed. Curved profile top caps will add ½" to overall height; flat profile top caps will add ¼". Glides provides 2½" adjustment.

Stacking of 1-high and 2-high frames, along with 1-high and 2-high tiles, can be used to achieve structures up to 6- or 7-high. Stacking is not applicable to 3.5-high frames.

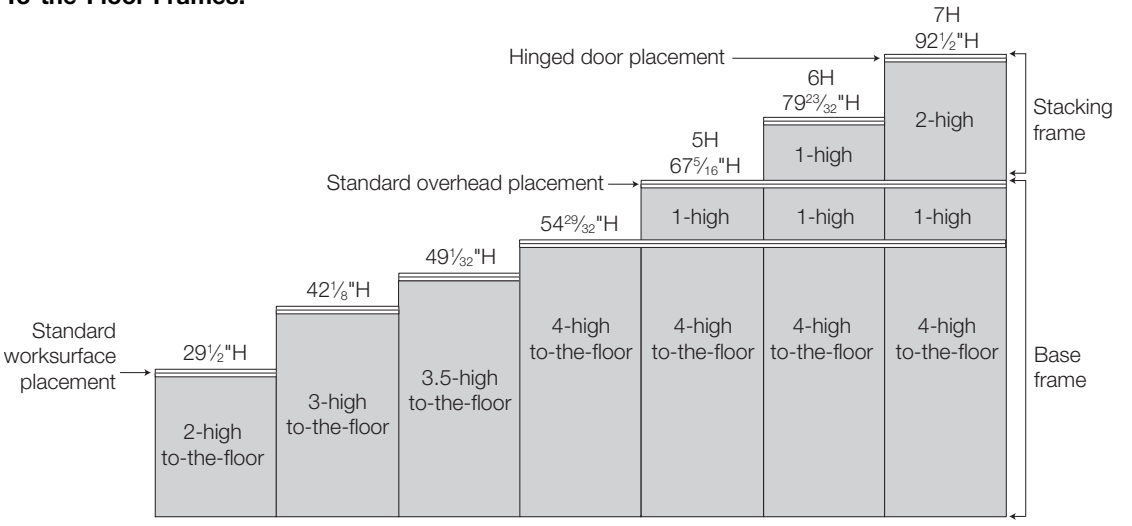
To-the-floor tackable acoustical tiles are available in 1-, 2-, 3-, and 4-high models. They are 3 13/16" longer than standard tiles and must be specified for the entire to-the-floor frame height (monolithic) or the lowest segment plus standard tiles to complete the frame above.
Note: 5-high models for to-the-floor frames are not available due to fabric limitations.

Combined tile heights must match the overall base frame height.

Base-Wireway Frames and Open-Base Frames:

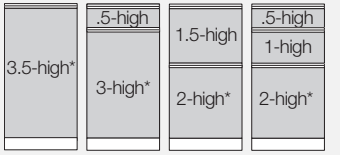


To-the-Floor Frames:



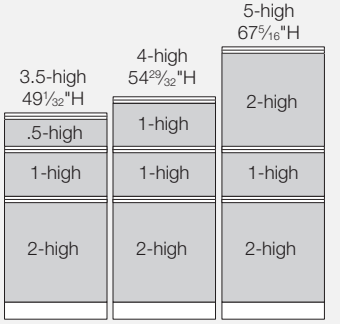
3.5-High Tile Combinations:

Only the height combinations shown below are possible for 3.5-high frames.



* For to-the-floor frames, specify a to-the-floor tile for the full frame or the lowest segment.

3.5-High Frame Traxx Relationships:



Traxx locations at the 2-high and 3-high segments correspond to the same locations on other frames. Traxx at the top fo the 3.5-high frame does not line up with possible Traxx locations on other frames.

Tile Availability Matrix

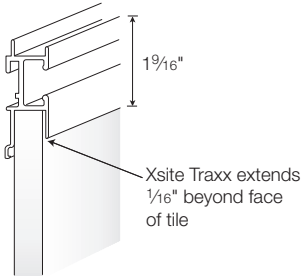
Note: Tackable acoustical (excluding to-the-floor), wood, laminate, and paint tiles are available in additional widths not listed above in 3" increments from 21"W up to the widest standard size offered for the tile height. Use an electronic specification tool to specify. Xsite tiles in woodgrain laminate available up to 57"W.

Xsite Traxx

Features	➤See page 116
Traxx and Tiles Overview	137
Tile Height Relationships	138
Tiles	141

Details

Xsite Traxx is a horizontal mounting rail that provides support for Xsite tiles, worksurfaces, storage, and accessories.



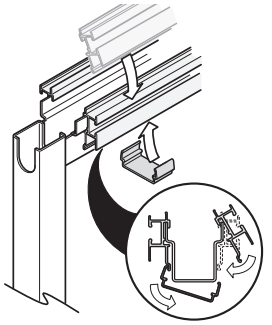
Tiles are held in place on the frame by Xsite Traxx at the top and bottom of the tile.

Xsite Traxx can span multiple frames up to 144"W for a seamless aesthetic.
Note: Xsite Traxx is available in additional widths (other than those listed on the pricing page in 3" increments up to the largest standard size. Use your electronic specification tools to specify.

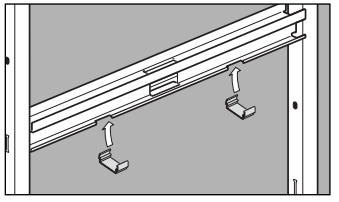
Finishes & Materials

- Xsite Traxx: extruded aluminum, paint

Connections



Xsite Traxx attaches to top channels, mid-frame supports, and stacking frames with Traxx lock brackets (included). Traxx lock bracket slips under the top channel and provides tension to hold both Xsite Traxx in place.



Mid-frame supports have two cut-outs at the bottom where Traxx lock brackets can attach. The location of these cut-outs requires Traxx to be attached within 6" of frame verticals. However, Traxx can span across multiple frames.

Planning Factors

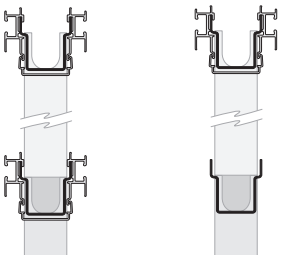
Xsite Traxx width and tile width do not have to correspond. Traxx can span across multiple tiles.

Xsite Traxx and Kimball Office Traxx are not interchangeable, but are functionally compatible. Xsite Traxx cannot be wall mounted.
➤See page 118 for off-module applications.

Xsite Traxx is required at the top of all frames on BOTH sides.

Mid-frame supports are required at each Xsite Traxx location below the top channel. Xsite Traxx may be located on one or both sides of frame where there is a mid-frame support.

Xsite Traxx can be scribed in the field.



In stacking applications, Xsite Traxx must be located at the top of the stacking frame AND on either both sides OR neither side at the top of the base frame. Traxx lock bracket will not hold a single Xsite Traxx securely against the top channel.

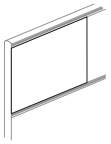
Tiles

Product Information

Tackable Acoustical, Wood, Laminate and Painted Tiles

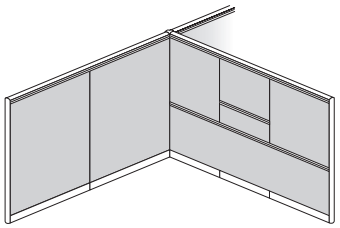
Features ➤See page 116
Traxx and Tiles Overview 137
Tile Height Relationships 138
Xsite Traxx 140

Details



Tackable acoustical, to-the-floor tackable acoustical, wood, laminate, and painted tiles are available in a variety of widths and heights.

➤See tile availability matrix on page 139.



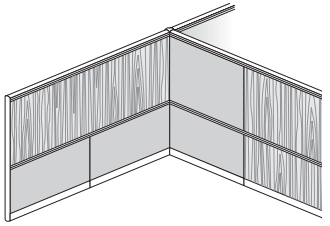
Vertical and horizontal monolithic or segmented aesthetics can be created with the use of tiles.

Tackable acoustical tiles are constructed of fiberglass and covered in fabric. They can be field scribed if necessary. Fabric is applied railroad style.

➤See page 588.

Wood, laminate and painted tiles are constructed of a 7/16" wood composite core and covered with premium-grade wood veneer or laminate, or painted.

Wood, laminate and painted tiles are very durable and are recommended for use under a worksurface, in lower positions in corridors or beside marker tiles. They can also be used to provide visual interest when creating a segmented look.

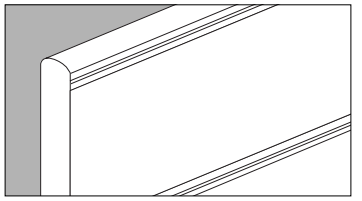


Woodgrain direction runs vertical on wood and woodgrain laminate tiles.

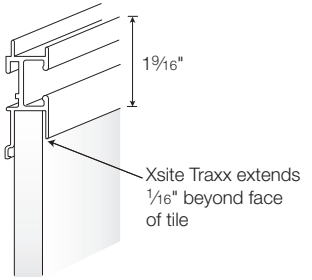
Finishes & Materials

- Panel fabrics
- Wood
- Laminate
- Paint (excluding metallic paint)

Connections



Tiles are held in place on the frame by Xsite Traxx at the top and bottom of the tile.



Xsite Traxx extends beyond the face of the tile by 1/16".

Power & Data

Power and data can be routed vertically in the panel's interior behind tackable acoustical, wood, laminate, and painted tiles.

Planning Factors

Specify tiles for both sides of the frame to complete the panel. Tiles may be omitted on panel runs where visually acceptable, provided no components are on the affected side of the frame.

Acoustical Ratings:

NRC = 0.70
STC = 13

Electrical:

c UL US LISTED

Class A—Tackable acoustical tiles. *Note: COM must comply with U.L. Standard 1286*

Class B—Laminate tiles

Class C—Wood and painted tiles

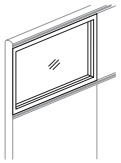
Tiles

Product Information

Glass and Pass-Thru Tiles

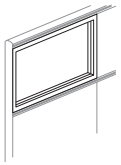
Features ➤See page 116
Traxx and Tiles Overview 137
Tile Height Relationships 138
Xsite Traxx 140

Details

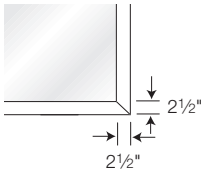


Glass tiles have an extruded aluminum frame (painted or covered with premium grade veneer) with 3mm-thick (clear or frosted) or 4mm-thick (linear vertical) tempered glass. Glass tiles are available in clear, frosted, and linear-vertical pattern. Glass tiles cannot be field scribed.

Glass tiles consist of two tile frames (one for each side of the frame) with a single pane of tempered glass between them. Only one glass tile is needed to complete both sides of the frame. They are available in 1-, 1.5-, 2-, and 3-high models.



Pass-thru tiles provide access from station to station. They consist of two tile frames (one for each side of the structure) and a rubber gasket. Only one pass-thru tile is needed to complete both sides of the frame. They are available in 2- and 3-high models.

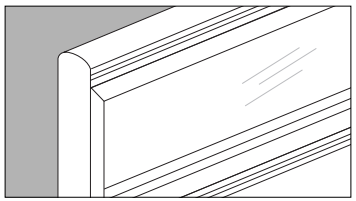


Frames on glass tiles and pass-thru tiles are 2½"W.

Finishes & Materials

- Glass tile frames: paint or wood
- Glass panes: clear, frosted, or linear vertical tempered glass
- Pass-thru tile frames: paint

Connections



Tiles are held in place on the frame by Xsite Traxx at the top and bottom of the tile.

Xsite Traxx extends beyond the face of the tile by 1⁄16".

Power & Data

Power and data cannot be routed through glass or pass-thru tiles.

Planning Factors

Mid-frame support can be removed or relocated if the standard placement interrupts the placement of a glass or pass-thru tile.

Hanging overheads over glass and pass-thru tiles is not recommended.

Consider accessory location. They may obstruct the view through glass tiles.

Glass or pass-thru tiles cannot be field scribed.

Glass tiles are not recommended for use next to adjustable wall-mount channel.

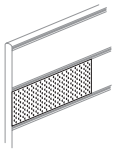
Tiles

Product Information

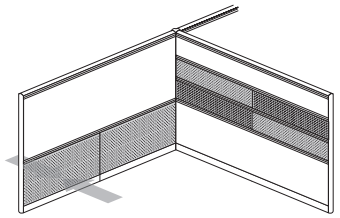
Metal Tiles

Features ➤See page 116
Traxx and Tiles Overview 137
Tile Height Relationships 138
Xsite Traxx 140

Details

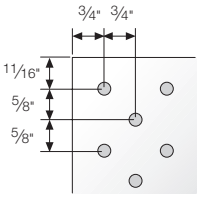


Metal tiles are available with a perforated or embossed (shown) surface. They are available in .5-, 1-, 1.5-, and 2-high models.



Perforated metal tiles, when used on both sides of a frame, increase ventilation below the worksurface or behind computer equipment. If perforated tiles are used on both sides of a run, it is recommended that they be the same size.

Metal tiles are washable, durable, and magnetic.

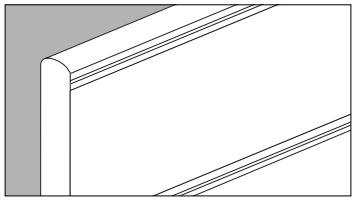


Pattern of perforated or embossed tiles is consistently spaced on centerlines.
Perforation hole size: 3/16" (5 mm)
Embossed circle size: 3/8" (10 mm)

Finishes & Materials

- 18 gauge steel: paint

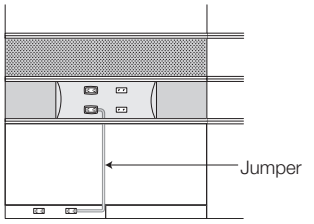
Connections



Tiles are held in place on the frame by Xsite Traxx at the top and bottom of the tile.

Xsite Traxx extends beyond the face of the tile by 1/16".

Planning Factors



Do not use a perforated metal tile below a technology or power/data tile to avoid seeing the jumper passing through the structure.

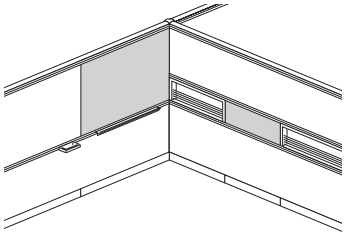
Tiles

Product Information

Marker Board and Slat Tiles

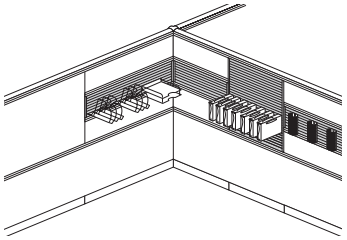
Features ➤See page 116
Traxx and Tiles Overview 137
Tile Height Relationships 138
Xsite Traxx 140

Details

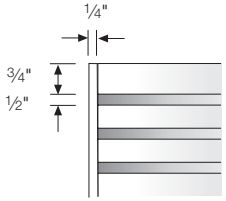


Marker boards are available in variety of tile widths and heights to provide a larger writing surface for meeting spaces and smaller surfaces for private workspaces.

Expo or Expo2 dry erase markers are recommended for use on marker boards. Low-odor dry erase markers are not recommended, as they may leave undesirable results when erased.



Slat tiles allow work tools to be placed in appropriate areas to accommodate individual user needs. They accommodate all Kimball Office metal work tools.



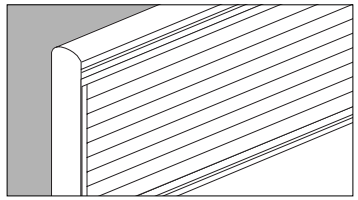
Slats are ¾"H; space between slats is ½"H. Trim channel is ¼"W.
.5-high = 4 slats
1-high = 8 slats
1.5-high = 14 slats
2-high = 18 slats
3-high = 28 slats

Finishes & Materials

Marker Board Tiles
- Core: standard 7/16" wood composite
- Erasable marker board surface: 409M Icey White or 483M Off White
- Vertical edges: black PVC

Slat Tiles
- Extruded aluminum: paint

Connections



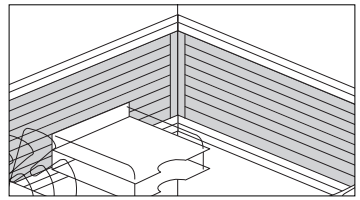
Tiles are held in place on the frame by Xsite Traxx at the top and bottom of the tile.

Xsite Traxx extends beyond the face of the tile by 1/16".

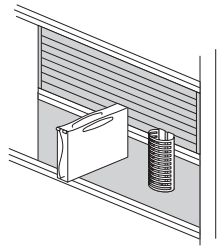
Monitor arms can be used on 18", 24", and 30"W 1-high and 2-high slat tiles. 2-high tiles require an additional mid-frame support, specified separately. Only one monitor arm per slat tile can be accommodated.

Trim channel on slat tiles prevents tools from spanning across two slat tiles. Tools can hang within ¼" of edge of the tile. Trim can be removed to allow tools to span across two slat tiles.

Planning Factors



Slat tiles can be placed at right angles to each other in a corner.



Consider what will be above and below the accessory. It may interfere with other tiles such as glass or marker board.

Slat tiles placed behind overheads can provide functionality inside the overhead, since the back is open.

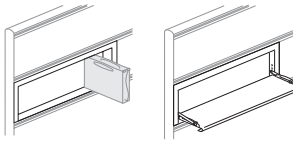
Tiles

Product Information

Storage and Fold-Down Tiles

Features	➤See page 116
Traxx and Tiles Overview	137
Tile Height Relationships	138
Xsite Traxx	140

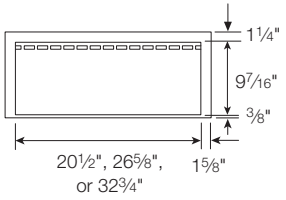
Details



Storage and fold-down tiles maximize space by using the interior of the structure. Both are available in 1-high in four widths: 18", 24", 30", and 36".

Fold-down tile features a one-piece door that can be opened to provide a surface for impromptu meetings. Fold-down surface heights:

Mounted at	*Surface height*
2-high	17¼"
3-high	30"
4-high	42½"
5-high	55"
6-high	67¾"
7-high	80¼"

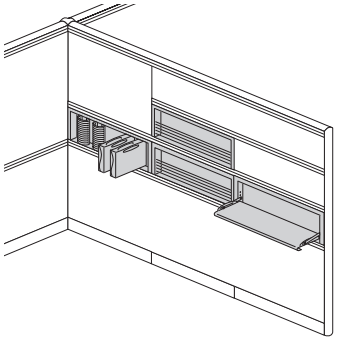


Finishes & Materials

Tile

- 18 gauge steel: paint

Connections



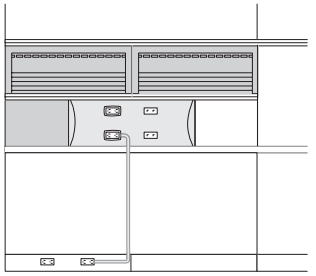
Storage tiles accept a variety of accessories, specified separately, to accommodate the user's individual work requirements.

Planning Factors

Storage tiles use the interior space of the frame; therefore, they cannot be placed back to back, nor can a storage tile be placed back to back with a power/data tile.

Specify tackable acoustical, wood, laminate, painted, metal, marker board, or slat tiles for the opposite side of the panel behind storage tiles.

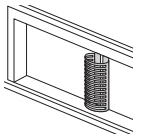
Storage and fold-down tiles can be installed at the 2-high segment and above. On a 3.5-high frame, they can be installed at worksurface height with a .5-high tile above.



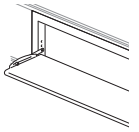
Do not use a storage tile below a technology or power/data tile (shown) as it will interfere with the vertical routing of power and data.

Storage and fold-down tiles cannot cross a frame or connector and cannot be field scribed.

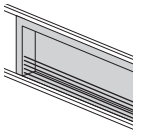
Related Products



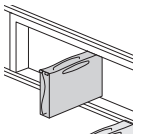
CD holder holds 12 CDs. It takes up the space of 3 slots in storage tile. Painted metal.
➤See the Perks Price List to specify.



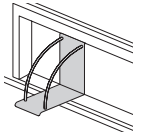
Fold-down accessory kit provides a fold-down surface for existing storage tiles. It is available in three widths to correspond to storage tile.



Web kit provides five horizontal elastic bands (black) to hold items in open view. Web kit consumes the entire width of the tile. They cannot be combined with other accessories.



Translucent file pocket accommodates standard file folders and other items. It requires two slots; consumes half of each slot (two file pockets placed side by side consume 3 slots). Interior dimensions: 1¾"D x 11¾"W x 9³⁄₁₆"H.
➤See the Perks Price List to specify.



Binder shelf works only in wide center slot of 36"W storage tile.
➤See the Perks Price List to specify.

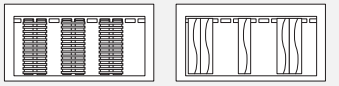
Storage Tile Capacity:

	Storage Tile Width 24"	30"	36"
CD holder	3	4	5
File pocket	10	13	16
Binder shelf	–	–	1
Fold-down accessory kit	1	1	1

Note: This table indicates the quantities of accessories that can be accommodated in a single storage tile. It assumes only one type of accessory is used in each tile.

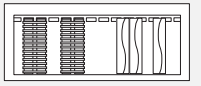
Examples of Mixed Accessories:

24"W Storage Tile
11 slots



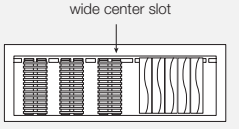
- 3 CD holders
- 5 file pockets

30"W Storage Tile
14 slots



- 2 CD holders
- 2 file pockets

36"W Storage Tile
15 slots



- 3 CD holders
- 4 file pockets

Power & Data

Overview

Features ➤See page 116
Base Wireway 147
Electrical Guidelines 152

Xsite offers a 10-wire power system for the base wireway.
Options include:
- 10-wire shared neutral: 6 hot (3 and 3), 2 neutral, 2 ground
- 10-wire shared neutral can be wired for 8-wire configuration by using 4 hot (3 and 1 or 2 and 2), 2 neutral, 2 ground
- 10-wire independent neutral: 4 hot (2 and 2), 4 neutral, 2 ground

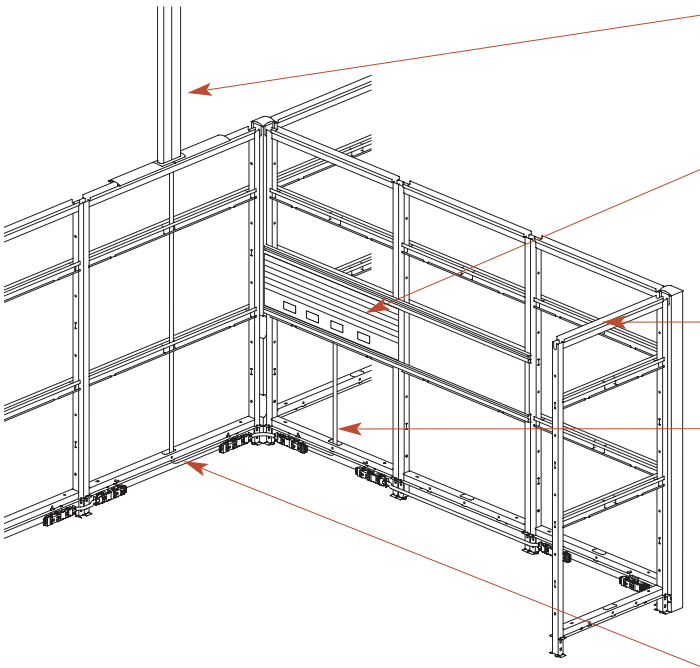
Note: Independent and shared neutral components cannot be mixed.

All electrical components are non-directional. The base wireway harness simply hooks into place—no mechanical attachment is required.
Components include:
- Base or ceiling power feeds
- Base wireway harness
- Base wireway jumper
- Pass-thru jumpers
- Technology tile and components
- Power/data tile and components
- Hardwire components

The building's power capability should be determined before power is configured and components are specified.

Xsite is approved to accept Chicago electrical.

Vertical cable managers are available separately to conceal task light cords.
➤See page 240 to specify.



Ceiling power/data pole allows power and data to be dropped down from above.

Technology tiles provide access to power and data at 2nd, 3rd, 4th, and 5th segments. Technology tiles utilize an 8-wire system.

Top channel provides top lay-in capability

Data cables may be distributed through the frame and connectors. ➤See page 166 for cable management information.

Base wireway power harnesses and jumpers distribute power through the base.

Base wireway power entry allows power to enter at the floor, wall, or column. Power can then be distributed to the base and/or jumped up to a technology or power/data tile.

Wireway Cover Options:

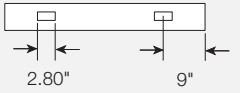
NP2	2 non-punched
P1	1 power punched 1 non-punched
P2	2 power punched
PD1	1 power & data punched 1 non-punched *Not available on 24"W*
PD2	2 power & data punched *Not available on 24"W*

Note: All punched (power and power & data) covers include two wireway cover doors.

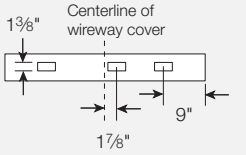
Wireway Cover Punch Dimensions:

2.80"W x 1.38"H.
Applies to both power and data punches.

No power or data access



Power access only



Power and data access

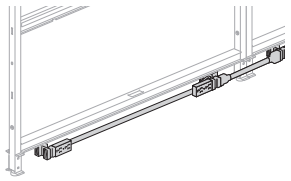
Base Wireway Components

Product Information

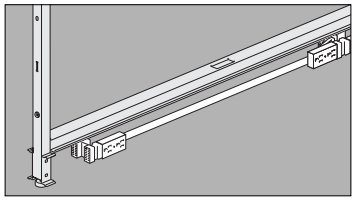
Harnesses and Receptacles

Features	➤See page 116
Power & Data Overview	146
Ceiling Power	151
Electrical Guidelines	152

Details



Base wireway harnesses distribute power through the base of the frame.



Base wireway harness provides two duplex receptacles per side, for a total of four.

Duplex receptacles are rated at either 15 or 20 amps and may be installed back-to-back in the base wireway. 20-amp models, required for some large equipment applications, protrude 1⁄8" more than 15-amp models. Duplex receptacles are available in black, white, or orange for use as a visual aid.
Note: Orange color duplex receptacles for the base wireway do not match the dark orange color for technology tile receptacles.

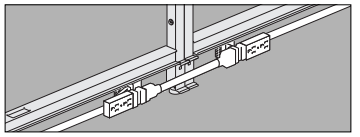
Up to four duplex receptacles (two per side) can be installed in each base wireway.

Finishes & Materials

Harness

- Ends: injection-molded plastic
- Conduit: 3⁄4" oval

Connections



Jumper cables are used to pass power from panel to panel or through non-powered panels.
➤See page 148.

Building-to-panel power connections can be accomplished whether the power source is in the wall, floor, or ceiling.
➤See pages 149–151.

Power entry will consume one duplex receptacle location.

Power & data poles bring voice/data cables and electrical wiring from the ceiling to the panel run.
➤See page 151.

Planning Factors

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

Specify the appropriate harness based on the corresponding width of the frame. Use 24", 27", and 30"W harnesses for the corresponding frame width. For 33"–36" widths use a 36"W harness; for 39"–42" widths use a 42"W harness; for 45"–48" widths use a 48"W harness.

One receptacle location will be consumed if the harness will have a power entry (floor/wall or ceiling) jumper for technology tile or power/data tile attached.

Specify a base wireway cover without power or data access if access to power is not needed. Receptacles and a punched wireway cover can be added later as needed.

Independent and shared neutral components cannot be mixed.

New York City electrical applications require a special power entry.
➤See page 149.

Hardwire electrical components for use in the base wireway are available for areas where local codes do not accept modular electrical plug-in components.
➤See page 150.

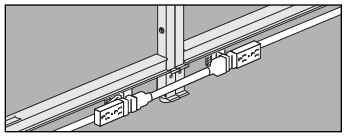
Base Wireway Components

Product Information

Jumpers

Features	➤See page 116
Power & Data Overview	146
Ceiling Power	151
Electrical Guidelines	152

Details



Jumpers continue power between two adjacent base wireway harnesses.

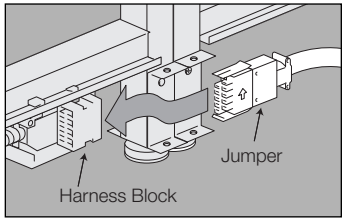
Base wireway jumpers are available in 5 different models and are specified according to the application.
➤See chart at right.

Pass-thru jumpers are available in 8 different models to pass power through a frame base where duplex receptacles are not required. Size required is determined by application.
➤See chart on page 234.

Finishes & Materials

- Ends: injection-molded plastic
- Mesh sleeving
- Metal oval conduit

Planning Factors



Base wireway jumpers and pass-thru jumpers connect to a base wireway harness on each end. They cannot connect to another jumper.

Independent and shared neutral components cannot be mixed.

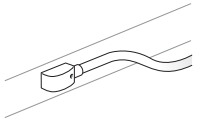
Base Wireway Components

Product Information

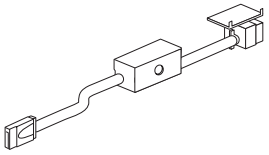
Power Entries

Features	➤See page 116
Power & Data Overview	146
Ceiling Power	151
Electrical Guidelines	152

Details



Base power entries deliver power from building to frame.



New York City base power entries are available to meet codes that require a hardwired infeed connection to modular electrical systems inside the frame. New York City approval number E44747.

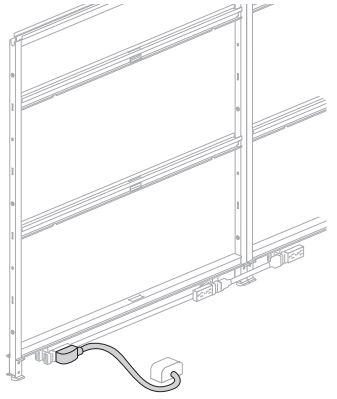
Capacity:

- Six 20-amp circuits for shared neutral.
- Four 20-amp circuits for independent neutral.

Finishes & Materials

- Black liquid-tight conduit; 6' length

Connections



Base power entry can be adjusted in the field for left- or right-hand applications.

New York City model passes power in one direction and accepts base wireway jumper cable on opposite end.

Planning Factors

It is most cost effective to place your infeeds at the ends of spine runs where the highest usage is expected. You can then feed returns only as needed.

Multiple power entries cannot be interconnected.

Independent and shared neutral components cannot be mixed.

System connection to building power must be made by a licensed electrician.

Base power entry extends 1¾" from face of frame; allow proper clearance.

One receptacle location will be consumed in the base wireway harness by floor/wall power entry.

If the junction box is on the wall directly behind the system connection, approximately 12" will be required for the conduit. To avoid this space requirement, offset the junction box from the system connection.

New York City model replaces the base wireway harness and eliminates two receptacles. Use in 30"W or greater structure due to box size. The electrical contractor must furnish box fittings, conduit, and wiring from the system junction box to the building power source connection for New York City models.

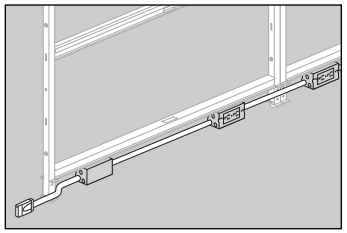
Base Wireway Components

Product Information

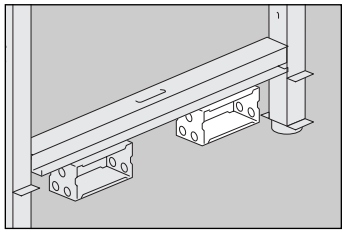
Hardwire Boxes & Cover Plates

Features ➤See page 116
Power & Data Overview 146
Ceiling Power 151
Electrical Guidelines 152

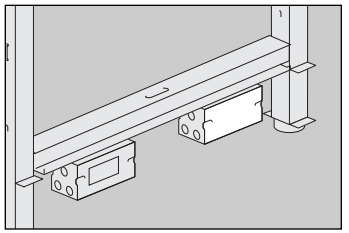
Details



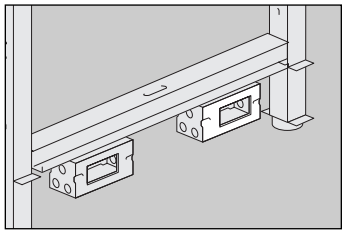
Hardwire components allow field hardwiring of power within the base frame where required by local codes.



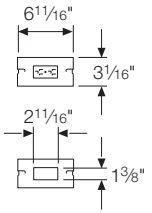
Hardwire box accommodates junctions and receptacles.



Hardwire cover plate is solid to cover and protect the contents of the hardwire box.



Hardwire cover plate for power provides an access hole, sized to fit Pass & Seymour 26242 series receptacles (or compatible size and type).



Cover plates are required for both sides of the hardwire box.

Planning Factors

For hardwire applications, specify non-powered panel frame with appropriate wireway cover punch option and hardwire electrical components separately.

Specify power or power and data base wireway covers.

Power/data tiles are compatible with hardwire applications.

Ceiling Power Entries and Power/Data Poles

Features ➤See page 116
Power & Data Overview 146
Base Wireway 147
Electrical Guidelines 152

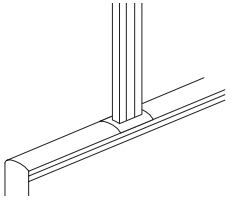
Details

Ceiling power entries deliver building power to the base wireway in applications where power must be dropped down from above to clusters in open areas away from walls or where power is not accessible in the floor. Ceiling power entry is 12' in length.

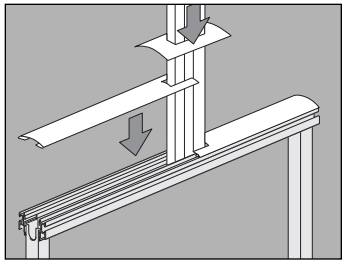
Note: Models detailed on this page are not for use with technology tiles. ➤See page 157 for ceiling power entries for use with technology tiles.

Ceiling power entry capacity:

- Six 20-amp circuits for shared neutral
- Four 20-amp circuits for independent neutral



Power/data pole provides a chase for power or data drops from the ceiling. Pole is specified separately from power entry.



Pole is divided into two sections. A top cap and power pole trim plate are provided to blend into frame top cap. Pole is 5½"W x 82"H.

Power/data pole capacity:

- 50 ¼"-diameter cables at 40% fill or 126 ¼"-diameter cables at 100% fill (non-powered)
- 46 ¼"-diameter cables at 40% fill or 117 ¼"-diameter cables at 100% fill, (powered)
- Over 2 square inches of capacity per section of power/data pole

Finishes & Materials

Ceiling Power Entry

- ¾" oval metal conduit

Power/Data Poles

- Pole: extruded aluminum, paint
- Top cap: painted steel or wood veneer
- Trim plate: paint

Planning Factors

Plan for ceiling power entries where no glass, storage, or pass-thru tiles are used, since the conduit must have a direct path to the base wireway harness.

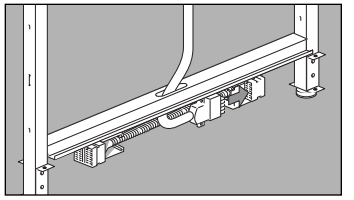
It is most cost effective to place your infeeds at the ends of spine runs where the highest usage is expected. You can then feed returns only as needed.

Multiple power entries cannot be interconnected.

Independent and shared neutral components cannot be mixed.

System connection to building power must be made by a licensed electrician. Ceiling power entries do not include junction box and related connectors.

6" of ceiling power entry conduit is required above ceiling for electrical connection.



Power entry must plug into right hand block of base wireway harness.

Use ceiling power entry and poles on frame that is a minimum of 24"W for terminal block to pass through frame opening.

Access to ceiling source is regulated by National Electric Code to 12' maximum conduit for our standard infeed construction. Ceiling power entry in lengths up to 24' are available with custom quote for alternate construction.

New York City approval number is E44747.

Maximum Ceiling Height for Power/Data Pole:

With Ceiling Power Entry	
2-high Frame	
24"–48"W	100 15/16"
3-high Frame	
24"–48"W	113½"
3.5-high Frame	
24"–48"W	120½"
4-high Frame	
24"–48"W	126⅛"
5-, 6-, or 7-high Frame	
24"W	140¾"
30"W	137¾"
36"W	134¾"
42"W	131¾"
48"W	128¾"

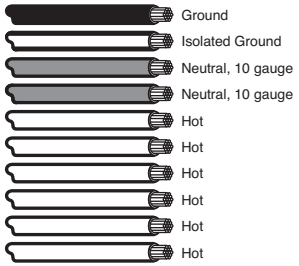
Without Ceiling Power Entry	
2-high	100 15/16"
3-high	113½"
3.5-high	120½"
4-high	126⅛"
5-high	138¾"
6-high	151⅜"
7-high	164"

Base Wireway Electrical System

Application Guidelines

Shared Neutral 10-Wire (10S) Circuit Configurations

Features	➤See page 116
Power & Data Overview	146
Base Wireway	147
Ceiling Power	151



The 10-wire configuration supports work environments having heavy intensity, advanced computerized equipment requirements. A 10-wire system consists of six 12-gauge hot wires, two 10-gauge neutral wires, and two 12-gauge ground wires.

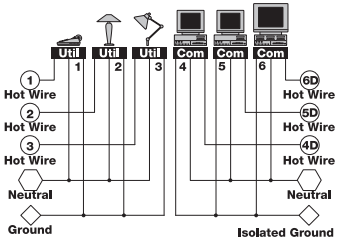
➤See electrical service info at left.
➤See page 153 for wiring diagrams.

The same components are used for all configurations through the addition or substitution of receptacles. This simplifies specifications and allows a faster understanding of the system. In addition, components used in the bottom channel are also used in other locations except in technology tiles.

Xsite's 10-wire electrical system is rated for 20-amp service. To support the usage, 15-amp convenience receptacles can be placed anywhere along the leg of the electrical connection. In the event that an appliance, such as a larger printer/copier/plotter needs to have a 20-amp receptacle, it is recommended to use a dedicated circuit with a 20-amp receptacle. Using 15-amp convenience receptacles will aid in ensuring that no one leg of the system can pull too much current, which could potentially cause the system to trip out and lose power across the entire system.

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided here is intended to assist specifiers. Access to ceiling power source is regulated by National Code to a maximum of 12 ft. conduit.

3 and 3 (10-wire):



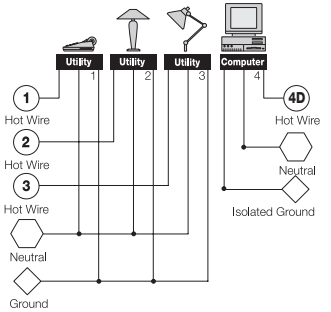
Circuits 1, 2, and 3 share a common 10 gauge neutral and 12 gauge ground wire, providing three designated circuits for lighting and other general/utility equipment.

Circuits 4, 5, and 6 share a common increased size neutral and isolated ground wire, providing three designated circuits for computer applications.

Circuit	*15-amp Model*	*20-amp Model*
1	36PER110S	36PER110S20
2	36PER210S	36PER210S20
3	36PER310S	36PER310S20
4	36PER4D10S	36PER4D10S20
5	36PER5D10S	36PER5D10S20
6	36PER6D10S	36PER6D10S20

IMPORTANT: Technology tiles cannot be connected to power in a base wireway utilizing this configuration.

3 and 1 (8-wire):

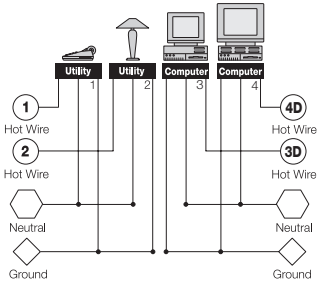


Circuits 1, 2, and 3 share a neutral and common ground, providing circuits for general electrical needs. Customarily, one or more of the circuits is reserved for lighting or other everyday uses, which allows control by central or master switching.

Circuit 4 consists of three separate conductors (hot, neutral, and ground) and meets the BIFMA/ANSI definition for a dedicated circuit.

Circuit	*15-amp Model*	*20-amp Model*
1	36PER110S	36PER110S20
2	36PER210S	36PER210S20
3	36PER310S	36PER310S20
4	36PER4D10S	36PER4D10S20

2 and 2 (8-wire):



Circuits 1 and 2 provide a pair of designated circuits for general electrical needs.

Circuits 3 and 4 provide a pair of designated circuits for computer applications.

Circuit	*15-amp Model*	*20-amp Model*

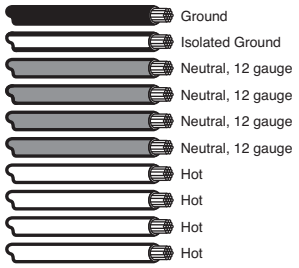
Base Wireway Electrical System

Independent Neutral 10-Wire (10D) Circuit Configurations

Features ➤See page 116
Power & Data Overview 146
Base Wireway 147
Ceiling Power 151



The 10-wire configuration supports work environments having heavy intensity, advanced computerized equipment requirements. An independent neutral 10-wire system consists of four 12-gauge hot wires, four 12-gauge neutral wires, and two 12-gauge ground wires.
➤See page 155 for wiring diagrams.

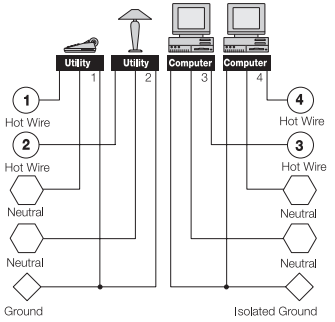
The same components are used for all configurations through the addition or substitution of receptacles. This simplifies specifications and allows a faster understanding of the system. In addition, components used in the bottom channel are also used in other locations.

Base wireway independent neutral (10D) system cannot be used with technology tiles.

Xsite's 10-wire electrical system is rated for 20-amp service. To support the usage, 15-amp convenience receptacles can be placed anywhere along the leg of the electrical connection. In the event that an appliance, such as a larger printer/copier/plotter needs to have a 20-amp receptacle, it is recommended to use a dedicated circuit with a 20-amp receptacle. Using 15-amp convenience receptacles will aid in ensuring that no one leg of the system can pull too much current, which could potentially cause the system to trip out and lose power across the entire system.

IMPORTANT Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided here is intended to assist specifiers. Access to ceiling power source is regulated by National Code to a maximum of 12 ft. conduit.

2 and 2 (10-wire):



Circuits 1 and 2 each have a neutral wire and share a common ground wire, providing a pair of designated circuits for lighting and other general/utility equipment.

Circuits 3 and 4 each have a neutral wire and share an isolated ground wire, providing a pair of designated circuits for computer applications.

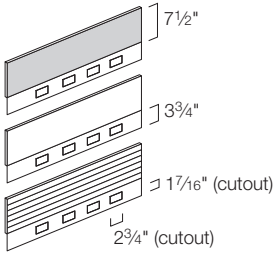
Technology Tiles

Features ➤See page 116
Power & Data Overview 146
Tech Tile Electrical 157
Circuit Configurations 160

Details

Technology tile provides power and data at the 2nd, 3rd, 4th or 5th segments for access below the worksurfaces, at worksurface height, at standing height, or at the overhead position. Technology tiles utilize an 8-wire electrical system.



Three header options to meet user needs include:
- Tackable fabric
- Marker board
- Slat

Note: Marker board tiles should not be used on unsupported runs due to panel movement when writing on the surface.

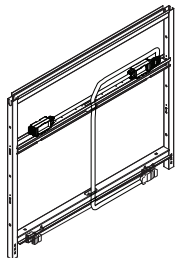
Two to six cut-outs, depending on the width of the tile, are provided in each technology tile to accommodate duplex receptacles and/or data ports. The in-line arrangement of the cut-outs provide a clean aesthetic.
➤See chart on page 158 for configuration options.

Technology tiles without cutouts are available for a seamless look.

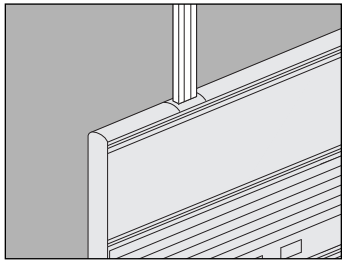
Finishes & Materials

- Tile: formed steel, paint
- Tile header:
  - –Tackable fabric
  - –Slat: extruded aluminum, paint
  - –Erasable marker board:
    409M Icey White or
    483M Off White
    (edges: black PVC)

Connections



Technology tiles may be powered from the base wireway with a vertical jumper. One base receptacle location will be used for the vertical jumper; no receptacle location in the technology tile is required/lost for the vertical jumper.



Ceiling power entry for technology tile can be used to bring power to the tile from above. This model cannot be used to route power down to the base wireway.

Power cannot be jumped from one technology tile to another through a connector or from a technology tile to a power/data tile.

Planning Factors

Technology tiles can be used in both Xsite cubicle and benching applications.

Technology tiles should be placed back to back for optimum component utilization. The same arrangement of duplex and data receptacles should be used in both tiles.

Technology tiles cannot be used back to back with storage tiles or power/data tiles since both tiles use the interior space of the frame.

Specify technology tiles to match the width of the frame.

Technology tiles without cutouts must be specified where pass-through jumpers will be used.

Stacking frames can accept technology tiles where only data is required. Power cannot be installed in this application because the power block mounting brackets must attach to the mid channel.

Hole cover plates, specified separately (10 per package), are recommended to cover unused power blocks and where cut-out is not being used for data.

Consider the tile below a technology tile in base entry applications. The jumper needs to pass from the base through the interior of the frame to the tile; therefore, storage tiles or any tiles where the jumper may be visible are not recommended.

Related Products

Technology tile electrical components must be specified separately.
➤See page 157.

Technology slat tile can support one or two Perks® single-monitor arms (model 99KSMAM2SMS). Perks work tools are available.
➤See the Perks Price List.

Power/data tile components cannot be used with technology tiles.

Expo or Expo2 dry erase markers are recommended for use on marker boards. Low-odor dry erase markers are not recommended.

Acoustical Ratings:

NRC = 0.70
STC = 13

Electrical:

c UL US LISTED

Class A—Tiles with tackable acoustical header.
Note: COM must comply with U.L. Standard 1286

Class B—Tiles with marker board header.

Technology Tile Power/Data Components

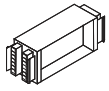
Features ➤See page 116
Power & Data Overview 146
Circuit Configurations 160

Details

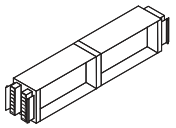
Technology tile components are required to provide power and data access to the tile.

Power components for technology tiles are offered in kits based on application with specific models for each tile width. Kits include the appropriate quantity and size of power blocks, mounting brackets and hardware, harnesses, vertical and/or horizontal jumpers for the application.
➤See page 158 for kit descriptions.

Individual components in the kits may ship separately. Use assembly instructions found online at: www.kimballoffice.com/resources/assembly.aspx?sID=54

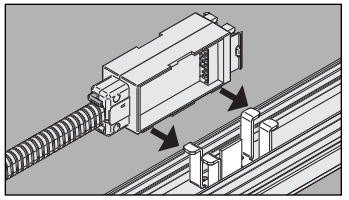


Single Block

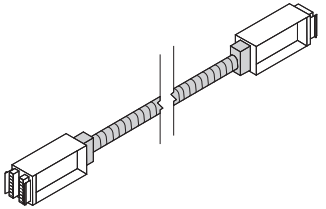


Double Bllock

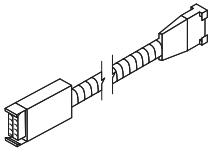
Power blocks are either single or double. Both single and double blocks are two sided and each opening can house a duplex receptacle:
- Single power block holds 1 duplex receptacle per side; total of 2
- Double power block holds 2 duplex receptacles per side; total of 4



Mounting brackets hold power blocks and are standard with the kit. A metal template also ships standard with the brackets (one per order) to assist with correct placement of the mounting brackets.

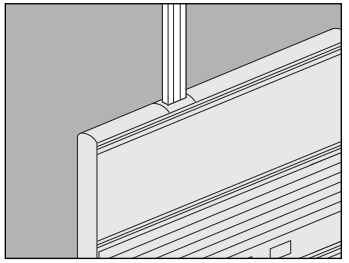


Single power block assemblies, for use behind a single tile, include an attached power harness (flexible metal conduit).



Jumpers are used to pass electricity from one point to another. There are four types of jumpers:
- Horizontal (tile-to-tile)
- Vertical (base wireway-to-tile)
- Pass-thru
- Double block-to-double block

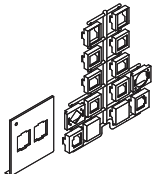
Hardwire box allows hardwiring of power with the base of the frame to comply with local codes.



Ceiling power entry for technology tile delivers power to the tile by dropping power down from above to clusters in open areas away from walls or where power is not accessible in the floor. Ceiling power entry is 12' in length. The ceiling power entry assembly can be used with a ceiling power/data pole. Ceiling power entry connects to the end of a power block.

Duplex receptacles for use with technology tiles are rated at 15 or 20 amps. 20-amp models, required for some large equipment applications, protrude ⅛" more than 15-amp models. Duplex receptacles are available in black, white, or orange for use as a visual aid; specified separately. Trim plate is standard with each receptacle: black with Cinder or Dark Orange receptacles or white with Designer White receptacles. *Note: Dark orange receptacles are not the same color as orange base wireway receptacles.*

Hole cover plates, specified separately (10 per package), are recommended to cover unused power blocks or where cut-out is not being used for data.



Data plates have two openings and come with a voice/data adapter kit to accommodate couplers/jacks from multiple suppliers. Two of each style of adapter are standard in the kit.
➤See page 158 for adapter/manufacturer chart.

Finishes & Materials

- Power blocks: injection-molded, PVC-free plastic
- Power block brackets: formed steel
- Block-to-block and panel-to-panel jumpers: injection-molded, PVC-free plastic ends and metal conduit
- Vertical base-to-tile jumper: plastic and metal conduit
- Receptacles: injection-molded, PVC-free plastic
- Power entries: metal conduit
- Trim plates: painted steel
- Data plates: painted steel
- Voice adapter kit: PVC-free plastic

Technology Tile Power/Data Components

Product Information

continued

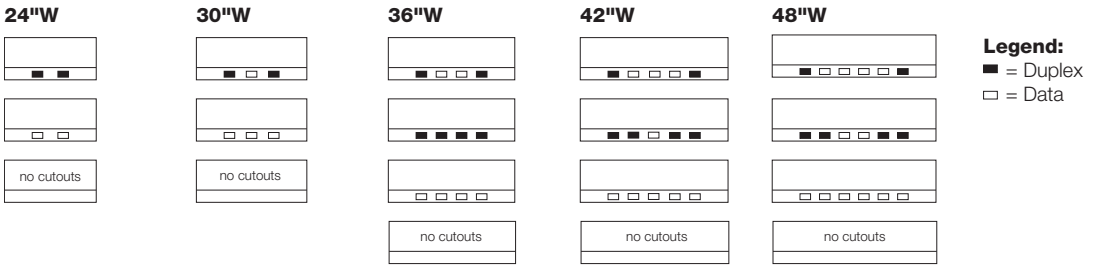
Features ➤See page 116
Power & Data Overview 146
Tech Tile Electrical 157
Circuit Configurations 160

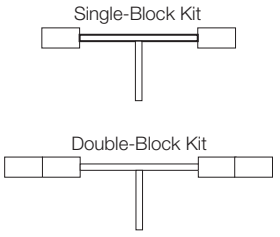
Connections

Power must be "started" in a 30"W or wider tile. Power cannot be "started" from 24"W tiles due to space constraints.
➤See next page for kits applicable to 24"W tiles.

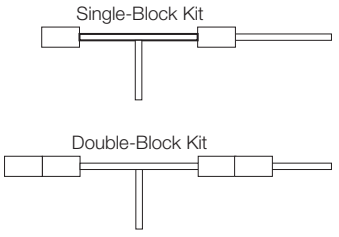
Kits for use in 30", 36", 42", and 48"W technology tiles:

Receptacle and Data Configuration Options:

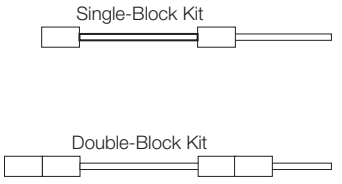




Power kit with vertical jumper brings power up from the base wireway to a technology tile at 2- or 3-high in a single-frame application. Kit includes:
- Vertical (base-to-tile) jumper
- Single power block assemblies (includes two single blocks and harness) or two double power blocks with jumpers
- Mounting brackets and hardware

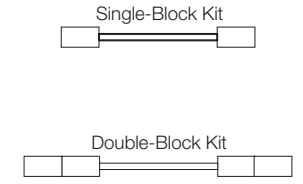


Power kit with vertical and horizontal jumpers brings power up from the base wireway to a technology tile at 2- or 3-high and jumps power to an adjacent technology tile not separated by a connector.
Kit includes:
- Vertical (base-to-tile) jumper
- Horizontal (tile-to-tile) jumper
- Single power block assemblies (includes two single blocks and harness) or two double power blocks with jumpers
- Mounting brackets and hardware



Power kit with horizontal jumper provides power to one tile and jumps power to an adjacent tile not separated by a connector. This kit is also applicable for a power in-feed application (ceiling, NYC, or hardwire power entry) or in a 4H or 5H application. Kit includes:
- Horizontal (tile-to-tile) jumper
- Single power block assemblies (includes two single blocks and harness) or two double power blocks with jumpers
- Mounting brackets and hardware

Note: For 4H & 5H applications, specify a base-to-tile jumper separately.



Power kit with blocks and harness only is for use at the end of a run where power will not be continued further and in single-frame applications. This kit is also applicable for a power in-feed application (ceiling, NYC, or hardwire power entry) or in a 4H or 5H application. Kit includes:
- Single power block assemblies (includes two single blocks and harness) or two double power blocks with jumpers
- Mounting brackets and hardware

Note: For 4H & 5H applications, specify a base-to-tile jumper separately.

Technology Tile Power/Data Components

Product Information

continued

Features ➤See page 116
Power & Data Overview 146
Tech Tile Electrical 157
Circuit Configurations 160

Two kits for use in 24" technology tiles:

24"W power kit with horizontal jumper provides power to one tile and jumps power to an adjacent tile not separated by a connector.
Kit includes:
- Horizontal (tile-to-tile) jumper
- One double power block
- Mounting brackets and hardware

24"W power kit with block only provides power to one tile. It may be used as illustrated at far right where power is jumped to it from an adjacent frame or in a single-frame application with a ceiling, NYC, or hardwire power entry. Kit includes:
- One double power block
- Mounting brackets and hardware

Planning Factors

Vertical jumpers included with kits are designed for bringing power to the 2- or 3-high segment. If you need to route power to a different segment, specify a kit without a vertical jumper and specify the appropriate length vertical (base-to-tile) jumper separately.

If only one frame will have a technology tile, use a power kit with vertical jumper for routing power from the base wireway. If routing power down from the ceiling, specify a kit with blocks and harness only.

Power cannot be jumped from one technology tile to another through a connector.

Power cannot be jumped from a technology tile to a power/data tile.

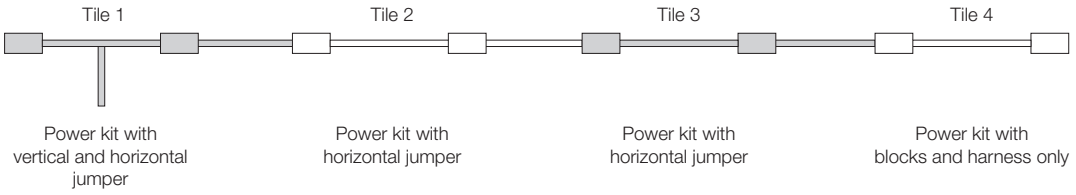
Data plates cannot cover power blocks, but can be used in any of the tile's cutouts.

Hole cover plates can be used over a power block or any cut-out that is not in use. Duplex receptacles are not required in all power block locations.

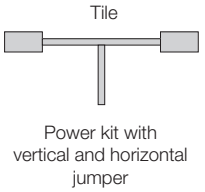
IMPORTANT Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided here is intended to assist specifiers.

Typical Layouts:

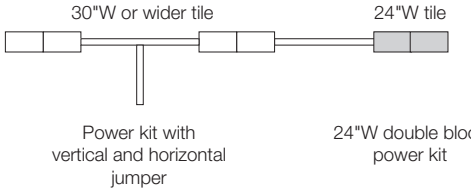
Four-frame benching application



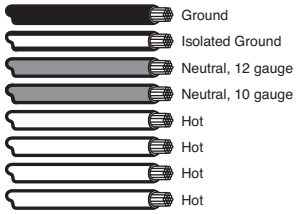
Single-frame application



24"W frame application



Features ➤See page 116
Power & Data Overview 146
Tech Tile Electrical 157



8-wire configuration supports work environments having heavy-intensity advanced computerized equipment requirements. An 8-wire systems includes four 12-gauge hot wires, one 12-gauge dedicated neutral wire, one 10-gauge shared neutral wire, and two 12-gauge ground wires.
➤See electrical service info at left.
➤See wiring configurations at right and wiring diagrams on the next page.

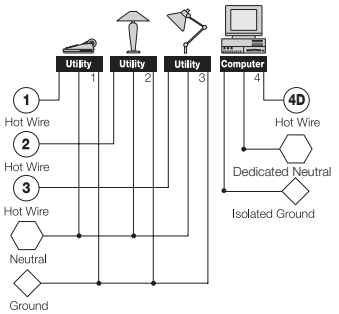
Base wireway shared neutral (10S) system or ceiling power in-feed should be used technology tiles.
➤See page 152 for base wireway circuit configurations.

Base wireway independent neutral (10D) system cannot be used with technology tiles.

Xsite's technology tile electrical system is rated for 20-amp service. To support the usage, 15-amp convenience receptacles can be placed anywhere along the leg of the electrical connection. In the event that an appliance, such as a larger printer/copier/plotter needs to have a 20-amp receptacle, it is recommended to use a dedicated circuit with a 20-amp receptacle. Using 15-amp convenience receptacles will aid in ensuring that no one leg of the system can pull too much current, which could potentially cause the system to trip out and lose power across the entire system.

IMPORTANT Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided here is intended to assist specifiers.

3 and 1 (8-wire):

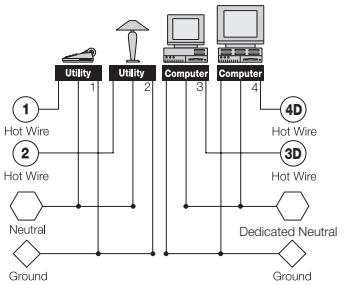


Circuits 1, 2, and 3 share a neutral and common ground, providing circuits for general electrical needs. Customarily, one or more of the circuits are reserved for lighting or other everyday uses, which allows control by central or master switching.

Circuit 4 consists of three separate conductors (hot, neutral, and ground) and meets the BIFMA/ANSI definition for a dedicated circuit.

Cir.	*15-amp Model*	*20-amp Model*
1	36PER184SB15	36PER184SB20
2	36PER284SB15	36PER284SB20
3	36PER384SB15	36PER384SB20
4	36PER4D84SB15	36PER4D84SB20

2 and 2 (8-wire):



Circuits 1 and 2 provide a pair of designated circuits for general electrical needs.

Circuits 3 and 4 provide a pair of designated circuits for computer applications.

Cir.	*15-amp Model*	*20-amp Model*
1	36PER184SB15	36PER184SB20

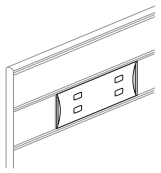
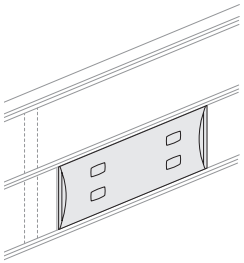
Power/Data Tiles

Xsite Overview ➤See page 116
Power & Data Overview 146
Product Information 163
Application Guidelines 152

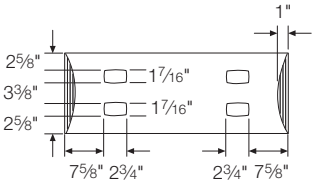
Details



Power/data tiles provide access to power and data at the 2nd, 3rd, 4th or 5th segments. They utilize the same wiring configuration as the used in the base wireway, either 10-wire shared neutral or 10-wire independent neutral.
➤See pages 152–155 for circuit configurations and wiring diagrams.



Flexible material on both ends allows excess cables to be stored inside the frame interior. Not accessible when in-line with a frame vertical.



Four cut-outs are provided in each power/data tile to accommodate a combination of four duplex receptacles and/or data ports.

Finishes & Materials

- Tile: formed steel, paint
- Trim plates and cover plates: black plastic

Connections

Power/data tiles may be powered with a ceiling infeed to provide belt line power throughout the system without extending to the base.

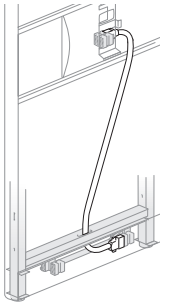
Power/data tile may be placed horizontally at any location on the frame provided the distribution block bracket does not conflict with the frame. Tiles should not be placed at the end of a panel run or aligned with frame verticals because the full functionality of accessing the frame interior for cable management is not realized.

Special power/data tile components are specified separately to bring and distribute power to the tile.
➤See page 163 for product info.
➤See page 164 for application guidelines.

Planning Factors

Power/data tiles may be placed back to back, provided the power and/or data components are not back to back. Power/data tiles cannot be placed back to back with technology tiles or storage tiles since both tiles use the interior space of the frame.

Place power/data tiles in frames wider than the tile to allow access to cable manager.



Consider the tile below a power/data tile in base entry applications. The jumper needs to pass from the base through the interior of the frame to the tile; therefore, storage tiles or any tiles where the jumper may be visible are not recommended.

One receptacle at the base will be used to connect the power/data tile.

Data cabling can be routed from the top, bottom, or sides. Top or bottom feed provides the least amount of conflict with opposing tiles. Specify data ports through the communications supplier or their distribution network.

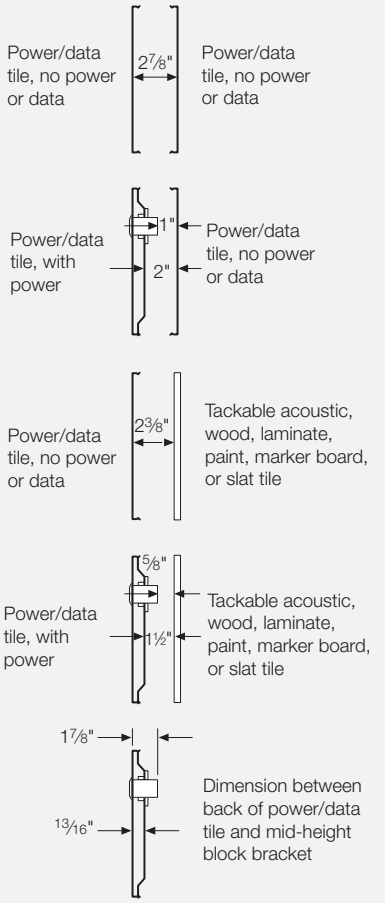
Hardwire applications can be accommodated.

Related Products

Power/data tile electrical components
➤See page 163.
➤See page 164 for jumper application guidelines.

Technology tile electrical components cannot be used with power/data tiles.

Interior Dimensions:



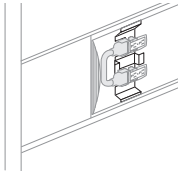
Power/Data Tile Electrical Components

Product Information

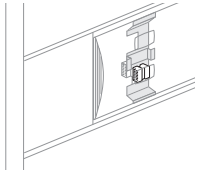
Xsite Overview ➤See page 116
Power & Data Overview 146
Application Guidelines 152

Details

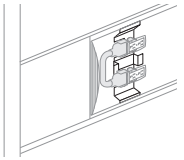
Power/data tile components are required to provide power access to the power/data tile. They utilize the same wiring configuration as the used in the base wireway, either 10-wire shared neutral or 10-wire independent neutral.
➤See pages 152–155 for circuit configurations and wiring diagrams.



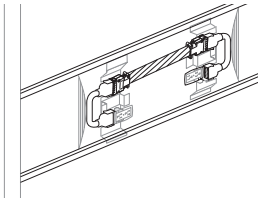
Mid-distribution block bracket snaps into the power/data tile to hold two mid-distribution blocks.



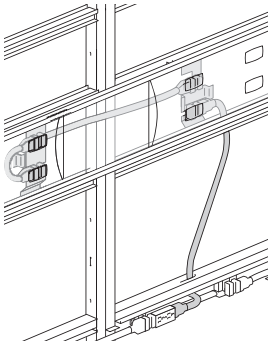
Mid-distribution block screws to the mid-distribution block bracket and accepts one duplex receptacle and up to three jumpers.



Base wireway panel-to-panel jumper (36PEJB1) is used to connect two vertically adjacent receptacles.



Mid-block jumper passes power horizontally between two power/data tiles, between two sets of vertically adjacent receptacles, or to connect back-to-back tiles with staggered receptacle locations.



Base-to-power/data tile jumper passes power from base wireway harness to mid-distribution block in power/data tile. Two lengths available, one for power/data tiles located in the 2nd segment, and one for the 3rd or 4th segment. When connecting two power/data tiles across a vertical, a metal tile (up to 36"W) must be used to allow sufficient space for the jumpers.

Finishes & Materials

- Mid-distribution block: injection-molded plastic
- Mid-distribution block bracket: formed steel
- Mid-block jumper: injection-molded plastic ends; mesh sleeving
- Base-to-power/data tile jumper: injection-molded plastic ends; ¾" oval metal conduit

Planning Factors

Independent and shared neutral components cannot be mixed.

Power/data tile accepts one to four mid-distribution blocks and one to two mid-distribution block brackets. Blocks should be placed where duplex receptacles are required.

IMPORTANT: Specific guidelines apply to power/data tile jumper connections.
➤See page 164.

IMPORTANT: Technology tile electrical components cannot be used with power/data tiles.

Power/Data Tile Electrical Components

Selecting Jumpers

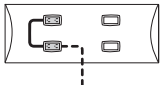
Key:
- = Mid-Block Jumper
- = Base Wireway Panel-Panel Jumper
- = Base Wireway Pass-Thru Jumper
- = Base to Power/Data Tile Jumper

Note: Illustrations intended to show applications, not actual dimensions.

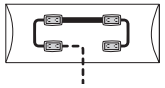
IMPORTANT: Power cannot be passed through connectors. If there is a connector between power/data tiles, power must be brought up from the base for each tile next to the connector.

IMPORTANT: Power cannot be jumped between power/data tiles if they are separated by a different tile type, except an embossed metal tile (see continuous beltline at right).

One Side of a Run:

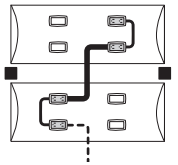


Use a base wireway panel-to-panel jumper (36PEJB1) to connect two vertically adjacent receptacles.



Use base wireway panel-to-panel jumper to connect two vertically adjacent receptacles and a mid-block jumper to pass power horizontally between sets.

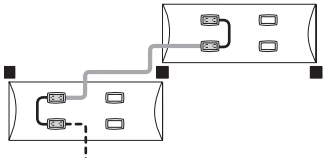
Back-to-Back:



Use mid-block jumper to connect back-to-back tiles with staggered receptacle locations. Two receptacles per side only. Use base wireway pane-to-panel jumper to connect two vertically adjacent receptacles.

IMPORTANT Mid-distribution blocks and brackets must be staggered side to side when using power/data tiles opposite each other (back to back).

Adjacent on Opposite Side:



Use base wireway panel-to-panel jumper to connect two vertically adjacent receptacles; use a base wireway pass-thru jumper to connect tiles that are adjacent (not back to back) on opposites sides of the run (see tile-to-tile option 2 for size).

Continuous Beltline:

Use a base pass-thru jumper to connect two inside mid-block distribution blocks.

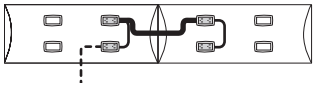
Tile	*Specify Jumper Model*
24"W	36P36EPT
30"W	36P42EPT
36"W	36P48EPT

Tile separating the power/data tiles must be embossed metal. The frame vertical must be at least 3" from the end of the metal tile.

If metal tile exceeds 36"W, there is no standard-size jumper available.

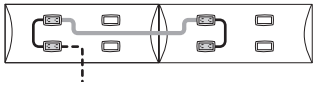
Tile-to-Tile:

Option 1—



Use base wireway panel-to-panel jumper to connect two vertically adjacent receptacles; use a mid-block jumper to pass power horizontally between tiles.

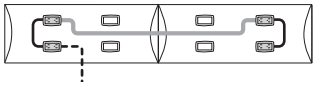
Option 2—



Use base wireway panel-to-panel jumper to connect two vertically adjacent receptacles; use a base wireway pass-thru jumper to connect non-adjacent receptacles.

Tile 1	*Tile 2*	*Pass-Thru Jumper Model*
30"W	30"W	36P30EPT
30"W	36"W	36P36EPT
36"W	36"W	36P42EPT

Option 3—



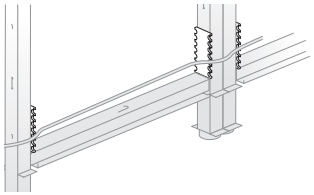
Use base wireway panel-to-panel jumper to connect two vertically adjacent receptacles; use a base wireway pass-thru jumper to connect non-adjacent receptacles.

Tile 1	*Tile 2*	*Pass-Thru Jumper Model*
30"W	30"W	36P36EPT
30"W	36"W	36P42EPT
36"W	36"W	36P48EPT

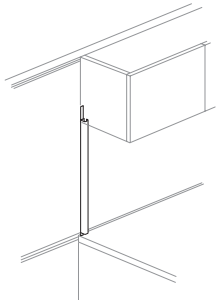
Cable Management Components

Xsite Overview ➤See page 116
Power & Data Overview 146
Product Information 163
Application Guidelines 166

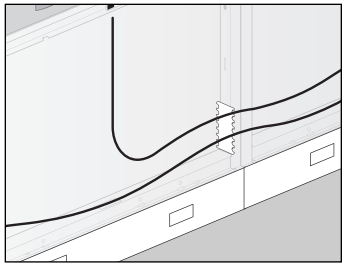
Details



Data cable manager manages up to twelve ¼" cables per side within the frame's interior.



Vertical cable manager manages cables in vertical application and conceals up to two task light cords.



Space between frame and tile is ¼", allowing cables to pass horizontally across verticals.

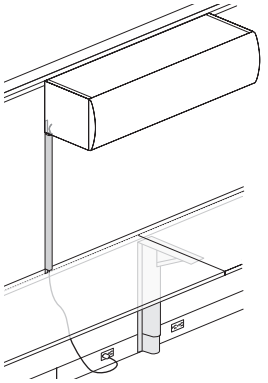
Finishes & Materials

- Data cable manager: polypropylene
- Vertical cable manager: fabric

Connections

Data cable managers can be located at any point up and down the frame's vertical elements.

Planning Factors



Plan for vertical cable manager to be located at the end of the cabinet. Specify the appropriate size vertical cable manager based on the space between the cabinet and worksurface below.

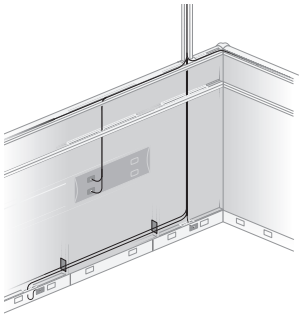
Cable Management

Xsite Overview ➤See page 116
Power & Data Overview 146
Product Information 163

Cables may enter the frame through a base wireway cover or through a ceiling power/data pole.

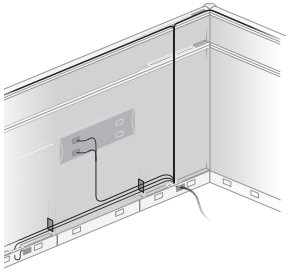
Cables may be routed through the frame in the top channel, at the bottom of the frame above the base wireway, or through the interior of the frame.

Ceiling Entry:



Ceiling entry applications utilize a power/data pole. Pole features a divided septum to separate power and data cables. Cables are distributed in the top channel of the frame and dropped down for access in power/data tiles or in the base wireway.

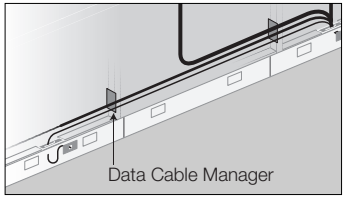
Base Entry:



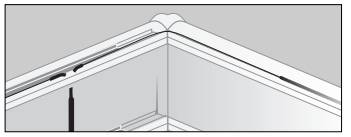
In base entry applications, cables enter through the data opening in a base wireway cover (power and data access model). Cables are routed up to the top channel or a power/data tile.

Allow an additional 12' of cable when routing up to the top channel from the base entry.

Horizontal Routing:



Data cable manager guides cables between frame and tiles. Up to 12 ¼"-diameter cables can be accommodated on each side of the frame. Locate as many as required on the frame verticals.



Cables in top channel can be routed through connectors. Top channel is 1¾"W and 1¼"H.
➤See chart at right for cable capacity.
➤See chart at left for bend radius.

Hi-Lo Applications:

When cabling is distributed in a run with a hi-lo condition, the cabling must go into the frame, pass across the hi-lo condition, and then route back to the top of the frame.

Cable Capacities:

Capacities listed below are for ¼"-diameter cables at 40% fill. Actual capacities may vary. A substantial number of cables can also be accommodated between the frame and tiles.

	40% Fill
Top channel	36
Top channel and mid-frame support cut-out	30
Power/data pole:	
• With power	46
• Without power	50
• Per segment	25
Power/data pole to top of frame, each direction	14
Connector top cap	
• Paint:	24
• Wood	24

Bend Radius:

	Min.	*Max.*
Top channel at connector	1"	1⅜"
Through frame at connector	1"	1⅝"
Frame to wireway	1"	2⅛"
Top channel to inside frame	1"	2"
Power/data pole to top channel	1"	2"

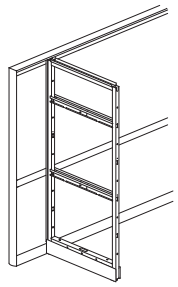
Off-Module Frames

Pricing

Base Wireway

GSA SIN 711-1



Specify tiles and top caps separately.

Mid-frame supports are required wherever Traxx are used to support tiles. Mid-frame supports that are included can be relocated. Specify additional mid-frame supports if needed.
➤See page 173.

Loadbearing applications require off-module frame to be equal to the load-bearing height of spine run.

In non-loadbearing applications, off-module frame may be equal to, or shorter than, the height of spine run.

Off-module frame must tie into a minimum of two Xsite Traxx—one in the top position.

Specify an adjustable wall mount channel to fill the gap below a lower wall-mounted Traxx if off-module frame will be exposed.
➤See page 188.

When mounting privacy panel in a straight panel run, specify panel to be wider than opening to allow for proper clearance.

Privacy panels are non-handed and reversible. They can be mounted left or right and can be flipped so that the marker board or different fabrics can be positioned inside or out.

Expo or Expo2 dry erase markers are recommended for use on marker boards. Low-odor dry erase markers are not recommended, as they may leave undesirable results when erased.

Standard Includes

- Privacy panel
- Mounting brackets
- Caster
- Marker board, on applicable models: 488M Frosty White

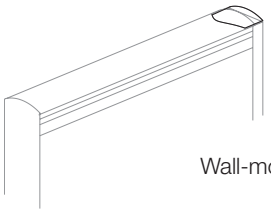
Top Cap Splice for Curved Profile Top Caps		
36PTCOMSP	Use to fill the gap between curved profile top caps in off-module and in-line applications or to cover the top of an adjustable wall-mount channel in wall-mount applications. Must be specified separately for in-line and wall mount applications. Included with off-module frames.	$7



Wall-mount

Specify top cap splice separately to cover the top of an adjustable wall-mount channel when using a curved profile top cap.

Specify top cap one size larger and field scribe to cover the adjustable wall-mount channel and frame when using a flat profile top cap.

IMPORTANT Frameless glass pane must be specified separately. Specify pane and top cap to match the width of the panel frame or the combined width of multiple frames to which they will attach.

IMPORTANT Top cap with brackets can be used in a hi-lo application along with a hi-lo pane. For top cap with rail in a hi-lo application, specify a hi-lo model to receive a shorter rail that can be used with a vertical hi-lo end trim and hi-lo frameless glass pane.

Standard Includes

- Flat profile top cap with pre-drilled holes
- Rail or two brackets, as specified: aluminum, paint
- Attachment bolts and hardware

How to Specify

Top Cap with Brackets or Top Cap with Rail:

❶ Model
② Top cap profile:

Overview

Statement of Line	➤See page 242
Product Information	245
Application Guidelines	254
Power & Data Overview	261

Top caps feature integral snap fit to secure the top cap onto the panel.

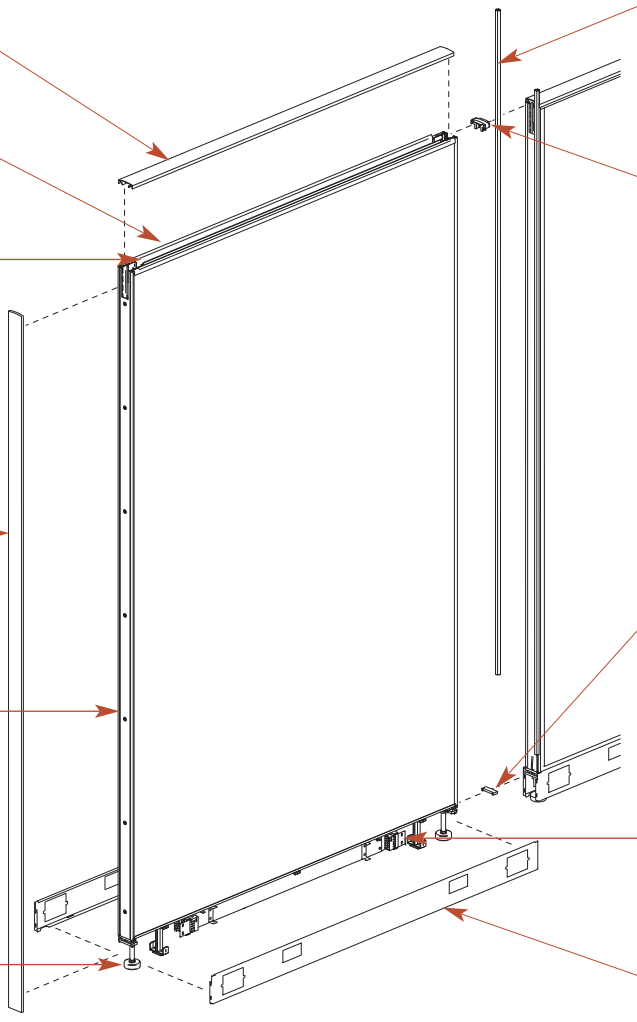
Top channel provides lay-in capability of data cables.

Horizontal rail holds panel face in place at the top and bottom of the frame.

Full-height end trim provides a finished look at the end of the panel run.

Side rails are slotted at 1" increments for attachment of panel-supported components.

Glides provide 2" of adjustability. Carpet grippers are included.



Panel hinges lock panels together along the full height of the panel.

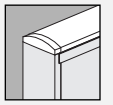
In-line connectors transition joints between panels in straight panel runs. Specified separately.

Alignment clips slip into alignment slots to vertically align adjacent panels.

Wireways allow power and data routing through panels bases.

Wireway covers are available punched or non-punched for power and data access.
➤See page 261.

Top Cap Profiles:



Crowned (C) top caps are available in select colors.

c UL US LISTED

Class A—Tackable acoustical panels

Related Products:

Traxx and tiles are available to integrate wall-mount applications and panel applications.
➤See page 333.

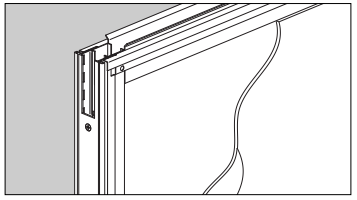
Tackable Acoustical Panels

Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
Circuit Configurations	266

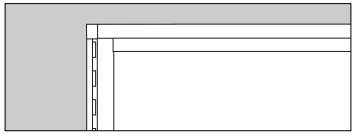
Details

Tackable acoustical panels are 2" thick and fabric covered. All panel models include:

- Top cap
- Wireway covers
- Panel hinges
- Glides and carpet grippers



Panel frame is constructed of 1¼" steel tubing. Panel interior has two sheets of ¼" thick fiberglass that are held in place at the top and bottom with a horizontal rail.



Side rails provide slots at 1" increments for mounting components.

Panel dimensions listed in the pricing tables are actual. Panel width includes the width of the panel plus the width of one panel hinge.

Finishes & Materials

Tackable Acoustical Panel

- Kimball Office panel fabrics: grade A and B
- COM

Note: COM fabrics must be U.L. listed for use on panels.

➤See page 596 for complete information regarding U.L. approval procedures.

Top Cap

- Aluminum: select paint colors

Wireway Covers

- Steel: select paint colors

Full-Height End Trim

- PVC: select colors

Trim Top Cap and In-Line Connector Kit

- ABS plastic: select colors

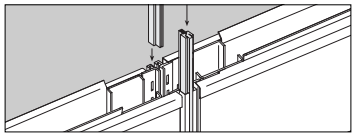
Panel Hinge

- Polypropylene: select colors

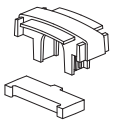
Acoustical Ratings

- NRC rating = .65
- STC rating = 15

Connections

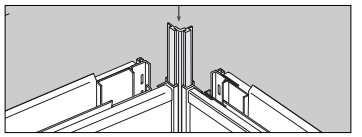


Continuous, polypropylene panel hinge inserted into side rails locks adjacent panels together along the full height of the panel. This hinge design allows removal of a single in-line panel, simplifying reconfigurations.



In-line connector kit, specified separately, provides a connector to transition joints between panels in a straight run and an alignment clip that slips into alignment slots to vertically align adjacent panels. They are required at each in-line panel-to-panel connection.

➤See page 317.

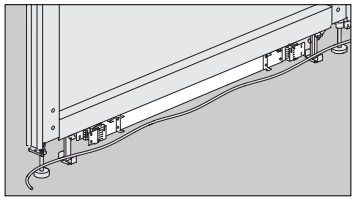


Panel hinges interlock to form L-, T-, X- and 120°-configurations. Alignment clips, included with finish channels, are essential for proper alignment.

Panel runs may also be started using a wall-mount connector or Traxx starter kit.

➤See page 253.

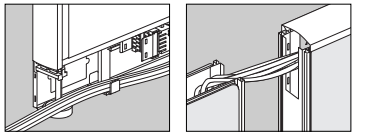
Power & Data



Wireway in the panel base allows power and data cable routing.

Power distribution assembly, factory-installed in the base wireway of 24"W and wider powered panels, allows distribution of power. Power can also be field-installed on non-powered panels. 18"W panels provide no power or data access, but can pass power to adjacent panels.

➤See page 262.



Cable routing is possible in the base wireway and in the top channel. Base wireway can accommodate up to 8 ¼"-diameter data cables at 40% fill or up to 12 at 60% fill. Top channel provides lay-in capability of up to 22 ¼"-diameter data cables at 40% fill or up to 33 at 60% fill. The capacity from panel to panel is 11 at 40% fill or 16 at 60% fill. Capacity is based on ¼"-diameter (nominal) Cat 5 or Cat 6 (4-pair UTP) cables. Data cables can also be run from the base to the mid-wireway.

Related Products

Full-height end trim, specified separately, is required to provide a finished look to the end of a panel run.

➤See page 318.

Finish channels are required when changing directions. They include alignment clips for proper panel alignment and for L, T, and, and X configurations. Specify separately.

➤See page 252.

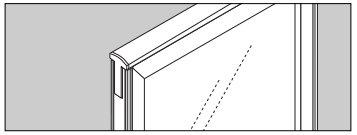
Full Glass Panels

Product Information

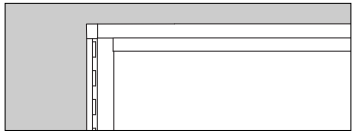
Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
8-Wire Power System	266

Details

Full glass panels are 2" thick and feature a horizontal rail at the top and bottom. All panel models include:
- Top cap
- Wireway covers
- Panel hinges
- Glides and carpet grippers



Tempered glass is ⅛" thick and secured in an 2⅞" extruded aluminum frame. Structural frame is 1¼" steel tubing.



Side rails provide slots at 1" increments for mounting components.

Panel dimensions listed in the pricing tables are actual. Panel width includes the width of the panel plus the width of one panel hinge.

Finishes & Materials

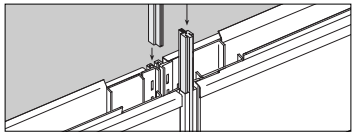
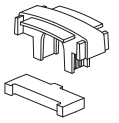
Connections

Worksurfaces can be mounted on glass panels; however, consider the visual through the glass from the back side.

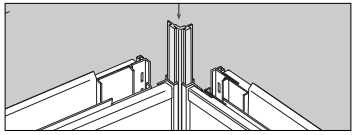
Overheads cannot be mounted to glass panels.



Continuous, polypropylene panel hinge inserted into side rails locks adjacent panels together along the full height of the panel. This hinge design allows removal of a single in-line panel, simplifying reconfigurations.



In-line connector kit, specified separately, provides a connector to transition joints between panels in a straight run and an alignment clip that slips into alignment slots to vertically align adjacent panels. They are required at each in-line panel-to-panel connection.

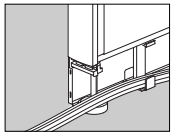


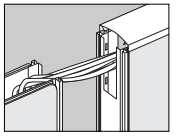
Panel hinges interlock to form L-, T-, X- and 120°-configurations. Alignment clips, included with finish channels, are essential for proper alignment.

Panels runs may also be started using a wall-mount connector or Traxx starter kit.
➤See page 253.

Power & Data

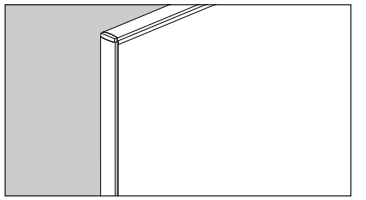
Wireway in the panel base allows data routing. Glass panels do not accept power distribution assemblies or pass-thru jumpers.





Cable routing is possible in the base wireway and in the top channel. Base wireway can accommodate up to 8 ¼"-diameter data cables at 40% fill or up to 12 at 60% fill. Top channel provides lay-in capability of up to 22 ¼"-diameter data cables at 40% fill or up to 33 at 60% fill. The capacity from panel to panel is 11 at 40% fill or 16 at 60% fill. Capacity is based on ¼"-diameter (nominal) Cat 5 or Cat 6 (4-pair UTP) cables. Data cables cannot be run from the top to the bottom of full glass panels.

Related Products



Full-height end trim, specified separately, is required to provide a finished look to the end of a panel run.
➤See page 318.

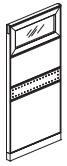
Finish channels are required when changing directions. They include alignment clips for proper panel alignment and for L, T, and, and X configurations. Specify separately.
➤See page 252.

Tackable Sectional Panels

Product Information

Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
8-Wire Power System	266

Details



Sectional panel frames are constructed of 1¼" steel tubing and are 2" thick. Panel tiles are held in place at the top and bottom with a horizontal rail. All panel models include:

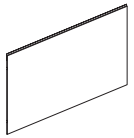
- Sectional tiles
- Top cap
- Base wireway covers
- Panel hinges
- Glides and carpet grippers
- Power distribution assembly on powered panels

Sectional panels ship with the tiles assembled to the frame. Tiles are held in place at the top bottom with horizontal rails.

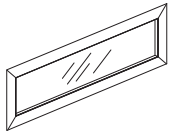
Mid-wireway sectional panel frames include, in addition to the list above:

- Base and mid-wireway power distribution assemblies
- Base-to-mid-wireway jumper
- Mid-wireway covers

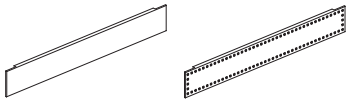
Panel dimensions listed in the pricing tables are actual. Panel width includes the width of the panel plus the width of one panel hinge.



Fabric sectional tiles are constructed of ¼"-thick fiberglass and covered with the selected fabric.



Glass sectional tiles have a 2⅞" extruded aluminum frame with ⅛" tempered glass; available clear or frosted. is available in clear or frosted. Specify only one glass tile to complete both sides of the sectional panel.



Metal sectional tiles are 6"H and are designed for placement just above the worksurface for added visual interest. Metal sectional tiles match mid-wireway covers to create a consistent accent band throughout the workstation. They are available in smooth or bordered profiles.

Finishes & Materials

Sectional Tiles

- Fabric: Kimball Office panel fabrics (grades A and B)
- Tempered glass: clear or frosted
- Metal (steel): selected paint colors
- COM
  Note: COM fabrics must be U.L. listed for use on panels.

➤See page 596 for complete information regarding U.L. approval procedures.

Top Cap

- Aluminum: select paint colors

Wireway Covers

- Steel: select paint colors

Full-Height End Trim

- PVC: select colors

Trim Top Cap and In-Line Connector Kit

- ABS plastic: select colors

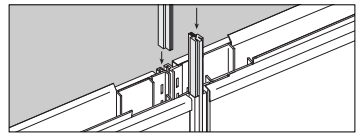
Panel Hinge

- Polypropylene: select colors

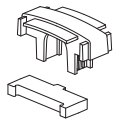
Acoustical Ratings

- NRC rating = .60
- STC rating = 14
- U.L. Listing = Class A

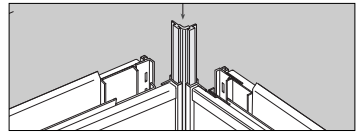
Connections



Continuous, polypropylene panel hinge inserted into side rails locks adjacent panels together along the full height of the panel. This hinge design allows removal of a single in-line panel, simplifying reconfigurations.



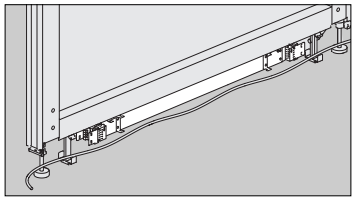
In-line connector kit, specified separately, provides a connector to transition joints between panels in a straight run and an alignment clip that slips into alignment slots to vertically align adjacent panels. They are required at each in-line panel-to-panel connection.



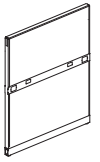
Panel hinges interlock to form L-, T-, X- and 120°-configurations. Alignment clips, included with finish channels, are essential for proper alignment.

Panels runs may also be started using a wall-mount connector or Traxx starter kit.
➤See page 253.

Power & Data



Wireway in the panel base allows power and data cable routing.



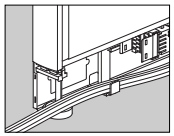
Mid-wireway panels provide power and data access at both worksurface height and at the base. Cables are routed up through the panel from the base wireway.

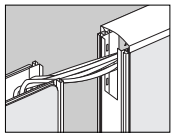
Power distribution assembly, factory-installed in the base wireway of 24"W and wider powered panels, allows distribution of power through the wireway. Power can also be field-installed on non-powered panels.
➤See page 262.

Tackable Sectional Panels

continued

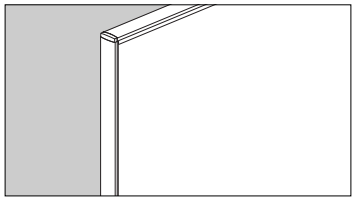
Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
8-Wire Power System 266





Cable routing is possible in the base wireway, mid-wireway, and in the top channel. Base wireways and mid-wireways can accommodate up to 8 ¼"-diameter data cables at 40% fill or up to 12 at 60% fill. Top channel provides lay-in capability of up to 22 ¼"-diameter data cables at 40% fill or up to 33 at 60% fill. The capacity from panel to panel is 11 at 40% fill or 16 at 60% fill. Capacity is based on ¼"-diameter (nominal) Cat 5 or Cat 6 (4-pair UTP) cables. Data cables can also be run from the base to the mid-wireway.

Related Products



Full-height end trim, specified separately, is required to provide a finished look to the end of a panel run.
➤See page 318.

Finish channels are required when changing directions. They include alignment clips for proper panel alignment and for L, T, and X configurations. Specify separately.
➤See page 252.

Panel Heights and Corresponding Tile Heights:

80"H	66"H	62"H	54"H	48"H	42"H	34"H
14" tile						
18" tile	18" tile	14" tile				
14" tile	14" tile	14" tile	20" tile	14" tile		
					8" tile	
6" tile	6" tile	6" tile	6" tile	6" tile	6" tile	6" tile
24" tile	24" tile	24" tile	24" tile	24" tile	24" tile	24" tile

Note: Sectional panels ship with the tiles assembled to the frame. Panels are specified as fully configured models.

Stackable Panels

Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
8-Wire Power System 266

Details

Stackable panels are available for use on top of monolithic, glass, or sectional panels.

Stackable panels are 2" thick and have a horizontal rail at top and bottom. All stackable panels models include:
- Panel hinge
- Attachment hardware

Note: Top cap from base panel will be used on top of stacking panel.

Panel dimensions listed in the pricing tables are actual. Panel width includes the width of the panel plus the width of one panel hinge.

12", 14", and 18" panel heights are available to increase the height of the workstation. These heights correspond to sectional panel tile heights for a consistent look when using both types of panels in the same office setting.
➤See page 260 for application guidelines.

Stackable panels are available in fabric or glass.

Fabric stackable panel is constructed of steel tubing with a ¼" fiberglass core and covered with selected fabric.

Tempered glass in glass stackable is ⅛" thick and available in clear and frosted. Frames are extruded aluminum.

Top lay-in capability provides space for up to 22 ¼"-diameter data cables at 40% fill or up to 33 at 60% fill. The capacity from panel to panel is 11 at 40% fill or 16 at 60% fill. Capacity is based on ¼"-diameter (nominal) Cat 5 or Cat 6 (4-pair UTP) cables.

Finishes & Materials

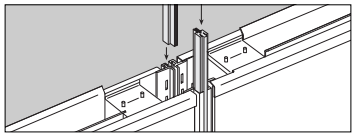
Fabric Stackable Panel
- Kimball Office panel fabrics: grade A and B
- COM

  Note: COM fabrics must be U.L. listed for use on panels.

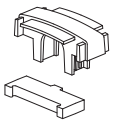
➤See page 596 for complete information regarding U.L. approval procedures.

Glass Stackable Panel
- Tempered glass: clear or frosted
- Steel-tubing frame: select colors

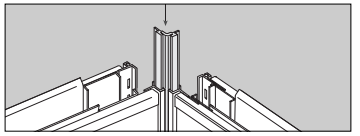
Connections



Continuous, polypropylene panel hinge inserted into side rails locks adjacent panels together along the full height of the panel. This hinge design allows removal of a single in-line panel, simplifying reconfigurations.

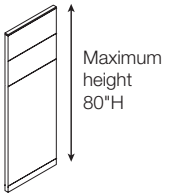


In-line connector kit, specified separately, provides a connector to transition joints between panels in a straight run and an alignment clip that slips into alignment slots to vertically align adjacent panels. They are required at each in-line panel-to-panel connection.



Panel hinges interlock to form L-, T-, X- and 120°-configurations. Alignment clips, included with finish channels, are essential for proper alignment.

Installation of stackable panel is accomplished without disassembling the existing panel run. Stackable panel is bolted to the base panel frame.



One or two stackable panels may be stacked onto a base panel to a maximum overall height of 80".

Width of stackable panel must match the width of the base panel.

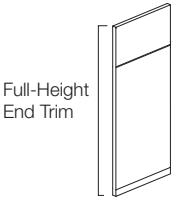
Panel run stability rules are the same for stackable panels as for standard Interworks EQ panels.
➤See pages 254–259.

Overhead components can be supported by panel runs containing stackable panels; however, specific application guidelines apply.
➤See page 260.

Panels made prior to 2/26/07 cannot accommodate stackable panels.

Panels with model numbers beginning with 10P cannot accommodate stackable panels with model numbers beginning with 11P, and vice versa.

Related Products

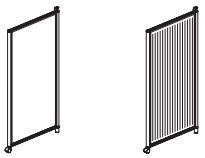


Finish channels and end trim, specified separately, must match the combined height of the base and the stackable panel(s). Finish channels include alignment clips for proper panel alignment and are required in change-of-direction applications. Specify separately.
➤See page 252.

Privacy Panels

Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
8-Wire Power System 266

Details



Privacy panels are available 36" or 42"W and in three designs: fabric on both sides, fabric/marker board combination, or translucent.

Privacy panel models include:
- Top attachment bracket
- Base pivot bracket
- Caster

Fabric and fabric/marker board combination privacy panels have an extruded aluminum frame. Interior is fiberglass over a honeycomb panel.

Translucent privacy panels feature a ribbed pattern to provide privacy, yet allow light to pass through. Frame is extruded aluminum.

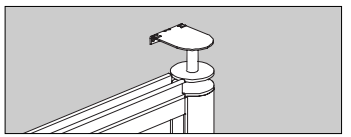
Single caster allows privacy panel to pivot open or closed.

Finishes & Materials

Privacy Panel Frame
- 462 Cinder paint
- 501 Platinum metallic paint

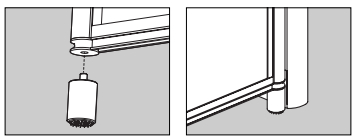
Privacy Panel Inserts
- Kimball Office panel fabrics: grade A and B
- COM
  Note: COM fabrics must be U.L. listed for use on panels.
  ➤See page 596 for complete information regarding U.L. approval procedures.
- Marker board (488M Frosty White)
- Translucent

Connections



Top attachment bracket is used to mount the privacy panel to any 66"H Interworks EQ panel. Top bracket attaches under the top cap and can be easily relocated.

Privacy panel is 68"H and is compatible to, but does not directly align with, Interworks EQ panels.

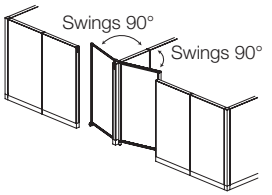


Base pivot bracket features a carpet gripper to hold bracket in place while allowing the privacy panel to swing.

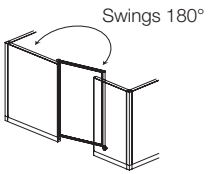
Privacy panels abut the opposite panel, but do not latch.

Non-handed and reversible, privacy panels can be mounted left or right, and can be flipped so the marker board or different fabrics can be positioned inside or outside the workstation.

Planning Factors



When mounted to the perpendicular panel (on one or both sides) in an L or T configuration, panel swings 90°.

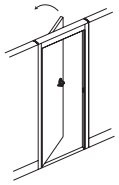


When mounting in a straight panel run, specify privacy panel to be wider than the opening to allow for proper clearance. Panel will swing 180° to lay flat against the Interworks EQ panel.

Hinged Doors

Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
8-Wire Power System 266

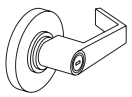
Details



Hinged doors are available 36” or 42”W (nominal). All hinged doors include:

- Frame and threshold
- Top cap
- Panel hinges
- In-line connector caps

Door is 1 7/16" thick hollow-core construction with laminate faces.



Locking lever is available and is suitable for ADA guidelines.

Door opening width for the 36"W door is 29 7/8"; for the 42"W door it is 35 7/8". Opening height is 76 3/4". 42”W hinged door is recommended for ADA guidelines.

Finishes & Materials

Door

- Solid laminate: select colors

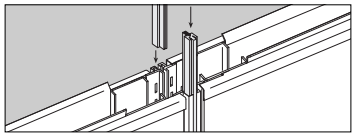
Door Frame

- Paint: select colors

Top Cap

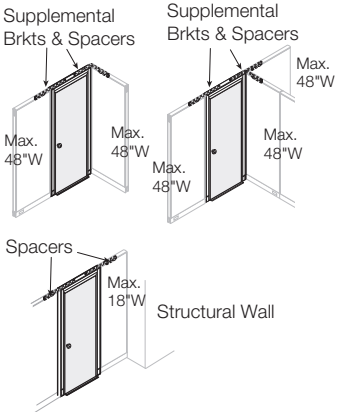
- Aluminum: select paint colors

Connections



Continuous, polypropylene panel hinge inserted into side rails locks adjacent panels together along the full height of the panel. This hinge design allows removal of a single in-line panel, simplifying reconfigurations.

Planning Factors



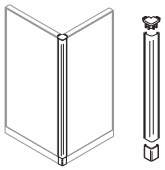
Hinged doors in a panel run must be placed next to a corner or T-configuration where panels are not wider than 48" for necessary stability. Supplemental brackets and spacers are required at panel connections along the door panel run.

Hinged door in wall-mount applications must not be more than one 18"W panel from the wall.

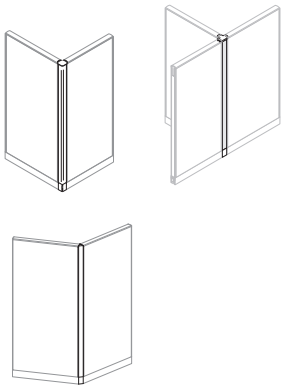
Finish Channels and Trim Top Caps

Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
8-Wire Power System	266

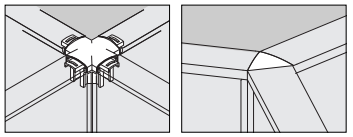
Details



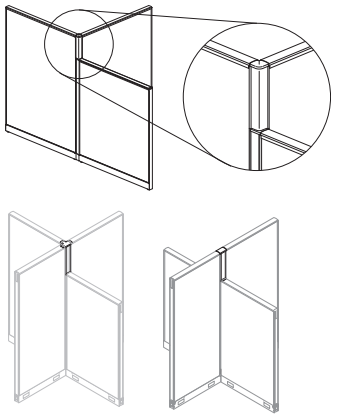
Finish channels provide a finished look to the end of a panel. Finish channels include alignment clips for proper panel alignment and are required in change-of-direction applications; specified separately.



Same-height corner/L-, straight/T-, and 120° V-configuration finish channels include:
- Fabric channel
- Finish channel top cap
- Metal base cover
- Alignment clip



Same-height X- and 3-way 120° Y-configurations do not require a finish channel since the connection will be concealed by the panels. Specify the appropriate top cap to bridge the gap between the panel top caps.



Varied-height 3-way/T- and 4-way/X-configuration finish channels include:
- Fabric channel (one or two)
- Finish channel top cap
- In-line fill caps
- Alignment clip(s)

The appropriate model is determined based on the difference in panel heights.

Finishes & Materials

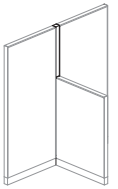
Finish Channel
- Kimball Office panel fabrics: grades A and B
- COM

Note: COM fabrics must be U.L. listed for use on panels.

➤See page 596 for complete information regarding U.L. approval procedures.

Top Cap
- Aluminum: select paint colors

Planning Factors



3-way/T-configuration with one perpendicular lower-height panel requires specification of two finish channel models:
- Same-height straight/T finish channel in the appropriate height for the straight side; and
- Varied-height 4-way/X with two lower-height panels finish channel (models 10P**CNHLL) for the side with the lower-height perpendicular panel.

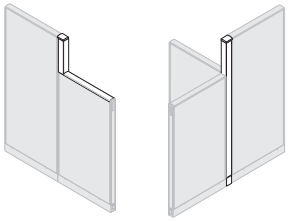
120° configurations must always be with same height panels. Varied height finish channels are not available.

To achieve a different 2-, 3-, or 4-way configuration than those shown on this page, an alternate top cap must be specified separately in addition to the finish channel.

➤See page 315.

Power & Data

When passing electrical cabling from one panel to another, finish channels are required at change-of-direction connections to enclose cabling. They are not needed between two panels in a straight panel run.



Data channels are for use in change-of-height applications to run data cables between the top channel of adjacent panels with differing heights. In-line, corner/L-, and straight/T-configuration are available. Knock outs are provided at each panel height to allow data access into the panel. All models include:
- Metal channel
- Data channel top cap
- Metal base cover
- Alignment clip
- In-line fill caps
- Top cap for the lower-height panel (in-line only)

➤See page 330 to specify.

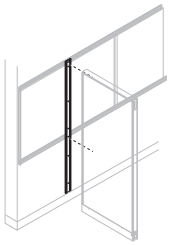
Connectors

Product Information

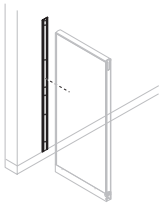
Traxx Starter Kits and Wall-Mount

Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
8-Wire Power System 266

Details



Traxx panel starter kit is used when starting a panel run from a wall with Traxx. The kit must be the same height as the adjoining panel. It includes necessary hardware to attach the perpendicular panel to Traxx.



Wall-mount connectors are available to start a panel run from a building wall. The wall-mount connector must be the same height as the adjoining panel and must be attached level to the start of the panel run.

IMPORTANT: The selection and purchase of the proper fasteners based on wall type for installing wall-mount and Traxx panel starter kit is the responsibility of the installer.

Finishes & Materials

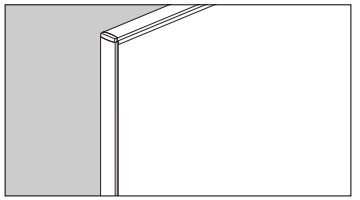
Traxx Panel Starter Kit

- Paint: select colors

Wall-Mount Connector

- Paint: select colors

Related Products



Full-height end trim, specified separately, is required to provide a finished look to the end of a panel run.
➤See page 318.

Panel Configurations

Without Components

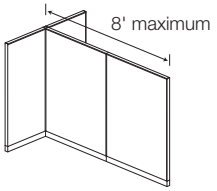
Features ➤See page 244
Power & Data Overview 261
8-Wire Power System 266

General Guidelines:

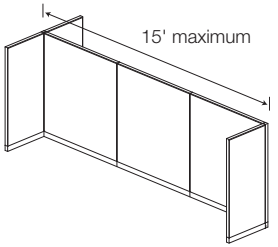
The most stable configurations are those in which panels are tied to worksurfaces and pedestals.

Workstations that include pedestals can accommodate longer panel runs.

Configurations that include overhead storage carry heavier loads and work best on shorter panel runs with additional floor supports.



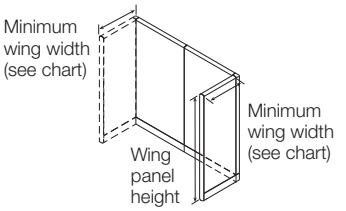
Unsupported run:
- 8' maximum; and
- 2 panels maximum
- 2 supplemental brackets (recommended)



8' to 15' supported runs:
- 3 panels maximum; and
- Wing panels
- 4 supplemental brackets (recommended)

➤See minimum wing panel chart at right.

Do not exceed maximum number of panels in a run.



C-shaped workstations:
- Wing panels
- 3 supplemental brackets (recommended)

➤See minimum wing panel chart at right.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage. They are critical in unsupported (panel only) configurations.

Height of Panel Run	*Minimum Wing Width*
34", 42", or 48"	30"
54", 62", or 66"	36"
80"	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 80"H runs must be 80"H.

Panel Configurations

Without Overhead Storage

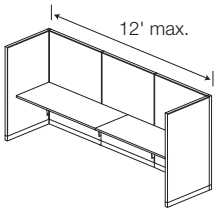
Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
8-Wire Power System	266

General Guidelines:

The most stable configurations are those in which panels are tied to worksurfaces and pedestals.

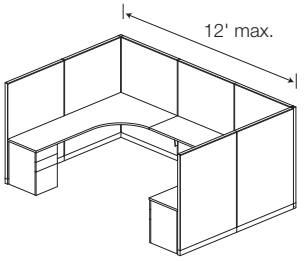
Workstations that include pedestals can accommodate longer panel runs.

Configurations that include overhead storage carry heavier loads and work best on shorter panel runs with additional floor supports.

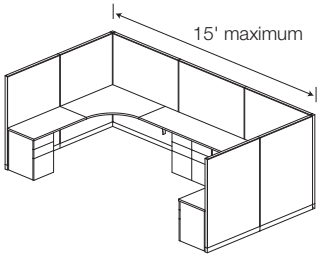


Maximum 12' supported run:
- Cantilevers;
- 3 panels maximum; and
- Wing panels; and
- No overheads

➤See minimum wing panel chart at right.

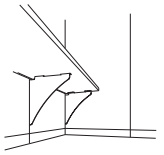


Maximum 12' supported run:
- Cantilevers;
- 3 panels maximum;
- Floor supports at end of wing panel runs; and
- No overheads

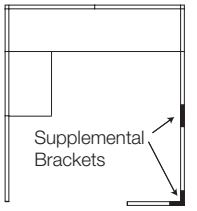


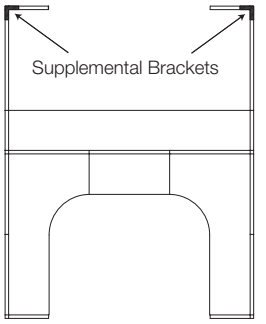
Maximum 15' supported run:
- Cantilevers;
- 3 panels maximum;
- Minimum 2 floor supports mid-run;
- Floor supports at end of wing panel runs; and
- No overheads

Do not exceed maximum number of panels in a run.



Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, or undersurface storage.





IMPORTANT: It is recommended that wing panels be tied to worksurfaces at front and back edges for maximum stability. If not, specify supplemental brackets.

Specify pedestal filler strip where there is no wing panel beside a pedestal to tie the panel and pedestal together for additional support.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage. They are critical in unsupported (panel only) configurations.

Height of Panel Run	*Minimum Wing Width*
34", 42", or 48"	30"
54", 62", or 66"	36"
80"	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 80"H runs must be 80"H.

Panel Configurations

With Overhead Storage

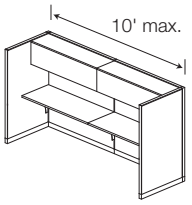
Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
8-Wire Power System	266

General Guidelines:

The most stable configurations are those in which panels are tied to worksurfaces and pedestals.

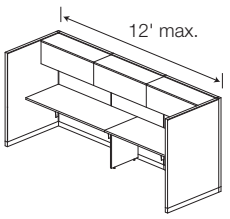
Workstations that include pedestals can accommodate longer panel runs.

Configurations that include overhead storage carry heavier loads and work best on shorter panel runs with additional floor supports.



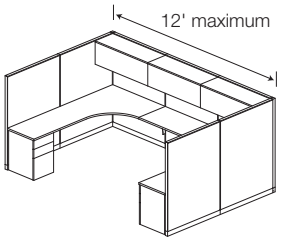
Maximum 10' supported run:
- Cantilevers;
- 3 panels maximum; and
- Wing panels

➤See minimum wing panel chart at right.

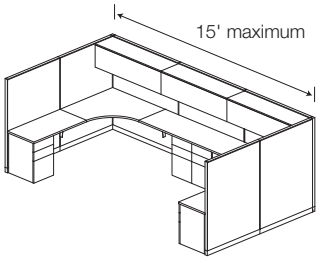


Maximum 12' supported run:
- Cantilevers;
- 3 panels maximum;
- 1 floor support, minimum; and
- Wing panels
- Two supplemental brackets recommended

➤See minimum wing panel chart at right.



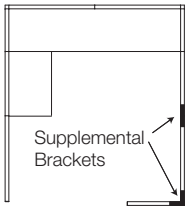
Maximum 12' supported run:
- Cantilevers;
- 3 panels maximum; and
- Floor supports at end of wing panel runs

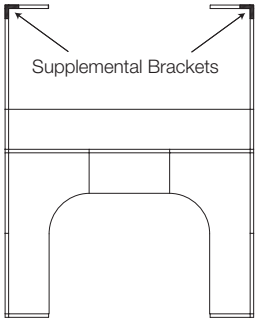


Maximum 15' supported run:
- Cantilevers;
- 3 panels maximum;
- Floor supports at end of wing panel runs; and
- 2 floor supports mid-run, minimum

Do not exceed maximum number of panels in a run.

IMPORTANT: Overhead cabinets must be ganged to ensure maximum rigidity.





IMPORTANT: It is recommended that wing panels be tied to worksurfaces at front and back edges for maximum stability. If not, specify supplemental brackets.

Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, or undersurface storage.

Specify pedestal filler strip where there is no wing panel beside a pedestal to tie the panel and pedestal together for additional support.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage. They are critical in unsupported (panel only) configurations.

Height of Panel Run	*Minimum Wing Width*
34", 42", or 48"	30"
54", 62", or 66"	36"
80"	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 80"H runs must be 80"H.

Panel Configurations

X Configurations

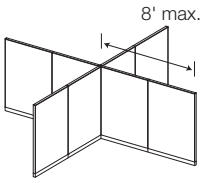
Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
Circuit Configurations 266

General Guidelines:

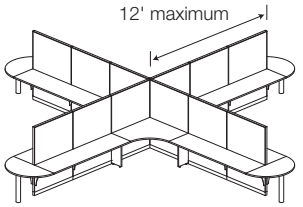
The most stable configurations are those in which panels are tied to worksurfaces and pedestals.

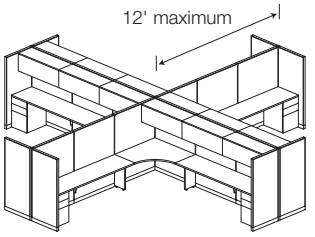
Workstations that include pedestals can accommodate longer panel runs.

Configurations that include overhead storage carry heavier loads and work best on shorter panel runs with additional floor supports.



Unsupported run:
- 8' maximum; and
- 2 panels maximum
- 5 supplemental brackets (recommended)

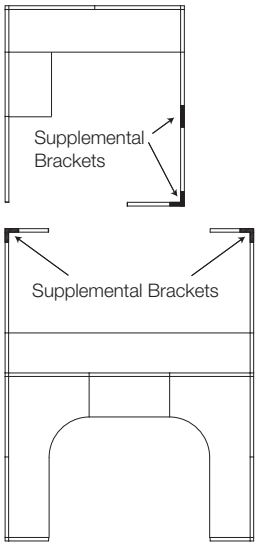




12' supported run:
- Cantilevers;
- 3 panels maximum;
- 1 floor support mid-run minimum; and
- Floor supports at end of wing panel runs

Do not exceed maximum number of panels in a run.

IMPORTANT: Overhead cabinets must be ganged to ensure maximum rigidity.



IMPORTANT: It is recommended that wing panels be tied to worksurfaces at front and back edges for maximum stability. If not, specify supplemental brackets.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage. They are critical in unsupported (panel only) configurations.

Height of Panel Run	*Minimum Wing Width*
34", 42", or 48"	30"
54", 62", or 66"	36"
80"	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 80"H runs must be 80"H.

Panel Configurations

120° V- and Y-Configurations

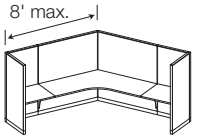
Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
Circuit Configurations 266

General Guidelines:

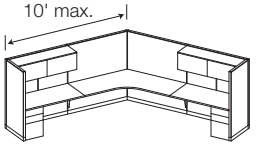
The most stable configurations are those in which panels are tied to worksurfaces and pedestals.

Workstations that include pedestals can accommodate longer panel runs.

Configurations that include overhead storage carry heavier loads and work best on shorter panel runs with additional floor supports.



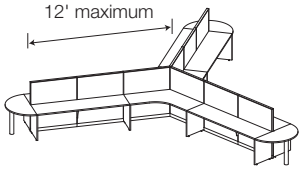
Unsupported run:
- 8' maximum; and
- 2 panels maximum
- Supplemental brackets (recommended)



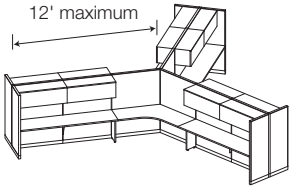
Maximum 10' supported V:
- Cantilevers;
- 3 panels maximum; and
- Wing panels

➤See minimum wing panel chart at right.

Balanced back-to-back overheads can extend maximum run to 12'



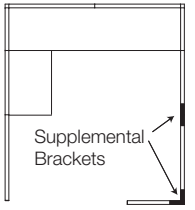
12' supported Y:
- Cantilevers;
- 3 panels 54"H maximum;
- Floor supports at end of run and one additional at mid-run; and
- No overheads

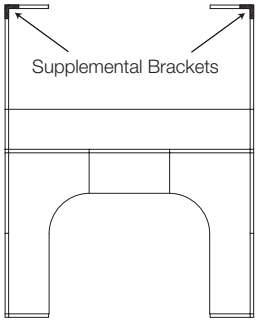


Maximum 12' supported Y:
- Cantilevers;
- 3 panels maximum;
- Wing panels;
- Balanced back-to-back overheads; and
- 1 floor support mid-run minimum

➤See minimum wing panel chart at right.

Do not exceed maximum number of panels in a run.





IMPORTANT: It is recommended that wing panels be tied to worksurfaces at front and back edges for maximum stability. If not, specify supplemental brackets.

Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, or undersurface storage.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage. They are critical in unsupported (panel only) configurations.

Height of Panel Run	*Minimum Wing Width*

54", 62", or 66"	36"
80"	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 80"H runs must be 80"H.

Panel Configurations

Wall- and Traxx-Mounted

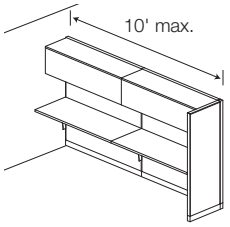
Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
Circuit Configurations	266

General Guidelines:

The most stable configurations are those in which panels are tied to worksurfaces and pedestals.

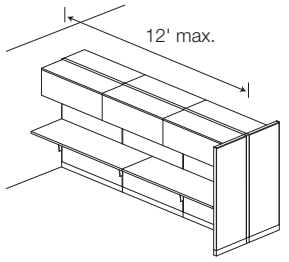
Workstations that include pedestals can accommodate longer panel runs.

Configurations that include overhead storage carry heavier loads and work best on shorter panel runs with additional floor supports.



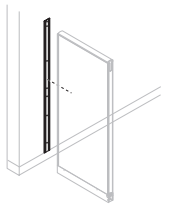
Maximum 10' supported run:
- Cantilever next to wall;
- Cantilever in middle of run; and
- Minimum width wing panel

➤See minimum wing panel chart at right.



Maximum 12' supported run:
- Cantilever next to wall;
- Cantilevers in middle of run;
- Minimum width wing panel; and
- Balanced back to back

➤See minimum wing panel chart at right.



Wall-mount brackets and Traxx starter kits must be secured to the building wall by fastening into the stud or by using drywall fasteners. Selection and purchase of the proper attachment fasteners for your wall is the responsibility of the installer.

Do not exceed maximum panels in a run.

Unsupported worksurface span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, or undersurface storage.

Definitions:

Unsupported panel runs: Runs not attached on BOTH ends to a wall, panel run, or floor support.

Floor support: Undersurface storage units, support panels, or column legs

Balanced back-to-back: Runs having similar components mounted to opposite sides of the run so as to counter-balance the load.

Minimum Wing Panel Widths:

Minimum wing panel widths increase according to the height of the panel run. These minimum widths eliminate the possibility of tipping or injury under standard loading and usage. They are critical in unsupported (panel only) configurations.

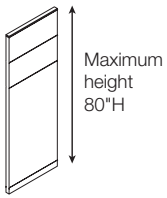
Height of Panel Run	*Minimum Wing Width*
34", 42", or 48"	30"
54", 62", or 66"	36"
80"	48"

IMPORTANT: Wing panel height is not required to be the same height as the panel run.
Exception: Wing panels on 80"H runs must be 80"H.

Panel Configurations

Stackable Panels

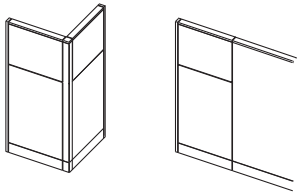
Features	➤See page 244
Application Guidelines	254
Power & Data Overview	261
Circuit Configurations	266



One or two stackable panels may be stacked onto a base panel. Maximum height of any combination of base and stackable panels is 80".

Width of stackable panel must match the width of the base panel.

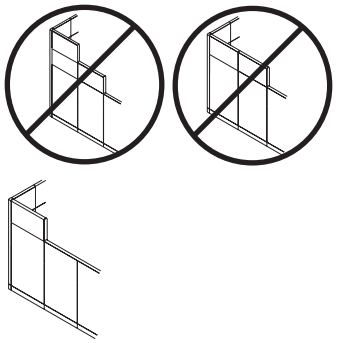
Panel run stability rules are the same for stackable panels as for standard Interworks EQ panels.
➤See pages 254–259.



Turning a corner

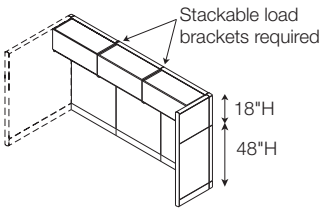
Attached to monolithic panel

For proper support, stackable panels must either turn a corner or be connected to a panel or finish channel that is equal to the height of the base panel plus the height of the stackable panel.



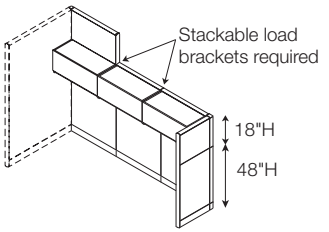
When creating a "step-down" or "cityscape" effect, stackable panels can only extend out one panel width from a connector, unless a stackable load bracket is used.

Wing panel must be equal to the combined height of the base panel plus the stackable panel.



First row of stackable fabric panels above the base panel can support overheads. Overheads cannot be mounted on the second row (top row) of stackable panels.
➤See page 254 for stability rules.

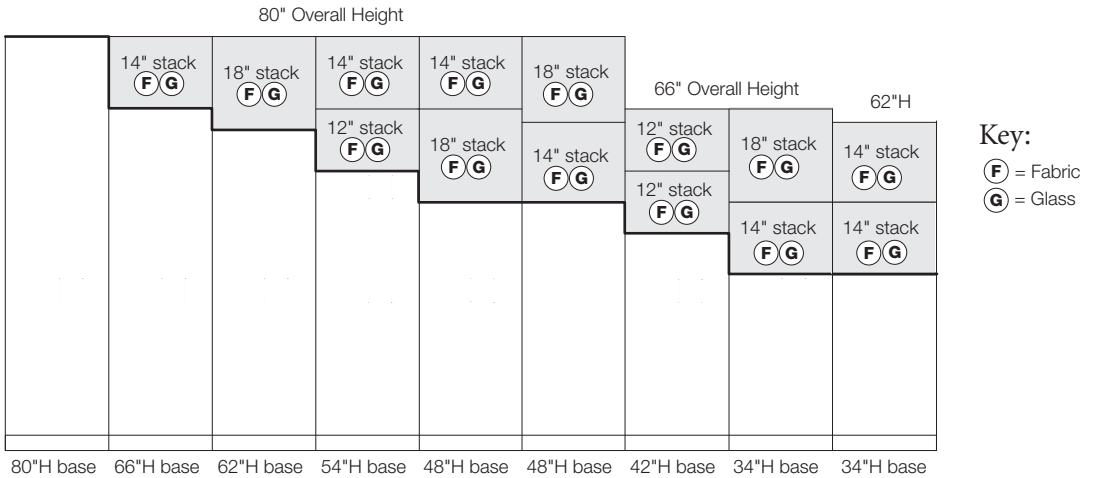
Overheads mounted on 12" or 14" stackable panels will hang down on to the base panel.



Overheads cannot be hung in a row of stackable panels where a hi-lo trim kit is used. However, they may be hung in the row beneath the hi-lo application as shown above.

Stackable load brackets specified separately, are required at in-line stackable panel connections when mounting overheads on stackable panels on only one side of the run.

Stackable load brackets are not required when overheads are balanced back-to-back on stackable panels, nor at the connection to a finish channel (change of direction) or end trim (end of run).
➤See illustration at left.



Power & Data

Overview

Features	➤See page 244
Application Guidelines	254
Circuit Configurations	266
Wiring Diagrams	267

Electrical system is an 8-wire, 4-circuit system. Power is distributed through panels via wireways in the base.

Top channel provides a horizontal lay-in space for cable routing in the top of the panel, accommodating 22 ¼"-diameter cables at 40% fill.

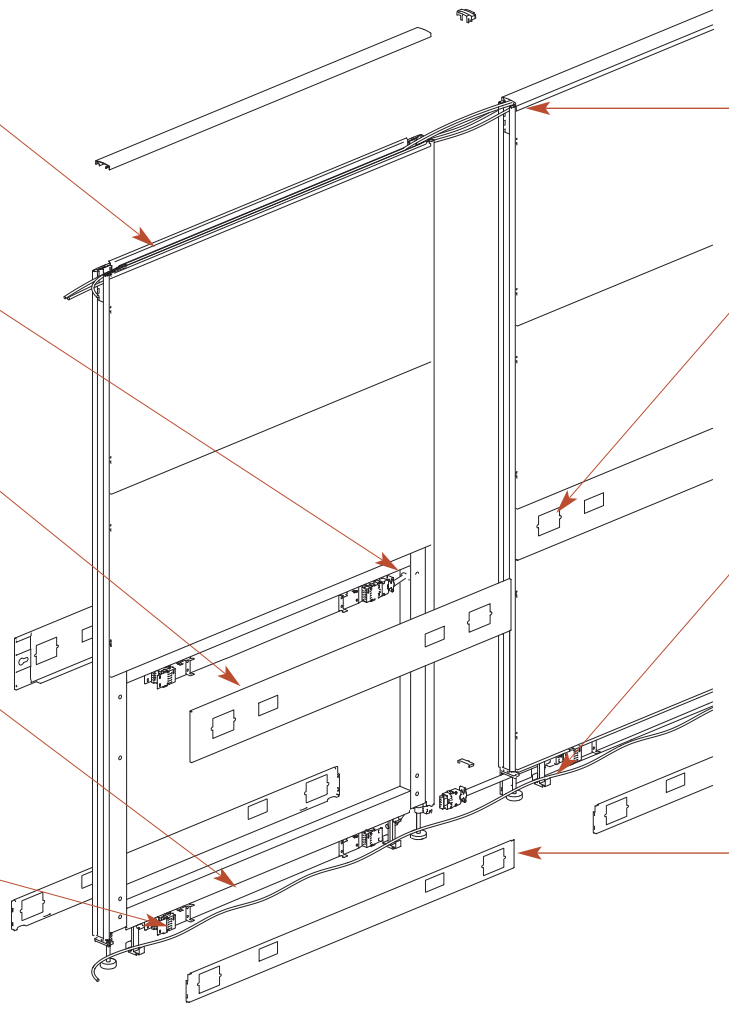
Base-to-mid-wireway jumper cable, routed through the panel frame, distributes power from the base to the mid-wireway.

Data cables may be routed from the base to worksurface height in mid-wireway panels, up to the top channel or from the top channel down to the base through the vertical channels.

Wireway provides space at the base of the panel for power and data cable routing. Wireway is 1 15⁄16"D x 3 1⁄4"H.

Power distribution assembly in powered panels accepts up to four duplex receptacles.

Base power entries are available to bring power from the floor or wall.



Ceiling power entry and power pole are available to bring power from the ceiling to the panel.

Side rail cutout allows cables to be routed to adjacent panels.

Data port openings (two per panel side, four per side on mid-wireway panels) provide access to data cabling. Interworks EQ cover plates or commercially purchased data ports and faceplates are required.

Base wireway can accommodate up to 8 ¼"-diameter data cables.

Wireway cover is removable to allow access to cavity in the panel base. Available punched and non-punched for power and data access.

Wireway Cover Options:

NP2	2 non-punched
P1	1 power punched 1 non-punched
P2	2 power punched
PD1	1 power & data punched 1 non-punched
PD2	2 power & data punched
H1	1 hardwire punched 1 non-punched
H2	2 hardwire punched
HD1	1 hardwire & data punched 1 non-punched
HD2	2 hardwire & data punched

Punch Dimensions:

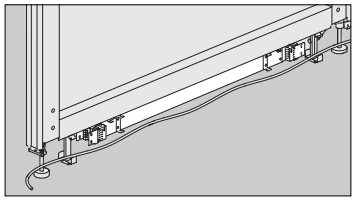
Power: 2.71"W x 1.38"H
Data: 3.00"W x 2.19"H

Power Distribution Assemblies & Receptacles

Product Information

Features	➤See page 244
Power & Data Overview	261
Circuit Configurations	266
Wiring Diagrams	267

Details



Powered panels feature factory-installed electrical distribution assemblies in the base wireway. Power can also be field-installed in non-powered panels.

Mid-wireway sectional panels feature factory-installed power distribution assemblies in both the base wireway and mid-wireway.

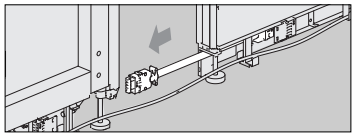
Power distribution assemblies and receptacles are the same for base and mid-wireway.

Two wiring configurations are possible—3 and 1 or 2 and 2—utilizing the same components.
➤See page 266 for planning and installation guidelines.

Duplex receptacles are rated at 15 amps and may be installed back-to-back in base and mid-wireways.

Two data ports can be installed in each wireway (two on one side or one on each side). There are four data port locations, however, data ports cannot be installed back to back. One data port location in the mid-wireway will be eliminated by the base-to-mid-wireway jumper.

Connections



Jumper cables are used to pass power from panel to panel at the base and from base to mid-wireway. Power cannot be passed from panel to panel at the mid-wireway.

Pass-thru jumper cables are used to pass power through non-powered panels.

18"W panels have no electrical access; however, they can accept pass-thru jumper cables to pass power to adjacent panels.

Building-to-panel power connections can be accomplished whether the power source is in the wall, floor, or ceiling.
➤See page 263.

Power and data poles bring voice/data cables and electrical wiring from the ceiling to the panel run.
➤See page 263.

Application Guidelines

IMPORTANT: **Planning actual power supplies and branch circuits** must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

New York City electrical applications require a special power entry. Panels should be specified as non-powered and electrical distribution assemblies should be specified separately.
➤See page 265.

Hardwire electrical components for use in the base wireway are available for areas where local codes do not accept modular electrical plug-in components.
➤See page 264.

Receptacle Capacity per Panel:

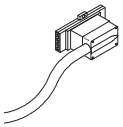
Panel Width	**Tackable Acoustical (Monolithic) Panels**		**Sectional Panels**		**Mid-Wireway Sectional Panels**	
	Base Wireway	*Total per Panel*	*Base Wireway*	*Total per Panel*	*Mid-Wireway*	*Total per Panel*
18"	0	0	0	0	0	0
24"	1 per side	2	1 per side	2	1 per side	4*
30"–60"	2 per side	4	2 per side	4	2 per side	8*

* Including receptacle locations in the base wireway.

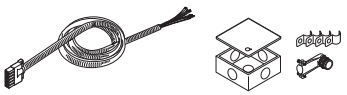
Power Entries and Power/Data Poles

Features ➤See page 244
Power & Data Overview 261
Circuit Configurations 266
Wiring Diagrams 267

Details

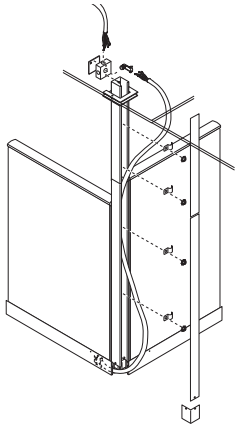


Base power entry is available in straight, corner, end, and side models to bring power to the panel run from the floor or wall.



Ceiling power entry assembly is available to bring power to the panel run from the ceiling. It is used in conjunction with a power and data pole. Ceiling power entry assembly includes:

- Ceiling power entry
- Junction box
- 15' jumper cable
- Hardware



Power/data poles bring voice/data cables and/or electrical wiring from the ceiling to the panel. Poles include:

- Pole and cover
- Ceiling plate
- Appropriate base cover
- Alignment clip
- Fill caps

Note: Ceiling power entry assembly must be specified separately.

Application Guidelines

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

Access to ceiling power source is regulated by National Electrical Code to a maximum of 12 ft. conduit.

When using power pole with two ceiling power entry assemblies, plan an extra pole for data cabling.

18"W panels have no electrical access. They can be used to pass power from one panel to another, but cannot accept receptacles or power entries.

Power entries will take up the space of one receptacle location on the power distribution assembly.

Related Products

Hardwire electrical components are available for areas where local codes do not accept modular electrical plug-in components.
➤See page 264.

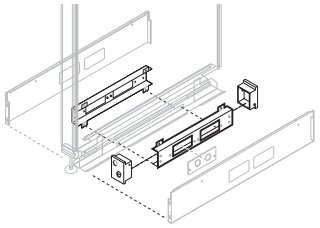
New York City electrical applications require a New York City power assembly for the panel where power entry is made.
➤See page 265.

Hardwire Components

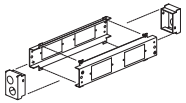
Features ➤See page 244
Power & Data Overview 261
Circuit Configurations 266
Wiring Diagrams 267

Details

Interworks EQ tackable acoustical and sectional panels are available with a hardwire option. Components should be specified separately to accommodate hardwire applications. All duplex receptacles must be Leviton brand or equivalent for hardwire.

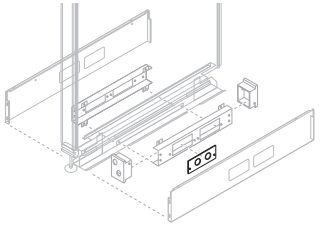


Hardwire panels ship with an internal wireway modified to accept the junction box and one or two punched wireway covers with modified access windows.



Junction box kit, specified separately, is required for each panel that will receive field-installed hardwired electrical. Junction box kit includes:

- Junction box
- Single duplex port per side on 24”W; two ports per side on other widths
- Two junction box end caps with knockouts to feed power in from the panel ends



Side feed plate, specified separately, enables power in-feed from the side into the junction box.

End

Corner

Straight

Appropriate replacement wireway end cap should be specified to in-feed power from the end or through a finish channel.

Connections

Hardwire installations must be completed by a qualified electrician or an electrical engineer familiar with the National Electrical Code and the appropriate local codes.

Application Guidelines

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

18"W panels are not available with the hardwire option.

Hardwire Wireway Cover Options:

H1	1 hardwire punched 1 non-punched
H2	2 hardwire punched
HD1	1 hardwire & data punched 1 non-punched
HD2	2 hardwire & data punched

Punch Dimensions:

Power: 2.71"W x 1.38"H
Data: 3.00"W x 2.19"H

New York City Power Assemblies

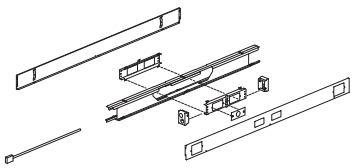
Features ➤See page 244
Power & Data Overview 261
Circuit Configurations 266
Wiring Diagrams 267

Details

Interworks EQ tackable acoustical and sectional panels can be modified to meet New York City electrical code.

New York City electrical power assembly is available for field installation in each starter panel—those into which power from the building will be connected. The starter panel can then be hardwired in the field by a qualified electrician. New York City power assembly is only required in the starter panel. It is not available for use in 18"W or 24"W panels.

Mid-wireway panels are not available with New York City power option.



For 30"–60"W Panels

New York City power assembly includes:

- Internal panel wireway
- Jumper cable
- Junction box
- Interface plate
- Two junction box end caps
- Wireway covers

New York City power assemblies are different depending on the width of the panel as illustrated above.

Connections

Duplex receptacles are not accommodated in panels with New York City power assembly.

Data ports can be installed in panels with New York City power assembly.

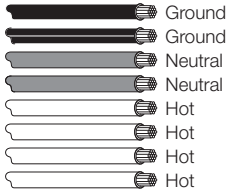
Application Guidelines

IMPORTANT: **Planning actual power supplies and branch circuits** must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

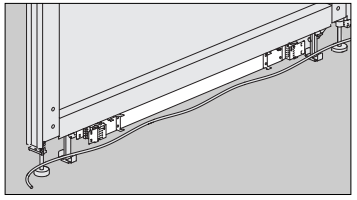
Circuit Configurations

Shared Neutral 8-Wire Power System

Features ➤See page 244
Power & Data Overview 261
Wiring Diagrams 267



Interworks EQ 8-wire, 4-circuit power system supports work environments having light- to medium-intensity computerized equipment needs. The 8-wire systems include two 12-gauge ground wires, two 10-gauge neutral wires, and four 12-gauge hot wires.



Powered panels feature factory-installed electrical distribution assemblies in the base wireway. Power can be field-installed on non-powered panels.
➤See page 269.

Building-to-panel electrical connections can be accomplished from power sources in the wall, floor, or ceiling.
➤See page 263.

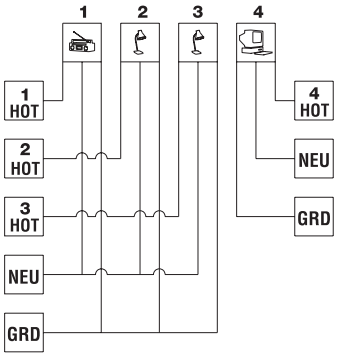
Two wiring configurations are possible—3 and 1 or 2 and 2—utilizing the same components.
➤See wiring configurations at right.

Duplex receptacles used for both types of wiring configurations are the same. This simplifies specifications and allows a faster understanding of the system.
➤See page 262.

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided herein is intended to assist specifiers.

Installations should be in accordance with the NEC. Local codes may vary. Consult a qualified electrical contractor or engineer for proper installation of electrical equipment. Hardware necessary for installation is shipped with all components.

3 and 1 (8-wire):

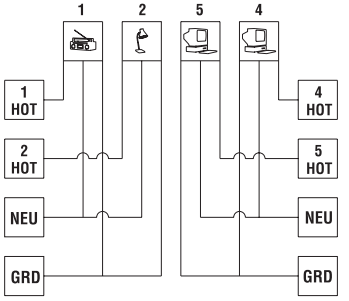


- Three utility circuits share a neutral and common ground.
- One circuit with a DEDICATED hot, neutral and ground.
- Utilize Interworks EQ receptacles #1, 2, 3 for utility and #4 for the DEDICATED ground circuit.

Circuits 1, 2, and 3 can be used for general electrical needs. Customarily, one or more of the circuits is reserved for lighting or other everyday uses, which allows control by central or master switching.

Circuit 4 consists of three separate conductors (hot, neutral, and ground) and meets the BIFMA/ANSI definition for a dedicated circuit.

2 and 2 (8-wire):



- Two DESIGNATED utility circuits and two DESIGNATED computer circuits.
- Utilize Interworks EQ receptacles #1 and #2 for the designated utility circuits and receptacles #4 and #5 for the designated computer circuits.

Note: Receptacle #3 cannot be used in the 2 and 2 configuration. If receptacle #3 is used, possible cross feed or interference from utility circuits one and two can be introduced to computer circuits.

Circuits 1 and 2 provide a pair of designated circuits for general electrical needs, as described for the 3 & 1.

Circuits 4 and 5 provide a pair of designated circuits for computer applications.

Approval/Compliance:

Interworks EQ's electrical system is UL approved, complies with the National Electrical Code (NEC), and is certified for electrical safety to Canadian Standards Association (CSA) standard C22.1 No. 203.
Note: Any field modification of the electrical components voids the UL listing.

Wiring Diagrams

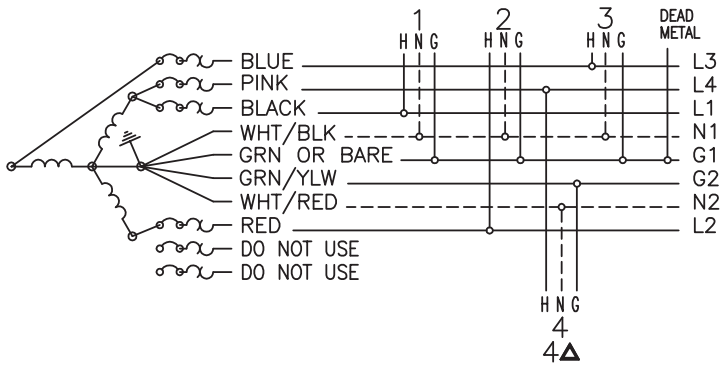
Shared Neutral 8-Wire Electrical System

Features ➤See page 244
Power & Data Overview 261
Circuit Configurations 266

Provide these wiring diagrams to the electrical contractor.

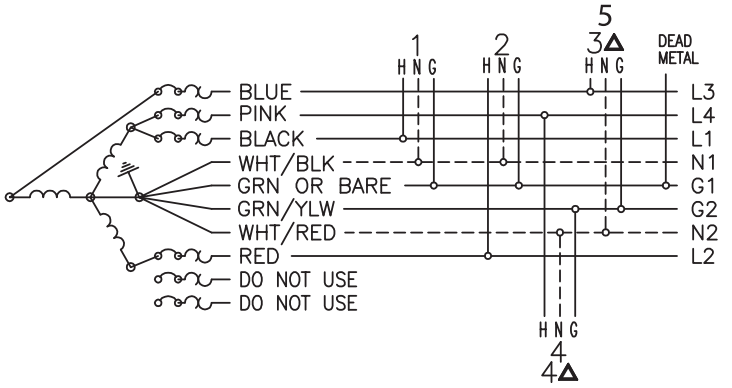
Interworks EQ 3 and 1 Configuration 8-Wire:

120/208V WYE 3 Phase 8-10 Shared Neutral
Receptacles: 1, 2, 3, and 4 (or 4Δ)



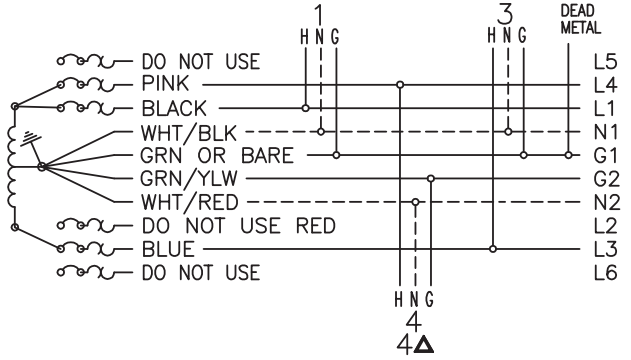
Interworks EQ 2 and 2 Configuration 8-Wire

120/208V WYE 3 Phase 8-10 Shared Neutral
Receptacles: 1, 2, 4, and 5 (or 1, 2, 3Δ, and 4Δ)



Interworks EQ 2 and 1 Configuration 8-Wire

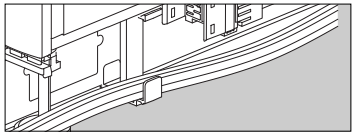
120/240V 1 Phase 8-10 Shared Neutral
Receptacles: 1, 3, and 4 (or 4Δ)



Cable Management

Features	➤See page 244
Power & Data Overview	261
Circuit Configurations	266
Wiring Diagrams	267

Communication and data cables can be routed:
- Through top channel of panels,
- Through verticals to the base wireway.
- Through the base wireway, or
- From the base wireway up to mid-height

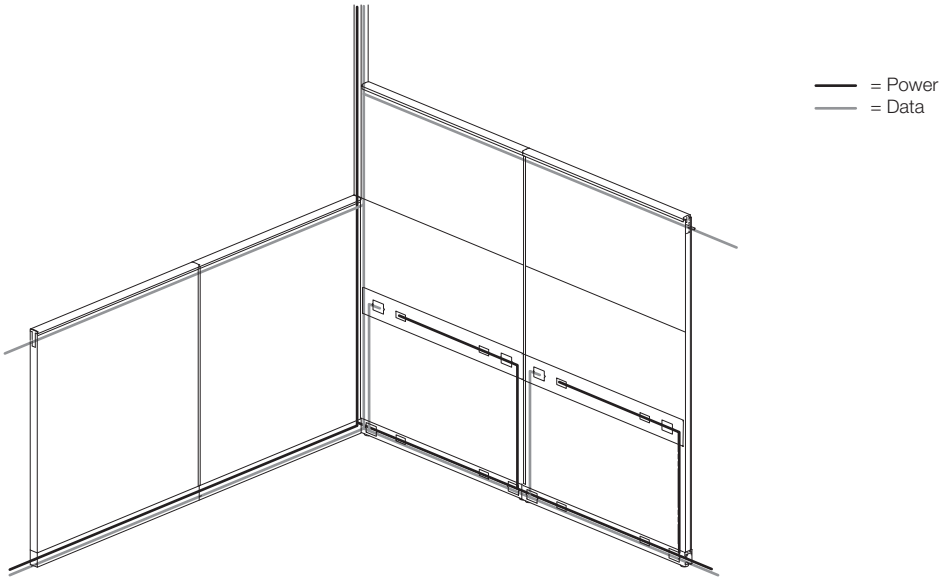


Cable hanger allows data cables to be routed through the base wireway.

Base wireways can have up to two data port openings on each side of the panel.

Mid-wireway panels can have up to four data port openings on each side of the panel: two in the base and two at worksurface height. However, base-to-mid-wireway jumper will eliminate access to one data port opening in the base and one in the mid-wireway.

Data ports cannot be installed back to back unless surface mounted ports are purchased commercially.



When purchasing data ports commercially, verify that the depth of the port and size of cover plate are appropriate for proper fit. Data ports can be purchased through the port manufacturer or their distribution network. Data ports up to 1½"D can be accommodated provided the data port is on Side 1 and the jumper is on Side 2 or there is no electrical jumper.

Consider the cable bend radius when planning the routing of data cables through Interworks EQ panels at panel-to-panel connections or within the panel.

	Min. Radius	*Max. Radius*
Top Channel to Vertical Channel		
	½"	1½"
Top Channel Panel-to-Panel at 90°		
	½"	1½"
Vertical Channel to Base Wireway		
	1"	2"
Mid-Wireway to Vertical Channel		
	½"	1½"

Panel-to-panel capacity is limited by the top channel cutout and is 11 at 40% fill or 16 at 60% fill..

Cable Capacities:

	¼"-diameter cables at 40% Fill*
Base Wireway	8
Top Channel	
–Acoustical	22
–Sectional	22

18"W panel is available non-powered only; does not accept power entry or receptacles.

Fabric selected for side will apply to all tiles.

Use an electronic specification tool for accurate pricing when specifying two different fabric grades on a panel.

Features ➤See page 244
Application Guidelines 254
Power & Data Overview 261
Circuit Configurations 266

Standard Includes

- Top cap
- Two fabric tiles per side
- Two wireway covers
- Two panel hinges
- Two panel glides
- Carpet grippers
- Power distribution assembly on powered panels

How to Specify

❶ Model
❷ Power option:
P = Powered
N = Non-powered
H = Hardwired (+$56 to non-powered)
❸ Top cap material:
P = Paint
④ Type of power system (omit for non-powered and hardwired):
84 = 8-wire, 4-circuit
⑤ Top cap profile:
C = Crowned
⑥ Wireway cover punch option (omit for 18"W):
➤See page 261 for designators.
⑦ Trim finish designator:
Paint number or
501 = Platinum Metallic (+10%)
⑧ Hinge color designator
⑨ Side 1 fabric grade
⑩ Side 1 fabric number
⑪ Side 2 fabric grade
⑫ Side 2 fabric number

Pricing

GSA SIN 711-1
COM GSA Non-Contract

When mounting privacy panel in a straight panel run, specify panel to be wider than opening to allow for proper clearance.

Privacy panels can be mounted left or right and are reversible so that different fabrics or marker board can be positioned inside or out.

Expo or Expo2 dry erase markers are recommended for use on marker boards. Low-odor dry erase markers are not recommended, as they may leave undesirable results when erased.

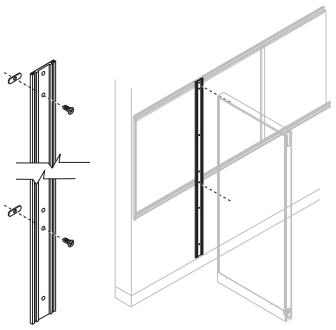
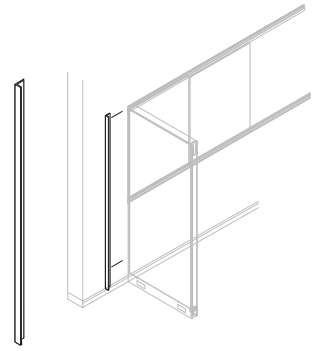
Traxx Starter Kits

GSA SIN 711-1





Specify the starter to match the height of the panel.

Traxx Panel Starter Kit includes only the necessary hardware to attach panel perpendicular to Traxx.

Selection and purchase of the proper attachment fasteners for your wall is the responsibility of the installer.

In-line filler cap, included, is used to fill the gap at top of panel side rail when using Traxx panel starter kit or panel wall mount.

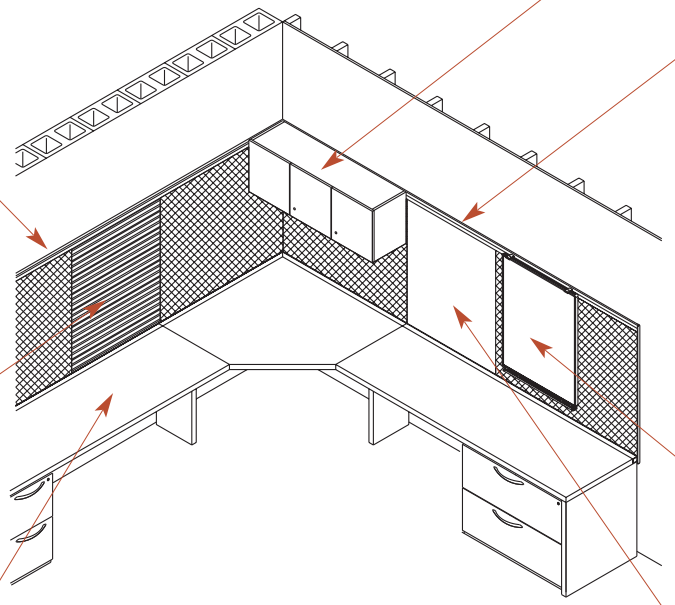
Overview

Statement of Line	➤See page 334
Traxx & Tiles Product Info	336
Installation & Planning	337
Presentation Tools	338

Traxx is a unique horizontal rail system that attaches to existing architecture, allowing free, off-module placement of Kimball Office components. Place storage, worksurfaces, tiles and panels wherever you need them.



Overhead storage can be mounted to upper Traxx.

Traxx can be mounted to most interior walls, including steel or wood stud walls, masonry block, or solid masonry walls.

Upper Traxx can be mounted to correspond with appropriate panel heights or at 80"H for conference room applications.

Tiles mount between upper and lower Traxx to add functionality to the workspace.

Worksurfaces can be mounted to lower Traxx.

Presentation tools hang from upper Traxx and slide along rail.
➤See page 344.

Fabric and standard marker board tiles can be scribed in the field to meet individual requirements.

Related Products:

Vertical cable manager is available to route cords. It is available in fabric or black plastic.
➤See page 346.

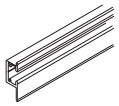
Traxx and Tiles

Features ➤See page 335
Installation & Planning 337
Presentation Tools 338

Details



Traxx is available in lengths of 72" and 144", and can be scribed in the field. Traxx models include:
- Two Traxx (72" or 144")
- Four splice plates

Tiles are available in fabric, slat, or marker board models. Fabric and standard marker board tiles can be scribed in the field. Tile models include:
- Tile
- Two trim channels

Marker board tiles add convenient, erasable writing space and are ideal for offices, training rooms, and conference areas. Available in laminate or magnetic porcelain.

Slat tiles offer flexibility in placement of work tools. Selecting the slat tile with fabric above is an economical alternative when overhead storage will be used.

Two trim channels, standard with each tile, provide an expansion joint, wire manager attachment, and compensate for out-of-plumb walls. Additional trim channels are available, if required, for tiles that have been scribed in the field.

Finishes & Materials

Traxx
- Paint

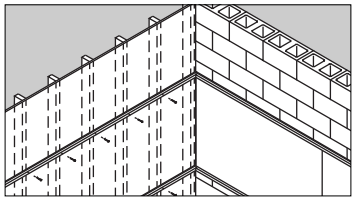
End Trim
- Paint, except 499 Satin

Trim Cap
- Paint
- Wood finishes

Tiles
- Fabric
- Slat: paint
- Marker board: 409M Icey White or 483M Off White

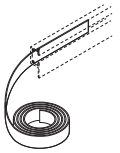
Trim Channels
- Fabric
- Paint

Connections

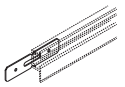


Traxx are mounted horizontally permitting complete tie-in to all studs.

No additional blocking is required to support Traxx, if walls are designed and built to specifications outlined. ➤See page 337 for application guidelines.



Fastener concealment is used to conceal splice plates and fasteners. It does not interfere with mounted components and does not require any additional tools for installation. Fastener concealment is available in vinyl or felt. Vinyl must be specified when using presentation tools.



Splice plates are required to align two sections of Traxx in-line or when turning corners. They are easily modified in the field to accommodate angles or corners.

Planning Factors

Traxx can be mounted at any height if not corresponding to other products. ➤See page 337 for mounting heights to correspond to panel applications.

To custom paint Traxx in the field, specify 480 Antique White. Schedule delivery to precede the rest of the order to provide time for painting. Traxx should be lightly sanded before painting. Enamel based paints are recommended.

Traxx and tiles, excluding porcelain marker board) can be scribed in the field to the desired size.

Related Products

Traxx panel starter kits allow attachment of a panel anywhere along Traxx.

Full end trim is available to finish the end of tile between upper and lower Traxx.

Panel-height full end trims are available for use with Traxx panel starter kit.

Single end trim finishes the end of a single Traxx rail, if stopping Traxx short of an intersecting wall.

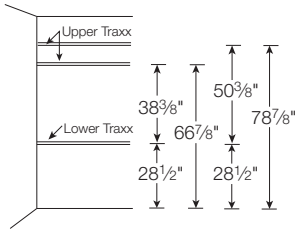
Trim cap slips into the top ledge of the upper Traxx to provide continuity with panel heights. ➤See page 345.

Features ➤See page 335
Traxx & Tiles Product Info 336
Presentation Tools 338

Installation Heights:

Traxx should be installed at heights to correspond with the appropriate application.

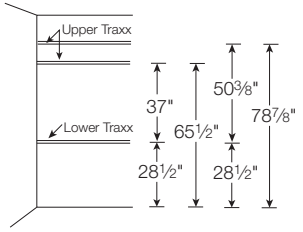
Compatible with Cetra and Xsite:



Overhead Cabinets	66⅞"H
Worksurfaces	28½"H
Conferencing Solutions	78⅞"H

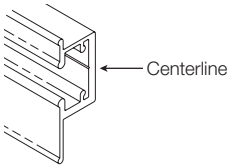
Note: 37"H tiles coordinate with Cetra and Xsite 68"H applications.

Compatible with Interworks EQ:



Overhead Cabinets	65½"H
Worksurfaces	28½"H
Conferencing Solutions	78⅞"H

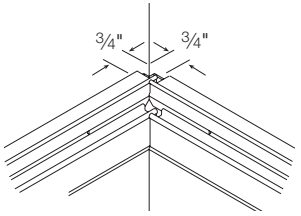
Note: 36"H tiles coordinate with Interworks EQ 66"H applications.



Determine proper position of Traxx using centerline of lower Traxx as a reference point.

Actual mounting height can be varied to meet specific needs; however, undersurface storage height must be considered.

Variations in the floor surface (peaks and valleys) should be considered, especially where horizontal placement is critical.



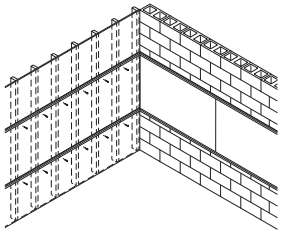
Traxx extends ¾" from the wall. This dimensional loss should be considered when space planning for components, when Traxx are being used on 2 or more walls of a space.

When planning components for the entire length of the wall, total length of storage components should be a minimum of 1½" less than the total length of the wall. Filler panels may be specified to fill any remaining space.

Select worksurfaces and tiles can be field scribed to fit space.

In fixed wall Traxx applications, choose your tile height based on your specific application. Consider the height of the cabinet and clearance between the bottom of the overhead and the worksurface.

Recommended Fasteners:



Fasteners must tie in directly to the substructure of a structural wall for proper attachment of Traxx. Kimball Office defines a structural wall as a loadbearing wall constructed of materials such as poured concrete, concrete block, or studs.

Selection and purchase of the proper attachment fasteners for your wall conditions is the responsibility of the installer.

Type and Size	*Commercial Model #*
Steel studs (½" to ¾" drywall)

Minimum Requirements:

- Wood studs must be nominal 2" x 4" minimum.
- Metal studs must be "C" channel, 20 gauge minimum thickness.
- Metal or wood studs must be on centers no greater than 24" and have a maximum height of 14' restrained at floor and ceiling.
- Interior walls must be designed to resist not less than a force of 5 lbs. per sq. ft. applied perpendicular to the wall. The deflection of such walls under a load of 5 lbs. per square foot shall not exceed 1/240 of the span for walls with brittle finishes and 1/120 of the span for walls with flexible finishes (per International Building Code sections 1604.4 and 1607.13).
- Traxx may not extend more than 6" beyond the last solid attachment point.
- Minimum width of Traxx that can be attached to a wall is 16" mounted to studs 16" apart.
- If an overhead is being mounted, the minimum width for Traxx is 24" with the Traxx being centered on studs 16" apart, so as not to extend more than 6" beyond the last solid attachment point.

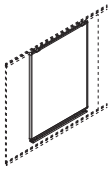
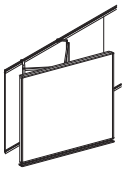
Installation & Planning 337

Details

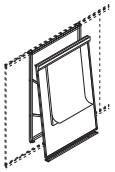


Flexboards provide tackable fabric or marker board surfaces that can be positioned easily for your convenience. Flexboards hang from the center reveal of the upper Traxx. They can also hang off the top edge of the upper Traxx; however, the anti-dislodgement feature will be inactive in this position.

Flexboards are reversible. They are available in fabric/marker board and marker board/ marker board combinations. Marker board surfaces are porcelain/magnetic.



Swivel marker board hangs from the upper Traxx channel which allows it to pass over flexboards, flip chart holder, and extendable flip chart holder. It will swivel 45° for maximum flexibility. Pen holder is included.



Extendable flip chart holder provides an ergonomically correct surface for writing on flip charts. It pulls out from the wall at a 20° angle for access and to allow pages to be flipped over the back of the chart and remain attached. Ships with one pad of paper. There is a marker board surface beneath the pad. Concealed rollers on extendable flip chart holder are standard to hold any pages that are torn from the flip chart pad. Pen holder is included.

Anti-dislodgement feature on all boards keeps them in place as they move along the Traxx. Boards may be used with or without tiles.

Presentation rail is 36"W and can be used on the lower Traxx to hold presentation materials. It can also be used as an eraser tray. End caps allow two rails to be joined together to create a longer display surface. A smooth transition is accomplished by removing one end cap and inserting the exposed rail into the end cap of another rail.

Flip chart holder hangs on upper Traxx and can be repositioned easily. It holds standard size flip chart pads. Pegs are adjustable. Flip chart holder is equipped with concealed rollers to hold any pages that are torn from the flip chart pad.

Finishes & Materials

Flexboard Fabric
- 2913 Charcoal Grey
- 2914 Natural Linen

Flexboard Marker Board
- White magnetic porcelain

Presentation Rail
- Black only

Flip Chart Holders/Board Frames
- Anodized aluminum

➤See page 470 to specify.

Features

Overview

Statement of Line ➤See page 350
Product Information 357
Application Guidelines 358

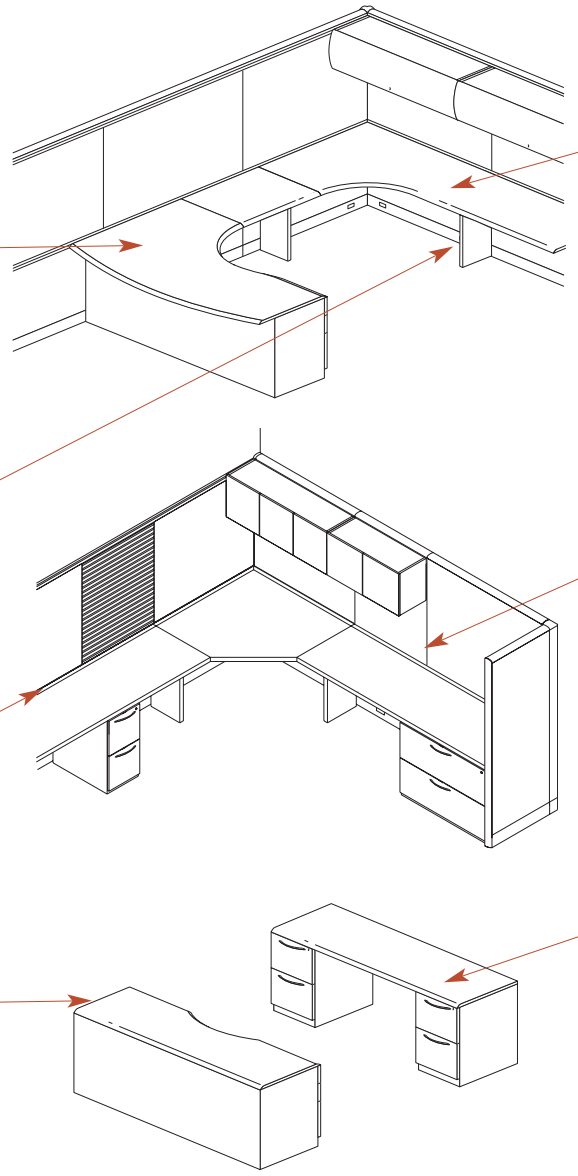
Worksurfaces can be panel-mounted, Traxx mounted, or used in freestanding applications. Two worksurface thicknesses are available: 1 3/16" and 1 9/16".

Worksurfaces have a solid core with a thermally fused laminate (TFL), high-pressure laminate (HPL), wood, or 3D laminate surface. 3D laminate worksurfaces feature a protective polymer layer that is heat formed over an MDF core.

Additional support can be provided by mid-supports, cantilevers, pedestals, column legs, and support panels.

Traxx brackets attach worksurface to bottom Traxx in Traxx-mounted applications.

Corner and end supports are available to create freestanding modular casegoods.



Xsite Traxx-mounted worksurfaces allow for flexible horizontal positioning which provides exceptional off-modular capabilities.

Cetra and Interworks EQ panels feature slots to allow worksurfaces to be mounted at any height in 1" increments.

Freestanding applications can be created by combining undersurface storage and modesty panels.

1 3/16" Rim Profiles:

Softened PVC (P) | Wood Softened (F) | Sloped Edge (S)

Softened PVC rim is available on TFL and HPL worksurfaces only. The wood softened rim is available on laminate or wood worksurfaces. Sloped rim is available on 3D laminate worksurfaces only.

1 9/16" Rim Profiles:

Self Edge (J) | PVC (P) | Waterfall (K)

Wood Softened (F) | Wood Reed (W)

Wood Scalloped (X) | Wood Transitional (E)

Self edge, PVC, and waterfall rim profiles are available on laminate worksurfaces only. Wood softened, reed, scalloped, and transitional rim profiles are available on laminate or wood worksurfaces.
IMPORTANT: All rim profiles are not available on all worksurface shapes.
➤See pricing pages.

Worksurfaces

Features ➤See page 356
Application Guidelines 358

Details

Two worksurface thicknesses are available: 1 3/16" and 1 9/16". IMPORTANT: While the 1 3/16" and 1 9/16" worksurfaces are offered in the same materials, they are not interchangeable and cannot be used next to each other.

Wire manager profile worksurfaces have a flexible rubber trough that allows cords and cables to be routed along the back edge of the worksurface.

Tables are ideal for private offices and team work areas. Two table top thicknesses are available—1 3/16" and 1 9/16"—to complement the worksurface offering.

Cylinder and half-cylinder bases are available for use with table tops. Table support bases include an anti-tip weight.

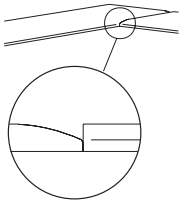
Finishes & Materials

Worksurfaces
- 3D laminate
- Thermally fused laminate (TFL)
- High-pressure laminate (HPL)
- Wood

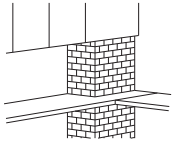
Rims
- Sloped on 3D laminate worksurface
- PVC on laminate (HPL & TFL) worksurface
- Wood on laminate (HPL) or wood worksurface
- Laminate (HPL) on 1 9/16" laminate worksurface with self edge or waterfall rim

Wire Manager
- PVC, specified to coordinate with worksurface

Connections

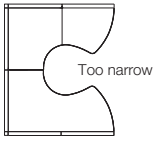


When using straight worksurfaces with sloped rims perpendicular to each other, there will be a valley where the slopes meet. It is recommended that extended worksurfaces be specified where possible to eliminate the valley between surfaces.



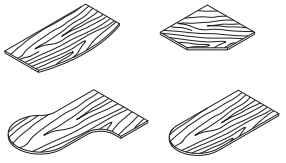
Worksurfaces can be scribed on site to conform to oblique angles, irregular column placement, and historical preservation guidelines.

Planning Factors



Workstations using curvilinear worksurfaces need special planning to ensure there is proper clearance. Some curved worksurfaces, such as the wedge or extended wedge, will extend into the workspace making the work area too narrow for a chair. Specify corner surface in appropriate size to provide ample workspace.
➤See pricing pages for dimensions.

IMPORTANT: When using curvilinear worksurfaces, it is recommended that mobile undersurface storage is used.



Standard grain direction for wood, woodgrain laminate, and wood-grain 3D laminate worksurfaces runs the length of the worksurface. However, depending on the worksurface shape and the material, the direction can vary.
➤See pricing pages for grain direction on specific worksurface models.
Note: Special attention should be given to wood grain direction when specifying a corner worksurface in a U-configuration. If a different grain direction other than the standard is required, worksurfaces must be custom quoted.

Custom modifications can be specified using an electronic specification tool for select models without running through as a special order. These include factory-installed grommets, additional wire managers, rims, or mitering. Special dimensions are available on straight worksurfaces by specifying the next larger standard model and selecting the special cut down dimension option. Upcharges apply; not available on Kwik Office models.
Note: Special dimensions on worksurface shapes other than straight must be custom quoted.

Related Products

Brackets are available to attach worksurfaces to all Kimball Office Systems and adjacent worksurfaces.
➤See pages 458–460.

Support components are available to make worksurfaces freestanding.
➤See pages 463–470.

Accessories, including center drawer and keyboard trays, are available to add functionality to the work area.
➤See the Perks Price List.

Rim Options:

➤See appropriate pricing page for available rim options.

Wire Manager | Single Rim | Double Rim

Wire manager option has the selected rim detail on the front edge and a wire manager on the back edge. Side edges are finished to match the top surface.
Exception: Sides on 1 3/16" laminate surfaces with softened PVC rim (P) are finished to match the rim.

Single-rim option has the selected rim detail on the front edge only. Sides and back are finished to match the front rim.

Double-rim option has the rim detail on the front and back edges. Sides are finished to match the front and back rims.
Note: Only select shapes are available with double rim.

Grommets:

Factory-installed grommets are available through electronic specification tools for single and double rim worksurfaces. Factory-installed grommet option includes black plastic grommet (models 99KG50, 99KG60, 99KG80); upcharge 99KG60 applies.
Note: Not all grommet locations are available for all surfaces. Use electronic specification tools for available options.

Cetra-Supported Worksurfaces

Bracketry and Support Guidelines

Features ➤See page 356
Product Information 357
Application Guidelines

IMPORTANT: Supports and brackets must be specified separately for all worksurfaces. Specify the appropriate supports or brackets for the specific application.

Supports and brackets are packaged separately from worksurfaces.

IMPORTANT: Careful consideration must be given to dimensions when using curvilinear worksurfaces. It is recommended that mobile undersurface storage be used.

End-to-end panel-supported worksurfaces require the additional support of a cantilever, support panel, or undersurface storage at every joint.

Perpendicular panel-supported worksurfaces can use flat brackets and edge support brackets to provide adequate support at the worksurface joint.

Column or tapered legs can provide additional support for worksurfaces. Support panels may also be used. Verify dimensions before specifying.

Cetra panel-mounted worksurfaces must be supported by edge support brackets, flat brackets, cantilevers, support panels, undersurface storage units, or universal support components.
Note: When using 1 3/16" worksurfaces with Cetra sectional panels or midwireway panels, approximately 3/8" of the panel or bottom tile will be visible above the worksurface.

Unsupported span of 48" for 1 3/16" worksurfaces or 60" for 1 9/16" worksurfaces requires additional support, such as a cantilever, support panel, or undersurface storage.

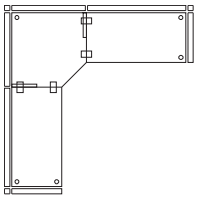
Brackets should be utilized at every panel joint to fully support the surface and to tie the panels to the worksurface.

Edge support brackets attach to the panel's slotted vertical channel and provide the most secure method of supporting a worksurface. They must be secured to the underside of the worksurface. The supporting panel width must be equal to the worksurface depth. They also provide corner support for corner worksurfaces and are used as additional support behind an attached storage unit.

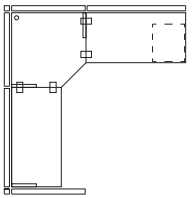
Drop brackets are used to attach adjacent worksurfaces at varying heights. They provide a 3" height change.

Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.

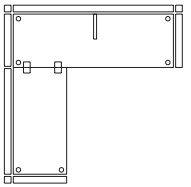
➤Continued on next page.



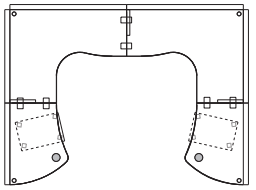
Corner and straight worksurfaces



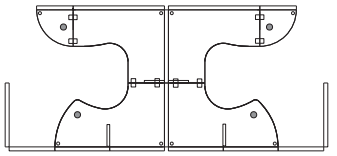
Corner and straight worksurfaces



Straight worksurfaces



Serpentine corner and wedge worksurfaces



Extended wedge, serpentine corner, and quarter round worksurfaces

LEGEND

- ○ = Edge Support Bracket
- ▭ = Cantilever
- ⬚ = Pedestal
- ▭ = Flat Bracket
- ● = Leg

Note: Worksurface spans greater than 48"W for 1 3/16" surfaces and 60"W for 1 9/16" surfaces require additional support.

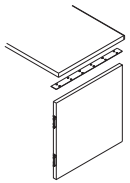
Considerations:

- Worksurfaces may be used with all Kimball Office Systems. Specify appropriate bracketry and support for the application.face storage be used.
- Consider the worksurface load when planning support. For worksurfaces that will hold office equipment, such as laser printers and copiers, supplemental support other than standard bracketry is recommended.
- Undersurface storage and pedestals satisfy both storage and support needs.
- Reconfigurations of existing worksurfaces may require new supports or brackets.
- Supports may be positioned anywhere along the worksurface without the limitations of predrilled or |pre-determined locations.
- HFES Method 2 can be met when using Footprint worksurfaces and storage with keyboard kit model 99K2319KKS1.
  ➤See the Perks Price List.

Cetra-Supported Worksurfaces

continued

Features ➤See page 356
Product Information 357
Application Guidelines 358



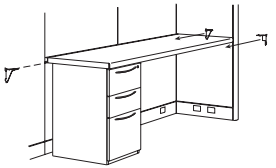
Cetra panel-mounted support panels are 1¼" thick and are available in four depths—12", 18", 24", and 30".

18", 24", and 30"D support panels are used on the end of worksurfaces that are not panel wrapped. Support panels can also be used as additional support for worksurfaces that exceed the recommended kneespace. They should be attached to the panel in back of the worksurface and to the underside of the worksurface to provide maximum strength. Panel and worksurface brackets are attached; however, they can be reversed for left- or right-hand applications.

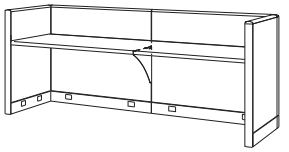
12"D support panels are intended for use as additional support in the middle of a run when kneespace exceeds the recommended span. 12"D support panels do not attach to panel reveals.

Support panels may be used in freestanding or Traxx applications when modesty panels are not used as long as the back edges are not exposed. Back edges of support panels are unfinished.
If the back edge of the support panel will be exposed, request that it be finished. Support panels are equipped with adjustable leveling glides to align the worksurfaces. They provide 1¼" of adjustment.

Note: Cetra support panels may be used in Interworks EQ, freestanding, or Traxx applications by removing panel brackets and ordering a support panel bracket or gusset bracket for additional support as needed. If back edge of support panel will be exposed, request that it be finished. If modesty panel is required, specify a freestanding support panel.



Pedestals provide support for the front edge of worksurfaces. A back bracket must also be used to attach the surface to the panel.



Cantilevers are used as support in the center of long worksurfaces or in configurations where other support methods are not possible. They may be used as support when placing two surfaces end to end. Cantilevers may be used as sole support when wing panel width is different than worksurface depth. A pedestal or support panel must be used if there is no wing panel. Cantilevers are handed, however, they can share the load of the adjacent worksurface with use of flat brackets.

Universal support components are available for use as additional alternative support solutions.

Xsite-Supported Worksurfaces

Bracketry and Support Guidelines

Features ➤See page 356
Product Information 357
Application Guidelines 358

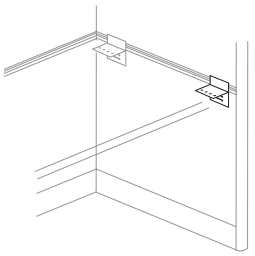
IMPORTANT: Supports and brackets must be specified separately for all worksurfaces. Specify the appropriate supports or brackets for the specific application. Supports and brackets are packaged separately from the worksurfaces.

IMPORTANT: Careful consideration must be given to dimensions when using curvilinear worksurfaces. It is recommended that mobile undersurface storage be used.

End-to-end panel-supported worksurfaces require the additional support of a mid-support, support panel, or undersurface storage at every joint.

Perpendicular panel-supported worksurfaces can use flat brackets and edge support brackets to provide adequate support at the worksurface joint.

Column, stick, or tapered legs can provide additional support for worksurfaces. They can provide support to the front edge of a worksurface, but do not stabilize adjacent loadbearing panels. Support panels may also be used. Verify dimensions before specifying.



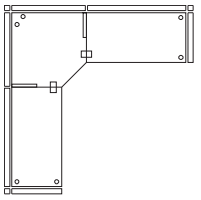
Xsite-mounted worksurfaces must be supported on the ends by edge support brackets, full-depth support panels, end-support legs, or undersurface storage unit.

Unsupported span of 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces requires additional support such as a mid-support, support panel, or undersurface storage.

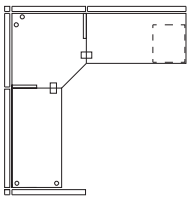
Flat brackets, 12"D support panels, or mid-supports should be used as additional support at every worksurface joint. Additional support is also required every 48" on 1 3/16" worksurfaces and every 60" on 1 9/16" worksurfaces.

Use Xsite Traxx with edge support brackets to support the ends of worksurfaces whenever possible. This ties the station together providing more rigidity for the structure.

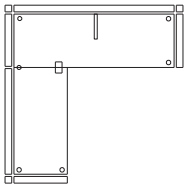
➤Continued on next page.



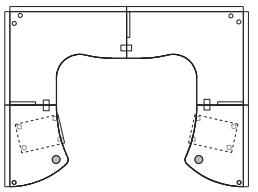
Corner and straight worksurfaces



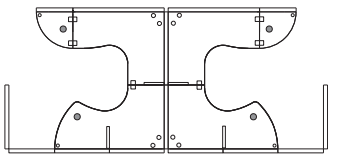
Corner and straight worksurfaces



Straight worksurfaces



Serpentine corner and wedge worksurfaces



Extended wedge, serpentine corner, and quarter round worksurfaces

LEGEND

- ○ = Edge Support Bracket
- ▭ = Mid-Support
- ⬚ = Pedestal
- ▭ = Flat Bracket
- ● = Leg

Note: Worksurface spans greater than 48"W for 1 3/16" surfaces and 60"W for 1 9/16" surfaces require additional support.

Considerations:

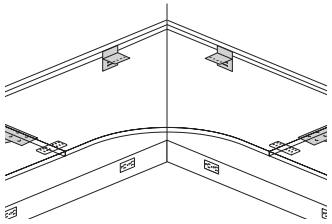
- Worksurfaces may be used with all Kimball Office Systems. Specify appropriate bracketry and support for the application.
- Consider the worksurface load when planning support. For worksurfaces that will hold office equipment, such as laser printers and copiers, supplemental support other than bracketry is recommended.
- Undersurface storage and pedestals satisfy both storage and support needs.
- Reconfigurations of existing worksurfaces may require new supports or brackets.
- Supports may be positioned anywhere along the worksurface without the limitations of predrilled or pre-determined locations.

Xsite-Supported Worksurfaces

continued

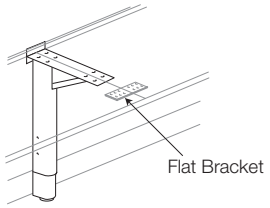
Features ➤See page 356
Product Information 357
Application Guidelines 358

Brackets adjust for worksurface heights from 27¾" to 29", at ⅝" increments, measured from the floor to the top of the 1³⁄₁₆" worksurface.



Two edge support brackets are required for the back corner of corner surfaces, one on each side.

Specify quantity of worksurface edge support brackets to match worksurface size and type.



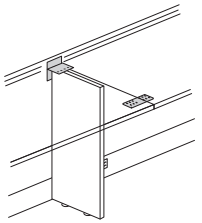
Adjustable Mid-Support

Adjustable worksurface mid-supports may be used as additional support. They cannot provide support at the end of a worksurface and can only be used with an end-support leg in balanced configurations. They do not extend far enough under the worksurface to provide sufficient support in one-sided configurations. Adjustable mid-supports are not visually compatible with end-support legs.

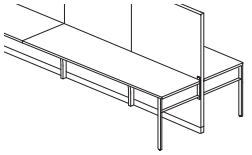
2-high adjustable mid-supports will adjust vertically from 27¾" to 29", at ⅝" increments, measured from the floor to the top of the worksurface.

3-high adjustable mid-supports will adjust vertically from 40¼" to 41½", at ⅝" increments, measured from the floor to the top of the 1³⁄₁₆" worksurface.

Specify adjustable mid-supports to match worksurface depth.



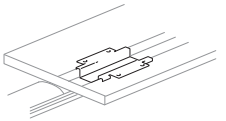
Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.



End-support legs are for use at the end of panel run or in the middle of a run in place of a mid-support. They must be used with a worksurface and be attached vertically with two screws to the panel frame (through the tile) and to the worksurface. The worksurface conceals the attachment holes in the top of the leg.

End support legs are not applicable to 6- and 7-high configurations.

Mid-support legs are visually compatible with end-support legs. They require a flat bracket, specified separately, and must be secured to the worksurface but not to the tile and frame.



Transaction counter brackets recess into Xsite's top channel and are screwed to the frame.

Top cap is required beneath a transaction counter. The width of the top cap should match the width of the frame to which the transaction counter will be mounted. Top cap must be modified in the field to accommodate transaction counter brackets.

Specify two transaction counter brackets for 24" to 60"W counters. Specify four brackets for 66" to 96"W counters.

Transaction counter brackets will not interfere with cables routed through the top channel.

Interworks EQ-Supported Worksurfaces

Application Guidelines

Bracketry and Support Guidelines

Features ➤See page 356
Product Information 357
Application Guidelines 358

IMPORTANT: Supports and brackets must be specified separately for all worksurfaces for the specific application. Supports and brackets are packaged separately from the worksurfaces.

IMPORTANT: Careful consideration must be given to dimensions when using curvilinear worksurfaces. It is recommended that mobile undersurface storage be used.

End-to-end panel-supported worksurfaces require the additional support of a cantilever, support panel, or undersurface storage at every joint.

Perpendicular panel-supported worksurfaces can use flat brackets and edge support brackets to provide adequate support at the worksurface joint.

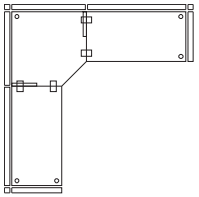
Column or tapered legs can provide additional support for worksurfaces. Support panels may also be used. Verify dimensions before specifying.

Interworks EQ panel-mounted worksurfaces should be supported by edge support brackets, flat brackets, support panels, cantilevers, undersurface storage units, or universal support components.

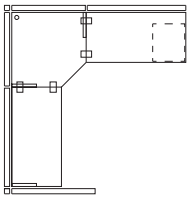
Edge support brackets attach to the panels slotted vertical channel and provide the most secure method of supporting a worksurface. They must be secured to the underside of the worksurface.

Unsupported span of 48" for 1 3/16" worksurfaces or 60" for 1 9/16" worksurfaces requires additional support, such as a cantilever, support panel, or undersurface storage.

Edge support brackets should be used at every panel joint to fully support the worksurfaces and to tie the panels to the worksurface. They manually hook into the panel side rail to prevent accidental removal. They support the worksurface at the front and back corners. The supporting panel width should be equal to the worksurface depth. They also provide corner support for corner worksurfaces and are used as additional support behind an attached storage unit.



Corner and straight worksurfaces



Corner and straight worksurfaces

➤Continued on next page.

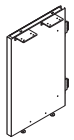
Interworks EQ-Supported Worksurfaces

continued

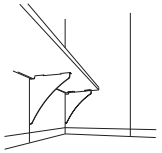
Features ➤See page 356
Product Information 357
Application Guidelines 358

Drop brackets are used to attach adjacent worksurfaces at varying heights. They provide a 2" height change.

Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.



Interworks EQ panel-mounted support panels are available in four depths—12", 18", 24", and 30". They are used on the end of worksurfaces that are not panel wrapped. Support panels can also be used as additional support for worksurfaces that exceed the recommended kneespace. They should be attached to the panel in back of the worksurface and to the underside of the worksurface to provide maximum strength. Panel and worksurface brackets are attached, however, they can be reversed for left- or right-hand applications. They are equipped with adjustable leveling glides that provide 1" of adjustment to align the worksurfaces.



Cantilevers are available 24"D. They are used as added support in the center of long worksurfaces or in configurations where other support methods are not possible. They may be used as support when placing two surfaces end to end or with suspended pedestals. A pedestal or support panel must be used if there is no wing panel. Cantilevers are handed, however they can share the load of adjacent worksurface with the use of flat brackets.

Pedestals provide support for the front edge of worksurfaces. A back edge support bracket must also be used to attach the surface to the panel.

Universal support components are available for use as additional alternative support solutions.

Traxx-Supported Worksurfaces

Application Guidelines

Bracketry and Support Guidelines

Features ➤See page 356
Product Information 357
Application Guidelines 358

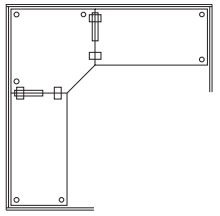
Traxx worksurface brackets attach worksurfaces to bottom Traxx. Traxx-mounted worksurfaces must be supported by worksurface brackets, flat brackets, support panels, undersurface storage units or universal support components. A bracket is required every 48" along back edge of worksurface in addition to corner and end locations.
Note: When using 1 3/16" worksurfaces with Traxx, approximately 3/8" of the bottom Traxx will be visible above the worksurface.

End-to-end worksurfaces require a support panel or undersurface storage for additional support of the front edge.

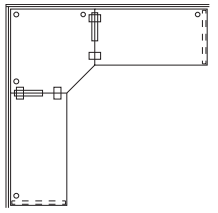
Perpendicular worksurfaces can use flat brackets and Traxx brackets to provide adequate support from one surface to the other at the worksurface joint.

Universal support components, such as tapered, stick, or column legs, are available as alternative support solutions for worksurfaces. ➤See page 467.

Worksurface brackets have an anti-kickout design that provides secure attachment without pre-determined positioning.



Corner and straight worksurfaces; Traxx wrapped



Corner and straight worksurfaces; support panels

- Supports may be positioned anywhere along the worksurface without the limitations of pre-drilled or pre-determined locations.

Freestanding Worksurfaces

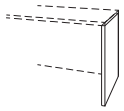
Application Guidelines

Bracketry and Support Guidelines

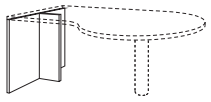
Features ➤See page 356
Product Information 357
Application Guidelines 358

Freestanding worksurfaces can be created by configuring a stable combination of freestanding support panels, freestanding end supports, freestanding corner supports, square or flat profile undersurface storage. *Note: Radius profile storage is designed to be positioned within a desk shell.*

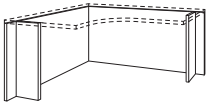
Wood and Laminate:



Freestanding undersurface support panels are used to support worksurfaces in freestanding applications. Their depth is 1⅛" less than the worksurface to accommodate a modesty panel.



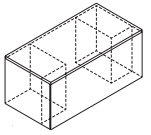
Freestanding end supports are used to support worksurfaces in a freestanding application. Worksurfaces used in freestanding applications must be attached to a return or extension worksurface for additional support.



Freestanding corner supports provide support for corner worksurfaces in freestanding applications.

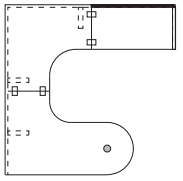
Universal support components, such as tapered or column legs, are available as alternative support solutions for worksurfaces.
➤See page 467.

Modesty panels provide undersurface privacy, additional support, and a finished appearance. They may be used in freestanding applications. Hardware is included for attachment to the underside of the worksurface. *Note: When using a modesty panel with a 30"D radius-profile pedestal, the worksurface must be 36"D.*

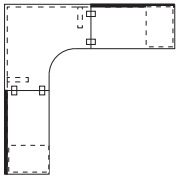


Flush appearance is achieved by specifying the modesty panel to be the same width as the worksurface. It will cover the back of storage units or supports.

➤Continued on next page.



Extended U-top, corner, and straight worksurfaces



Corner and straight worksurfaces

LEGEND

- = Flat Brackets
- = Pedestal
- = Support Panel
- = Freestanding Support
- = Modesty Panel
- = Leg

Note: Worksurface spans greater than 48"W for 1 3/16" surfaces and 60"W for 1 9/16" surfaces require additional support.

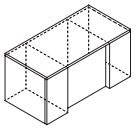
Freestanding Worksurfaces

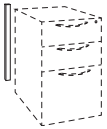
Application Guidelines

continued

Features ➤See page 356
Product Information 357
Application Guidelines 358



Breakfront appearance is achieved by specifying three modesty panels. Two 18"W modesty panels to cover the backs of square profile pedestals and one equal to the width of the space between the pedestals.
Note: Breakfront appearance can only be achieved with square profile storage.



Modesty filler strip is used if a modesty panel is not specified. It maintains space for cable routing behind the pedestal and fills the 1⅛" difference in depth.

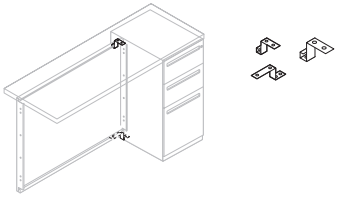
Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.

Drop brackets are used to attach adjacent worksurfaces at varying heights. They provide a 3" height change.

Column, stick, and tapered legs cannot be used in freestanding applications.

Metal Support:

Metal modesty panels attach 4" inset from the approach side of the pedestal or support panel. Wire management is achieved via a 1½" space between the top of the modesty panel and the underside of the surface as well as a 3" gap from the bottom of the modesty panel to the floor.



Pedestal non-deface kit allows attachment of metal modesty panel to metal pedestals without drilling holes in the sides.

End panels are used to support worksurfaces in freestanding applications. They are equipped with adjustable leveling glides that provide 1" of adjustment for aligning worksurfaces. They are designed to secure metal modesty panels.

8" return support can be used as support for corner surfaces or as additional support for 24"D worksurfaces that exceed the recommended kneespace.

8"D support panels cannot support any worksurface deeper than 24". They are equipped with one leveling glide that provides 1" of adjustment for aligning worksurfaces.

Corner posts are used to create freestanding corner units. They are equipped with one leveling glide that provides 1" of adjustment for aligning worksurfaces. They are designed to secure metal modesty panels.

Filler strip is used if a metal modesty panel is not specified. It maintains space for cable routing behind the pedestal and fills the 1⅛" difference in depth for wood or laminate applications.

Flat brackets are used to align and secure two perpendicular or end-to-end worksurfaces.

Drop brackets are used to attach adjacent surfaces at varying heights. They provide a 2" height change.

Metal Support Common Applications:

8"D support panel applies to 24"D (return) worksurface.

7"D corner post applies to freestanding corner surfaces.

12"D support panel applies to any depth corner worksurface, providing it is bracketed to adjacent unit, and 30"D (return) worksurface, providing additional support is used to match surface depth.

18"D half end panel applies to any depth corner worksurface.

18"D undersurface lateral file applies to any depth worksurface, providing full end panel is included to match surface depth.

24"D pedestal and full end panel apply to 24"D or 30"D worksurfaces.

30"D pedestal and full end panel apply to 30"D or 36"D worksurfaces.

36"D full end panel applies to 36"D worksurfaces.

96" Straight	2 Peds.	30"	66
96" Straight	1 Ped., 1 Support Panel	16"	80"
96" Straight	2 Support Panels	2"	94"

Notes:

** Freestanding corner units require 2 modesty panels. Corner Post is 7"W (nominal) and is inset 4" (actual); total of 11". When combined with the support panel (1"), support width is 12" (nominal). When combined with the pedestal (15"), support width is 26" (nominal).*

Unsupported surface span cannot exceed 48"W for 1 3/16" worksurfaces or 60"W for 1 9/16" worksurfaces.

To determine the metal modesty panel width, subtract the total nominal width of support (pedestal and/or end panel) from the nominal worksurface width.

Example:

60"W worksurface
– 30"W support (2 pedestals)
= 30"W modesty panel

For planning purposes, the chart at right uses the term support panel to refer to full support panels, return support panels, and worksurface support panels since all are nominally 1" wide.

Support depth underneath the left and right side of the worksurface must be equal unless the unit is secured to an adjacent, freestanding unit such as a return.

Universal Supports

Application Guidelines

Bracketry and Support Guidelines

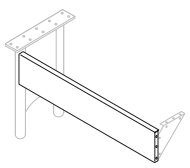
Features ➤See page 356
Product Information 357
Application Guidelines 358

Universal supports can be used in any panel-mounted, Traxx-mounted, or freestanding application.

Support panel brackets and gusset brackets provide additional stability between a worksurface and support panel when the support panel is not attached to a panel.

Adjustable column base provides 4" of adjustment. It is equipped with a glide.

Decorative support leg includes glides and carpet grippers. Inserts are specified separately.



Metal modesty panel can be secured to decorative support leg and/or gusset bracket on either end. Gusset bracket must be specified separately.

Static and adjustable-height mobile table legs are available for use with worksurfaces and table tops.

Units using tapered leg, column leg, adjustable column base, or decorative support leg must be secured to an adjacent worksurface for stability.

Cylinder and half-cylinder bases are available for use with table tops and worksurfaces. Table support bases include anti-tip weight.

Adjustable base, X-base and T-base are available for use with table tops and worksurfaces.

Note: Review support recommendations on the pricing pages when specifying tops and support for table use.

The illustration below shows a variety of worksurface configurations and support options. Please use these examples to aid you in specifying appropriate support for specific applications.
Note: Worksurface spans greater than 48"W for 1 3/16" surfaces and 60"W for 1 9/16" surfaces require additional support.

IMPORTANT: Brackets must be specified separately.

Return combo dimensions are determined from left to right when seated at the worksurface.

Side edges are finished to match the top; wire manager is on the back edge.
Exception: Side edges on worksurfaces with PVC rim option (P) are finished to match the front PVC rim.

* Height (thickness) for TFL worksurfaces is 1⅛".

Rim Profiles:

Sloped (S)

Softened PVC (P)

Wood Softened (F)

	83 7/8"			27 1/8"	**SS24488430WSAE**	1526	—	1691	2332	2147

Rim Profiles:

Sloped (S)

Softened PVC (P)

Wood Softened (F)

IMPORTANT: Brackets must be specified separately.

Side "A" dimension for 3D laminate worksurfaces is 40 9/32".

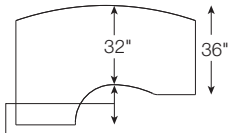
Consider dimension "E" when specifying pedestals for use with extended arc worksurfaces.

Extended arc worksurfaces with an "E" dimension of 15 1/8" are for use with 15"W pedestals only.

Side edges are finished to match the front and back rims.

* Height (thickness) for TFL worksurfaces is 1 1/8".

Dimensions for Space Planning:



• 16" on 42"D worksurface
22" on 48"D worksurface

Note: Dimensions for 3D laminate worksurfaces are 1/2" less than shown.

	83 7/8"			27 1/8"	**SS30844824WSAE**	1526	—	1691	2332	2147

Rim Profiles:

Sloped (S)

Softened PVC (P)

Wood Softened (F)

IMPORTANT: Brackets must be specified separately.

Side "A" dimension for 3D laminate worksurfaces is 40 9/32".

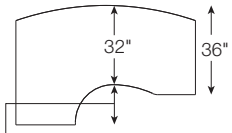
Consider dimension "E" when specifying pedestals for use with extended arc worksurfaces.

Extended arc worksurfaces with an "E" dimension of 15 1/8" are for use with 15"W pedestals only.

Side edges are finished to match the front and back rims.

* Height (thickness) for TFL worksurfaces is 1 1/8".

Dimensions for Space Planning:



- 16" on 42"D worksurface
  22" on 48"D worksurface

Note: Dimensions for 3D laminate worksurfaces are 1/2" less than shown.

Rim Profiles:

Softened PVC (P) | Waterfall (K) | Wood Softened (F) | Reed (W) | Scalloped (X) | Transitional (E)

IMPORTANT: Brackets must be specified separately.

Side and back edges are finished to match front rim.

Return combo dimensions are determined from left to right when seated at the worksurface.

Standard Includes

- Worksurface

How to Specify

1. Model
2. Material:
   L = Laminate
   LW = Laminate with wood rim
   W = Wood
3. Rim option:
   1 = Single Rim
4. Rim profile:
   P = Softened PVC rim (available on laminate surface only)
   F = Wood softened rim
   W = Wood reed rim
   X = Wood scalloped rim
   E = Wood transitional rim
5. Surface finish price group:
   STD = Group 1
   STD2 = Group 2 (+20%)
   FSCW = FSC-certified group 1 wood (+3%)
6. Surface finish designator
7. Rim finish price group (include for laminate with wood rim only):
   STD = Group 1
   STD2 = Group 2 (+20%)
8. Rim finish designator (include for laminate with wood rim or P rim only)

Rim Profiles:

PVC (P) Waterfall (K) Softened (F) Reed (W) Scalloped (X) Transitional (E)

IMPORTANT: Brackets are included with transaction counters for use with Cetra panels. Soffits must be specified separately.
➤See page 452.

Transaction counters can only be supported by panels. Models on this page are for mounting inside Cetra panels. Transaction counters are unfinished on back edge. Rim detail appears on the front edge only.

Cetra straight transaction worksurfaces may be used on Xsite by specifying “rim detail on the back edge” through electronic specification tools.

Woodgrain runs parallel to surface width.

Standard Includes

- Transaction counter
- Brackets for attachment to Cetra panel

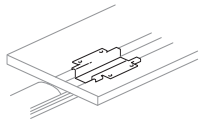
Adjustable Mid-Support



IMPORTANT: Brackets and support must be specified separately.
➤See page 360 for proper bracket/support application.

Adjustable mid-supports are used when placing two worksurfaces end to end or when kneespace exceeds 48". Adjustable mid-support cannot provide support at the end of a worksurface. Bracket is exposed above the worksurface.

One flat bracket is required to properly join two flush, adjacent/perpendicular worksurfaces when an adjustable mid-support or mid-support leg is used; two flat brackets are required to properly secure and support when undersurface support panels or pedestals are used.

Features ➤See page 356
Product Information 357
Application Guidelines 364

IMPORTANT: Supports must be specified separately.
➤See pages 364–365 for proper bracket/support application

If a modesty panel is not used, specify the modesty filler strip which maintains space for cabling behind pedestal while filling the 1⅛" difference in depth.

Grain direction runs horizontal on 60"W or wider woodgrain laminate modesty panels.

If using wood modesty and support panels with flat profile metal pedestals with wood fronts to create freestanding desk applications, specify the worksurface to be deeper than the pedestals.
➤See page 485.

Features

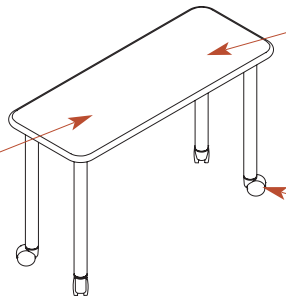
Overview

Statement of Line ➤See page 471
Pricing 473
Finishes & Materials 575

Mobile tables are available in six different top shapes and with a wood or 3D laminate surface. All models are available in a top-only model to allow attachment of an alternate base in the field or to replace an existing table top.

Tear-drop and rectangular mobile tables are standard with fixed-height column legs (29⅛") or adjustable-height column legs (26⅝"–30½").

Fixed-height and adjustable-height mobile column legs can be specified separately and used with other table tops, including those listed in the worksurfaces section in accordance with the guidelines listed.



Wood table tops feature a wood bullnose rim and are 1 3⁄16" thick.

Locking casters are standard on all mobile column legs.

Rim Profiles:

Wood Bullnose (N) | Sloped Edge (S)

Wood bullnose is available on wood tops only. Sloped rim is available on 3D laminate tops only.
Note: Due to different material composites, wood finishes may vary slightly between the top and the bullnose rim.

Cord Management:

A variety of accessories may be added in the field to help manage cords and cables, including

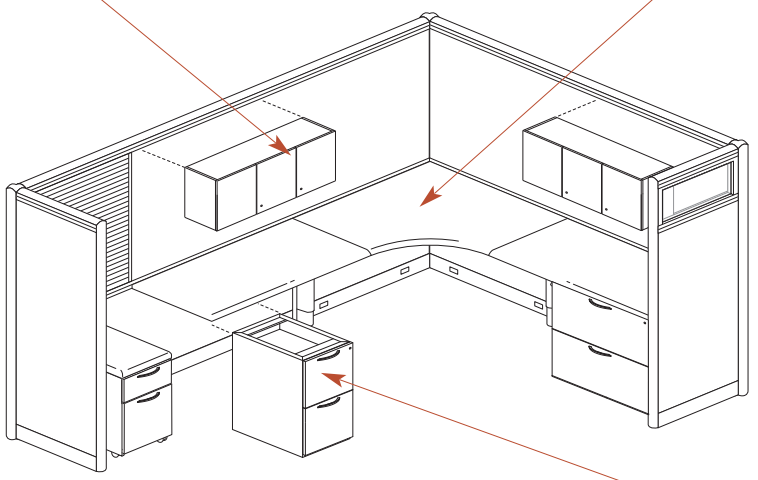
Features

Overview

Locking Info ➤See page 501
Lock Core Requirements 502

Overhead storage is available in wood, laminate, metal, metal/laminate, metal/wood, and laminate/metal combinations.
Note: Not all profiles are available in all materials.

Overhead storage can be can be mounted on panels, Traxx, building walls, mounted between storage units in freestanding applications.
➤See chart on page 489 for possible applications by storage profile.



1³⁄₁₆" and 1⁹⁄₁₆" worksurfaces may be used with all undersurface storage. Mobile storage units are recommended when specifying curvilinear worksurfaces.

Undersurface storage is available in wood, laminate, metal, and metal/laminate combination.
Note: Not all profiles are available in all materials.

All undersurface storage may be used with any Kimball Office panel system.

Specifying Checklist:

- ❑ Pull options
- ❑ Pedestal reveal strips and modesty filler strips when side of square profile pedestal is exposed
- ❑ Tops for square profile freestanding lateral files
- ❑ Back panels for any storage units that have unfinished backs that will be exposed
- ❑ Pedestal spacers for radius profile pedestals with vertical pulls or hinged door units when placed side by side
- ❑ Change key
- ❑ Lock cores if key specific option is selected
- ❑ Additional file bars if required
- ❑ Appropriate support brackets for panel system or Traxx application
- ❑ Traxx when wall mounting overheads
- ❑ Vertical cord managers
- ❑ Ganging kit when mounting overheads side-by-side.

Product Information

Square Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details

Square profile undersurface storage is available in wood or laminate.

Arc, bar, dome, span, and wire pulls are available on wood or laminate square profile storage.

Pedestals are 18"W with finished sides. They can be used at the ends of storage arrangements for a finished look without using support panels.

1½" glides provide 1¼" of adjustment.

Filing hardware for front-to-back and side-to-side filing is included for pedestals and lateral files. Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file holders to utilize strength of the drawer sides. Drawer interiors are black.
➤See page 482 for filing capacities.

Backs and tops of undersurface units are unfinished and must be concealed in application. Tops are not enclosed. Worksurfaces attach directly to horizontal frame.

Backs can be finished with a full width modesty panel for freestanding applications. For breakfront applications, specify two 18"W modesty panels for backs of pedestals and an additional modesty panel equal to the width of the kneespace between pedestals.

Mobile pedestals are finished on the top and all sides.

Locks are standard. They are black and located on front of cabinet.
➤See page 501 for keying.

- Silver Stipple
- Carbon Metallic

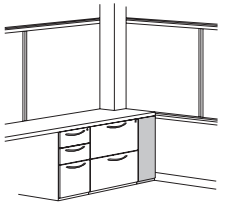
Connections

Pedestals are 23"D or 29"D. They are sized 1" less than worksurface depths to accommodate cable access when placed against a wall, or for the addition of a modesty panel.

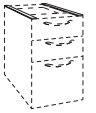
Planning Factors

Undersurface pedestals and lateral files provide support for worksurfaces. They are not intended to be used as freestanding units. 29"H worksurfaces can be supported by file/file, box/box/file, lateral file, and hinged door pedestals.

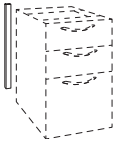
Related Products



Filler panels are available in wood or laminate. They can be scribed in the field to finish out cabinetry for a custom fit.



Pedestal reveal strips should be specified when the side of a pedestal is exposed. It conceals the small space between the top of the pedestal and the underside of the worksurface.



Modesty filler strip should be specified if a modesty panel is not used or if the storage component is not panel wrapped. Modesty filler strip maintains space for cabling behind pedestal while filling in the difference in storage and worksurface depth.

Heavier lines in the illustrations at left indicate file bars. File bars to accommodate front-to-back and side-to-side filing as shown are shipped standard with file/file pedestals and lateral files.

Undersurface Storage

Product Information

Radius Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details

Radius profile undersurface storage is available in wood or laminate.

Waterfall or horizontal pulls are available on wood or laminate radius profile storage.

Vertical pulls are available on wood radius profile pedestals only. Vertical pulls run along the side edges of drawer fronts.

1½" glides provide 1¼" of adjustment.

Filing hardware for front-to-back and side-to-side filing is included for pedestals and lateral files. Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file holders to utilize strength of the drawer sides. Drawer interiors are black.
➤See page 484 for filing capacities.

Backs and tops of undersurface units are unfinished and must be concealed in application. Tops are not enclosed. Worksurfaces attach directly to horizontal frame.

Locks are standard on undersurface storage. They are black and located on front of cabinet.
➤See page 501 for keying options.

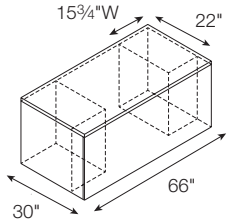
Finishes & Materials

Radius Profile Storage
- Wood
- Laminate

Waterfall and Horizontal Pulls (on radius profile)
- Black

Pedestal Spacers
- Wood
- Laminate

Connections

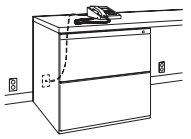


Pedestals are 15¾"W and are designed to be positioned within a desk shell or surrounded by panels.

Full width modesty panel and support panels must be specified for freestanding applications.

Planning Factors

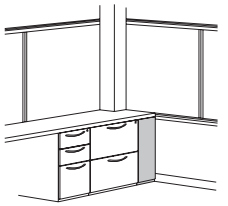
Undersurface pedestals and lateral files provide support for worksurfaces. They are not intended to be used as freestanding units. 29"H worksurfaces can be supported by file/file, box/box/file, lateral file, and hinged door pedestals.



16"D or 22"D pedestals are sized 2" less than worksurface depths to accommodate cable access when placed against a wall or panel.

30"D pedestals do not allow for cable access clearance or a modesty panel if used with 30"D worksurface.

Related Products



Filler panels are available in wood or laminate. They can be scribed in the field to finish out cabinetry for a custom fit.

Pedestal spacer is required between side-by-side pedestals with vertical pulls to provide access to the pull. It can also be used for clearance when two hinged door cabinets with waterfall pulls are placed next to each other or a wall.

Undersurface Storage

Product Information

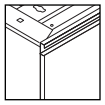
Flat Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Flat profile undersurface storage features a drawer-front-over-case design. Flat profile storage is available in all metal or with metal chassis and wood fronts.

Pedestals are 15"W. Suspended box/file pedestals are mounted beneath the worksurface. File/file and box/box/file pedestals support worksurfaces at 29"H.

Glides provide 1" of adjustment.

File drawers accommodate front-to-back filing by suspending hanging files from the drawer sides. For side-to-side filing, additional file bars are required.
➤See the Perks Price List.

Box and file drawer suspensions allow full extension.

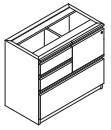
Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Lateral files includes two side-to-side file bar per drawer for letter filing. Front-to-back file bars are specified separately.
➤See the Perks Price List.

Tops are not enclosed. Worksurfaces attach directly to the horizontal frame.

Backs and sides are finished.

Mobile pedestals are finished on all sides and are available with painted or cushion top. Cushion top pedestal seated capacity is 225 lbs.



File center consists of box, file, and lateral file drawers. Box drawers can be specified in either the left or right drawer locations. One lock secures all drawers.

Locks are standard on undersurface storage. They are black and located on front of cabinet. For silver lock core and key, specify lock option "key specific" and order locks separately.
➤See page 501 for keying options.

Bookcases feature an enclosed back and include one adjustable shelf. Shelf adjusts in ½" increments. Glides on bookcases provide 1" of adjustment.

Finishes & Materials

Flat Profile Storage
- Metal: all paints
- Wood fronts: all wood finishes

Arc Pulls
- Cinder
- Platinum Metallic

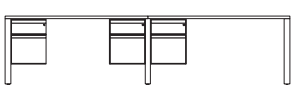
- Polished Argent
- Satin Nickel Metallic
- Carbon Metallic

Connections

Undersurface pedestals and lateral files provide support for worksurfaces. They are not intended to be used as freestanding units. 29"H worksurfaces can be supported by file/file, box/box/file, lateral file, and file center pedestals.

Suspended pedestals must be attached to worksurfaces that meet all application guidelines; suspended pedestals are non-supporting.



Suspended pedestal, model 12S1915PUBFM, is intended for use with Xsede 22"D wire gap surfaces with tech trays. This model features spacers to allow the ped to fit around an undersurface support rail which is required if the unsupported span is over 48" Must be placed next to Xsede support legs (U-legs without stanchions, U-legs with stanchions, T-legs, or H-legs).

Related Product

Metal modesty panel, when specified, attaches to the sides of pedestals. Metal modesty panels are recommended for use with flat profile pedestals.
➤See page 466.

If using wood modesty and support panels with flat profile metal pedestals with wood fronts to create freestanding desk applications, specify the worksurface to be deeper than the pedestals. Specify 24"D pedestal for use with 30"D worksurface; 30"D pedestal with a 36"D worksurface; or 18"D lateral file with a 24"D worksurface.

Non-deface kit, specified separately, is available to allow attachment of modesty panel without defacing the side of the pedestal.
➤See page 466.

Overhead Storage

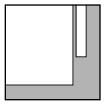
Product Information

Square Profile

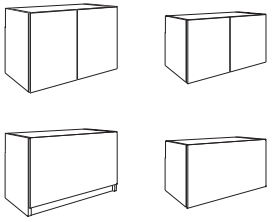
Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Square profile overheads are available in wood, laminate, wood chassis with a glass front, or laminate chassis with a glass front, and in hinged or flipper door models.

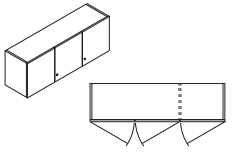
Overhead cabinets and highback organizers ship pre-assembled.



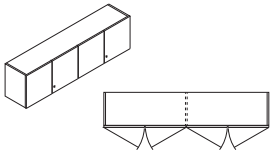
19"H 16"H

16"H overheads feature a smaller profile and accommodate standard-size binders.

Flipper doors include easy-down mechanism. 7" clearance above the cabinet is required.



42"W and 48"W hinged door overheads have three doors with a single door on the right. A support panel divides the overhead into two separate sections as indicated above.



60"W and 72"W hinged door overheads have four doors.

60"W and 72"W flipper door overheads have two doors.

Backs of overheads are unfinished and may be visible when used on panels that are 61"H or less. Backs are partial height in flipper and hinged door overheads.

Highback organizers have an unfinished back. Task light and tackboard must be specified separately. Cord exit is centered directly above tackboard through the back panel. Panel fabric is turned 90° and applied railroad style on 72"W tackboards.

Locks are optional on square profile overhead storage. Locks are located on the front of the cabinet. All locks are black.
➤See page 501 for keying options.

Finishes & Materials

Square Profile Overheads
- Wood
- Laminate
- Glass front

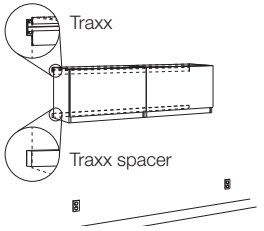
Square Profile Highback Organizers
- Wood
- Laminate

Square Profile Filler Panels
- Wood
- Laminate

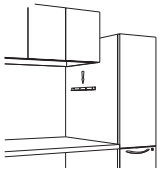
Waterfall pulls
- Black

Connections

Xsite, Cetra, and Traxx can support square profile overheads.



Wall mounted cabinets are hung from a single upper Traxx channel. Traxx spacer (5⁄8" full length shim), specified separately, is required when wall mounting overheads without using Traxx tiles. Traxx full end trim should be specified when the end of wall mounted overhead is exposed.
➤See page 347 for Traxx spacer.
➤See page 345 for end trim.

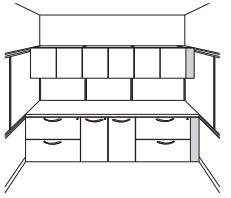


In freestanding applications, a single overhead unit can be supported by two angle brackets attached to short storage cabinets, vertical storage cabinets, or a combination of both.

Related Products

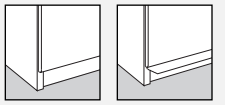
Overhead mounting brackets must be specified separately.
➤See pages 541–545.

Ganging kit is required when hanging overheads side-by-side. When mounted on Cetra panels, the inside left and right overhead brackets are replaced by the ganging bracket.
➤See page 547.



Filler panels are available to build out cabinetry for a custom fit. Filler panels are scribed in the field.

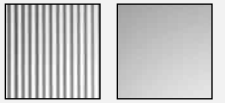
Door Pulls:



Integrated Waterfall

Integrated and waterfall door pulls are available. Integrated pulls run the full length of the door along the bottom edge.

Glass Patterns:



Linear Vertical Frosted

Integrated and waterfall door pulls are available. Integrated pulls run the full length of the door along the bottom edge.

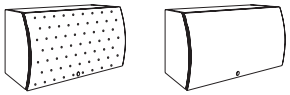
Overhead Storage

Product Information

Curved Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Curved profile overheads are available with laminate chassis and painted metal fronts. Metal fronts are available with smooth or perforated metal. Curved profile overheads feature an easy-down mechanism and ship pre-assembled.

24"W–48"W units have a single door with black lock.

60"W–72"W units have two individually locking doors with black locks.

Locks are standard on curved profile overhead storage. Locks are located on the front of the cabinet. All locks are black.
➤See page 501 for keying options.

Finishes & Materials

Curved Profile Overhead Storage
- Laminate chassis: select solid laminates
- Metal front: paint

Connections

Xsite, Cetra, and Traxx can support curved profile overheads.

Related Products

Overhead mounting brackets must be specified separately.
➤See pages 541–544.

Ganging brackets are required when mounting overheads side by side on Xsite or Traxx.

Overhead Storage

Product Information

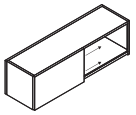
Flat Profile Sliding-Door Overheads

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details

Sliding-door overheads feature a metal chassis with metal, laminate or wood front. Units are available with one-sided or two-sided access. Units ship fully assembled.

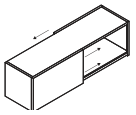
Locks are optional on sliding-door models; they are located on the bottom of the cabinet. Consider lock access when placing the overhead above other storage units or worksurfaces.



One-sided sliding-door models have one sliding door. A center panel divides the space; one compartment will be open at all times. Door can lock in either position. One-sided models are available for:

- Center mounting on Xsite panels, Xsede accessory rail, or Priority stanchions
- Center-mounting on Xsede accessory rail
- Wall mounting using wall standards
- Traxx mounting
- Panel-mount (face-mount) on Cetra, Xsite, and Interworks EQ

Note: Panel-mount model features a removable, full back for access and clean aesthetics.



Two-sided sliding-door models for use in center-mount applications only on Xsite panels, Xsede accessory rail, or Priority stanchions; they feature one-sliding door on each side. Center panel divides the space and each compartment features a fully finished back panel. Both sides can be locked independently on locking models; they must feature the same keying option.

Finishes & Materials

Flat Profile Overhead Storage

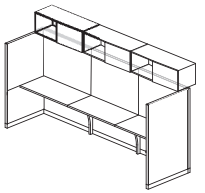
- Metal chassis/metal door
- Metal chassis/laminate door
- Metal chassis/wood door

Connections

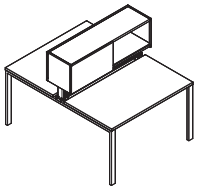
One-sided sliding-door overheads can be panel-mounted. Mounting and leveling brackets are included as standard. Overall depth of the overhead (front of the cabinet to the panel face) varies depending on the panel and it's applicable attachment brackets:

- 15 1/16"D on Cetra
- 14 15/16"D on Xsite
- 15"D on Interworks EQ

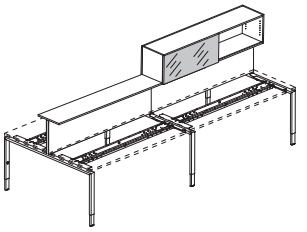
One-sided sliding-door overheads can be wall-mounted using Traxx or wall standards. Leveling bracket is standard on the back of the cabinet; Traxx spacers are not required.



Sliding-door overheads can be center-mounted on Xsite panels. Mounting brackets are included as standard. Consider coordinating the bracket color to Traxx color.
➤See page 133 for application guidelines.



Sliding-door overheads can be center-mounted on Xsede accessory rails. Stanchion mounting brackets (set of 2) must be specified separately; one set is required per overhead.



Sliding-door overheads can be center-mounted on Priority stanchion U-legs and 90° or 120° corner support frames. Two overheads can be ganged together; however, attachment brackets must hit a stanchion on both sides and the overheads must be ganged together in the middle. When an overhead is used next to a Priority shelf as shown above, there must be a stanchion between the shelf and the cabinet.

Cubbies cannot be mounted below a center-mounted overhead due to interference in the shared Traxx.

Planning Factors

Brackets for panel-mount sliding-door models are standard and painted to match the chassis. The following options are available:

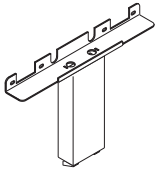
Designator	*Brackets Included*
For Xsite or Wall Traxx	
X	2 Xsite Traxx brackets
XG	2 Xsite Traxx brackets and 1 ganging bracket
For Interworks EQ or Wall Standards	
I	1 left and 1 right
IG	1 left, 1 right, and 1 ganging bracket
For Cetra	
C	1 left and 1 right
CG	1 left, 1 right, and 1 ganging bracket

Brackets for center-mount sliding-door models are standard. The following options are available:

Designator	*Brackets Included*
For Xsite Curved Profile Top Cap	
XC2C	2
For Xsite Flat Profile Top Cap	
XC2F	2
For Xsede	
XAR	2
For Priority	
PC1	1 end
PC2	2 end
PC3	1 end and 1 ganging

Note: If placing two overheads next to one another in a Priority center-mount or panel-mount application, specify one of the cabinets with an option that includes ganging bracket.

Related Products



Mounting stanchion brackets, set of 2, must be specified separately for use with Xsede accessory rail. Each overhead requires two stanchion brackets.

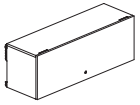
Overhead Storage

Product Information

Flat Profile Flipper-Door Overheads, Open Cabinets, and Cubbies

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

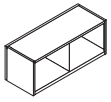
Details



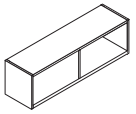
Flipper-door overheads have a metal chassis and wood doors with integrated pulls. Metal chassis is available in all paint finishes. Wood fronts are available in all standard wood finishes. Doors feature steel ball bearing, easy-down slides. Units ship fully assembled.

Locks are standard on flipper-door models; they are located on the front of the cabinet. Locks are black.

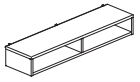
24"W–48"W flipper-door units have one door with lock. 54"W–72"W units have two individually locking doors.



One-sided open cabinets feature a finished back and center panel that divides space. They are available in center-mount models for use with Xsite panels; Xsede accessory rail, or Priority stanchions. Set-on-surface models and suspended models can be used at the end of worksurface.



Two-sided open cabinets are for center mounting only on Xsite panels; Xsede accessory rail, or Priority stanchions. A center panel divides the space; each compartment features a finished back panel.



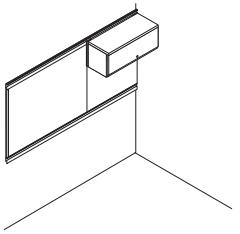
Cubbies have a metal chassis and are available in all paint finishes. Cubbies are standard with a Traxx bracket. Units ship fully assembled.

Finishes & Materials

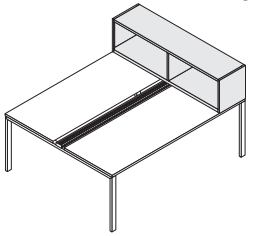
Flat Profile Overhead Storage

- Metal chassis/metal door
- Metal chassis/laminate door
- Metal chassis/wood door

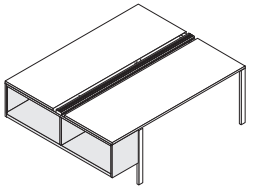
Connections



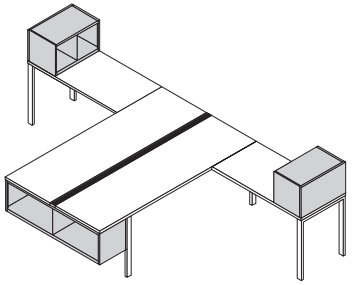
Flipper-door overheads and cubbies can be panel-mounted (on the face of the panel) on Cetra, Xsite, and Interworks EQ or hung on Traxx.



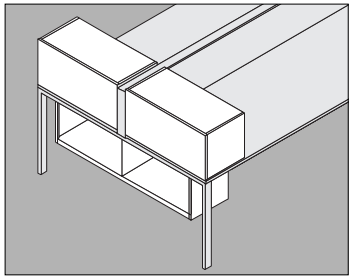
Set-on-surface open cabinets are intended for mounting on top of the worksurface at the end of a run. 51", 57", and 63"W units can span back-to-back worksurfaces in Xsede accessory rail applications.



Suspended open cabinets mount below the end of a run in Xsede crossrail and accessory rail applications. Worksurface supports will need to be inset approximately 15" which impacts kneespace clearance.



24" and 30"W units can be used on 24" and 30"W surfaces in a return application.



24" and 30"W set-on-surface cabinets can be used at the end of a surface and specified to align with 51", 57", or 63"W suspended storage below in an Xsede crossrail or accessory rail application.

Cubbies cannot be mounted below a center-mounted overhead due to interference.

Planning Factors

Overhead mounting brackets must be specified separately for flipper-door models based on the application.
Exception: No additional bracketry is required when hanging flat profile flipper-door overheads on Interworks EQ panels.
➤See pages 541–544.

Ganging kit is required when mounting overheads side-by-side in panel-mount or Traxx-mount applications.

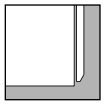
Overhead Storage

Product Information

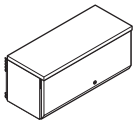
Bevel Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Bevel profile overheads are metal and are available in all paint finishes.

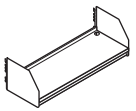


Receding door overheads are available in paint or with fabric covered doors. Door finish and chassis finish on painted units must be the same. Ships pre-assembled.

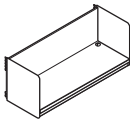
Doors operate on ball bearing slides that are fitted into the unit.

24"W–48"W units have one door with black lock.

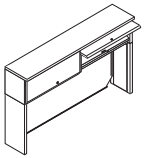
54"W–72"W units have two individually locking doors.



Half height shelf has a single compartment and an open back with a 1" binder stop. Ships ready-to-assemble. Half height shelves are for use on Interworks EQ panels only.



Full height shelf has a single compartment and full height back. Ships ready-to-assemble.



Highback organizers include two vertical end panels, back panel, overhead unit, and attachment hardware. Recesses at corners of back panel allow for wire management. Ships ready-to-assemble.

Highback organizer must be same nominal width as freestanding unit on which it will be attached.

Seating fabric is turned 90° and applied railroad style to 60"W and 72"W highback tackboards.

Panel fabric is turned 90° and applied railroad style to 72"W highback tackboards.
➤See page 588 for illustration of railroad application.

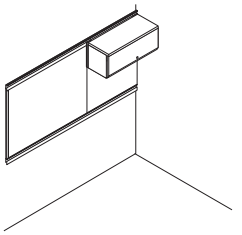
Tackboards and task lights must be specified separately for highback organizers.

Locks are standard. They are located on the front of the cabinet Locks are black.
➤See page 501 for keying options.

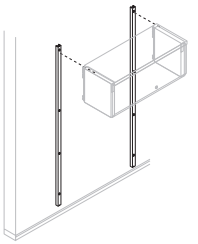
Finishes & Materials

Bevel Profile Overhead Storage
- Metal: paint
- Fabric door with metal chassis: panel or seating fabrics

Connections



Bevel profile overheads can be supported by Xsite, Cetra, Interworks EQ, and Traxx.



Wall standards can be used to mount bevel profile overheads to building walls. A maximum of two components may be attached to a set of wall standards, not to exceed 150 lbs. Blocking and bearing on floor is recommended.

Related Products

Overhead mounting brackets must be specified separately if mounting on Xsite, Cetra, or Traxx.
Note: No additional bracketry is required when hanging bevel profile overheads on Interworks EQ panels.
➤See pages 541–544.

Ganging kit is required when hanging overheads side-by-side.

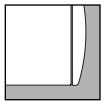
Overhead Storage

Product Information

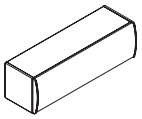
Lunar Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Lunar profile overheads are available with painted metal chassis and door. Flipper doors feature ball bearing slides. Lunar profile overhead units are shipped ready-to-assemble.



30"–48"W units have one door with black lock.

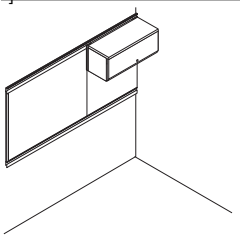
60" and 72"W units have two individually locking doors.

Locks are standard. They are located on the bottom of the cabinet. Locks are black.
➤See page 501 for keying options.

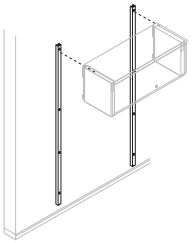
Finishes & Materials

Lunar Profile Overhead Storage
- Metal chassis/front: select paints

Connections



Lunar profile overheads can be supported by Xsite, Cetra, Interworks EQ, and Traxx.



Wall standards can be used to mount bevel profile overheads to building walls. A maximum of two components may be attached to a set of wall standards, not to exceed 150 lbs. Blocking and bearing on floor is recommended.

Related Products

Overhead mounting brackets must be specified separately if mounting on Xsite, Cetra, or Traxx.

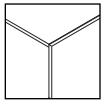
Vertical Storage

Product Information

Square Profile

Features ➤See page 480
Locking Information 501
Lock Core Requirements 502

Details



Square profile vertical storage units are available in wood or laminate.

Drawer fronts are available with arc, bar, dome, span, and wire pulls.

Short storage cabinets are available in wood or laminate. Door may be hinged on the left or right. Short storage finish panel should be specified if back of short storage unit will be exposed.

Overall height of short storage cabinets is affected by worksurface thickness. When aligning short storage cabinets with other vertical or overhead storage units specify the 39"H models for use with 1 9/16" worksurfaces and 40"H models for use with 1 3/16" worksurfaces.

Lateral files feature a drawer interlock that prevents tipping.

Top and back of lateral files are unfinished. Specify a worksurface to cover an individual lateral file or to span multiple lateral files. Tops are not enclosed. Worksurfaces attach directly to the horizontal frame.

Two drawer lateral files with hinged doors include one adjustable shelf in hinged door storage area. Lateral file finish panel should be specified if back of unit will be exposed. Lateral file filler strip should be specified if side of unit will be exposed.

Filler panels are available in wood or laminate. They can be scribed in the field to finish out cabinetry for a custom fit.

All vertical storage units ship preassembled.

Vertical storage units are finished on the top and sides. Interiors are finished to match the exterior. 18"W units can be specified with finished or unfinished backs. Backs are unfinished on 30" and 36"W units. Specify a finish panel separately if back will be exposed.

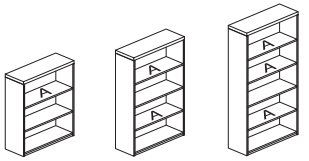
Wardrobes and storage cabinets are available with finished or unfinished backs. Finished back, if specified, matches the chassis.

6"W and 18"W wardrobes include hang bar. 18"W wardrobe also includes an adjustable shelf.

6"W wardrobe is not freestanding and must be attached to adjacent storage or wall.

Touch latch is standard on all doors.

Filing hardware for front-to-back and side-to-side filing is included. Drawer bottoms are not intended to support heavy loads. Drawer interiors are black.
➤See page 482 for filing capacities.



Bookcase shelves are spaced 12" apart. 42"H bookcase features three shelves; one is adjustable. 56"H bookcase features four shelves; two are adjustable. 68"H bookcase features five shelves; three are adjustable.

File drawers are designed to accommodate hanging files suspended from the drawer sides.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Wardrobe doors may be specified on the left or right of the unit.

Coat rod is galvanized metal.

Wardrobe shelf is Cinder with ½" adjustability.

Locks are optional on doors and standard on pedestals. They are black and located on the front of the cabinet.
➤See page 501.

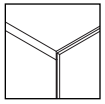
Vertical Storage

Product Information

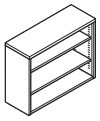
Flat Profile (12S)

Features	➤See page 480
Pull Options	500
Locking Information	501
Lock Core Requirements	502

Details

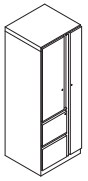


Flat profile vertical storage units are available in all metal or with a metal chassis and wood fronts.

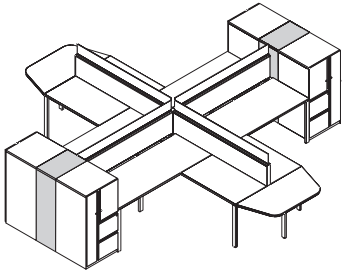


Bookcases include enclosed back and factory installed shelves.

Shelves adjust in ½" increments.



Storage towers include file/file cabinet, wardrobe/storage section, and/or open shelves. Sections have individual locks and can be keyed alike by selecting the key specific option.
➤See page 501 for keying options.



Storage tower spacers are metal. They fill the space between back-to-back storage towers used at the end of an Xsede workstation with 24"D and/or 30"D worksurfaces.

File drawers are designed to accommodate hanging files suspended from the drawer sides.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Wardrobe doors may be specified on the left or right of the unit.

Coat rod is galvanized metal.

Wardrobe shelf is Cinder with ½" adjustability.

Finishes & Materials

Flat Profile Vertical Storage
- Metal: paint
- Wood fronts: all wood finishes

Planning Factors

12S 42 1/16"H models will align with 42"H Xsede and 3-high Xsite frames, and are compatible with 42"H Cetra panels.

12S 49 1/16"H models will align with 42"H Xsede and 3.5-high Xsite frames, and are compatible with 50"H Cetra panels.

Shelves for storage towers are specified seprately.

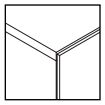
Product Information

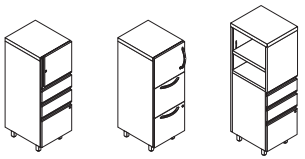
Flat Profile (14S)

Features	➤See page 480
Pull Options	500
Locking Information	501
Lock Core Requirements	502

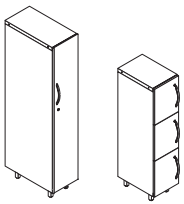
Details



Flat profile vertical storage units are available in all metal or with metal chassis and laminate (TFL) fronts.



Storage towers include box/box/file or file/file and with hinged-door storage or open shelves.



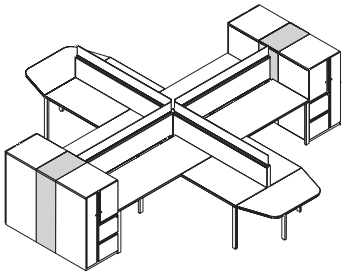
Wardrobe and personal storage lockers are available.

Wardrobe doors may be specified hinged right or left.

Wardrobe hooks are included and installed on the left side of 18"D units.

Coat rod and adjustable metal shelves are available separately. Coat rod is galvanized metal and used in 24"D wardrobes.

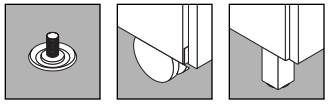
Non-locking is standard on all 14S units. Key random and keys pecific locking options are available with a black or silver lock core and key. Upcharge applies.



Storage tower spacers are metal. They fill the space between back to back 24"D and/or 30"D storage towers used at the end of an Xsede workstation.

File drawers are designed to accommodate hanging files suspended from the drawer sides.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.



Glides Casters 4" legs

Floor glides are standard and provide ⅜" of adjustment. Casters and 4" legs are available as an option; upcharge applies. Legs provide ⅞" of adjustment.
Note: Illustration of glides enlarged to show detail as compared to the relative size of the casters and legs.

Locking Information

Features ➤See page 480
Lock Core Requirements 502

Locking storage units can be specified as:
- Key random
- Key specific

Lock cores are shipped separately for field installation.

Black lock cores and hinged keys are identical to the ones available on the following Casegoods products:
- Definition
- Priority
- Transcend

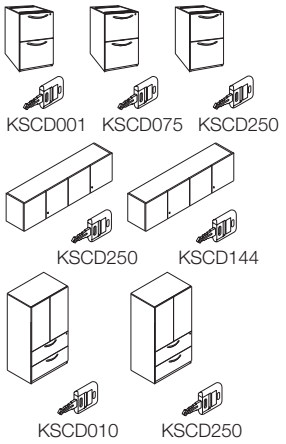
Silver lock cores and hinged keys are identical to the ones available on the following products:
- Definition
- Fluent
- Hum
- Priority

Key Random Option:

When key random option is selected, key numbers will be assigned arbitrarily at the factory with key numbers ranging from KSCD001 to KSCD300.

Randomly numbered lock core(s) will ship standard along with your order for field installation.

Exception: Randomly numbered lock cores on Kwik Office models are shipped installed.

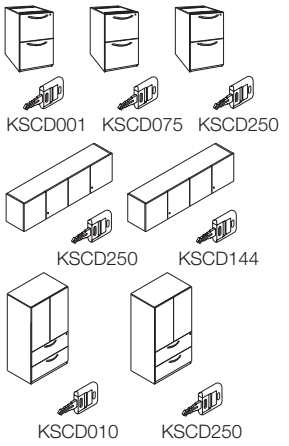


With random keying, different furniture units may or may not have the same key number. If you must have all locks keyed differently or all locks keyed the same, choose the key specific option.

Key Specific Option:

When key specific option is selected, the storage unit will be pre-drilled to accept a lock core; however, no lock cores will be shipped standard with the unit. If lock cores are standard on the unit, the price of the unit is reduced by the price of the lock core or cores.

You must specify lock core(s) separately for key specific option; specify any key number from KSCD001 to KSCD300.



To key all the furniture units in a workstation or department alike, choose the key specific option and order the quantity of locks needed for your installation.

Standard key that ships with the lock core can be used for the initial installation of the lock core in the field.

Change key model KCCB1CK allows removal of lock cores within KSCD001 to KSCD300 key range.

IMPORTANT: A change key, specified separately, is required to remove lock cores in the field.

Master key model KC2GMK will unlock any lock within KSCD001 to KSCD300 key range.

Model/Key Range *Price*

Black Lock Cores 99KG60

KSCD001 to KSCD300	$22
For Kwik Office Models

KC2GMK	$12

How to Specify

❶ Specify exact key number for lock cores as the model number or model number for change or master key

Lock Core Requirements

Features ➤See page 480
Locking Information 501

Undersurface Storage:

Radius Profile

Product Information 490

Standard Includes

- Chassis: wood or laminate
- Single open compartment

How to Specify

❶ Model
❷ Material:
W = Wood
L = Laminate
❸ Profile (include for filler panel only):
S = Square
④ Finish price group (omit for laminate):
STD = Group 1
STD2 = Group 2 (+20%)
FSCW = FSC-certified group 1 wood (+3%)
⑤ Finish designator

		53 3/16"	**FFP3653**	517	513
		67 3/16"	**FFP3668**	710	695

For finished top, specify single rim worksurface.

Specify a lateral file finish panel when the back of unit is exposed; field installation only.

Standard Includes

- Chassis and drawer fronts: wood or laminate
- Unfinished top and back.
- Locks; black

How to Specify

❶ Model
❷ Material:
W = Wood
L = Laminate
③ Pull option (omit for finish panel):
➤See page 497 for designators.
④ Lock option (omit for finish panel):
KRB = Key random
KSB = Key specific (-$22); specify lock core separately.
⑤ Finish price group (omit for laminate)
STD = Group 1
STD2 = Group 2 (+20%)
FSCW = FSC-certified group 1 wood (+3%)
⑥ Finish designator

Task Lights

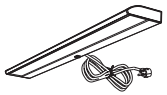
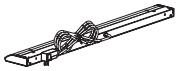
Statement of Line ➤See page 569
Pricing 571

Details



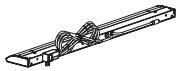
Task lights mount under overhead storage units (excluding center-mount and cubby storage). They feature a 9' cord with 90° plug and southwest oriented prongs. Electronic ballast minimizes flicker and is less susceptible to voltage variations. The T5 cool white, single tube lamp is energy efficient and has a color rendering index of 85 and a color temperature of 3500k.



Task lights for use in Chicago have a fused plug.

Starter

Middle



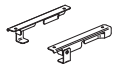
End

Daisy-chain task lights are specified based on their location within the chain. The starter model has a 9' power cord with 90° southwest-oriented, fused plug that plugs into a standard power outlet and a 6" female ganging connector. The middle model has two jumper cords: one 70" cord with a male plug and one 6" female cord. The end model has a 70" jumper cord with male plug. The maximum distance between two T5 fixtures is 20".

All lighting components are U.L. approved.

Connections

Wood screws and spring bars are standard with task lights to attach the fixture to wood or metal overhead storage units.



Quick release brackets are available, if required by local codes.

Mounting requirements, cord lengths, and cord access restrictions vary according to local standards. Consult local codes prior to specifying.

Power & Data

Task lights can be master controlled from a switch at the entrance panel by reserving one of the available circuits in the panel wiring system for lighting only.

Daisy chaining task light units together allows multiple fixtures to access a single power outlet.

A maximum of five task light fixtures can be linked to a single power source.

Related Products

Vertical cable managers are available separately to conceal task light cords.

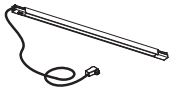
LED Lights

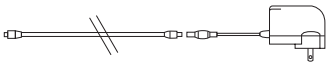
Details



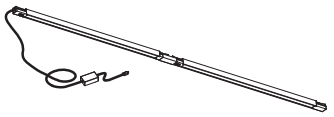
LED lights are a low-profile, linear solution for overhead cabinets, center-mount overheads, highback organizers, cubby storage, and shelves. LED lights provide a 3300K color temperature and consume less power; rated at 50,000 life hours. They utilize the latest technology for high light output with nearly no heat production. LEDs do not produce UV emissions.

Number of LED lights varies by fixture width:
16"W models include 56 LEDs
24"W models include 104 LEDs
30"W models include 132 LEDs
62"W models include 264 LEDs

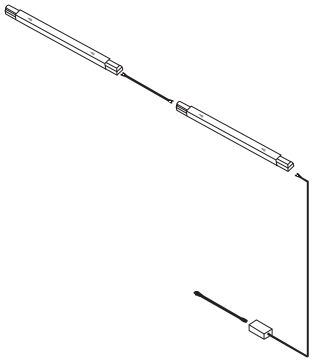
All units feature a silver aluminum finish and a toggle switch. 62"W models have two toggle switches.



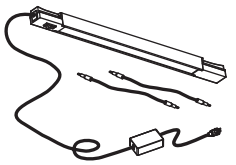
16", 24", and 30"W LED light fixtures include a 6' cord with an 3¼"W x 1½"D x 1½"H plug featuring a built-in UL1310 class II power supply. Standard models plug directly into power receptacle; they cannot be daisy chained.



62"W LED light fixture includes a two-piece 12' cord with an in-line 4⅛"W x 1¼"D x 1¾"H UL1310 class II power supply. 62"W standard models cannot be daisy chained.

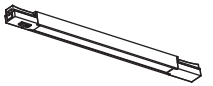


Daisy chain application requires a starter unit and is limited to 2 add-on units (3 fixtures total) per power source. A combination of fixture widths can be combined to obtain the desired length.



Daisy chain starter unit includes the fixture, a two-piece 12' cord with an in-line 4⅛"W x 1¼"D x 1¾"H UL1310 class II power supply, two 6' interconnect cords (black), and two jumper pins.

Black power cords are removable and can be plugged into either end of the fixture.



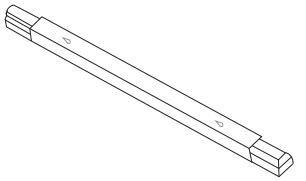
Daisy chain add-on units do not include a power supply or cords and must be used in conjunction with a starter unit.

Meets California Title 24.

Assembled in the USA.

Connections

Magnetic mounting concealed inside the fixture allows attachment to the underside of metal overhead storage cabinets.



Woods screws are included for attaching fixtures to wood overhead storage.

Mounting requirements, cord lengths, and cord access restrictions vary according to local standards. Consult local codes prior to specifying.

Fabrics	587

Kimball Office offers a diverse collection of surface materials. Please see descriptions below to ensure that you are choosing the materials that best support your requirements.

Fabric Collection:

Our collection of fabrics offers a wide variety of materials that include both timeless classics, as well as a selection of trendy colors and patterns to keep the offering fresh and current.

The classic patterns are perfect for establishing new standard color palettes, while the trendy patterns are great for adding accents and pops of color to make a statement and to show that you are in tune with the pulse of today's fast-paced world.

The fabric collection was developed with an international flare to make it easy for global companies to standardize in all locations. It contains both standard in-line and alliance patterns. Our alliance partners are chosen with great care to give us the best selections and service in the industry.

You will find that colors were developed to coordinate very well between the in-line and alliance offerings, as well as between the seating and panel fabric offerings.

The fabric collection will provide options for the discerning client for many years to come.

Wood Collection:

Our wood finishes offer fresh options that provide natural-looking finishes to meet today's design expectations. From the lightest Brighton Maple to the darkness of Urban Walnut, these finishes were chosen with great attention to offer a complete range of color options making it simple to specify the look you want. You can achieve contemporary or transitional looks, or choose to update your traditional style by selecting one of the newer walnut or cherry finishes.

Kimball Office carefully selects veneers and solid woods to provide high quality wood furniture. Variations in color, grain, and texture occur naturally in all wood species, but are most apparent in lighter colored woods, and especially in natural finishes.

The wood collection offers a number of light finishes that will not hide or mask the natural characteristics of wood. Mineral streaks, pitch pockets, and color variations from piece to piece are all characteristics that occur in natural veneers and are what make each piece unique. While the finishing process is identical for all pieces, each finished piece accepts the stain differently to create its own individual beauty. These characteristics are part of the inherent natural beauty of wood and are not considered defects.

Darker finishes can be selected to hide more of the veneer's characteristics. Several beautiful coordinating woodgrain laminate options are also available for the customer who wants complete color and grain consistency throughout.

Two surfaces with grain directions that are at different angles to a light source will reflect the light differently and look a slightly different color. This natural phenomenon is called flip. This can happen within a single piece as alternating veneer leaves are placed side by side or from piece to piece. Flip is often noticed on worksurfaces installed at a 90° angle to each other.

Two premium veneers—Sapele and Zebrawood—are part of the standard offering to provide options for high impact styles without having to quote custom veneers. Premium veneers could receive extended lead times based on supplier availability at the time the order is placed.

Generations Collection:

The Generations Collection is comprised of tried and true materials that have been in the Kimball Office offering for many years. This collection is designed to support long-standing customers and to help transition you to the current offering. ➤Visit kimballoffice.com to see the Generations Collection.

IMPORTANT: Materials in this collection should not be used to set standard color palettes for new installations.

Materials in this offering can be ordered using the standard process, however, extended lead times and minimum order quantities may apply. For best results, pre-planning orders with your Customer Service Representative is recommended.

Discontinuation Policy:

Kimball Office strives to give all business partners advanced notification of surface materials that are scheduled for discontinuation. Efforts will be made to support discontinued materials as specified in the deletion announcement. Pricing cannot be guaranteed. Extended leadtimes and minimum order requirements may apply.

Disclaimer:

Kimball Office will make every reasonable effort to maintain our commitments. If surface material changes must occur due to unforeseen circumstances, we will work with you on an alternative recommendation. Kimball Office reserves the right to cancel or make changes to standard products and surface materials.

Warranty:

Fabrics and leathers are not warranted against fading and wear, discoloration from contact with liquids, or change in color or texture caused by application of finishes (flame proofing, stain resistance).
➤See page 610 for complete warranty information.

Kimball Office is known as the wood leader in the office furniture industry. Exceeding our customer expectations has always been our goal.

It is important to educate your customers on what to expect from the wood furniture they order. If they require a specific characteristic or look, please contact ***By Design*** to review veneer options and discuss special quotes.

➤See page 579 for program overview.
➤See page 579 for wood finish characteristics, care and maintenance.

Special Wood Finishes

Wood Finishes	➤See page 577
Paints, PVC, & Polymer	580
Laminates	583
Fabrics	587

Previously developed and custom finishes are available for special requirements. Kimball Office has an extensive library of previously developed special finishes which may be an acceptable match for your application. If not, a custom finish can be developed to meet specific needs.

Samples of previously developed special finishes are available from Customer Service upon request.

Applicability of special finish colors depends on the wood species to which they are applied. The matrix at right shows the types of woods used for each series.

IMPORTANT: Kimball Office reserves the right to decline the opportunity to match a finish color.

Cetra	•	•	•	•
Xsite	•	•	•	•
Footprint	•	•	•	•

• = standard wood species

Note: Special finishes are not available on Zebrawood.

Approval Process:

① Send desired finish sample (no smaller than 3" x 5"), along with a purchase order for the $300 (net) special finish development fee, to Customer Service along with a complete list of the products and wood species to which the special custom finish is to be applied. Include dealer name, contact, and project reference.

② If a previously developed sample is found to be compatible, a sample will be sent for customer approval. Custom finishes will generally require at least a week for a matched sample. Samples sent to the customer will advise of any restrictions that may apply.

③ Customer signs off on the sample and returns the approval form to Customer Service. Approval is required prior to order entry.

Upcharges:

A one-time fee of **$300** (net) will be billed for the development of each new custom finish. This fee covers all Kimball Office product lines on which the finish may be used. Models receiving a special finish will also be assessed an upcharge.

A **10%** upcharge per line item (model number) for special wood finishes applies. Upcharge is calculated on the base price, before other option upcharges are added.

.

How to Specify

① **Model:**
Build the complete model specification by following the How to Specify steps on the pricing page for the product that is to receive the special finish.

② **Finish type:**
For the "Finish type" step, insert a special code (in place of STD or STD2):
ZCHY1 = Special cherry finish
ZMAP1 = Special maple finish
ZWAL1 = Special walnut finish
ZSAP1 = Special sapele finish
Note: Choose the special finish code based on the standard wood species used in the case-goods line (see matrix at left).

③ **Finish designator:**
For the "Finish designator" step, insert the designator provided to you by Customer Service.

Kimball® Office

Wood Finish Characteristics

Including Care and Maintenance Tips

Wood Finishes	➤See page 577
Paints, PVC, & Polymer	580
Laminates	583
Fabrics	587

Kimball Office's experience in wood finishing extends from past generations of craftsmen to present day state-of-the-art technology.

Our Pura® finish is a proprietary, water-based, ultraviolet (UV) wood finish that has virtually no volatile organic compounds (VOCs). It uses less energy than our conventional finishing process and meets or exceeds BIFMA Furniture Emission Standards (FES) and U.S. Green Building Council LEED requirements for indoor air quality. Pura is exceptionally clear and durable and allows the beauty of our wood to shine through. The durability, depth, clarity, and beauty of Pura meets the high expectations customers have of Kimball Office finishes.

Cetra, Xsite, and Footprint wood surfaces feature a semi-open pore finish with 50 sheen.

All wood products are very susceptible to darkening from age and exposure to UV rays (sunlight and other sources), especially cherry and maple. Although a special UV inhibitor is added to finishes, care in placement of furniture near light sources and elimination of prolonged covering of surfaces is necessary to reduce uneven color change of the wood.

Grain characteristics of cherry veneer such as gum streaks and gum pockets occur naturally and add to the authentic look and feel of natural veneer. These are inherent to this veneer and should not be considered defects.

Brighton maple is a clear finish for those who appreciate the inherent beauty of wood. Differences in grain character and color are natural characteristics of wood and will show through in the finished product.

All walnut veneers are flat cut and applied book and center matched.

Maple and cherry veneers are slip matched. However, there may be a slight difference in the color of adjacent leaves and perpendicular arrangements.

Fine scratches from everyday use may be more visible on furniture with dark finishes. Darker finishes absorb more light, while fine scratches reflect the light. Therefore, scratches can be more emphasized due to this contrast. The use of a desk pad is recommended to keep scratching to a minimum.

The beauty of wood is that it is a natural product that will have differences in grain characteristics, color, and other features among wood species. For the majority of our customers, the characteristics of our top grade veneers are appreciated and welcomed; it's the differences in characteristics that offer each office a unique look.

Specification of particular cuts, characteristics, or wood species can be accommodated. For example, a customer may ask for a limited amount of cathedrals or very limited variation in color from one veneer flitch to the next. Kimball Office systems products are able to satisfy those expectations, as long as we are notified prior to order placement. Depending on the request, the higher grade veneer may require an upcharge. Orders would also need to be handled through our custom quote process.

To Maximize Longevity and Beauty of the Wood Finish:

- Clean all surfaces frequently with a water dampened soft cloth following direction of the grain.
- Dry with a separate cloth if needed.
- Avoid exposure to strong sunlight or extremes in temperature or humidity.
- Avoid exposure to harsh solvents and always remove any spilled liquids immediately.
- Use a desk pad. This will help protect against possible damage and imprinting caused by writing instruments and sharp objects.
- Pads with foam backing are not recommended.
- If using a protective glass top, always place felt spacer pads under the glass to allow the wood to breathe.
- Do not leave plastic, PVC, vinyl, or rubber items on finished wood surfaces. Sustained contact could damage the finish.

Customer-Specified Paint

GSA Non-Contract

Wood Finishes	➤See page 577
Paints, PVC, & Polymer	580
Laminates	583
Fabrics	587

Customer-Specified Paint (CSP) is available on systems products that require specification of a paint color, with the exception of Interworks EQ panels and Lunar profile storage.

Customer-specified metallic paint is not available on Xsite end trim and connector top caps.

Pricing:

A **one-time fee of $300** (net) will be billed for the development of each new custom (customer specified) paint. This fee covers all Kimball Office product lines on which the paint may be used. Models receiving a custom paint will also be assessed an upcharge.

A **10% upcharge per line item** (model) for customer specified non-metallic paint applies. Upcharge is calculated on the base price, before other option upcharges are added.

A **20% upcharge per line item** (model) for customer specified metallic paint applies. Upcharge is calculated on the base price, before other option upcharges are added.

The process:

① Send desired paint sample (no smaller than 3" x 5") to Customer Service along with a complete list of the products to which the custom paint is to be applied. **Include dealer name, contact, and project reference.**

② Custom paints will generally require at least a week for a matched sample. Samples sent to the customer will advise of any restrictions that may apply.

③ Customer signs off on the sample and returns the approval form to Customer Service. Approval is required prior to order entry.

IMPORTANT: Kimball Office reserves the right to decline the opportunity to match a paint color.

How to Specify:

① **Model:**
Build the complete model specification (excluding finish type and finish designator) by following the "How to Specify" on the appropriate pricing page for the product that is to receive the custom paint.

② **Finish type:**
For the “Finish type” step, insert a special paint code (in place of STD):
ZPNT1 = Special non-metallic paint
ZPNTM1 = Special metallic paint

③ **Finish designator:**
For the “Finish designator” step, insert the designator provided to you by Customer Service.

Woodgrain laminate is a commercially compatible match to the wood finish of the same name and designator with consideration for the most common application—laminate surfaces on a wood chassis. When laminate and wood are mixed in other applications, the flip that occurs naturally in veneer may influence the overall match from piece to piece. Xsite tiles up to 57"W are available in woodgrain laminate.

➤See page 585 for customer-specified laminate.
➤See page 584 for pattern laminates.

Customer-Specified Laminate

GSA Non-Contract

Wood Finishes	➤See page 577
Paints, PVC, & Polymer	580
Laminate	583
Fabrics	587

Customer-specified laminate (CSL) is available on select laminate products. CSL is not available for TFL surfaces.

➤Contact your Customer Service Team to initiate approval.

Kimball Office reserves the right to decline a customer specified laminate which may not be suitable for application.

Kimball Office assumes no responsibility for the durability, consistent coloration or any other performance characteristic of a customer specified laminate.

Metal, embossed, specialty, and supplier discontinued laminates must be custom quoted.
➤Contact ***By Design*** at 800.482.1616, extension 6001.

Kimball Office orders and procures all customer specified laminates.

Laminate sheen level must not exceed 60° for maximum durability of worksurfaces.

Lead times may vary for certain laminates. Minimum order quantities may apply.

UL approved suppliers for Xsite tiles are:
- Wilsonart
- Nevamar
- Lamitech
- Formica
- Pionite

Pricing:

A **20% upcharge** applies to approved CSL orders for supplier standard laminates.

How to Specify

① **Model:** Build the complete model specification (excluding the finish type and finish designator) by following the How to Specify on the appropriate pricing page for the product that is to receive the special finish.

② **Finish type:** For the "Finish type" step, insert a special finish code (in place of STD).
ZFMA1 = Formica
ZLMT1 = Lamin-Art
ZLTC1 = Lamitech
ZNEV1 = Nevamar
ZPTE1 = Pionite
ZWST1 = Wilsonart

③ **Finish designator:** For the "Finish designator" step, insert the laminate designator (color number) of the laminate to be applied to the product.

Fabric Overview

ACT Performance Icons

Wood Finishes	➤See page 577
Paints, PVC, & Polymer	580
Laminate	583
Application Matrix	588

All Kimball Office fabrics meet, and in most cases exceed, the minimum requirements set up by ACT. For the purpose of uniformity in the industry, Kimball Office will be utilizing the ACT icons on swatchcards and related materials.

The Association for Contract Textiles (ACT) has developed voluntary performance guidelines to make fabric specification easier. The five symbols give architects, designers, and end-users a vast amount of performance information in a succinct visual way. Look for these symbols on ACT member company sampling to assure that the fabrics you specify perform up to contract standards and pass all applicable testing.

These categories describe a material's performance features as measured by specified methods under standard laboratory conditions. All tests referenced here are intended to represent the most current version of a test method. Note: Individual ACT member product information may represent a different version of a test method depending on the date the product was introduced to the market.

IMPORTANT: These tests represent minimum requirements which are subject to change without notice and may not reflect requirements or laws in all locations.

Flammability:

The measurement of a fabric's performance when it is exposed to specific sources of ignition. Note: ACT guidelines specify different flammability tests dictated by the intended end use for the fabric.

Upholstery
California Technical Bulletin #117
Section E—Class 1 (Pass)

Wrapped Panels and Upholstered Walls
ASTM E 84 (Unadhered Mounting Method)—Class A or Class 1

Wet & Dry Crocking:

Transfer of dye from the surface of a dyed or printed fabric onto another surface by rubbing.

Upholstery
AATCC 8—
Dry Crocking, Grade 4 minimum
Wet Crocking, Grade 3 minimum

Wrapped Panels and Upholstered Walls
AATCC 8—
Dry Crocking, Grade 3 minimum
Wet Crocking, Grade 3 minimum

Colorfastness to Light:

A material's degree of resistance to the fading effect of light.

Upholstery
AATCC 16—Option 1 or 3
Grade 4 minimum at 40 hours

Wrapped Panels and Upholstered Walls
AATCC 16—Option 1 or 3
Grade 4 minimum at 40 hours

Physical Properties:

Pilling is the formation of fuzzy balls of fiber on the surface of a fabric that remain attached to the fabric. Breaking strength is the measurement of stress exerted to pull a fabric apart under tension. Seam slippage is the movement of yarns in a fabric that occurs when it is pulled apart at a seam.

Upholstery
Brush pill—ASTM D3511, Class 3 minimum or Martindale Tester ASTM D4970, Class 3 minimum

Breaking strength ASTM D5034 (Grab Test)—50 lbs. minimum in warp and weft

Seam slippage ASTM D4034—
25 lbs. minimum in warp and weft

Wrapped Panels and Upholstered Walls
Breaking strength ASTM D5034 (Grab Test)—35 lbs. minimum in warp and weft

Abrasion Resistance:

The surface wear of a fabric caused by rubbing and contact with another fabric.

General Contract Upholstery
ASTM D4157 (ACT approved #10 Cotton Duck)—15,000 double rubs Wyzenbeek method

ASTM D4966 (12 KPa pressure)—20,000 cycles Martindale method

Heavy Duty Upholstery
ASTM D4157 (ACT approved #10 Cotton Duck)—30,000 double rubs Wyzenbeek method

ASTM D4966 (12 KPa pressure)—40,000 cycles Martindale method

End use examples of heavy-duty installations where upholstery fabrics rated at 30,000 double rubs should be appropriate are single shift corporate, hotel rooms/suites, conference rooms and dining area usage.

ACT acknowledges that there are extreme wear situations that may require higher levels of abrasion resistance. End use examples that may require higher than 30,000 double rubs include: 24 hour transportation terminals, 24 hour telemarketing, 24 hour healthcare emergency rooms, 24 hour casino gambling areas, and such public gathering places as theatres, stadiums, lecture halls and fast food restaurants.

It is strongly suggested that double rubs exceeding 100,000 are not meaningful in providing additional value in use. Higher abrasion resistance does not necessarily indicate a significant extension of the service life of the fabric.

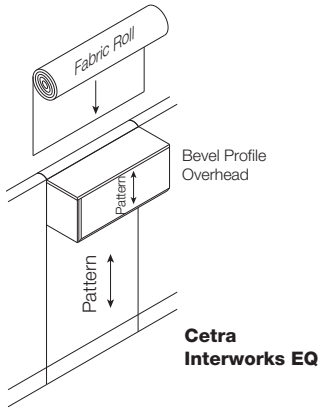
The Wyzenbeek and Martindale tests are the two methods commonly used to predict wearability. Actual performance is determined by many factors such as fiber content, weaves, finishes, furniture design, maintenance, cleaning, and usage. Durability of an upholstery fabric is a complex interaction (combination) of a number of performance tests that, in addition to abrasion, includes seam slippage, pilling, tensile strength, and usage.

There is no correlation between the Wyzenbeek and Martindale tests so it is not possible to estimate the number of cycles that would be achieved on one test if the results from the other test were known.

Fabric Application

Wood Finishes	➤See page 577
Paints, PVC, & Polymer	580
Laminate	583
Fabrics	587

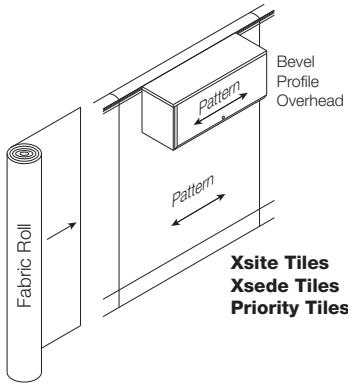
Standard Application:



Cetra
Interworks EQ

Directional fabrics are “cut up the roll” for standard application unless specified differently.

Railroad Application:



Xsite Tiles
Xsede Tiles
Priority Tiles

All fabrics will be applied in railroad (horizontal) fashion to Xsite tiles and larger-size tackboards. When viewing swatch cards or memo samples, turn 90° to get an accurate indication of how the fabric will appear on Xsite tiles.
➤See pricing pages for product application.

Railroad application of Kimball Office panel fabrics and COM requires a custom quote for all systems products that do not have railroading listed as an option in the price list.
➤Please contact ***By Design.***

Alliance Fabrics:

Kimball Office has formed partnerships with top textile companies in the industry to provide a broad range of design-oriented fabrics. These fabrics can be specified using our standard ordering process, eliminating the need for additional expense and efforts required for COMs.

IMPORTANT: Orders cannot be cancelled for alliance program fabrics.

Lead times for alliance fabrics are based on supplier availability. Pre-planning orders can help facilitate arrival of products as needed. Each supplier reserves the right to discontinue patterns or colors. Kimball Office will not be held responsible for supplying discontinued patterns/colors or when minimum order quantities apply.
➤Contact Customer Service for availability before finalizing orders.

The information provided in this section is the most current information available at the time this price list was printed.

Application of Alliance Program upholstery will be as depicted on the swatch card unless otherwise instructed on the order.

For memo samples of Alliance fabrics, contact our alliance partners directly.

Terratex is a registered trademark of True Textiles, Inc. Each Terratex fabric must meet these four criteria:

- Made of 100% post-consumer and/or post-industrial fiber, or compostable materials
- Made using processes that reduce waste, emissions, energy, water usage, and toxic by-products
- Meets or exceeds the same quality standards of fabrics manufactured using virgin materials and conventional processes
- Made of a single fiber type, without backcoating, so that it too can be recycled or composted.

Green-e
100% of the electricity used to make these products is matched by Green-e certified renewable energy certificates.

Cleaning Fabrics:

Cleaning Code B
- Cleanable with diluted bleach solution

Cleaning Code S
- Use only mild, pure water-free cleaning solvents.
- Cleaning by a professional furniture service is recommended.

Cleaning Code WS
- Use water-based cleaning agents or foam. Mild water-free solvents may also be used.
- Cleaning by a professional furniture service is recommended.

➤See swatch card for additional cleaning information.

Cleaning Code W
- Use water-based cleaning agents or foam.

Fire Retardant Fabrics
- Solvent-based fabric cleaning or dry cleaning are recommended.
- Cleaning with water or water-based cleaners could result in salt ringing.
- Test proposed cleaning procedure on a small portion of fabric before cleaning entire piece.

Cleaning Leather:

Regular Cleaning

- Remove as much soil or staining as possible by carefully vacuuming or brushing.
- Dust with a dry or damp cloth.

Deep Cleaning

- Use mild non-detergent soap or cleaner. Wipe surface with a light circular motion. Repeat with clean water.
- Do not soak leather.
- Air dry.

Note: Never use furniture polishes, oils, solvents, varnishes, abrasive cleaners, ammonia, wax, or saddle soaps on leather.

Characteristics:

Leather is a natural product. Healed scars, scratches, cuts, and stretch marks are natural markings and are characteristic of leather.

Customer's Own Material (COM)

Overview

GSA Non-Contract

Wood Finishes	➤See page 577
Paints, PVC, & Polymer	580
Laminate	583
Fabrics	587

COM Policy:

While Kimball Office inspects fabrics for mill imperfections, some are difficult to recognize. Kimball Office is solely responsible for upholstery workmanship and cannot assume responsibility or liability for the durability, tailoring, appearance, or other qualities such as color inaccuracies, dye lot variations, and other such flaws or defects of customer furnished coverings.

Customers are responsible for ordering COM fabrics and expediting delivery of the material to Kimball Office.

IMPORTANT: Kimball Office reserves the right to decline a fabric that may not be suitable for application to product.

COM Application Testing:

Application testing on product for non-preapproved fabrics is required. ➤Contact your Customer Service Team for the appropriate forms to initiate application testing.

The application test will render your fabric either:
- Approved
- Not recommended
- Restricted

A "not recommended" result is usually due to questionable construction of the material or pattern that is difficult to align. You will be required to sign a waiver to use any "not recommended" COM.

U.L. Listing/Flammability:

COM must be U.L. listed for use on Xsede, Cetra, Xsite, and Interworks EQ panels before Kimball Office accepts and enters an order which will have COM fabrics. All COM testing and processing costs are the responsibility of the customer. A minimum of 2 yards of production run yardage is required for U.L. testing and flammability testing. Approval of a COM fabric may result in extended lead times. For cost estimates, yardage requirements and project lead times, consult your Customer Service Team.

Yardage/Measurements

Directional and non-directional yardage requirements have been calculated based on 66"W panel fabrics for Tiles, Panels, Overheads, Highback Organizers, and Tackboards. Directional and non-directional yardage requirements have also been calculated based on 54"W seating fabric for Overheads, Highback Organizers, and Tackboards.

If your fabric is less than 66"W, some size restrictions may apply.

COM yardage listed in the Resource section of the price list reflects the amount of fabric required to upholster one panel. Additional yardage may be required if patterns require matching.

Shipment of COM

After the fabric has passed the approval process described, Kimball Office will enter the product order and send an acknowledgement of the tentative ship date. A notification will be sent giving the date the COM must be received. If it is not received by the specified date, your ship date will be reassigned.

Where to ship COM:

Applies to:
- Xsede Tiles
- Cetra panels
- Tackboards compatible with Cetra
- Cable managers compatible with Cetra or Xsite
- Tiles compatible with Cetra
- Tiles compatible with Xsite
- Seat cushions for flat profile storage (14S)

Kimball Office, Jasper
COM Department—Kimball Office
Dock 5
1037 East 15th Street
Jasper, IN 47549

Applies to:
- Interworks EQ panels
- Interworks EQ or Conferencing Solutions
- Tackboards compatible with Interworks EQ
- Cable managers compatible with Interworks EQ
- Flat profile cushion-top pedestals (12S)
- Bevel profile overheads
- Bevel profile highback organizers
- Bevel profile highback tackboards

Kimball Office, Post Falls
COM Department—Kimball Office
1881 West Seltice Way
Post Falls, ID 83854

Production of Order:

When COM production yardage is received, COM is cut for the order and inspected for flaws. If flaws are found, you will be notified of the additional fabric required.

A return tag (e.g. COD shipment, UPS call tag) is required from the specifier within 45 days of the acknowledged ship date or all excess COM yardage will be discarded.

Preapproved COM:

➤Contact your Customer Service Team to obtain information on preapproved COMs.

Repeat Fabrics:

It is Kimball Office standard process to match repeat fabrics on fabric covered Overhead and Highback Organizer doors.

Repeat fabrics will be matched in what Kimball Office deems the best possible application of the pattern.

Additional COM yardage is required for repeat fabrics.

Repeat	*Additional Yardage required per Overhead Door*
0–6"	None
6"–12"	0.166 yards
12"–18"	0.500 yards
18"–24"	0.666 yards
24" or more	1.000 yard

Note: If the customer requires that the repeat fabric be applied in a random fashion, Kimball Office requires written notification in advance of order processing to that effect. ➤Contact your Customer Service Team to obtain necessary waiver.

Checklist:

When ordering COM for Kimball Office products, please make sure you have done the following:
- Supplied vendor name, fabric name, color name and number.
- Supplied arrival date of COM to Kimball Office.
- Received application testing approval before sending purchase order (or signed waiver if not approved for application).
- Received U.L. listing before sending purchase order.

Customer's Own Material (COM)

Yardage Requirements

GSA Non-Contract

Wood Finishes	➤See page 577
Paints, PVC, & Polymer	580
Laminate	583
Fabrics	587

Kimball Office has analyzed each model to most accurately reflect the yardage requirements.

The yardage requirement for each model is listed for 66"W directional, 66"W non-directional, and 54"W directional, where applicable.

How to Use this Table

① Locate the model number
② Select yardage from the appropriate column for non-directional or repeat. For fabrics with nap, use the 1"–4" repeat column.

If you specify different panel fabrics for opposite sides of a panel, additional yardage may be required. ➤Contact Customer Care.

If COM fabric is to be "railroaded," contact Customer Care for yardage requirements.

➤See page 596 for COM policy and additional information.

How to Use this Table

① Locate the model number
② Select yardage from the appropriate column for non-directional or repeat. For fabrics with nap, use the 1"–4" repeat column.

If you specify different panel fabrics for opposite sides of a panel, additional yardage may be required. ➤Contact Customer Care.

If COM fabric is to be "railroaded," contact Customer Care for yardage requirements.

➤See page 596 for COM policy and additional information.

11P2480SFFFWF	3.7	3.7	3.7

How to Use this Table

① Locate the model number
② Select yardage from the appropriate column for non-directional or repeat. For fabrics with nap, use the 1"–4" repeat column.

If you specify different panel fabrics for opposite sides of a panel, additional yardage may be required. ➤Contact Customer Care.

If COM fabric is to be "railroaded," contact Customer Care for yardage requirements.

➤See page 596 for COM policy and additional information.

Laminate	583
Fabrics	587

How to Use this Table

① Locate the model number
② Select yardage from the appropriate column for non-directional or repeat. For fabrics with nap, use the 1"–4" repeat column.

If you specify different panel fabrics for opposite sides of a panel, additional yardage may be required. ➤Contact Customer Care.

If COM fabric is to be "railroaded," contact Customer Care for yardage requirements.

➤See page 596 for COM policy and additional information.

Operating Load Capacities

Terms & Conditions ➤See page 608
Asset Tag Locations 608
Product Warranty 610
Model Number Index 612

Component	Operating Load Capacity (Functional Loads)	Examples
Worksurface	200 lb.s over 12" diameter area, concentrated loading; 1.5 lb. per inch of perimeter, distributive loading	24"D x 72"W = 288 lbs. total weight (t.w.)
Transaction counter	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	12"D x 60"W = 147 lbs. t.w.
Round and rectangular tables	1.5 lb. per inch of perimeter, distributive loading	36" dia. = 170 lbs. t.w. 36"D x 60"W = 288 lbs. t.w.
Pedestal drawer	.017 lb. per cubic inch of drawer interior filing space (hanging load on file hangers)	24"D x 18"W x 12"H wood = 88 lbs. t.w. 24"D x 15"W x 12"H metal = 73 lbs. t.w.
Pedestal shelves	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	22"D x 30"W = 134 lbs. t.w
Center-mount cabinet	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	36"W x 12"H metal = 163.5 lbs. t.w
Flipper door cabinet	Top shelf—NO load	
	Bottom shelf—.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading*	36"W x 16"H metal = 117 lbs. t.w. 36"W x 19"H wood = 140 lbs. t.w.
Open shelves	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	36"W x 8"H metal = 59 lbs. t.w. 36"W x 19"H wood = 140 lbs. t.w.
Lateral file drawers	.017 lb. per cubic inch of drawer interior filing space (hanging load on file hangers)	30"W x 18"D x 12"H metal = 110 lbs. t.w. 30"W x 24"D x 12"H wood = 147 lbs. t.w.
Bookcase and wardrobe shelves	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	36"W x 8"D metal = 59 lbs. t.w. 36"W x 12"D wood = 88 lbs. t.w.

Cubic inches should be calculated using this formula:
Surface length x surface depth x height of available storage above the surface (limited to 12 inches above the surface)

The table at left lists the operating load capacities of various Kimball Office components. All components meet or exceed the ANSI/BIFMA Functional and Proof Loading requirements X5.6 2010 Panel System Test, X5.5 2008 Desk/Tables Products Test, and X5.9 2012 Storage Unit Test. The Operating Load Capacities listed represent the BIFMA functional loads which are equivalent to loads that can be expected in normal use of the component.

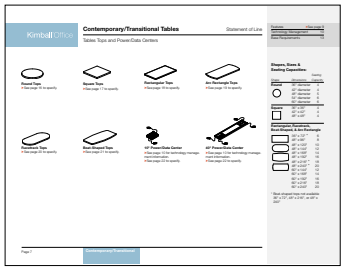
How to Use this Price List

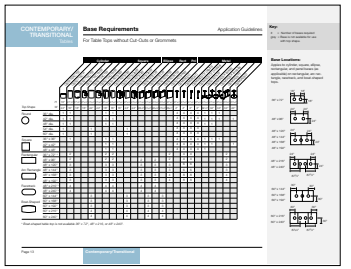
Kwik Office Program ➤See page 4
How to Specify Our Products 3
Sustainability 5

Kimball Office has made every effort to make this price list accurate and complete with all of the information you need to specify our products.

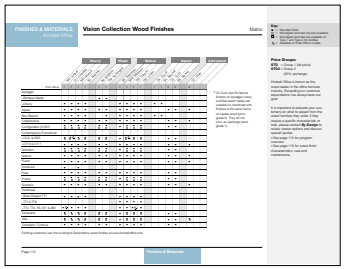
We suggest that you become familiar with the format of this price list. You'll find information about the product line, planning guidelines, pricing, and how to specify the product.



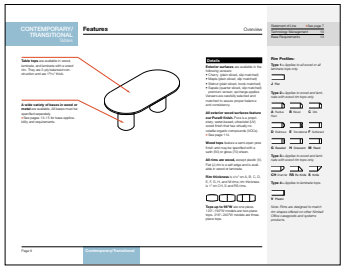
Statement of Line provides a snapshot of the entire product line. We've included an illustration and page cross references to the applicable pricing and how to specify pages.



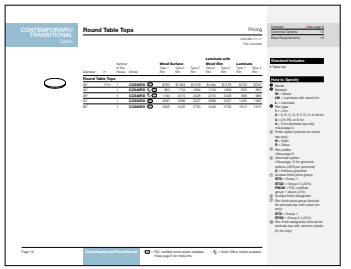
Product Information and Application Guidelines pages provide detailed information about the product, connections that can be made with other models, and planning factors.



Look in the Finishes and Materials section to see what materials and finishes are available. Matrices for wood finishes, laminate, paint, fabrics, and other surface materials offer a quick reference by product.



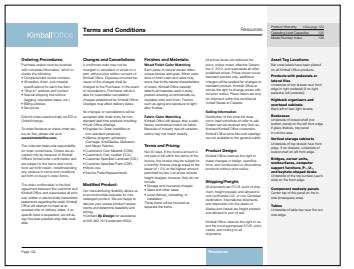
Overviews offer a quick look at the distinguishing features of the product line.



Pricing pages list each model individually along with its list prices. How to Specify steps instruct you how to build a complete model that includes all of its options and materials.

KJ icon indicates models that are available for quick shipment.
➤See the Kwik Office Price List.

(FSC) icon indicates models available with the FSC option (3% upcharge) at standard leadtime to meet FSC certification.



Use the Resources in the back of the price list. This repository of useful information includes Terms and Conditions, Warranty, Operating Load Capacities. You'll also find a model number index with references to the appropriate pricing page.

Dimensions provided in this price list are nominal. Products are manufactured to meet standard industry tolerances.

Illustrations and specifications contained in this price list are based on the latest product information at time of publication. Kimball Office reserves the right to make changes at any time without notice.

Standard product modifications are available on select products.
➤See the Product Modifications Price List at www.kimballoffice.com

Items listed herein are considered by Kimball Office as portable furniture and as such are subject to local fire, electrical, and building codes applicable to portable furniture.

How to Specify Our Products

Kwik Office Program ➤See page 4
How to Use this Price List 2
Sustainability 5

Complete specifications are built by following a set of steps. These "How to Specify" steps are located in the far right column of each pricing page and are specific to the models found on that page. These steps will guide you in the proper order to specify the base model, materials, finishes, options, etc.

Base model numbers may be comprised of two or more steps. For concise presentation, some models numbers have been truncated within the pricing table.

- The steps numbered using a solid circle with a white number inside (e.g., ❶, ❷, or ❸) make up of the base model number.
- Steps numbered using an outlined circle with black number inside (e.g., ④, ⑦, or ⑨) are required to complete the specification.

Kimball Office promotes the use of electronic drawing and specification tools to automate the furniture sales, design, and specification process. We provide our symbol and product information to industry leading design and specification software companies. We work closely with 20-20 Technologies Inc. to develop additional automation routines for our products; these are available in CAP and Giza software tools. We also partner with KISP and all of our products are available in The KITS *collaborator*™. As noted in our Terms and Conditions, the customer bears the responsibility for order correctness.

How to Use this Price List 2
How to Specify Our Products 3

Kwik Office casegoods are available to ship within five business days upon receipt of a credit-approved order.

Specific models and options from the following lines are available:
- Contemporary/Transitional Tables
- Traditional Tables

Model Numbers:

Models and finishes that are available on Kwik Office have been marked with a K icon in this price list.

Kwik Office model numbers are different from standard model numbers. Base model numbers for Kwik Office products include all options and finish designators.

The K icon on standard lead-time pricing pages indicates availability; it does not provide the correct model numbers and option designators for specifying. You must use the complete model numbers listed i the Kwik Office Price List.

Include only Kwik Office models on your order. Any orders containing non-Kwik Office products will be treated as such and entered at standard lead times. Indicate clearly at the top of your order “Kwik Office.”

Changes and Cancellations:

No changes or cancellations will be accepted after order entry for Kwik Office products.

Order Size:

The Kwik Office program has a limited weekly volume capacity, with orders being entered on a first come, first served basis. Contact Customer Service for availability.

How to Specify Our Products 3

At Kimball Office, we are proud of our environmental stewardship. We are committed to sustainable business practices and continuous improvement. It's part of our heritage to take initiative, to reduce waste, to conserve energy, to commit fully, and to lead by example. It's not enough to simply sustain. We strive to enhance our world.

Throughout our more than 40 years of documented environmental actions, we've made perpetual progress as a responsible steward of resources and an agent of sustainable change in our industry.

In the end, we're just beginning. Yes, the efforts we've made have the clear intention of minimizing our impacts on the planet in order to preserve a healthy world for future generations. Ultimately, the more we do in the area of sustainability, the more it helps you to achieve your environmental aims. Let us show you just how easy it is with Kimball Office.

➤Find more specific details regarding the environmental aspects of our product offerings at: **www.kimballoffice.com**

ANSI/BIFMA level™
100% of the products manufactured by Kimball Office are level® certified. We offer the most sustainable portfolio in the industry, which includes systems, casegoods, tables, and seating. Our product testing team evaluates all Kimball Office products, ensuring they meet and exceed ANSI/BIFMA Standards. Our team members regularly participate on BIFMA and USGBC committees to contribute to industry-wide standards.

ecoScorecard℠
Through this free online tool, you have quick, simple, 24/7 access to the environmental attributes of our products. By partnering with ecoScorecard, we are enabling speed and accuracy in the calculation of environmental credits, like LEED®, as well as saving you time and ultimately, money.
➤See how easy it is at kimballoffice.ecoscorecard.com.

ecoScorecard contains credit and other information for the following environmental rating systems:
- LEED for New Construction
- LEED for Commercial Interiors
- LEED for Existing Buildings
- CHPS
- LABS21
- Green Guide for Healthcare

LEED® Certification
Kimball Office offers furniture solutions which may contribute toward achieving U.S. Green Building Council certification status in your facilities. The LEED® Green Building Rating System™ is the nationally accepted benchmark for design, construction, and operation of high performance green buildings. Kimball Office has sought and received LEED certification for several of its facilities across the country.

LEED-CI Gold:
- Jasper, IN showroom
- San Francisco, CA showroom

LEED-CI Silver:
- Atlanta, GA showroom
- Chicago, IL showroom

LEED-CI:
- Corporate Headquarters
- New York, NY showroom
- R&D Team Rooms

SCScertified™ INDOOR AIR QUALITY
Indoor Advantage | Furniture

Indoor Air Quality
One of the largest contributions office furniture can make to a building's LEED certification is indoor air quality via low-emitting products. For certification of our product lines, Kimball Office uses the Indoor Advantage program from Scientific Certification Systems (SCS). Several of our Indoor Advantage Gold products also meet the more stringent CAL 01350 requirements.

Design for the Environment (DfE) is our approach to product development to ensure the inherent sustainability of our new offerings. By considering a full continuum of environmental factors—including durable engineering, recycled and recyclable materials, indoor air quality, packaging, and beyond, we have greatly improved the life cycle performance of our furniture.
➤For environmental data, visit our website at www.kimballoffice.com.

Pura® is our proprietary wood finish that has virtually no volatile organic compounds (VOCs). Pura is a key part of our sustainability story, enabling a broader range of products to meet or exceed indoor air quality standards and help our customers achieve LEED credits.

FSC www.fsc.org FSC® C010590
The mark of responsible forestry

FSC-Certified Wood
Due to our roots in crafting fine wood furniture, we have a natural respect for responsible forestry. Several series in select finishes are available in FSC wood at a 3% upcharge. Applicable models show FSCW as a finish price group designator option. Standard lead times apply to FSC orders.

ANEW

Asset Network for Education Worldwide, Inc. (ANEW) is an easy, effective way to responsibly disposition surplus furniture, fixtures and equipment (FF&E). Through our partnership with this third-party foundation, you can repurpose FF&E to benefit those in need, while diverting materials from landfills. ANEW calls it "Doing what's right with what's left." We call it smart.

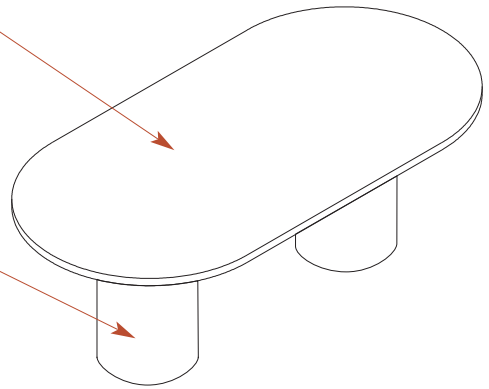
Overview

Statement of Line ➤See page 7
Technology Management 10
Base Requirements 13

Table tops are available in wood, laminate, and laminate with a wood rim. They are 3-ply balanced construction and are 1 9/16" thick.



A wide variety of bases in wood or metal are available. All bases must be specified separately.
➤See pages 13–15 for base applicability and requirements.

Details

Exterior surfaces are available in the following veneers:
- Cherry (plain sliced, slip matched)
- Maple (plain sliced, slip matched)
- Walnut (plain sliced, book matched)
- Sapele (quarter sliced, slip matched) premium veneer; upcharge applies

Veneers are carefully selected and matched to assure proper balance and consistency.

Wood tops feature a semi-open pore finish and may be specified with a satin (50) or gloss (70) sheen.

All rims are wood, except PVC (V). Flat (J) rim is a self edge and is available in wood or laminate.

Rim thickness is 5/16" on A, B, C, D, E, F, G, H, and M rims; rim thickness is 1" on CH, S and RS rims.

Tops up to 96"W are one piece. 120"–192"W models are two-piece tops. 216"–240"W models are three-piece tops.

Rim Profiles:

Type 1—*Applies to all wood or all laminate tops only.*

J Flat

Type 2—*Applies to wood and laminate with wood rim tops only.*

A Radius **B** Bevel **C** Double Radius

D Bullnose **E** Transitional **F** Softened

G Beaded **H** Crescent **M** Reed

Type 3—*Applies to wood and laminate with wood rim tops only.*

CH Chamfer **RS** Rv. Knife **S** Knife

Type 4—*Applies to laminate tops.*

V PVC

Note: Rims are designed to match rim shapes offered on other Kimball Office casegoods and systems products.

Product Information

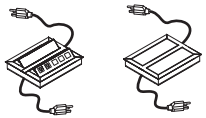
Power and Data

Features	➤See page 9
Power/Data Cut-Outs	11
Grommet Options	12
Base Requirements	13

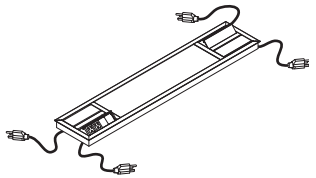
Details

Two power/data center models are available for use with:

- Rectangular table tops
- Racetrack table tops
- Boat-shaped table tops
- Arc rectangle table tops



10" power/data center features two power receptacles, three blank data ports, and one 10' power cord on each side, for a total of four power receptacles, six data ports, and two power cords per unit. Voice/adapter kit is included to accept couplers and jacks when required. Top opens and closes with a touch-pivot action. Clear anodized aluminum.

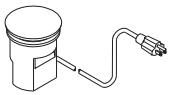


40" power data center features two power/data centers separated by a decorative resin center with a white frost appearance. Includes a total of eight power receptacles, eight blank data ports, and four 10' power cords. Voice/adapter kit is included to accept couplers and jacks when required. Top opens and closes with a touch-pivot action. Clear anodized aluminum.

Power/data cutout option must be specified for the table top; field scribing of the surface to accept power/data centers is not recommended.
➤See page 11.

Grommets may be specified for factory installation on all table tops in predetermined locations.
Grommets are matte black plastic.
➤See page 12.

Grommet lid raises up for cord access; push down to close.



Round power/communication grommet is available for field installation into a standard grommet opening to provide power, voice, or data directly to the table top. It includes two power outlets, one RJ11 voice jack, and one RJ45
data jack.
➤See the Perks Price List.

Undersurface wire managers are available to route cables underneath tables.

36" x 72" 48" x 96"	**C2E** = One C2 cut-out, end location **C2A** = Two C2 cut-outs, both end locations **C3C** = One C3 cut-out, center location **X** = No cut-outs	48" x 120" 48" x 144" 48" x 168" 48" x 192"	**C2C** = One C2 cut-out, center location **C2E** = One C2 cut-out, end location **C2LR** = Two C2 cut-outs, left and right end locations **C2CE** = Two C2 cut-outs, center and end locations **C2A** = Three C2 cut-outs, center and both end locations **C3C** = One C3 cut-out, center location **C2LRC3C** = Two C2 cut-outs, left and right end locations; and one C3 cut-out, center location **X** = No cut-outs	48" x 216" 48" x 240"	**C2C2** = Two C2 cut-outs, both inside/center locations **C2E2** = Two C2 cut-outs, both outside/end locations **C2A** = Four C2 cut-outs, all inside/center and outside/end locations **C3C** = One C3 cut-out, center location **C2LRC3C** = Two C2 cut-outs, left and right end locations; and one C3 cut-out, center location **X** = No cut-outs	60" x 144" 60" x 168" 60" x 192"	**C2C** = One C2 cut-out, center location **C2E** = One C2 cut-out, end location **C2LR** = Two C2 cut-outs, left and right end locations **C2CE** = Two C2 cut-outs, center and end locations **C2A** = Three C2 cut-outs, center and both end locations **C3C** = One C3 cut-out, center location **C2LRC3C** = Two C2 cut-outs, left and right end locations; and one C3 cut-out, center location **X** = No cut-outs	60" x 216" 60" x 240"	**C2C2** = Two C2 cut-outs, both inside/center locations **C2E2** = Two C2 cut-outs, both outside/end locations **C2A** = Four C2 cut-outs, all inside/center and outside/end locations **C3C** = One C3 cut-out, center location **C2LRC3C** = Two C2 cut-outs, left and right end locations; and one C3 cut-out, center location X = No cut-outs	
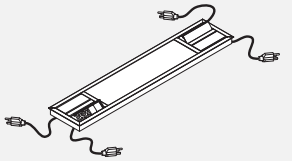
Factory-installed C2 cut-outs are sized to fit 10" power/data centers (model KCU0810ELPDC and KCU0810ELPDCH), specified separately.



Factory-installed C3 cut-outs are sized to fit 40" power/data centers (model KCU0840ELPDC), specified separately.

How to Specify

Insert the location designator for step ⑥ in the table top's model number sequence.

Note: G10 grommets cannot be specified along with C2 or C3 power/data cutouts.

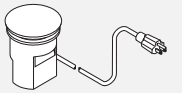
Features ➤See page 9
Technology Management 10
Base Requirements 13

Factory-installed G10 grommets may be specified on all table tops in pre-determined locations. Grommets are matte black plastic.



Round power/communication grommet is available for field installation into a standard grommet opening to provide power, voice, or data directly to the table top. It includes two power outlets, one RJ11 voice jack, and one RJ45 data jack.

➤See the Perks Price List.

How to Specify

Insert the location designator for step ⑥ in the table top's model number sequence.

Note: G10 grommets cannot be specified along with C2 or C3 power/data cutouts.

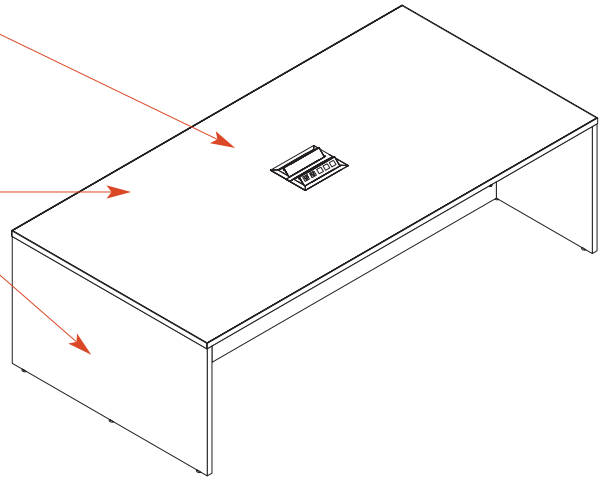
Features

Statement of Line ➤See page 31
Technology Management 33

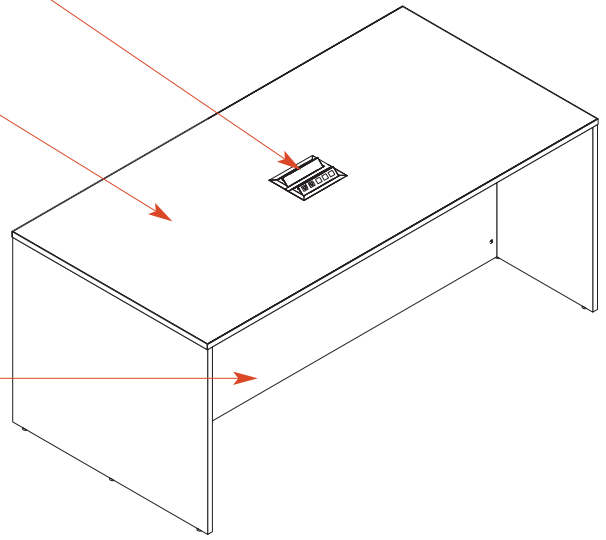
Seating-height tables are 29"H and available 78" or 96"W (nominal).

Table worksurfaces and end panels are 1 3/16" thick. Worksurface is 3-ply, balanced construction in wood or laminate.



Optional power/data center cut-outs are available factory installed. Upcharge applies.

Standing-height tables are 41"H and available 78" or 96"W (nominal).



Center modesty panels are ¾" thick. They extend from the underside of the worksurface to the floor for strength and stability. It is notched at the top to accommodate a power/data center.

Details

Exterior surfaces are available in the following veneers:

- Cherry (plain sliced, slip matched)
- Maple (plain sliced, slip matched)
- Walnut (plain sliced, book matched)
- Sapele (quarter sliced, slip matched) premium veneer; upcharge applies
- Zebrawood premium composite veneer; upcharge applies

Veneers are carefully selected and matched to assure proper balance and consistency.

Wood worksurfaces feature a semi-open pore finish with a satin (50) sheen.

Joints are securely fastened with dowels and mechanical fasteners to ensure maximum strength.

Two short modesty panels (4"H on 29"H table and 10"H for 41"H table) are included to create a trough to hide the power/data center.

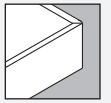
Materials:

W Wood worksurface, rim, end panels, and modesty panel

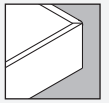
LW High-pressure laminate (HPL) worksurface, wood rim, wood end panels, and wood modesty panel

L High-pressure laminate (HPL) worksurface, plastic rim, low-pressure laminate (LPL), end panels, and low-pressure laminate (LPL) modesty panel

Rim Profiles:



P Softened PVC rim



F Softened wood rim

Rim profile is ⅛" thick and appears on all edges of the worksurface. Wood and laminate with wood rim models are available with a softened wood rim. Laminate models are available with a softened PVC rim.

Features

Overview

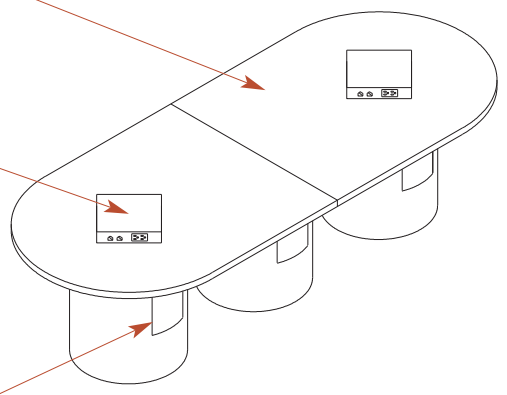
Statement of Line ➤See page 35
Rectangular Tops 37
Racetrack Tops 38
Power/Data Center 39

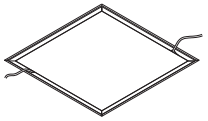
Power/data table tops are available in wood, laminate, and laminate with a wood rim. They are 3-ply balanced construction and are 1 9/16" thick.

Power/data centers, specified separately, are available for field installation in power/data table tops. Cut-outs are standard on power/data table tops

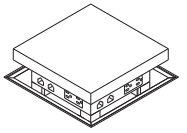
On wood veneer tops, top for the retractable power/data center is cut from the same piece of wood as the table top to ensure a matching grain.

Specially designed bases facilitate easy access to cables and floor monuments, and provide cut-outs for horizontal cord management.
➤See page 40.





While in use, the retractable power center can be lowered to fit flush with the table top to conceal excess cabling. Black brushes on all four sides allow cords to pass through easily, while helping to keep foreign objects out.



Retractable power/data center is designed to be concealed within the table top; a simple touch raises the spring-activated unit exposing power communication and data connections on all four sides. Includes:
- Four duplex receptacles
- Four RJ11 (voice)
- Four RJ45 (data) couplers
- One 15 amp/125 volt circuit breaker for overload protection
- One six foot power cord

All components and wiring of the power/data center are UL listed or recognized.

Details

Exterior surfaces are available in the following veneers:
- Cherry (plain sliced, slip matched)
- Maple (plain sliced, slip matched)
- Walnut (plain sliced, book matched)
- Sapele (quarter sliced, slip matched) premium veneer; upcharge applies

Veneers are carefully selected and matched to assure proper balance and consistency.

Wood tops feature a semi-open pore finish and may be specified with a satin (50) or gloss (70) sheen.

Rim thickness is 5/16" on A, B, C, D, E, F, G, H, and M rims; rim thickness is 1" on CH, S and RS rims.

All rims are wood, except PVC (V). Flat (J) rim is a self edge and is available in wood or laminate.

72"W and 96"W tops are one piece.

120"W, 144"W, 168"W, and 192"W tops are two-piece tops.

Rim Profiles:

Type 1—*Applies to all wood or all laminate tops only.*

J Flat

Type 2—*Applies to wood and laminate with wood rim tops only.*

A Radius Rad. **B** Bevel **C** Dbl.

D Bullnose **E** Transitional **F** Softened

G Beaded **H** Crescent **M** Reed

Type 3—*Applies to wood and laminate with wood rim tops only.*

RS Rv. Knife **S** Knife

Type 4—*Applies to laminate tops.*

V PVC

Note: Rims are designed to match rim shapes offered on other Kimball Office casegoods and systems products.

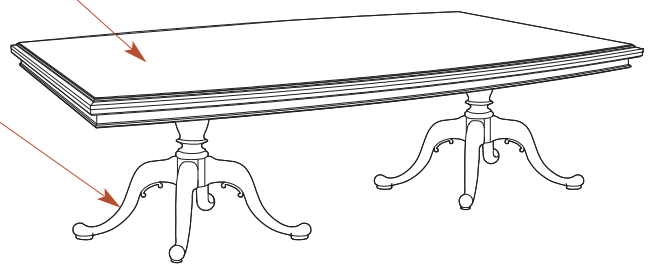
Features

Overview

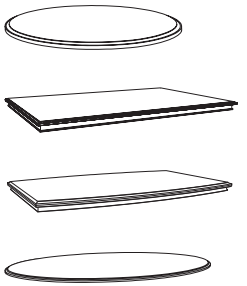
Statement of Line ➤See page 41
Base Requirements 43

Tops feature walnut or cherry veneers.
Note: Cherry veneer is available on select models.

A variety of bases are available. All bases must be specified separately.



Details

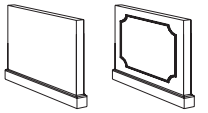


Round, rectangular, boat, and elliptical table shapes are available.

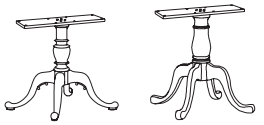
Round table top with pie-cut pattern walnut veneer is available.

Grain runs vertical on apron rails on boat-shaped and rectangular tops

Wood tops have a semi-open pore finish with a lustrous sheen (70).



Panel bases may be used with boat-shaped and rectangular tops.



Queen Anne bases may be used with any traditional top, except round tops with ash burl center (AT1).

The number of bases required varies depending on the size and shape of the top.
➤See page 43.

Base Requirements

Top Shape		Wood Panel Bases with or without molding	Wood Queen Anne Bases
Round Standard Veneer or Pie-Cut Walnut Veneer	42" dia.		1
	48" dia.		1
Elliptical	48" x 96"		2
Rectangular	42" x 96"	2	2
	48" x 120"	3	3
	48" x 144"	3	3

Pricing 55

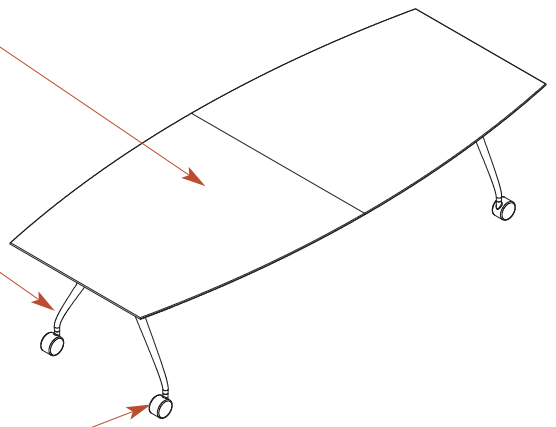
Tops feature 3-ply balanced construction and are 1 1/16" thick.

Base legs are polished aluminum.



4" dual wheel locking casters are standard on folding tables. Casters are black.

Details

Exterior surfaces are available in the following veneers:

- Cherry (plain sliced, slip matched)
- Maple (plain sliced, slip matched)
- Walnut (plain sliced, book matched)
- Sapele (quarter sliced, slip matched) premium veneer; upcharge applies
- Zebrawood premium composite veneer; upcharge applies

Veneers are carefully selected and matched to assure proper balance and consistency.

Table top support understructure is black metal.

Folding table tops are fully finished on top and underneath side.

Folding tables ship fully assembled. *Note: Folding tables lock into position when unfolded.*

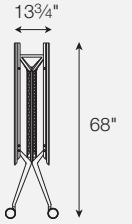
Power/data center is available to bring power directly to the table. It mounts under the table top and includes one grounded electrical outlet, one RJ11 telephone jack, one RJ45 data jack, and a 10 foot power cord. Power/data center has a 13 amp rating and is U.L. listed.

Rim Profiles:

Knife Rim

Softened Rim

Folding and Storing:



Folding tables store upright when folded and are 68"H. Casters remain functional when table is folded for easy movement and storage.

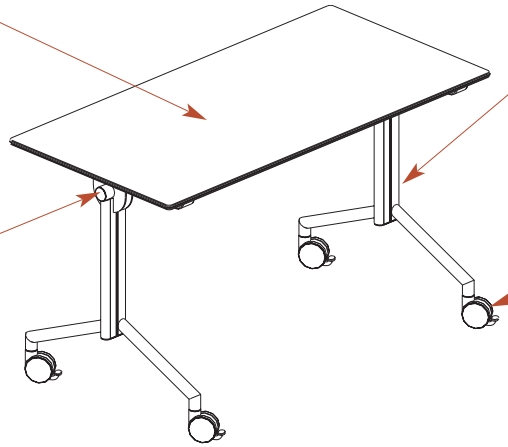
Features

Statement of Line ➤See page 57
1/2" Tops Product Info 59
1 3/16" Tops Product Info 60
Power Guidelines 63

Tops are available in 1/2"- and 1 3/16"-thick models.
- 1/2"-thick tops (shown) feature a phenolic core and a high-pressure laminate (HPL) surface.
- 1 3/16" models feature 3-ply, balanced construction. They are available in wood veneer or high-pressure laminate (HPL).

Crossbar provides support for the table top and a similar aesthetic for nesting and non-nesting bases.



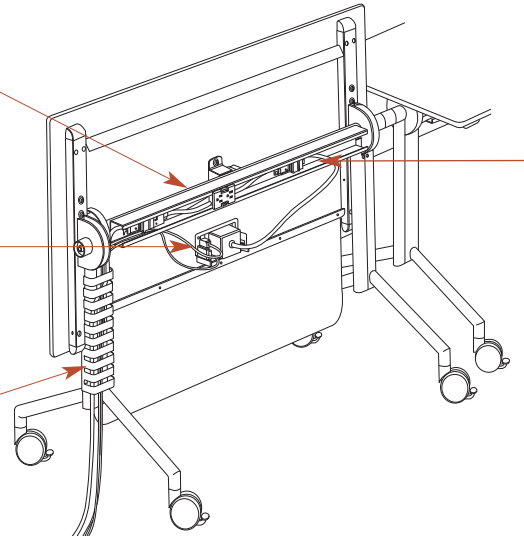
Nesting, non-nesting, and X-bases are constructed of 1 1/4"-diameter tubular steel and are available in 462 Cinder, 405 Designer White, 501 Platinum Metallic, or 514 Carbon Metallic finishes. Bases are specified separately from tops.

Mobile bases feature 3" locking casters. Non-nesting bases and X-bases are available with or without casters.

Power/cable management channel, on specific nesting and non-nesting base models, attaches to the cross bar to accept power components and cable routing.

Power/data center recesses flush with the worksurface top. It includes a duplex receptacle and two knockouts for data/communication ports.

Vertical cable managers snap onto leg of nesting, fixed, or X-bases.



Duplex receptacles allow power to be accessed below the worksurface.

Telephone and data faceplates can also snap into the power/cable management channel, and are available directly from Panduit or AMP/Tyco.

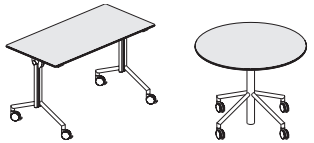
Planning Steps:

① Determine the configuration and select tabletop shapes and sizes.
② Select cord escape(s) and grommets (as applicable), or power/data center cutout locations.
➤See pages 68 and 72.
③ Select the base style and functionality: nesting, non-nesting, or X; mobile or static; with or without power/cable management channel.
④ Determine if and where modesty panels are needed.
⑤ Determine if and where ganging mechanisms are required for your installation.
⑥ Determine the type of electrical circuitry required: single-circuit or multi-circuit. Select components to power your installation.

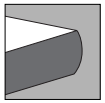
½" Tops

Features ➤See page 58
Power Guidelines 63
Cut-Out Locations 68

Details



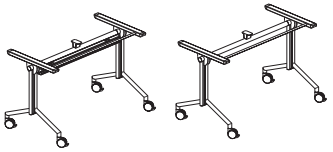
High-pressure laminate (HPL) surface is durable and available in a variety of standard colors. Underside is 462 Cinder laminate.



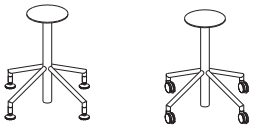
Black phenolic core creates an exposed rounded edge and provides excellent durability and wear resistance.

Tops shapes include:
- Rectangular
- Round
- Square
- Trainer cart/podium

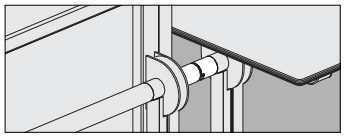
Connections



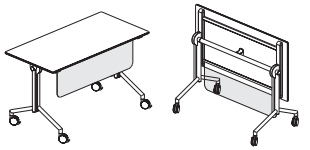
Rectangular tops mount to nesting or non-nesting base in the field. Tops are pre-bored to accept hardware to attach base.
➤See page 61.



Round, square and trainer cart/podium tops mount to an X-base in the field.
➤See page 62.



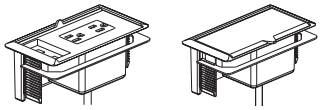
Ganging mechanisms, specified separately, are available to link rectangular tables end to end. Width of the base must match the width of the worksurface. Ganging is required when jumper cables are used to connect power from table to table.



Modesty panels are available for rectangular tables. They are frosted, opaque polycarbonate and swing to allow nesting when used with a flipping/nesting base. Specify modesty panels to correspond with the width of the base. Modesty panels attach to base without tools.

Related Products

Scenario rectangular power/ data center, specified separately, may be field installed in a power/data center cutout. Cutout MUST be specified as a factory-installed option on the top.



Open Closed

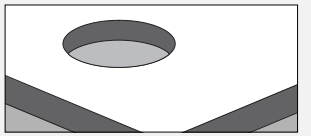
Lid of Scenario power/data center lifts up and slides down to store out of site within the unit. The power/data center is 5⅞"W x 2¾"D and is black plastic. It features a 3-prong plug for a wall outlet or to plug into the outlets of a multi-circuit installation.

Undersurface-mounted products (e.g., keyboard arms, drawers etc.) cannot be accommodated due to the table understructure and thickness of the top.

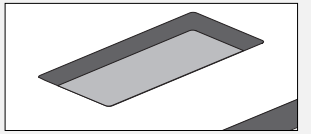
Scenario accessories, such as vertical cable managers and marker-board/flip chart are also available.

Cut-Out Options:

Applies to rectangular and trainer card/podium tops only; up-charge applies.



Factory-installed cord escapes feature black, radiused, phenolic edges. No grommet insert is required.



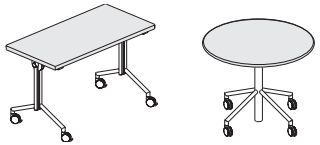
Factory-installed rectangular power/data center (PDC) cutout is required for the field-installation of a rectangular power/data center.

IMPORTANT: Cord escapes and power/data center cutouts CANNOT be field installed due to the density of the phenolic core material.
➤See page 68 for cutout locations and pricing.

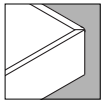
1 3⁄16" Tops

Features ➤See page 58
Power Guidelines 63
Cut-Out Locations 72

Details



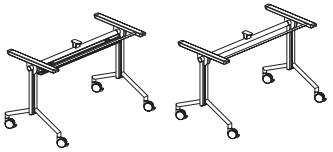
1 3⁄16"-thick tops are available in wood veneer or laminate.



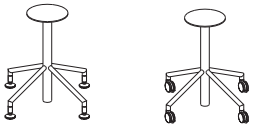
Rim profile is 1⁄8" thick and appears on all edges of the top. Wood models feature a softened wood rim; laminate models feature a softened PVC rim. Wood rim finish will always match the finish selected for the top. PVC rims may be specified in a contrasting to the surface if desired.

Tops shapes include:
- Rectangular
- 120° corner
- Round
- Square

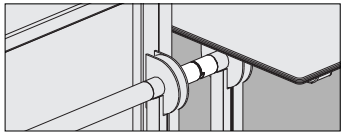
Connections



Rectangular and 120° corner tops mount to nesting or non-nesting base in the field.
➤See page 61.

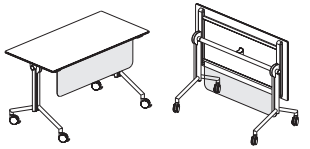


Round and square tops mount to an X-base in the field.
➤See page 62.



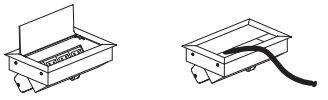
Ganging mechanisms, specified separately, are available to link rectangular tables end to end. Width of the base must match the width of the worksurface. Ganging is required when jumper cables are used to connect power from table to table.

120° corner tops, although available for nesting applications, cannot be ganged and therefore power cannot be jumped to adjacent tables.



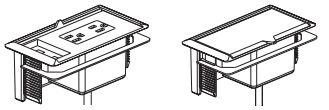
Modesty panels are available for rectangular tables. They are frosted, opaque polycarbonate and swing to allow nesting when used with a flipping/nesting base. Specify modesty panels to correspond with the width of the base. Modesty panels attach to base without tools.

Related Products



Open Closed

Perks® rectangular above-mount power/data center (model 99KPD-CAM), specified separately, is required for field installation in a G20 cutout.
➤See the Perks Price List.



Open Closed

Scenario rectangular power/ data centers, specified separately, may be field installed in a PDC cut-out. Lid of power/data center lifts up and slides down to store out of site within the unit. The power/data center is 5 7⁄8"W x 2 3⁄4"D and is black plastic. Depending on the model selected, it will feature a 3-prong plug for a duplex receptacle or a single-circuit double-out interface.

Undersurface-mounted products (e.g., keyboard arms, drawers etc.) cannot be accommodated due to the table understructure.

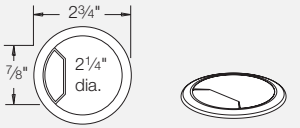
Scenario accessories, such as vertical cable managers and marker-board/flip chart are also available.

Grommets for field installation are also available. Round and square tops cannot accommodate a center grommet location due to the X-base attachment point.
➤See the Perks Price List.

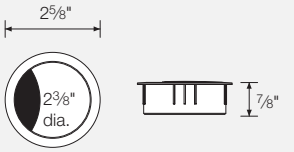
Priority resin privacy screens are compatible with 1 3⁄16"-thick tops in non-nesting applications.
➤See the Priority Price List.

Grommet/Cut-Out Options:

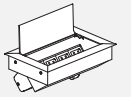
Applies to rectangular and 120° corner tops only; upcharge applies.



G1 plastic grommet is a two-piece unit with locking cap and black brush access. Powdercoat finish: matte black



G19 metal grommet is a two-piece unit with black brush access. Powdercoat finish in three colors:



G20 cut-out is designed to accept Perks above-mount power/data center, specified separately.

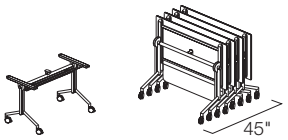
PDC cut-out is designed to accept a Scenario rectangular power/data center, specified separately.
➤See page 72 for grommet cutout locations and pricing.

Nesting and Non-Nesting Bases

Features ➤See page 58
1/2" Tops Product Info 59
1 3/16" Tops Product Info 60
Power Guidelines 63

Details

Scenario bases are constructed of 1¼"-diameter tubular steel and are available in 462 Cinder, 405 Designer White, 501 Platinum Metallic, or 514 Carbon Metallic finishes. Bases are specified separately from tops.

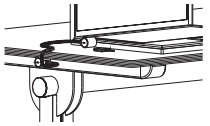


Nesting base allows the rectangular or 120° corner top to flip up for nesting. Nesting bases feature casters and are available with or without an power/cable management channel. Four tables can be nested in 45"D area.

Non-nesting base for rectangular or 120° corner top is available with or without casters, and with or without an power/cable management channel.
Note: The appearance of nesting and non-nesting bases is the same, but table top will not flip up.

Two depths are available:
- 17¾"D for use with 18"D tops
- 24"D for use with 24" and 30"D rectangular tops and 120° corner tops.

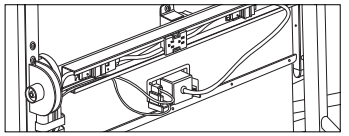
Three widths are available:
48", 60", and 72"W.
➤See base application chart at right.



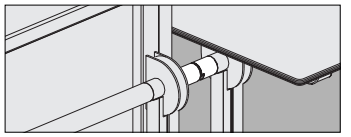
Built-in lock port is standard on nesting and non-nesting bases. It accepts laptop/equipment lock, specified separately.
➤See the Perks Price List for laptop/equipment lock.

Connections

Legs on nesting and non-nesting bases ship assembled, but must be attached to the crossbar in the field. Bases cannot be used with table tops from other series.



Bases with an power/cable management channel accept single-circuit or multi-circuit power components.
➤See page 63 for power application guidelines for single-circuit.
➤See page 64 for power application guidelines for multi-circuit.



Ganging mechanisms, specified separately, are available to link rectangular tables end to end.
IMPORTANT: Ganging mechanisms are required at all junctions where jumper cables are used to pass power to an adjacent table. Width of the base must match the width of the worksurface in order to be ganged and to jump power.

Ganged tables may be moved or nested in a straight line while ganged. Power components remain intact. Mechanism does not affect the ability of nesting tables to flip up or down. Tools are not required to separate or gang once the mechanism is installed. There is no limit to the number of non-electrified tables that can be ganged.

120° corner tops, while available for nesting applications, cannot be ganged and therefore power cannot be jumped to adjacent tables.

Technology Management

Vertical cable managers snap onto leg of nesting, fixed, or X bases.

Telephone and data faceplates can also snap into the power/cable management channel, and are available directly from Panduit or AMP/Tyco.

Base Application Chart:

● = Applicable; gangable
○ = Applicable; will not gang

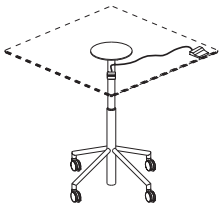
X-Bases

Features ➤See page 58
1/2" Tops Product Info 59
1 3/16" Tops Product Info 60
Power Guidelines 63

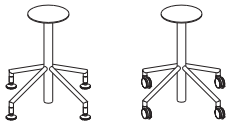
Details

Scenario X-bases are constructed of 1¼"-diameter tubular steel and are available in 462 Cinder, 405 Designer White, 501 Platinum Metallic, or 514 Carbon Metallic finishes. Bases are specified separately from tops.

Round, square, and trainer cart/podium tops require an X-base. X-bases do not allow the top to flip.



Height-adjustable model features casters. Release paddle to adjust height on adjustable-height model is factory-installed on the X-base.



Fixed-height model is available with or without casters.

Connections

For ½"-thick top applications, X-base must be attached to the factory pre-bored holes in the top.

Ganging tables together is not possible with X-base supported tables.

Table tops from other series cannot be used with X-bases.

Power components are not compatible with X-bases.

Technology Management

Vertical cable manager snaps onto the center column on X-bases to route cords and cables.

Single-Circuit Power

Features ➤See page 58
1/2" Tops Product Info 59
1 3/16" Tops Product Info 60

Single-circuit components access power from a standard wall or floor electrical outlet. This flexible, non-sequential, daisy-chaining system allows power to be distributed to a maximum of six tables with a maximum of eight duplex receptacles per power in-feed.

The following components comprise the single-circuit system:

- Power in-feed
- Duplex receptacles with an attached 12" modular feed
- Table-to-table jumper cables
- Receptacle-to-receptacle jumper cables
- Power/data center

For ease in installation, the connectors will only plug in one way.

Power in-feed is a 10' cord with a "smart box" that monitors the number of tables connected. The system will automatically shut off if more than six tables (or more than 8 receptacles) are plugged into the power in-feed. One end of the cord features a three-prong plug that plugs into any 110 volt, 15 amp wall or floor outlet.
Note: This system should not be plugged into a GFCI outlet receptacle. The single-circuit system contains an overload breaker, and the sensing circuit in the "smart box" can affect the sensitivity of a GFCI power feed, causing the GFCI duplex receptacle to trip.

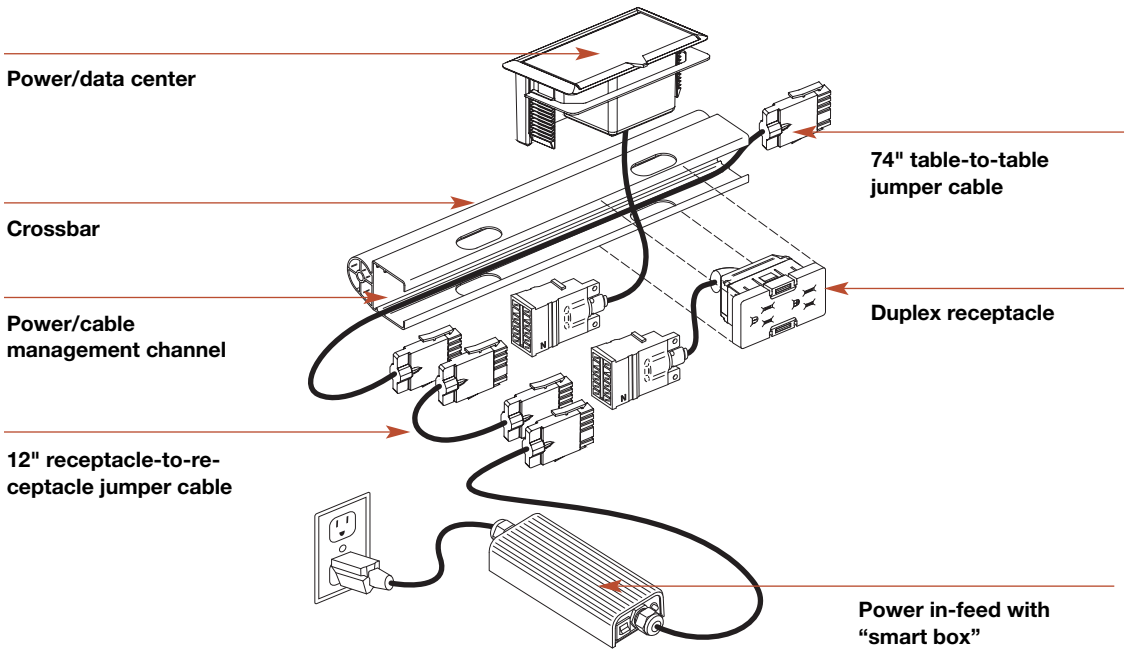
Duplex receptacles snap into the electrical/cable management channel on the base. Receptacles feature a 12" modular feed with a double-out interface. Power is brought to the receptacle by a power in-feed or jumper cable, and power is passed to adjacent components by a jumper cable forming a daisychain.

Table-to-table jumper cables are 74" and feature a squeeze-latch connector on each end. They are used to pass power from one table to an adjacent table.

IMPORTANT: Ganging mechanism, specified separately, is required when passing power from table to table. 120° corner tops cannot be ganged and therefore power cannot be jumped to adjacent tables.

Receptacle-to-receptacle jumper cables are 12" and feature a squeeze-latch connector on each end. They pass power from one receptacle or power/data center to another receptacle on a single table.

Power/data center (model KCUELPDC1) features an 24" modular feed with a double-out interface, similar to receptacles. Model



Circuitry Options:

Nesting and non-nesting bases with an power/cable management channel accept single-circuit or multi-circuit power components. Components are specific to either single or multi-circuit; they cannot be used interchangeably.
➤See page 64 for multi-circuit power application guidelines.

Approval/Compliance:

All Scenario single-circuit components and fully assembled tables are U.L. 962 Recognized and comply with the National Electrical Code (NEC). Consult a qualified electrical contractor or engineer for proper installation of electrical equipment. The customer is responsible for the proper application of products to the local codes under which installation must be made.
Note: Any field modification of the electrical components voids the U.L. listing.

c UL US LISTED

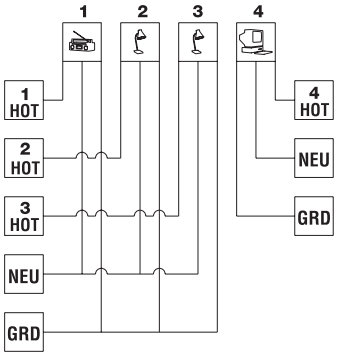
Multi-Circuit Power

Features ➤See page 58
1/2" Tops Product Info 59
1 3/16" Tops Product Info 60

Multi-circuit components combine to form an 8-wire, 4-circuit, hardwired system that must be installed by a licensed electrician. The number of rectangular tables that can be connected will be determined by the building's supply limitations.

The 8-wire, multi-circuit configuration provides up to four circuits. Ideally a 4-wire, WYE, 208 volt service provides the best utilization.
➤See wiring schematic below.

Scenario electrical components are not compatible with Cetra, Xsite or Interworks electrical components.



Circuits 1, 2, and 3 share a neutral and common ground and can be used for general electrical needs.

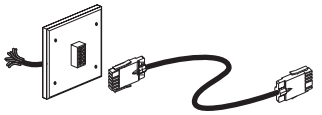
Circuit 4 consists of three separate increased-size conductors (hot, neutral, and ground) and meets the BIFMA/ANSI definition for a dedicated circuit.

The following components comprise the multi-circuit system:
- Hardwire power in-feeds (two options)
- Power distribution assemblies
- Duplex receptacles
- Table-to-table jumper cable
- Power/data center

For ease in installation, the connectors will only plug in one way.

There are two ways to bring power to the system:
- 15' hardwire power in-feed; or
- Modular wall starter and modular 15' power in-feed.

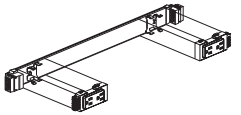
Hardwire power in-feed features a 15' liquid tight conduit with a pigtail on one end that must be wired by a licensed electrician to a wall or floor-mounted junction box. The other end features a single squeeze-latch connector to attach to a power distribution assembly.



Modular hardwire power in-feed features a 15' modular conduit, with a squeeze-latch connector on each end. One end must connect to modular wall starter, specified separately, the other end connects to a power distribution assembly. Modular wall starter must be wired to building power by licensed electrician.
Note: This modular power in-feed option allows you to unplug the cable from the wall and store away when not in use.

Multi-circuit hardwire power in-feed or modular starter must be installed by a licensed electrician.

Power distribution assembly is field-installed into the electrical/cable management channel and supplies power for receptacles in the table. One power distribution assembly is required for each table. They are available in three lengths to correspond to the length of the table base:
- 24"W power distribution assembly fits a 48"W base.
- 36"W power distribution assembly fits a 60"W base.
- 48"W power distribution assembly fits a 72"W base.



Duplex receptacles snap into the power distribution assembly. Each power distribution assembly can accommodate one or two duplex receptacles, up to a maximum of 13 duplex receptacles per circuit.

➤Guidelines continued on next page.

Circuitry Options:

Nesting and non-nesting bases with an electrical/ cable management channel accept single-circuit or multi-circuit electrical components. Components are specific to either single or multi-circuit; they cannot be used interchangeably.
➤See page 63 for single-circuit power application guidelines.

Approval/Compliance:

All Scenario multi-circuit components are U.L. 1286 Listed and comply with the National Electrical Code (NEC). Consult a qualified electrical contractor or engineer for proper installation of electrical equipment. The customer is responsible for the proper application of products to the local codes under which installation must be made.
Note: Any field modification of the electrical components voids the U.L. listing.

IMPORTANT: Due to U.L. 1286 code restrictions for assembled tables, multi-circuit components can only be used with static (non-mobile) bases.

c UL US LISTED

Multi-Circuit Power

continued

Features ➤See page 58
1/2" Tops Product Info 59
1 3/16" Tops Product Info 60

Receptacles models are numbered 1, 2, 3, or 4, to correspond to the circuit to which they will provide access.

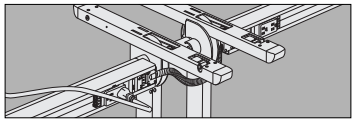


Table-to-table jumper cables are 28" and feature a single connector at both ends that connect the power distribution assemblies of two adjacent tables. Jumper is encased in a galvanized metal conduit. IMPORTANT: Ganging mechanism, specified separately, is required when passing power from table to table. 120° corner tops cannot be ganged and therefore power cannot be jumped to adjacent tables.

Scenario power/data center (model 77KELPDC2) features an 8' cord that plugs into one of the duplex receptacles below the worksurface. It can also be used as a stand-alone unit.

Perks above-mount power/data center (model 99KPDCAM) may also be used in 1 3/16"-thick top applications.

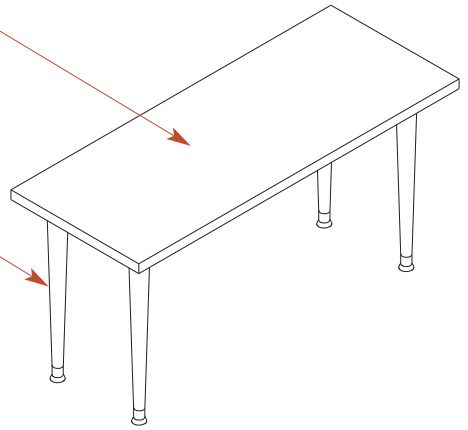
Folding T-Legs
➤See page 87 to specify.

Features

Statement of Line ➤See page 83
Base Requirements 85

Table tops are available in wood, laminate, and laminate with a wood rim. They are 3-ply balanced construction and are 1 3/16" thick.

Support is specified separately. Select from several column and T-leg models.
➤See page 85 for base requirements.



Details

All exposed wood surfaces are available in the following veneers:
- Cherry (plain sliced, slip matched)
- Maple (plain sliced, slip matched)
- Walnut (plain sliced, book matched)
- Sapele (quarter sliced, slip matched) premium veneer; upcharge applies

Veneers are carefully selected and matched to assure proper balance and consistency.

Rim profile appears on all sides of table top for the following rim profiles:
- Radius (A)
- Bevel (B)
- Double Radius (C)
- Bullnose (D)
- Transitional (E)
- Softened (F)
- Beaded (G)
- Crescent (H)
- Flat (J)
- Reed (M)
- PVC (V)

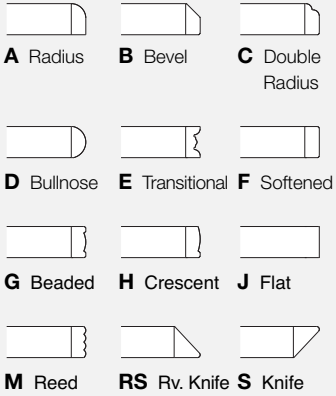
Knife (S) and reverse knife (RS) rim profiles on rectangular tops appear on the front and back edges; end edges have a flat profile for a flush fit when positioning tables end to end.

Rim thickness is 5/16" on A, B, C, D, E, F, G, H, and M rims; rim thickness is 1" on S and RS rims.

All rims are wood, except PVC (V). Flat (J) rim is a self edge and is available in wood or laminate.

Rim Profiles:

Rims for Wood Tops and Laminate Tops with Wood Rim



Rims for Laminate Tops

Note: Rims are designed to match rim shapes offered on other Kimball Office casegoods and systems products.

Base Requirements

Top Shape		Static Tapered Column Leg	Mobile Tapered Column Leg	Static Column Leg	Mobile Column Leg	Static T-Leg	Mobile T-Leg	Folding T-Leg
Rectangular	48"W	4	4	4	4			
	60"W	4	4	4	4			
	66"W	4	4	4	4	2	2	2
	72"W	4	4	4	4	2	2	2

Key:

\# = Number of bases required
grey = Base is not available for use with top shape.

This chart lists the number of bases that must be used with each top size for proper stability.

Configuration table bases are designed specifically for use with Configuration Tables and are not recommended for use with any other Kimball Office tables.

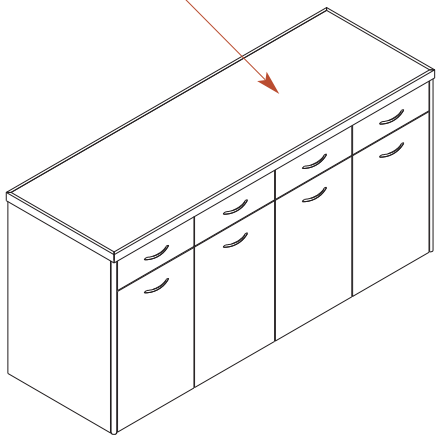
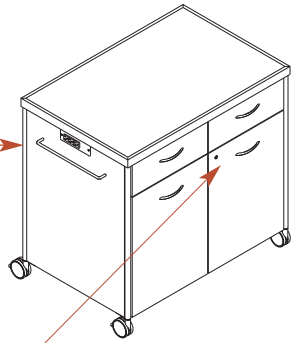
Features

Statement of Line ➤See page 103
Pull Options 105

Tops on credenzas, carts and telephone stand are available in wood or laminate with wood rim.





Metal corner posts are standard on vertical storage, credenzas, carts, telephone stand, and floor lectern. Available in three paint colors:
- 462 Cinder
- 501 Platinum Metallic
- 503 Satin Nickel

Locking is standard on utility/AV cart, hospitality cart, and telephone stand. Locks are available keyed randomly or keyed specific. Specify lock cores separately for key specific option.
➤See page 104 for lock information.

Details

Buffet credenza's lower left compartment features a pull-out door with black trash container.

Utility/AV cart is a multi-functional unit that serves as a serving cart, projector stand, or mobile TV cart. Lower section is locking. Includes cut-out in back panel for cable management and a side handle. Interior dimensions of open shelf are 34½"W x 22"D x 5½"H.

Serving cart features a hinged drop-leaf surface on all four sides, one fixed shelf, and a side handle.

Hospitality cart includes side handle and two box drawers with a black silverware organizer Lower left compartment features a pull-out door with black, 24 quart trash disposal container. Lower right section is locking. Power strip, located on left side of cart, includes three power outlets and a 10' cord. Black grommet for routing cord is located in the back panel.

Telephone stand features a hinged drop-leaf surface on both sides that extends 7". There is one adjustable shelf behind locking hinged door.

Floor lectern includes an adjustable shelf behind a non-locking hinged door. Presentation surface includes a cut-out for cable management.

Carts, telephone stand, and floor lectern are mobile and include four locking, dual-wheel casters.

All exposed wood surfaces are available in the following veneers:
- Cherry (plain sliced, slip matched)
- Maple (plain sliced, slip matched)
- Walnut (plain sliced, book matched)
- Sapele (quarter sliced, slip matched) premium veneer; upcharge applies

Veneers are carefully selected and matched to assure proper balance and consistency.
➤See page 113 for finish selections.

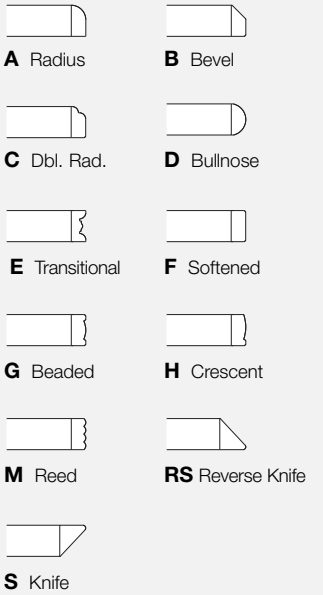
Wood tops on credenzas, carts, and stands feature a semi-open pore finish with a satin (50) or gloss (70) sheen.

Woodgrain laminate top with wood rim is also available in select finishes on all models, except serving cart.
➤See page 117.

Drawer suspensions feature black, precision steel ball bearings to ensure long lasting, quiet, and smooth operation. Box drawers are ¾ extension and have a 75 lb. load rating.

Rim Profiles:

Rims are designed to match rim shapes offered on other Kimball Office casegoods and systems products. All rims are wood.



Knife (S) and reverse knife (RS) rim profiles on vertical storage units, buffet credenzas, utility/AV cart, and hospitality cart appear on the front edge only; sides and back are flat. All other rim profiles appear on all four sides of the top.

How to Specify

Specify pull option and finish together in one step.
If pull finish designator is a number, insert an underscore between the pull designator and the finish designator. For finish designators that are letters, put the pull and finish together without a space or underscore.

Examples:
93_487 = Aero pull, brushed nickel
61SF = Helix pull, silver frost metallic

Locking Information

GSA SIN 711-8

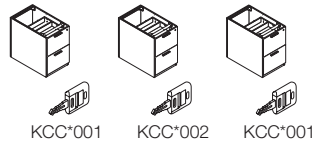
Features ➤See page 104
Pull Options 105

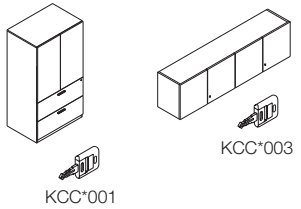
Locking units can be specified as:
- Key random with a black lock core and hinged key (KRB); or
- Key specific (KS)

Key Random Option:

When key random option is selected, key numbers will be assigned arbitrarily at the factory with key numbers ranging from KCCB001 to KCCB300.

Randomly numbered lock core(s) will ship standard along with your order for field installation.
Exception: Randomly numbered lock cores on Kwik Office models are shipped installed.



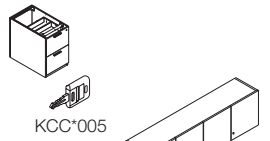


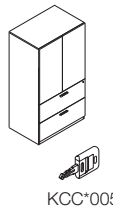
With random keying, different furniture units may or may not have the same key number. If you must have all locks keyed differently or all locks keyed the same, choose the key specific option.

Key Specific Option:

When key specific option is selected, the storage unit will be pre-drilled to accept a lock core; however, no lock cores will be shipped standard with the unit. If lock cores are standard on the unit, the price of the unit is reduced by the price of the lock core or cores.

You must specify lock core(s) separately for key specific option; specify any key number from KCCB001 to KCCB300.





To key all the furniture units in a workstation or department alike, choose the key specific option and order the quantity of locks needed for your installation.

Black lock cores and hinged keys are identical to the ones used with other casegoods and systems products.

Standard key that ships with the lock core can be used for the initial installation of the lock core in the field.

Change key model KCCB1CK allows removal of lock cores for key numbers ranging from KCCB001 to KCCB300.

IMPORTANT: A change key, specified separately, is required to remove lock cores in the field.

Master key model KC2GMK will unlock any lock with key numbers ranging from KCCB001 to KCCB300.

Model/Key Range	*Price*
Black Lock Cores	
KCCB001 to KCCB300	$22
Change Key	
KCCB1CK	$6
Master Key	
KC2GMK	$12

How to Specify

❶ Specify exact key number for lock cores as the model number or model number for change or master key

STD2 = Group 2 (+20%)
FSCW = FSC-certified group 1 wood (+3%)
③ Finish designator
④ Metal support/corner posts finish designator:
462 = Cinder
501 = Platinum metallic
503 = Satin Nickel metallic

FINISHES & MATERIALS

Samples:

Samples of wood finishes, paints, and laminates are available upon request. Samples are to be used as guidelines only. Slight variations within commercial tolerance may occur in color and texture.

Swatch cards and memo samples of Kimball Office fabrics are available upon request. There may be slight differences between samples and actual yardage as a result of variations in dye lots.

To order samples:

- Visit the Partner web site at www.kimballoffice.com to order materials electronically
- Contact your Kimball Office Sales Representative or the nearest Kimball Office Showroom
- For Alliance program fabrics, contact our Alliance partner directly.

Kimball Office offers a diverse collection of surface materials. Please see descriptions below to ensure that you are choosing the materials that best support your requirements.

Fabric Collection:

Our collection of fabrics offers a wide variety of materials that include both timeless classics, as well as a selection of trendy colors and patterns to keep the offering fresh and current.

The classic patterns are perfect for establishing new standard color palettes, while the trendy patterns are great for adding accents and pops of color to make a statement and to show that you are in tune with the pulse of today's fast-paced world.

The fabric collection was developed with an international flare to make it easy for global companies to standardize in all locations. It contains both standard in-line and alliance patterns. Our alliance partners are chosen with great care to give us the best selections and service in the industry.

You will find that colors were developed to coordinate very well between the in-line and alliance offerings, as well as between the seating and panel fabric offerings.

The fabric collection will provide options for the discerning client for many years to come.

Wood Collection:

Our wood finishes offer fresh options that provide natural-looking finishes to meet today's design expectations. From the lightest Brighton Maple to the darkness of Urban Walnut, these finishes were chosen with great attention to offer a complete range of color options making it simple to specify the look you want. You can achieve contemporary or transitional looks, or choose to update your traditional style by selecting one of the newer walnut or cherry finishes.

Kimball Office carefully selects veneers and solid woods to provide high quality wood furniture. Variations in color, grain, and texture occur naturally in all wood species, but are most apparent in lighter colored woods, and especially in natural finishes.

The wood collection offers a number of light finishes that will not hide or mask the natural characteristics of wood. Mineral streaks, pitch pockets, and color variations from piece to piece are all characteristics that occur in natural veneers and are what make each piece unique. While the finishing process is identical for all pieces, each finished piece accepts the stain differently to create its own individual beauty. These characteristics are part of the inherent natural beauty of wood and are not considered defects.

Darker finishes can be selected to hide more of the veneer's characteristics. Several beautiful coordinating woodgrain laminate options are also available for the customer who wants complete color and grain consistency throughout.

Two surfaces with grain directions that are at different angles to a light source will reflect the light differently and look a slightly different color. This natural phenomenon is called flip. This can happen within a single piece as alternating veneer leaves are placed side by side or from piece to piece. Flip is often noticed on worksurfaces installed at a 90° angle to each other.

Two premium veneers—Sapele and Zebrawood—are part of the standard offering to provide options for high impact styles without having to quote custom veneers. Premium veneers could receive extended lead times based on supplier availability at the time the order is placed.

Generations Collection:

The Generations Collection is comprised of tried and true materials that have been in the Kimball Office offering for many years. This collection is designed to support long-standing customers and to help transition you to the current offering.
➤Visit kimballoffice.com to see the Generations Collection.

IMPORTANT: Materials in this collection should not be used to set standard color palettes for new installations.

Materials in this offering can be ordered using the standard process, however, extended lead times and minimum order quantities may apply. For best results, pre-planning orders with your Customer Service Representative is recommended.

Discontinuation Policy:

Kimball Office strives to give all business partners advanced notification of surface materials that are scheduled for discontinuation. Efforts will be made to support discontinued materials as specified in the deletion announcement. Pricing cannot be guaranteed. Extended leadtimes and minimum order requirements may apply.

Disclaimer:

Kimball Office will make every reasonable effort to maintain our commitments. If surface material changes must occur due to unforeseen circumstances, we will work with you on an alternative recommendation. Kimball Office reserves the right to cancel or make changes to standard products and surface materials.

Warranty:

Fabrics and leathers are not warranted against fading and wear, discoloration from contact with liquids, or change in color or texture caused by application of finishes (flame proofing, stain resistance).
➤See page 124 for complete warranty information.

Price Groups:

STD = Group 1 (list price)
STD2 = Group 2 (20% upcharge)

Kimball Office is known as the wood leader in the office furniture industry. Exceeding our customer expectations has always been our goal.

It is important to educate your customers on what to expect from the wood furniture they order. If they require a specific characteristic or look, please contact ***By Design*** to review veneer options and discuss special quotes.

➤See page 112 for program overview.
➤See page 116 for wood finish characteristics, care and maintenance.

† CX Coco and SX Sienna finishes on Arpeggio cherry and Beo beech tables are available to coordinate with finishes of the same name on sapele wood (price grade 2). They do not incur an upcharge (price grade 1).

* Available on models specified with the FSC-certified wood option.

Special Wood Finishes

Matrix

Standard Finishes on Alternate Wood Species

Standard finish colors on alternate wood species are available. Samples are available from Customer Service upon request.

Applicability of special finish colors depends on the wood species to which they are applied. The matrix below shows the types of woods used for each series.

	Cherry	*Maple*	*Walnut*	*Sapele*
Price Group	*1*	*1*	*1*	*2*
Arpeggio	•	•		
Collaborative	•	•	•	•
Contemporary	•	•	•	•

Innsbruck	•			
Pose	•	•	•	•
Scenario	•	•	•	•
Traditional	•		•	
Transcend	•	•	•	•
Villa Tables	•	•	•	•

• = standard wood species
Note: Special finishes are not available on Zebrawood.

If one of our standard finishes is not appropriate, Kimball Office also has a library of previously developed special finishes which may be an acceptable match for your application. A custom finish can also be developed to meet specific needs.
➤See next page for previously developed and custom finishes.

Upcharges:

A **10% upcharge** per line item (model) for special wood finishes applies. Upcharge is calculated on the base price, before other option upcharges are added.

Example:
48" round table top (model CCS48RDW1) in special finish and factory-installed grommet—

Base price	$1233.00
	x .10
Special finish	$ 123.30
Base price	+1233.00
Grommet option	+ 82.00
List price	$1438.30

Special Finish Designators:

	Wood Species		
Color	*Cherry*	*Maple*	*Walnut*
Amber	Standard/MC	MA00174KOG	WA02905KOG
Espresso	×	×	Standard/ES
Mocha	Standard/MH	×	WA02920KOG

Note: We have not yet developed special finish designators for standard finishes on alternate wood species for all wood finishes.

Key:
× = Not feasible on wood species

How to Specify

① **Model:**
Build the complete model specification by following the How to Specify steps on the pricing page for the product that is to receive the special finish.

② **Finish type:**
For the "Finish type" step, insert a special code (in place of STD):
ZCHY1 = Special cherry finish
ZMAP1 = Special maple finish
ZWAL1 = Special walnut finish
ZSAP1 = Special sapele finish
Note: Choose the special finish code based on the standard wood species used in the case-goods line (see matrix at left).

③ **Finish designator:**
For the "Finish designator" step, insert the designator from the table at left.

Sample:
① ②
CCS48RDW1 ZCHY1
③
CH00073KOG

Special Wood Finishes

Matrix

Previously Developed and Custom Finishes

Wood Finishes ➤See page 113
Woodgrain & Solid Lam. 117
Pattern 118
Paint & Plastic 120

Previously developed and custom finishes are available for special requirements. Kimball Office has an extensive library of previously developed special finishes which may be an acceptable match for your application. If not, a custom finish can be developed to meet specific needs.

Samples of previously developed special finishes are available from Customer Service upon request.

Applicability of special finish colors depends on the wood species to which they are applied. The matrix at right shows the types of woods used for each series.

IMPORTANT: Kimball Office reserves the right to decline the opportunity to match a finish color.

	Cherry	*Maple*	*Walnut*	*Sapele*
Price Group	*1*	*1*	*1*	*2*
Arpeggio	•	•		
Collaborative	•	•	•	•
Contemporary	•	•	•	•

Pose	•	•	•	•
Scenario	•	•	•	•
Traditional	•		•	
Transcend	•	•	•	•
Villa Tables	•	•	•	•

• = standard wood species

Note: Special finishes are not available on Zebrawood.

Approval Process:

① Send desired finish sample (no smaller than 3" x 5"), along with a purchase order for the $300 (net) special finish development fee, to Customer Service along with a complete list of the products and wood species to which the special custom finish is to be applied. Include dealer name, contact, and project reference.

② If a previously developed sample is found to be compatible, a sample will be sent for customer approval. Custom finishes will generally require at least a week for a matched sample. Samples sent to the customer will advise of any restrictions that may apply.

③ Customer signs off on the sample and returns the approval form to Customer Service. Approval is required prior to order entry.

Upcharges:

A one-time fee of **$300** (net) will be billed for the development of each new custom finish. This fee covers all Kimball Office product lines on which the finish may be used. Models receiving a special finish will also be assessed an upcharge.

A **10%** upcharge per line item (model number) for special wood finish is calculated on the Grade 1 upholstery price, then added to the price for the selected fabric grade, to arrive at the list price.

Example:
48" round table top (model CCS48RDW1) in special finish and factory-installed grommet—

Base price	$1233.00
	x .10
Special finish	$ 123.30
Base price	+1233.00
Grommet option	+ 82.00
List price	$1438.30

How to Specify

① **Model:**
Build the complete model specification by following the How to Specify steps on the pricing page for the product that is to receive the special finish.

② **Finish type:**
For the "Finish type" step, insert a special code (in place of STD):
ZCHY1 = Special cherry finish
ZMAP1 = Special maple finish
ZWAL1 = Special walnut finish
ZSAP1 = Special sapele finish
Note: Choose the special finish code based on the standard wood species used in the case-goods line (see matrix at left).

③ **Finish designator:**
For the "Finish designator" step, insert the designator provided to you by Customer Service.

Wood Finish Characteristics

Including Care and Maintenance Tips

Wood Finishes	➤See page 113
Woodgrain & Solid Lam.	117
Pattern	118
Paint & Plastic	120

Kimball Office's experience in wood finishing extends from past generations of craftsmen to present day state-of-the-art technology.

Our Pura® finish is a proprietary, water-based, ultraviolet (UV) wood finish that has virtually no volatile organic compounds (VOCs). It uses less energy than our conventional finishing process and meets or exceeds BIFMA Furniture Emission Standards (FES) and U.S. Green Building Council LEED requirements for indoor air quality. Pura is exceptionally clear and durable and allows the beauty of our wood to shine through. The durability, depth, clarity, and beauty of Pura meets the high expectations customers have of Kimball Office finishes.

Finish fill and sheen level for the top surfaces is appropriate for the design and wood species. If different specifications are required, contact Customer Service.
➤See the individual chapters for fill and sheen information by line.

All wood products are very susceptible to darkening from age and exposure to UV rays (sunlight and other sources), especially cherry and maple. Although a special UV inhibitor is added to finishes, care in placement of furniture near light sources and elimination of prolonged covering of surfaces is necessary to reduce uneven color change of the wood.

Grain characteristics of cherry veneer such as gum streaks and gum pockets occur naturally and add to the authentic look and feel of natural veneer. These are inherent to this veneer and should not be considered defects.

Brighton maple is a clear finish for those who appreciate the inherent beauty of wood. Differences in grain character and color are natural characteristics of wood and will show through in the finished product.

Fine scratches from everyday use may be more visible on furniture with dark finishes. Darker finishes absorb more light, while fine scratches reflect the light. Therefore, scratches can be more emphasized due to this contrast. The use of a desk pad is recommended to keep scratching to a minimum.

To Maximize Longevity and Beauty of the Wood Finish:

- Clean all surfaces frequently with a water dampened soft cloth following direction of the grain.
- Dry with a separate cloth if needed.
- Avoid exposure to strong sunlight or extremes in temperature or humidity.
- Avoid exposure to harsh solvents and always remove any spilled liquids immediately.
- Use a desk pad. This will help protect against possible damage and imprinting caused by writing instruments and sharp objects.
- Pads with foam backing are not recommended.
- If using a protective glass top, always place felt spacer pads under the glass to allow the wood to breathe.
- Do not leave plastic, vinyl, or rubber items on finished wood surfaces. Sustained contact could damage the finish.

† *Woodgrain, solid, and pattern laminates are available on base models CBS2716 and CBS2724 only.*

Woodgrain laminate is a commercially compatible match to the wood finish of the same name and designator with consideration for the most common application—laminate surfaces on a wood chassis. When laminate and wood are mixed in other applications, the flip that occurs naturally in veneer may influence the overall match from piece to piece.

Pattern	118
Paint & Plastic	120

Customer specified high-pressure laminate (CSL) is available on:
- Definition
- Fluent
- Priority
- Scenario table tops
- Collaborative (LW model tops only)
- Complementary Furniture
- Configuration table tops
- Contemporary table tops
- Villa table tops

➤Contact Customer Service to initiate approval.

Kimball Office reserves the right to decline a customer specified laminate which may not be suitable for application.

Kimball Office assumes no responsibility for the durability, consistent coloration or any other performance characteristic of a customer specified laminate.

Metal, embossed, specialty, and supplier discontinued laminates must be custom quoted.
➤Contact ***By Design*** at 800.482.1616 extension 6002.

CSL on products not listed above must be custom quoted.
➤Contact ***By Design*** at 800.482.1616 extension 6002.

Kimball Office orders and procures all customer specified laminates.

Laminate sheen level must not exceed 60° for maximum durability of worksurfaces.

Lead times may vary for certain laminates. Minimum order quantities may apply.

Pricing:

A **20% upcharge per line item** (model) for CSL orders for supplier standard laminates applies. Upcharge is calculated on the base price, before other option upcharges are added.

Example:
48" round table top (model CCS48RDL1) with CSL and factory-installed grommet—

Base price	$1031.00
	x .20
Special finish	$ 206.20
Base price	+1031.00
Grommet option	+ 82.00
List price	$1319.20

How to Specify

① **Model:** Build the complete model specification (excluding the finish type and finish designator) by following the How to Specify on the appropriate pricing page for the product that is to receive the special finish.

② **Finish type:** For the "Finish type" step, insert a special finish code (in place of STD).
ZFMA1 = Formica
ZLMT1 = Lamin-Art
ZLTC1 = Lamitech
ZNEV1 = Nevamar
ZPTE1 = Pionite
ZWST1 = Wilsonart

③ **Finish designator:** For the "Finish designator" step, insert the laminate designator (color number) of the laminate to be applied to the product.

The table at right lists the operating load capacities (functional load) of various Kimball Office components. All components meet or exceed the ANSI/BIFMA Functional and Proof Loading requirements X5.5 (2008 Desk and Table Products Tests) and X5.9 (2004 Storage Units Tests). The Operating Load Capacities listed represent the BIFMA functional loads which are equivalent to loads that can be expected in normal use of the component.

BIFMA

MEMBER
THE BUSINESS AND INSTITUTIONAL FURNITURE MANUFACTURER'S ASSOCIATION

Component	**Operating Load Capacity**	**Examples** (total weight [t.w.])
Desk/table <45"W	200 lbs. over 12" diameter area, concentrated loading	
Desk/table 45"W–72"W	200 lbs. over 12" diameter area, concentrated loading 1.5 lbs. per inch of perimeter, distributive loading	24"D x 72"W = 288 lbs.
Desk/table >72"W	Two 200 lb. loads over two 12" diameter areas, concentrated loading 1.5 lbs. per inch of perimeter, distributive loading	24"D x 84"W = 324 lbs.
Pedestal drawer	.017 lb. per cubic inch of drawer interior filing space *Note: File drawers are to support hanging files only; they are not intended for bottom loading.*	24"D x 18"W x 12"H = 88 lbs.
Transaction counter,	.017 lb. per cubic inch above surface secondary surface <16"D, (not to exceed 12"H), distributive loading or and shelf	12"D x 60"W = 147 lbs. t.w.
Adjustable keyboard	66 lbs. over 12" diameter area, concentrated loading <36"W 66 lbs., distributive loading	
Writing shelf	25 lbs., distributive loading	
Extendible elements	.017 lb. per cubic inch of drawer interior filing space, (drawer, shelves, etc.) distributive loading	24"D x 15"W x 12"H = 73 lbs.
Center/pencil drawers	5 lbs., distributive loading	
Storage or bookcase	200 lbs. concentrated loading top <38"H distributive loading	.26 lb. per square inch of surface area, 24"D x 36"W = 225 lbs.
Storage or bookcase	.26 lb. per square inch of surface area, distributive loading top 38"H–72"H	24"D x 36"W = 225 lbs.
Storage or bookcase	.09 lb. per square inch of surface area, distributive loading top >72"H	24"D x 36"W = 78 lbs.
Storage or bookcase	.017 lb. per cubic inch above surface, distributive loading bottom	24"D x 36"W x 18"H = 264 lbs. (not more than 18" in height)

Square inches should be calculated using this formula: Surface depth x surface width of available storage

Cubic inches should be calculated using this formula: Surface length x surface depth x height of available storage above the surface (limited to 18 inches above the surface)

U.L. Information:

Only Underwriters' Laboratory (U.L.) listed electrical components are used in electrical devices and are so labeled.

The customer is responsible for the proper application of products to the local codes under which installation must be made. Further specifications are available on request.

Complete specifications are built by following a set of steps. These “How to Specify” steps are located in the far right column of each pricing page and are specific to the models found on that page. These steps will guide you in the proper order to specify the base model, materials, finishes, options, etc.

Base model numbers may be comprised of two or more steps. For concise presentation, some model numbers have been truncated within the pricing table.

- The steps numbered using a solid circle with a white number inside (e.g., ❶ or ❷) make up the base model number.
- Steps numbered using an outlined circle with a black number inside (e.g., ③, ④, or ⑤) are required to complete the specification.

Kimball Office promotes the use of electronic drawing and specification tools to automate the furniture sales, design, and specification process. We provide our symbol and product information to industry leading design and specification software companies. We work closely with 20-20 Technologies Inc. to develop additional automation routines for our products; these are available in CAP and Giza software tools. We also partner with KISP and all of our products are available in The KITS *collaborator*™. As noted in our Terms and Conditions, the customer bears the responsibility for order correctness.

General Information ➤See page 2
Product Information 7
Finishes & Materials 43
Resources 63

Standard Includes

- Top: TFL, HPL, or Wood
- Rim profile on three sides (no profile on the back edge that abuts the media wall)
- Media wall attachment hardware

How to Specify

❶ Model
❷ Material:
LL = TFL with P rim
L = HPL with P rim
2L = HPL with J rim
LW = HPL with wood F or M rim
W = Wood with wood F or M rim
1LW = HPL with wood S rim
1W = Wood with wood S rim
③ Rim profile:
P = Softened PVC rim (LL or L)
J = HPL self rim (2L)
F = Softened wood rim (LW or W)
M = Read wood rim (LW or W)
S = Knife wood rim (1LW or 1W)
④ Cut-out option:
X = No cut-out
C4C = C4 cut-out (+$52)
C8C = C8 cut-out (+$52)
C9C = C9 cut-out (+$52)
⑤ Surface finish price group (omit for LL):
STD = Group 1
ST02 = Group 2 (+20%)
⑥ Surface finish designator
⑦ Rim finish price group (include for LW and 1LW models only):
STD = Group 1
ST02 = Group 2 (+20%)
⑧ Rim finish designator (include for LL, L, LW and 1LW models only)

Refer to the “standard includes” list to see what ships standard as part of the base model.

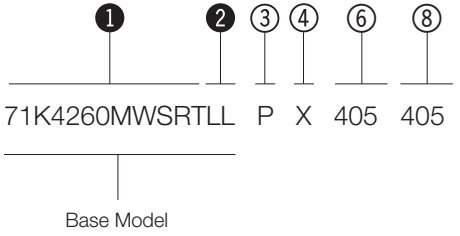
Follow these steps to build a complete model specification.

Options that incur an upcharge or decrease the base price are noted within the “How to Specify” steps.

Sample Specification:

The example below shows a complete model number for a **Teem™ rectangular media top in TFL with a softened PVC rim.**

➤See page 8 for the corresponding pricing table and How to Specify steps.



Pricing Table Abbreviations:

D = Depth

W = Width

H = Height

T = Thickness

AO = Approach Overhang

ED = End Depth

KW = Kneespace Width

KH = Kneespace Height

WC = Worksurface Clearance

At Kimball Office, we are proud of our environmental stewardship. We are committed to sustainable business practices and continuous improvement. It's part of our heritage to take initiative, to reduce waste, to conserve energy, to commit fully, and to lead by example. It's not enough to simply sustain. We strive to enhance our world.

Throughout our more than 40 years of documented environmental actions, we've made perpetual progress as a responsible steward of resources and an agent of sustainable change in our industry.

In the end, we're just beginning. Yes, the efforts we've made have the clear intention of minimizing our impacts on the planet in order to preserve a healthy world for future generations. Ultimately, the more we do in the area of sustainability, the more it helps you to achieve your environmental aims. Let us show you just how easy it is with Kimball Office.

➤Find more specific details regarding the environmental aspects of our product offerings at: **www.kimballoffice.com**

ecoScorecard℠

Through this free online tool, you have quick, simple, 24/7 access to the environmental attributes of our products. By partnering with ecoScorecard, we are enabling speed and accuracy in the calculation of environmental credits, like LEED®, as well as saving you time and ultimately, money.
➤See how easy it is at kimballoffice.ecoscorecard.com.

ecoScorecard contains credit and other information for the following environmental rating systems:
- LEED for New Construction
- LEED for Commercial Interiors
- LEED for Existing Buildings
- CHPS
- LABS21
- Green Guide for Healthcare

LEED® Certification
Kimball Office offers furniture solutions which may contribute toward achieving U.S. Green Building Council certification status in your facilities. The LEED® Green Building Rating System™ is the nationally accepted benchmark for design, construction, and operation of high performance green buildings. Kimball Office has sought and received LEED certification for several of its facilities across the country.

LEED-CI Gold:
- Jasper, IN showroom
- San Francisco, CA showroom

LEED-CI Silver:
- Atlanta, GA showroom
- Chicago, IL showroom

LEED-CI:
- Corporate Headquarters
- New York, NY showroom
- R&D Team Rooms

Design for the Environment (DfE) is our approach to product development to ensure the inherent sustainability of our new offerings. By considering a full continuum of environmental factors—including durable engineering, recycled and recyclable materials, indoor air quality, packaging, and beyond, we have greatly improved the life cycle performance of our furniture.
➤For environmental data, visit our website at www.kimballoffice.com.

pura

Pura® is our proprietary wood finish that has virtually no volatile organic compounds (VOCs). Pura is a key part of our sustainability story, enabling a broader range of products to meet or exceed indoor air quality standards and help our customers achieve LEED credits.

ANEW

Asset Network for Education Worldwide, Inc. (ANEW) is an easy, effective way to responsibly disposition surplus furniture, fixtures and equipment (FF&E). Through our partnership with this third-party foundation, you can repurpose FF&E to benefit those in need, while diverting materials from landfills. ANEW calls it "Doing what's right with what's left." We call it smart.

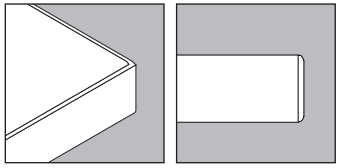
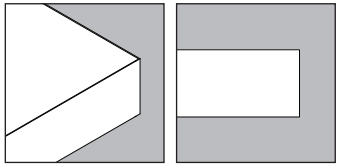
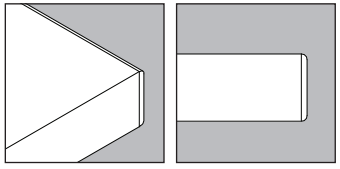
Rim Profiles



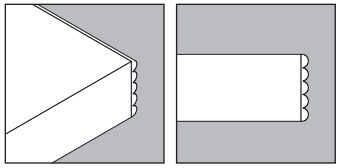
P Softened PVC rim
- Applies to TFL or HPL surfaces
- 3mm PVC edge
- Rim profile on three sides
- No rim profile on the back edge that abuts the media wall



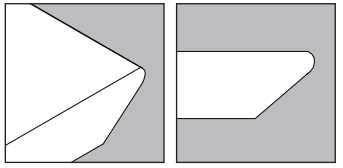
J Self-edge rim
- Applies to HPL surfaces
- Rim profile on three sides
- No rim profile on the back edge that abuts the media wall



F Softened wood rim
- Applies to HPL with wood rim or wood surfaces
- 3mm shaped wood on on three sides
- No rim profile on the back edge that abuts the media wall



M Reed wood rim
- Applies to HPL with wood rim or wood surfaces
- 3mm shaped wood on on three sides
- No rim profile on the back edge that abuts the media wall

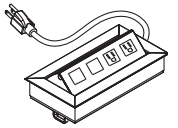


S Knife wood rim
- Applies to HPL with wood rim or wood surfaces
- Knife rim on on three sides
- No rim profile on the back edge that abuts the media wall

Cord Management

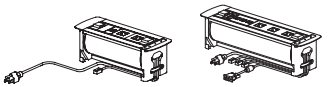
Teem provides several flexible options for routing and concealing cords and cables. These include:
- Factory-installed C8 and C9 grommets
- Factory-installed C4 cut-outs for power/data/USB centers

Factory-installed cutouts are available as an option on media tops.
➤See below.



C4 cut-outs (8 1/32"W x 4 1/32"D) are for use with:
- MHO retractable power/data center with 3 prong plug (KCEB2PDPS)
- MHO retractable power/data/USB center with 3 prong plug (KCEB2PDUPS)

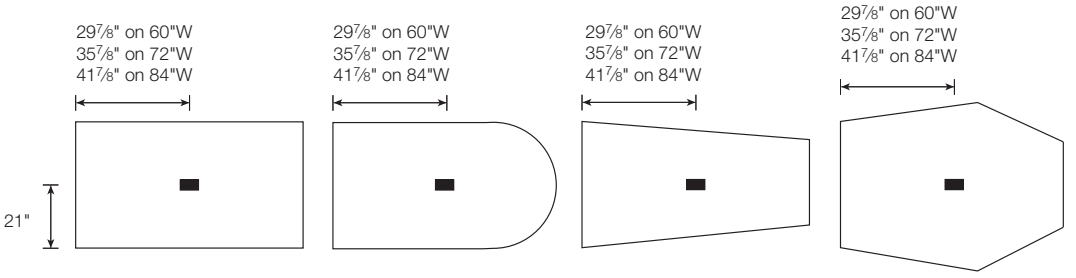
Power centers must be ordered separately for field installation.



C8 and C9 cut-outs are for use with:
- Vault turnbox power/data center (KCE4124PD); specify C8 cut-out (10 1/2"W x 4 1/16"D).
- Vault turnbox power/data/USB center (KCE4164PD); specify C9 cut-out (14 5/8"W x 4 1/16"D).

Power centers must be ordered separately for field installation.

Grommets for field installation are also available.
➤See the Perks Price List.



Note: Dimensions listed are from the center of grommet to edge of top.

IMPORTANT: Must be used with Teem media wall and base.

* Height (thickness) for TFL tops is 1⅛".

Standard Includes

- Top: TFL, HPL, or Wood
- Rim profile on three sides (no profile on the back edge that attaches to the media wall)
- Media wall attachment hardware

How to Specify

❶ Model
❷ Material:
LL = TFL with P rim
L = HPL with P rim
2L = HPL with J rim
LW = HPL with wood F or M rim
W = Wood with wood F or M rim
1LW = HPL with wood S rim
1W = Wood with wood S rim
③ Rim profile:
P = Softened PVC rim (LL or L)
J = HPL self rim (2L)
F = Softened wood rim (LW or W)
M = Reed wood rim (LW or W)
S = Knife wood rim (1LW or 1W)
④ Cut-out option:
X = No cut-out
C4C = C4 cut-out (+$52)
C8C = C8 cut-out (+$52)
C9C = C9 cut-out (+$52)
⑤ Surface finish price group (omit for LL):
STD = Group 1
STD2 = Group 2 (+20%)
⑥ Surface finish designator
⑦ Rim finish price group (include for LW and 1LW models only):
STD = Group 1
STD2 = Group 2 (+20%)
⑧ Rim finish designator (include for LL, L, LW and 1LW models only)

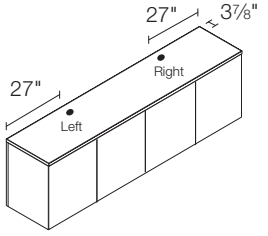
90"W Cabinets



Note: Dimensions listed are from the center of grommet to edge of top.

Available Finishes

G1 Plastic Grommets:
SL Silver
MB Matte Black

G19 Metal Grommets:
405 Designer White
501 Platinum Metallic
514 Carbon Metallic
544 Silver Pearl

How to Specify

① Insert the location *and* finish designator (for grommets) in step ⑦ of the model number sequence as indicated on the corresponding pricing page.

Note: Specify grommet location and finish together in one step without a space between the location and the finish designators.
For example:
G1LMB = G1 grommet, left, matte black
G19R501 = G19 grommet, right, platinum metallic

IMPORTANT: Only the grommet locations shown in the matrix at left with a designator and price are available.

Locking Information

General Information ➤See page 2
Statement of Line 15
FInishes & Materials 43
Resources 61

Locking buffet/media cabinets and serving carts can be specified as:
- Non-locking (standard)
- Key random
- Key specific

Lock cores are shipped separately for field installation.

Black lock cores and hinged keys are identical to the ones available on the following Casegoods products:
- Definition
- Priority
- Transcend

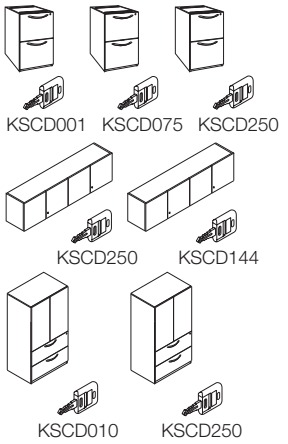
Silver lock cores and hinged keys are identical to the ones available on the following products:
- Definition
- Fluent
- Hum
- Priority

Key Random Option:

When key random option is selected, key numbers will be assigned arbitrarily at the factory with key numbers ranging from KSCD001 to KSCD300.

Randomly numbered lock core(s) will ship standard along with your order for field installation.

Exception: Randomly numbered lock cores on Kwik Office models are shipped installed.

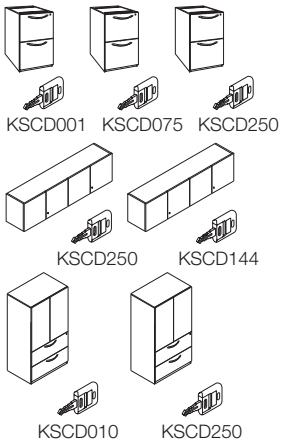


With random keying, different furniture units may or may not have the same key number. If you must have all locks keyed differently or all locks keyed the same, choose the key specific option.

Key Specific Option:

When key specific option is selected, the storage unit will be pre-drilled to accept a lock core; however, no lock cores will be shipped standard with the unit. If lock cores are standard on the unit, the price of the unit is reduced by the price of the lock core or cores.

You must specify lock core(s) separately for key specific option; specify any key number from KSCD001 to KSCD300.



To key all the furniture units in a workstation or department alike, choose the key specific option and order the quantity of locks needed for your installation.

Standard key that ships with the lock core can be used for the initial installation of the lock core in the field.

Change key model KCCB1CK allows removal of lock cores within KSCD001 to KSCD300 key range.

IMPORTANT: A change key, specified separately, is required to remove lock cores in the field.

Master key model KC2GMK will unlock any lock within KSCD001 to KSCD300 key range.

Model/Key Range	*Price*
Black Lock Cores	
KSCD001 to KSCD300	$22
Silver (Matte Nickel) Lock Cores	
KHCA001 to KHCA100	$22
Change Key	
KCCB1CK	$6
Master Key	
KC2GMK	$12

How to Specify

❶ Specify exact key number for lock cores as the model number or model number for change or master key

FINISHES & MATERIALS

Samples:

Samples of Kimball Office materials are available upon request. Samples are to be used as guidelines only. Slight variations within commercial tolerance may occur between samples and finished products. Kimball Office carefully selects all materials used in every product, insuring a commercially acceptable color and finish.

To order samples:

- Visit the Partner web site at www.kimballoffice.com to order materials electronically
- Contact your Kimball Office Sales Representative or the nearest Kimball Office Showroom
- For Alliance program fabrics, contact our Alliance partner directly.

Fabric Collection:

Our collection of fabrics offers a wide variety of materials that include both timeless classics, as well as a selection of trendy colors and patterns to keep the offering fresh and current.

The classic patterns are perfect for establishing new standard color palettes, while the trendy patterns are great for adding accents and pops of color to make a statement and to show that you are in tune with the pulse of today's fast-paced world.

The fabric collection was developed with an international flare to make it easy for global companies to standardize in all locations. It contains both standard in-line and alliance patterns. Our alliance partners are chosen with great care to give us the best selections and service in the industry.

You will find that colors were developed to coordinate very well between the in-line and alliance offerings, as well as between the seating and panel fabric offerings.

The fabric collection will provide options for the discerning client for many years to come.

Wood Collection:

Our wood finishes offer fresh options that provide natural-looking finishes to meet today's design expectations. From the lightest Brighton Maple to the darkness of Urban Walnut, these finishes were chosen with great attention to offer a complete range of color options making it simple to specify the look you want. You can achieve contemporary or transitional looks, or choose to update your traditional style by selecting one of the newer walnut or cherry finishes.

Kimball Office carefully selects veneers and solid woods to provide high quality wood furniture. Variations in color, grain, and texture occur naturally in all wood species, but are most apparent in lighter colored woods, and especially in natural finishes.

The wood collection offers a number of light finishes that will not hide or mask the natural characteristics of wood. Mineral streaks, pitch pockets, and color variations from piece to piece are all characteristics that occur in natural veneers and are what make each piece unique. While the finishing process is identical for all pieces, each finished piece accepts the stain differently to create its own individual beauty. These characteristics are part of the inherent natural beauty of wood and are not considered defects.

Darker finishes can be selected to hide more of the veneer's characteristics. Several beautiful coordinating woodgrain laminate options are also available for the customer who wants complete color and grain consistency throughout.

Two surfaces with grain directions that are at different angles to a light source will reflect the light differently and look a slightly different color. This natural phenomenon is called flip. This can happen within a single piece as alternating veneer leaves are placed side by side or from piece to piece. Flip is often noticed on worksurfaces installed at a 90° angle to each other.

Two premium veneers—Sapele and Zebrawood—are part of the standard offering to provide options for high impact styles without having to quote custom veneers. Premium veneers could receive extended lead times based on supplier availability at the time the order is placed.

Discontinuation Policy:

Kimball Office strives to give all business partners advanced notification of surface materials that are scheduled for discontinuation. Efforts will be made to support discontinued materials as specified in the deletion announcement. Pricing cannot be guaranteed. Extended leadtimes and minimum order requirements may apply.

Disclaimer:

Kimball Office will make every reasonable effort to maintain our commitments. If surface material changes must occur due to unforeseen circumstances, we will work with you on an alternative recommendation. Kimball Office reserves the right to cancel or make changes to standard products and surface materials.

Special Wood Finishes

General Information	➤See page 2
Teem	5
Stow	15
FInishes & Materials	43

Kimball Office offers the following options for special wood finishes:
- Standard finish color on alternate wood species
- Previously developed special finish
- Custom finish

Standard finish colors available on an alternate wood species include:
- Amber on Maple
- Amber on Walnut
- Mocha on Walnut

These finishes can be specified without going through the finish approval process described at right.

Previously developed special finishes can be selected from an extensive library developed by Kimball Office. Samples of previously developed special finishes are available from Customer Service upon request.

Custom finishes can be developed to meet specific needs, if an acceptable match is not available in our library.

IMPORTANT: Kimball Office reserves the right to decline the opportunity to match a finish color.

Applicability:

Applicability of special finish colors depends on the wood species to which they are applied. The matrix below shows the types of woods used for each series.

	Cherry	*Maple*	*Walnut*	*Sapele*
Price Group	*1*	*1*	*1*	*2*

Teem	•	•	•	•
Traditional	•		•	
Transcend	•	•	•	•
Villa Tables	•	•	•	•

• = standard wood species

Note: Special finishes are not available on Zebrawood, Canyon Oak, Monterey Oak, or Tuscan Walnut.

Upcharges:

A one-time fee of **$300** (net) will be billed for the development of each new custom finish. This fee covers all Kimball Office product lines on which the finish may be used.

A **10%** upcharge per line item (model number) will be applied for a standard finish on an alternative wood species, a previously developed special finish, or a custom finish. This upcharge is calculated on the base price, before other option upcharges are added.

For upholstered products, the upcharge is calculated on the Grade 1 upholstery price then added to the price for the selected fabric grade, to arrive at the list price.

Custom Finish Approval Process:

① Send desired finish sample (no smaller than 3" x 5"), along with a purchase order for the $300 (net) special finish development fee, to Customer Service along with a complete list of the products and wood species to which the special custom finish is to be applied. Include dealer name, contact, and project reference.

② If a previously developed sample is found to be compatible, a sample will be sent for customer approval. If not, a custom finish will generally require at least a week for a matched sample. Samples sent to the customer will advise of any restrictions that may apply.

③ Customer signs off on the sample and returns the approval form to Customer Service. Approval is required prior to order entry.

Note: The one-time fee of $300 will not be charged unless a custom match finish is required.

How to Specify

① **Model:**
Build the complete model specification by following the How to Specify steps on the pricing page for the product that is to receive the special finish.

② **Finish type:**
For the "Finish type" step, insert a special code (in place of STD):
ZCHY1 = Special cherry finish
ZMAP1 = Special maple finish
ZWAL1 = Special walnut finish
ZSAP1 = Special sapele finish
Note: Choose the special finish code based on the standard wood species used in the case-goods line (see matrix at left).

③ **Finish designator:**
For the "Finish designator" step, insert the designator below or the one provided to you by Customer Service:
MA00174KOG = Amber on Maple
WA02905KOG = Amber on Walnut
WA02905KOG = Mocha on Walnut

Wood Finish Characteristics

Including Care and Maintenance Tips

General Information	➤See page 2
Teem	5
Stow	15
FInishes & Materials	43

Kimball Office's experience in wood finishing extends from past generations of craftsmen to present day state-of-the-art technology.

Our Pura® finish is a proprietary, water-based, ultraviolet (UV) wood finish that has virtually no volatile organic compounds (VOCs). It uses less energy than our conventional finishing process and meets or exceeds BIFMA Furniture Emission Standards (FES) and U.S. Green Building Council LEED requirements for indoor air quality. Pura is exceptionally clear and durable and allows the beauty of our wood to shine through. The durability, depth, clarity, and beauty of Pura meets the high expectations customers have of Kimball Office finishes.

Finish fill and sheen level for the top surfaces is appropriate for the design and wood species. If different specifications are required, contact Customer Service.
➤See the individual chapters for fill and sheen information by line.

All wood products are very susceptible to darkening from age and exposure to UV rays (sunlight and other sources), especially cherry and maple. Although a special UV inhibitor is added to finishes, care in placement of furniture near light sources and elimination of prolonged covering of surfaces is necessary to reduce uneven color change of the wood.

Fine scratches from everyday use may be more visible on furniture with dark finishes. Darker finishes absorb more light, while fine scratches reflect the light. Therefore, scratches can be more emphasized due to this contrast. The use of a desk pad is recommended to keep scratching to a minimum.

The beauty of wood is that, as a natural product, it will have differences in grain characteristics, color, and other features among wood species. The characteristics of our top grade veneers are appreciated and welcomed; it's the differences in characteristics that offer each office a unique look.

Maple veneers are slip matched. Brighton Maple is a clear finish for those who appreciate the inherent beauty of wood. Differences in grain character and color are natural characteristics of wood and will show through in the finished product.

Walnut veneers are flat cut and applied book and center matched, except for Tuscan Walnut which is quarter cut.

Cherry veneers are slip matched. Grain characteristics of cherry veneer such as gum streaks and gum pockets occur naturally and add to the authentic look and feel of natural veneer. These are inherent to this veneer and should not be considered defects.

Oak veneer is quarter cut.

Specification of particular cuts, characteristics, or wood species can be accommodated. For example, a customer may ask for a limited amount of cathedrals or very limited variation in color from one veneer flitch to the next. Kimball Office systems products are able to satisfy those expectations, as long as we are notified prior to order placement. Depending on the request, the higher grade veneer may require an upcharge. Orders would also need to be handled through our custom quote process.

The wood species on seating may vary from the wood species on the casegood or system. Different wood species offer unique texture and grain which provide more variation in finish color; however seating finishes are compatible with casegoods and systems finishes.

To Maximize Longevity and Beauty of the Wood Finish:

- Clean all surfaces frequently with a water dampened soft cloth following direction of the grain.
- Dry with a separate cloth if needed.
- Avoid exposure to strong sunlight or extremes in temperature or humidity.
- Avoid exposure to harsh solvents and always remove any spilled liquids immediately.
- Use a desk pad. This will help protect against possible damage and imprinting caused by writing instruments and sharp objects.
- Pads with foam backing are not recommended.
- If using a protective glass top, always place felt spacer pads under the glass to allow the wood to breathe.
- Do not leave plastic, vinyl, or rubber items on finished wood surfaces. Sustained contact could damage the finish.

Laminate

TFL and HPL

General Information	➤See page 2
Teem	5
Stow	15
FInishes & Materials	43

Thermally Fused Laminate (TFL)

Applies to:
- Teem with TFL option
- Stow with TFL option

Woodgrain		*Solid*		*Pattern*
MC	Amber Cherry	480	Antique White	Not applicable
CC	Cordoba Cherry	403	Chamois	
MH	Mocha Cherry	462	Cinder	
SC	Sedona Cherry	440	Cloud	
IM	Brighton Maple	405	Designer White	
TM	Huntington Maple	450	Fog	
CO	Canyon Oak	488	Frosty White	
YO	Monterey Oak	461	Graphite	
MW	Midtown Walnut	420	Sandstone	
TW	Tribeca Walnut	425	Shadow	
NW	Tuscan Walnut	460	Storm	
UW	Urban Walnut	419	Wallaby	
CZ	Clear Zebrawood			

Woodgrain laminate is a commercially compatible match to the wood finish of the same name and designator with consideration for the most common application—laminate surfaces on a wood chassis. When laminate and wood are mixed in other applications, the flip that occurs naturally in veneer may influence the overall match from piece to piece.

High-Pressure Laminate (HPL)

Applies to:
- Teem media tops

Customer Specified Laminate

GSA Non-Contract

General Information	➤See page 2
Teem	5
Stow	15
FInishes & Materials	43

Customer specified high-pressure laminate (CSL) is available select products.
➤Contact Customer Service to initiate approval.

Kimball Office reserves the right to decline a customer specified laminate which may not be suitable for application.

Kimball Office assumes no responsibility for the durability, consistent coloration or any other performance characteristic of a customer specified laminate.

Metal, embossed, specialty, and supplier discontinued laminates must be custom quoted.
➤Contact ***By Design*** at 800.482.1616 extension 6002.

Kimball Office orders and procures all customer specified laminates.

Laminate sheen level must not exceed 60° for maximum durability of worksurfaces.

Lead times may vary for certain laminates. Minimum order quantities may apply.

Pricing:

A **20% upcharge per line item** (model) for CSL orders for supplier standard laminates applies. Upcharge is calculated on the base price, before other option upcharges are added.

How to Specify

① **Model:** Build the complete model specification (excluding the finish type and finish designator) by following the How to Specify on the appropriate pricing page for the product that is to receive the special finish.

② **Finish type:** For the “Finish type” step, insert a special finish code (in place of STD).
ZFMA1 = Formica
ZLMT1 = Lamin-Art
ZLTC1 = Lamitech
ZNEV1 = Nevamar
ZPTE1 = Pionite
ZWST1 = Wilsonart

③ **Finish designator:** For the “Finish designator” step, insert the laminate designator (color number) of the laminate to be applied to the product.

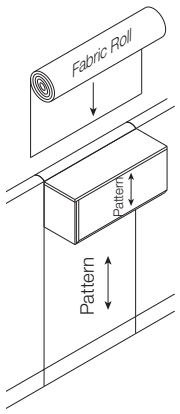
Fabric Application

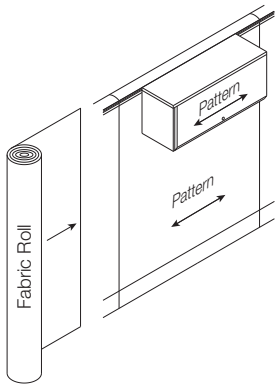
General Information	➤See page 2
Teem	5
Stow	15
FInishes & Materials	43

Standard Application:



Directional fabrics are “cut up the roll” for standard application unless specified differently.

Railroad Application:



All fabrics will be applied in railroad (horizontal) fashion to:

- Xsite tiles
- Xsede tiles
- Priority tiles
- Stow wallpanels
- Tackboards greater than 48"W when using a seating fabric or greater than 60"W when using a panel fabric

When viewing swatch cards or memo samples, turn 90° to get an accurate indication of how the fabric will appear on when railroaded.

Railroad application of Kimball Office panel fabrics and COM for all products that are not listed above or do not have railroading listed as an option in the price list requires a custom quote.

Alliance Fabrics:

Kimball Office has formed partnerships with top textile companies in the industry to provide a broad range of design-oriented fabrics. These fabrics can be specified using our standard ordering process, eliminating the need for additional expense and efforts required for COMs.

IMPORTANT: Orders cannot be cancelled for alliance program fabrics.

Lead times for alliance fabrics are based on supplier availability. Preplanning orders can help facilitate arrival of products as needed. Each supplier reserves the right to discontinue patterns or colors. Kimball Office will not be held responsible for supplying discontinued patterns/colors or when minimum order quantities apply. ➤Contact Customer Service for availability before finalizing orders.

The information provided in this section is the most current information available at the time this price list was printed.

Application of Alliance Program upholstery will be as depicted on the swatch card unless otherwise instructed on the order.

For memo samples of Alliance fabrics, contact our alliance partners directly.

Cleaning Codes:

Cleaning Code B
- Cleanable with diluted bleach solution

Cleaning Code S
- Use only mild, pure water-free cleaning solvents.
- Cleaning by a professional furniture service is recommended.

Cleaning Code W
- Use water-based cleaning agents or foam.

Cleaning Code WS
- Use water-based cleaning agents or foam. Mild water-free solvents may also be used.
- Cleaning by a professional furniture service is recommended.

➤See swatch card for additional cleaning information.

Fire Retardant Fabrics
- Solvent-based fabric cleaning or dry cleaning are recommended.
- Cleaning with water or water-based cleaners could result in salt ringing.
- Test proposed cleaning procedure on a small portion of fabric before cleaning entire piece.

Customer's Own Material (COM)

GSA Non-Contract

General Information	➤See page 2
Teem	5
Stow	15
FInishes & Materials	43

COM Policy:

While Kimball Office inspects fabrics for mill imperfections, some are difficult to recognize. Kimball Office is solely responsible for upholstery workmanship and cannot assume responsibility or liability for the durability, tailoring, appearance, or other qualities such as color inaccuracies, dye lot variations, and other such flaws or defects of customer furnished coverings.

Customers are responsible for ordering COM fabrics and expediting delivery of the material to Kimball Office.

IMPORTANT: Kimball Office reserves the right to decline a fabric that may not be suitable for application to product.

COM Application Testing:

Application testing on product for non-preapproved fabrics is required.
➤Contact your Customer Service Team for the appropriate forms to initiate application testing.

The application test will render your fabric either:
- Approved
- Not recommended
- Restricted

A "not recommended" result is usually due to questionable construction of the material or pattern that is difficult to align. You will be required to sign a waiver to use any "not recommended" COM.

Shipment of COM

After the fabric has passed the approval process described, Kimball Office will enter the product order and send an acknowledgement of the tentative ship date. A notification will be sent giving the date the COM must be received. If it is not received by the specified date, your ship date will be reassigned.

Where to ship COM:

Kimball Office
COM Department
Dock 11
1620 Cherry Street
Jasper, IN 47549

IMPORTANT: Tag all materials with the Kimball Office dealer name and the purchase order number.

Production of Order:

When COM production yardage is received, COM is cut for the order and inspected for flaws. If flaws are found, you will be notified of the additional fabric required.

A return tag (e.g. COD shipment, UPS call tag) is required from the specifier within 45 days of the acknowledged ship date or all excess COM yardage will be discarded.

Preapproved COM:

➤Contact your Customer Service Team to obtain information on preapproved COMs.

Repeat Fabrics:

It is Kimball Office standard process to match repeat fabrics on fabric covered Overhead and Highback Organizer doors.

Repeat fabrics will be matched in what Kimball Office deems the best possible application of the pattern.

Additional COM yardage is required for repeat fabrics.

Repeat	*Additional Yardage required per Overhead Door*
0–6"	None
6"–12"	0.166 yards
12"–18"	0.500 yards
18"–24"	0.666 yards
24" or more	1.000 yard

Note: If the customer requires that the repeat fabric be applied in a random fashion, Kimball Office requires written notification in advance of order processing to that effect.
➤Contact your Customer Service Team to obtain necessary waiver.

Checklist:

When ordering COM for Kimball Office products, please make sure you have done the following:
- Supplied vendor name, fabric name, color name and number.
- Supplied arrival date of COM to Kimball Office.
- Received application testing approval before sending purchase order (or signed waiver if not approved for application).
- Received U.L. listing before sending purchase order.

FInishes & Materials	43

The table at right lists the operating load capacities (functional load) of various Kimball Office components. All components meet or exceed the ANSI/BIFMA Functional and Proof Loading requirements X5.5 (2008 Desk and Table Products Tests) and X5.9 (2004 Storage Units Tests). The Operating Load Capacities listed represent the BIFMA functional loads which are equivalent to loads that can be expected in normal use of the component.

BIFMA

MEMBER
THE BUSINESS AND INSTITUTIONAL FURNITURE MANUFACTURER'S ASSOCIATION

Component	**Operating Load Capacity**	**Examples** (total weight [t.w.])
Desk/table <45"W	200 lbs. over 12" diameter area, concentrated loading	
Desk/table 45"W–72"W	200 lbs. over 12" diameter area, concentrated loading 1.5 lbs. per inch of perimeter, distributive loading	24"D x 72"W = 288 lbs.
Desk/table >72"W	Two 200 lb. loads over two 12" diameter areas, concentrated loading 1.5 lbs. per inch of perimeter, distributive loading	24"D x 84"W = 324 lbs.
Pedestal drawer	.017 lb. per cubic inch of drawer interior filing space *Note: File drawers are to support hanging files only; they are not intended for bottom loading.*	24"D x 18"W x 12"H = 88 lbs.
Transaction counter,	.017 lb. per cubic inch above surface secondary surface <16"D, (not to exceed 12"H), distributive loading or and shelf	12"D x 60"W = 147 lbs. t.w.
Adjustable keyboard	66 lbs. over 12" diameter area, concentrated loading <36"W 66 lbs., distributive loading	
Writing shelf	25 lbs., distributive loading	
Extendible elements	.017 lb. per cubic inch of drawer interior filing space, (drawer, shelves, etc.) distributive loading	24"D x 15"W x 12"H = 73 lbs.
Center/pencil drawers	5 lbs., distributive loading	
Storage or bookcase	200 lbs. concentrated loading top <38"H area, distributive loading	.26 lb. per square inch of surface 24"D x 36"W = 225 lbs.
Storage or bookcase	.26 lb. per square inch of surface area, distributive loading top 38"H–72"H	24"D x 36"W = 225 lbs.
Storage or bookcase	.09 lb. per square inch of surface area, distributive loading top >72"H	24"D x 36"W = 78 lbs.
Storage or bookcase	.017 lb. per cubic inch above surface, distributive loading bottom	24"D x 36"W x 18"H = 264 lbs. (not more than 18" in height)

Square inches should be calculated using this formula: Surface depth x surface width of available storage

Cubic inches should be calculated using this formula: Surface length x surface depth x height of available storage above the surface (limited to 18 inches above the surface)

U.L. Information:

Only Underwriters' Laboratory (U.L.) listed electrical components are used in electrical devices and are so labeled.

The customer is responsible for the proper application of products to the local codes under which installation must be made. Further specifications are available on request.

Kimball® Office

XSEDE™ Price List

This price list is effective March 16, 2015 and supercedes all previously printed or electronically released versions. Pricing effective June 9, 2014.

Xsede provides a balance of focus and collaboration in the open plan.

Xsede was designed to bring diversity to the open plan; combining the openness of a bench with the visual privacy of a panel system. Configure Xsede to support the way you work, whether functioning independently or with a team. Xsede is ANSI/BIFMA level certified and may contribute to LEED credits.

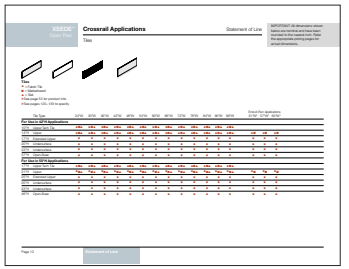
How to Use this Price List

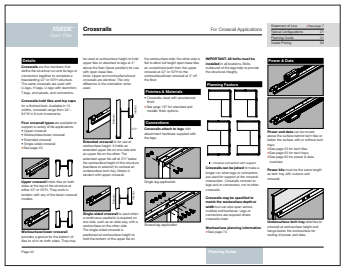
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Kimball Office has made every effort to make this price list accurate and complete with all of the information you need to specify our products.

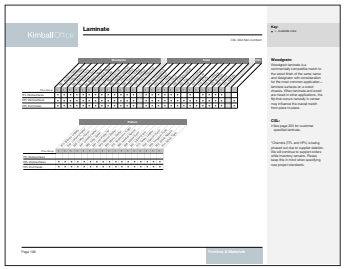
We suggest that you become familiar with the format of this price list. You'll find information about the product line, planning guidelines, pricing, and how to specify the product.



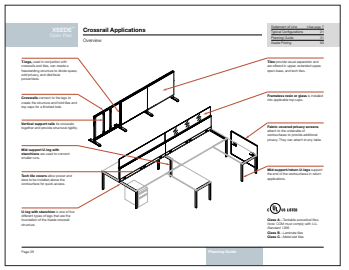
Statement of Line provides a snapshot of the entire product line. We've included an illustration and page cross references to the applicable pricing and how to specify pages.



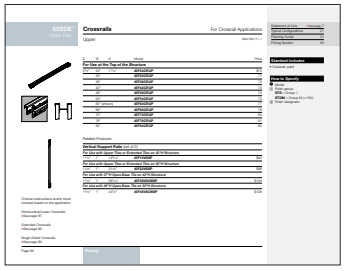
Product information pages provide detailed information about the product, connections that can be made with other models, and planning factors, and applications guidelines.



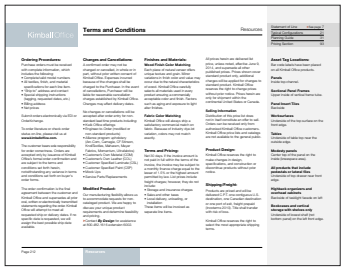
Look in the Finishes and Materials section to see what materials and finishes are available. Matrices for wood finishes, laminate, paint, fabrics, and other surface materials offer a quick reference by product.



Overview pages offer a quick look at the distinguishing features of the product line.



Pricing pages list each model individually along with its list prices. How to Specify steps instruct you how to build a complete model that includes all of its options and materials.



Use the Resources in the back of the price list. This repository of useful information includes:

- Terms and Conditions
- Asset Tag Locations
- Product Warranty
- BIFMA & U.L. Information
- Model Number Index

Dimensions provided in this price list are nominal. Products are manufactured to meet standard industry tolerances.

Illustrations and specifications contained in this price list are based on the latest product information at time of publication. Kimball Office reserves the right to make changes at any time without notice.

Items listed herein are considered by Kimball Office as portable furniture and as such are subject to local fire, electrical, and building codes applicable to portable furniture.

How to Specify Our Products

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Complete specifications are built by following a set of steps. These "How to Specify" steps are located in the far right column of each pricing page and are specific to the models found on that page. These steps will guide you in the proper order to specify the base model, materials, finishes, options, etc.

Base model numbers may be comprised of two or more steps. For concise presentation, some models numbers have been truncated within the pricing table.

- The steps numbered using a solid circle with a white number inside (e.g., ❶, ❷, or ❸) make up of the base model number.
- Steps numbered using an outlined circle with black number inside (e.g., ④, ⑦, or ⑨) are required to complete the specification.

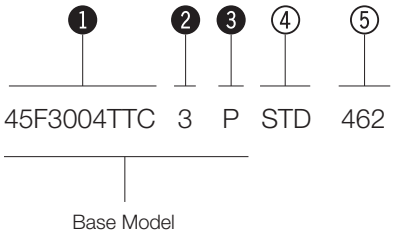
➤See page 143 for the corresponding pricing table and How to Specify steps.



Pricing Table Abbreviations:

D = Depth

W = Width

H = Height

T = Thickness

AO = Approach Overhang

ED = End Depth

KW = Kneespace Width

KH = Kneespace Height

WC = Worksurface Clearance

Electronic Catalog and Specification Software:

Kimball Office promotes the use of electronic drawing and specification tools to automate the furniture sales, design, and specification process. We provide our symbol and product information to industry leading design and specification software companies. We work closely with 20-20 Technologies Inc. to develop additional automation routines for our products; these are available in CAP and Giza software tools. We also partner with KISP and all of our products are available in The KITS *collaborator*™.
As noted in our Terms and Conditions, the customer bears the responsibility for order correctness.

Sustainability

Enhancing the Home We All Share

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

At Kimball Office, we are proud of our environmental stewardship. We are committed to sustainable business practices and continuous improvement. It's part of our heritage to take initiative, to reduce waste, to conserve energy, to commit fully, and to lead by example. It's not enough to simply sustain. We strive to enhance our world.

Throughout our more than 40 years of documented environmental actions, we've made perpetual progress as a responsible steward of resources and an agent of sustainable change in our industry.

In the end, we're just beginning. Yes, the efforts we've made have the clear intention of minimizing our impacts on the planet in order to preserve a healthy world for future generations. Ultimately, the more we do in the area of sustainability, the more it helps you to achieve your environmental aims. Let us show you just how easy it is with Kimball Office.

➤Find more specific details regarding the environmental aspects of our product offerings at: **www.kimballoffice.com**

ANSI/BIFMA level™
100% of the products manufactured by Kimball Office are level® certified. We offer the most sustainable portfolio in the industry, which includes systems, casegoods, tables, and seating. Our product testing team evaluates all Kimball Office products, ensuring they meet and exceed ANSI/BIFMA Standards. Our team members regularly participate on BIFMA and USGBC committees to contribute to industry-wide standards.

ecoScorecard℠

Through this free online tool, you have quick, simple, 24/7 access to the environmental attributes of our products. By partnering with ecoScorecard, we are enabling speed and accuracy in the calculation of environmental credits, like LEED®, as well as saving you time and ultimately, money.
➤See how easy it is at kimballoffice.ecoscorecard.com.

ecoScorecard contains credit and other information for the following environmental rating systems:
- LEED for New Construction
- LEED for Commercial Interiors
- LEED for Existing Buildings
- CHPS
- LABS21
- Green Guide for Healthcare

LEED® Certification
Kimball Office offers furniture solutions which may contribute toward achieving U.S. Green Building Council certification status in your facilities. The LEED® Green Building Rating System™ is the nationally accepted benchmark for design, construction, and operation of high performance green buildings. Kimball Office has sought and received LEED certification for several of its facilities across the country.

LEED-CI Gold:
- Jasper, IN showroom
- San Francisco, CA showroom

LEED-CI Silver:
- Atlanta, GA showroom
- Chicago, IL showroom

LEED-CI:
- Corporate Headquarters
- New York, NY showroom
- R&D Team Rooms

SCScertified™ INDOOR AIR QUALITY
Indoor Advantage | Furniture

Indoor Air Quality
One of the largest contributions office furniture can make to a building's LEED certification is indoor air quality via low-emitting products. For certification of our product lines, Kimball Office uses the Indoor Advantage program from Scientific Certification Systems (SCS). Several of our Indoor Advantage Gold products also meet the more stringent CAL 01350 requirements.

Design for the Environment (DfE) is our approach to product development to ensure the inherent sustainability of our new offerings. By considering a full continuum of environmental factors—including durable engineering, recycled and recyclable materials, indoor air quality, packaging, and beyond, we have greatly improved the life cycle performance of our furniture.
➤For environmental data, visit our website at www.kimballoffice.com.

Pura® is our proprietary wood finish that has virtually no volatile organic compounds (VOCs). Pura is a key part of our sustainability story, enabling a broader range of products to meet or exceed indoor air quality standards and help our customers achieve LEED credits.

FSC www.fsc.org FSC® C010590
The mark of responsible forestry

FSC-Certified Wood
Due to our roots in crafting fine wood furniture, we have a natural respect for responsible forestry. Several series in select finishes are available in FSC wood at a 3% upcharge. Applicable models show FSCW as a finish price group designator option. Standard lead times apply to FSC orders.

ANEW

Asset Network for Education Worldwide, Inc. (ANEW) is an easy, effective way to responsibly disposition surplus furniture, fixtures and equipment (FF&E). Through our partnership with this third-party foundation, you can repurpose FF&E to benefit those in need, while diverting materials from landfills. ANEW calls it "Doing what's right with what's left." We call it smart.

Product Positioning

Xsede by Kimball Office

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

The modern workspace is calling for a diverse environment that allows people to work multiple ways. By combining the openness of a bench with the visual privacy of a panel system, Xsede balances focus and collaboration by providing the freedom to develop the space you need.

Consciously using the most necessary materials in the most efficient ways, Xsede is refined to provide a valued economic solution. A minimalistic approach and common kit of parts keep Xsede simple and intuitive.

Effortlessly create and construct your ideal workspace—from heads down focus to lively collaboration…and everything in between.

Xsede Pricing	93

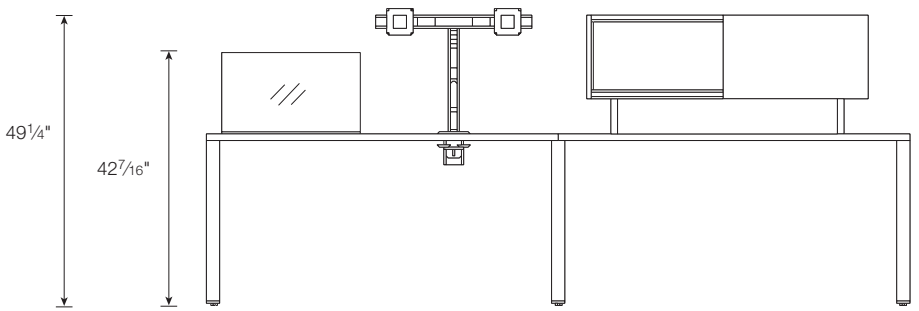
Although not intended to be joined together, accessory rail and crossrail applications were designed to align in height.

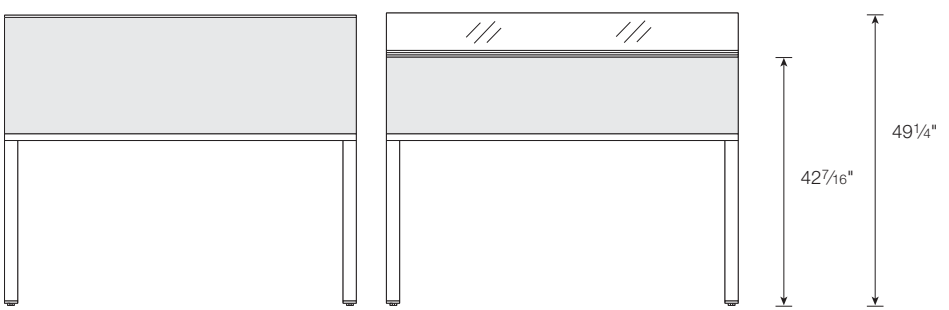
Accessory Rail Application



- 14"H frameless glass/resin
- Perks dual-monitor arm, clamp-mount for Xsede, fully extended

- Footprint metal center-mount sliding-door overhead cabinet

Crossrail Application



- 50"H upper tile

- 7"H frameless glass/resin
- 42"H upper tile

Accessory Rail Applications

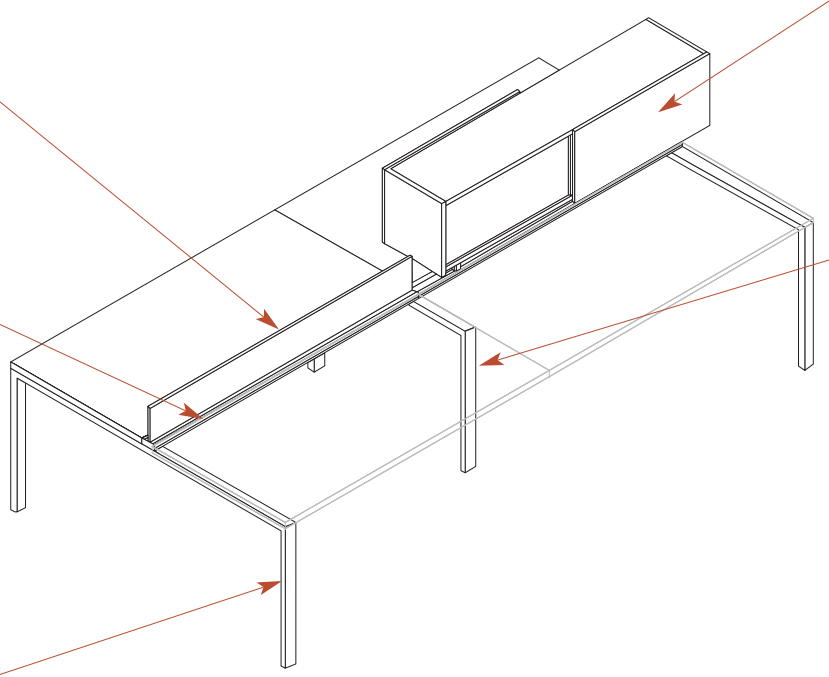
Overview

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Frameless glass or resin can mount to accessory rail to provide space division without hindering visual access.

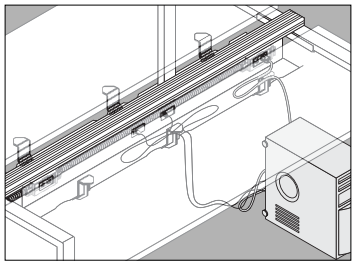
Accessory rail brings function to benching. Accessory rail is mounted between two surfaces and can be used to attach frameless glass/resin, monitor arms, or center-mount overheads.

Dual-sided U-legs support the end of the worksurfaces.



Footprint metal center-mount overheads and Priority center-mount overheads and shelves can be mounted to accessory rail with stanchion brackets, specified separately.

Mid-support/return U-legs can be used as mid-support for longer runs and to support returns extending from the main run.



Power can be mounted directly underneath the accessory rail, and can be accessed using a tech tray with wire gap worksurfaces.

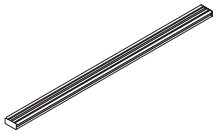
Accessory Rails

For Accessory Rail Applications

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details



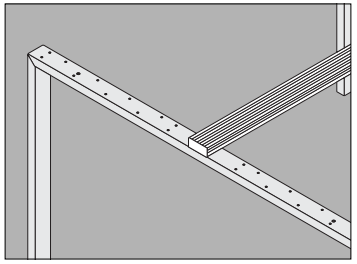
Accessory rail is a component that provides much flexibility to a work station. It can be used to attach monitor arms, frameless glass or resin, center-mount overheads or shelves. Accessory rail is 1 3/16"D by 2 11/16"W and is available in 9 widths from 36"–84" in 6" increments. Accessory rails are finished off with a complementary color cap on each end.

Accessory rails are intended for dual-sided table applications.

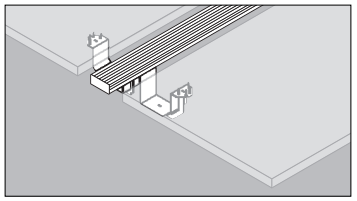
Finishes & Materials

- Accessory rail: anodized aluminum with a satin finish

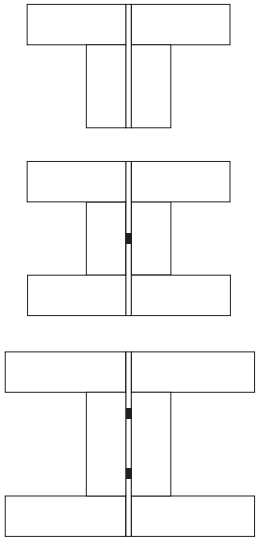
Connections



Accessory rail attaches to U-legs with four button-head cap screws on each end.



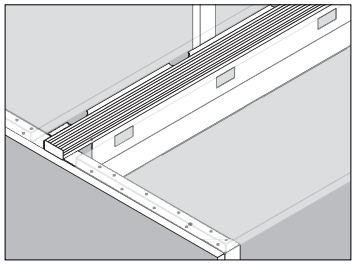
Worksurfaces attach to the accessory rail with a worksurface bracket or a dual-sided tech tray bracket.



▮ = Accessory rail connection with support

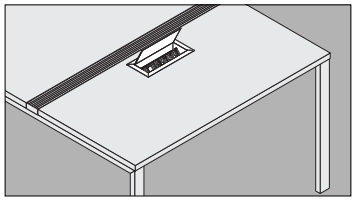
Accessory rails can be used in main/return applications. Two accessory rails can be joined to create a longer width; support is required at each connection. Power kits must be the same length as the accessory rail.

Power & Data



When wire-gap worksurfaces are used with an accessory rail, tech trays can be used under the worksurface for power, data, and cable management.

Tech trays hang from an accessory rail or crossrail and can conceal power/data and manage cables.



When full-depth worksurfaces are used, worksurface power/data grommets or power/data centers are recommended.

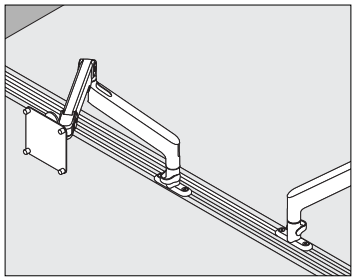
Planning Factors

50½" and 62½"D U-legs must have an accessory rail located between the two worksurfaces.

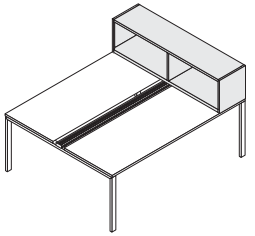
Accessory rails can only be used in straight-run configurations as they cannot turn corners.

24" and 30"D mid-support/return U-legs can be used for mid-support.
➤See page 37.

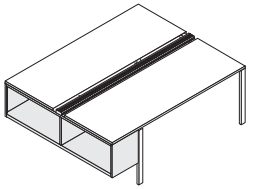
Related Products



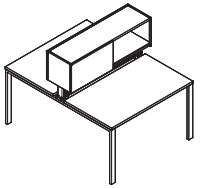
Single monitor arms can attach to accessory rail with accessory rail-mount.
➤See the Perks Price List.



Footprint set-on-surface open cabinets are intended for mounting on top of the worksurface at the end of a run. 57" and 63"W units can span back-to-back worksurfaces on U-legs.
➤See the Footprint section of this price list.



Footprint suspended open cabinets mount below the end of a worksurface. Worksurface supports will need to be inset to allow clearance for the cabinet.
➤See the Footprint section of this price list.



Footprint center-mount metal overheads or Priority center-mount overheads and shelves can be mounted to accessory rail using stanchion brackets, specified separately.

Frameless glass or resin
➤See page 59.

U-Legs

For Accessory Rail Applications

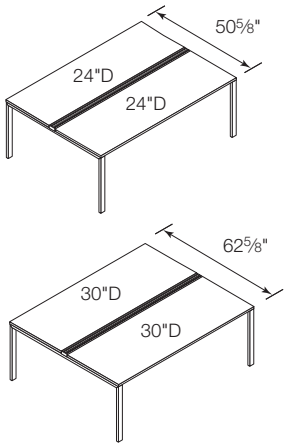
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details

U-Legs are for use in accessory rail applications and as mid- or return support.

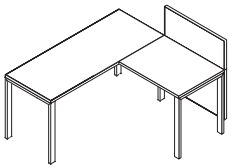
Continuous-worksurface applications require the use of U-legs.

U-legs are 27¾"H and intended for undersurface table applications. They may be used for benching, tables, and returns. Posts are 1³⁄₁₆"D x 2⅜"W.

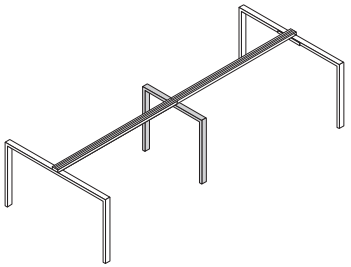


50⅝" U-legs are for use with two back-to-back 24"D worksurfaces separated by an accessory rail.

62⅝" U-legs are for use with two back-to-back 30"D worksurfaces separated by an accessory rail.



24" and 30"D mid-support/return U-legs are for use in table applications to support the end of a return surface (shown above) or shared between two worksurfaces (shown below). It can also be used as return support with other Kimball Office products.

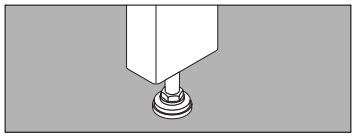


Mid-support/return U-legs can be used for center support in back-to-back accessory rail applications (shared between two worksurfaces):

- 24"D models can be used with 51"D U-legs.
- 30"D models can be used with 57" and 63"D U-legs.

The depth of the mid-support must be at least half the depth of the two surfaces.

➤See page 41 for application guidelines.



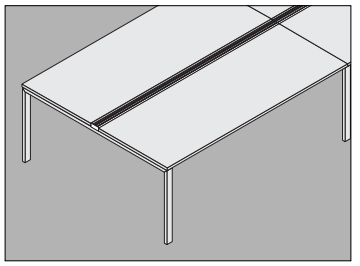
Floor glides are standard on all legs. Glides on U-legs provide 2¾" height adjustment.

Finishes & Materials

- 14-gauge steel with powdercoat finish

➤See page 199 for standard and metallic finish options.

Connections



U-legs for use with accessory rail ship with attachment hardware. All U-legs ship with screws to secure worksurfaces.

Planning Factors

Structures created with U-legs can span from 24" to 84".

Worksurface planning information

➤See page 74.

Back-to-back, dual-sided worksurfaces supported by U-legs require an accessory rail between the two worksurfaces.

Legs may be inset up to half the depth of the surface to create a different visual. Legs must be inset to mount suspended cabinets below the surface.

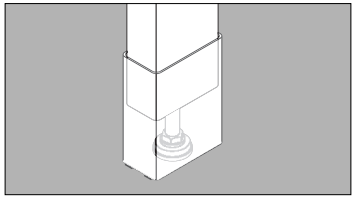
Related Products

Accessory rails

➤See page 36.

Power & Data

➤See page 60.



4"H glide cover provides a cosmetic leg sleeve that can be added to U-legs to hide extended leveling glides. Glide cover is made of aluminum and can be painted same color as the leg. Install glide covers on U-legs prior to U-leg installation.

Crossrail Applications

Overview

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

T-legs, used in conjuction with crossrails and tiles, can create a freestanding structure to divide space, add privacy, and distribute power/data.

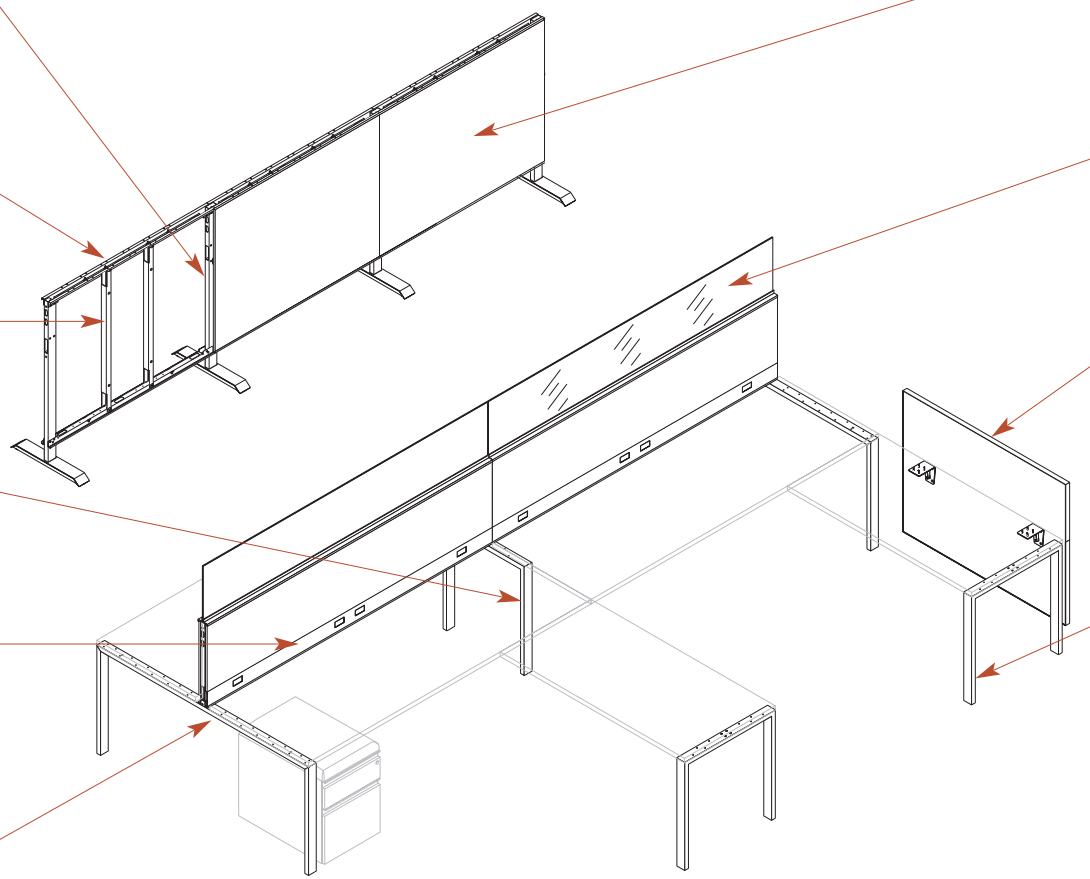
Crossrails connect to the legs to create the structure and hold tiles and top caps for a finished look.

Vertical support rails tie crossrails together and provide structural rigidity.

Mid-support U-leg with stanchions are used to connect smaller runs.

Tech tile covers allow power and data to be installed above the worksurface for quick access.

U-leg with stanchion is one of five different types of legs that are the foundation of the Xsede crossrail structure.



Tiles provide visual separation and are offered in upper, extended upper, open-base, and tech tiles.

Frameless resin or glass is installed into applicable top caps.

Fabric-covered privacy screens attach to the underside of worksurfaces to provide additional privacy. They can attach to any table.

Mid-support/return U-legs support the end of the worksurfaces in return applications.

c UL US LISTED

Class A—Tackable acoustical tiles.
Note: COM must comply with U.L. Standard 1286
Class B—Laminate tiles
Class C—Metal slat tiles

Crossrail Applications

Overview, continued

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

X-Connector provides the ability for the crossrail structure to change direction.

Full-height end panel provides a clean aesthetic without visible connectors. Worksurface-height end panels are also available.

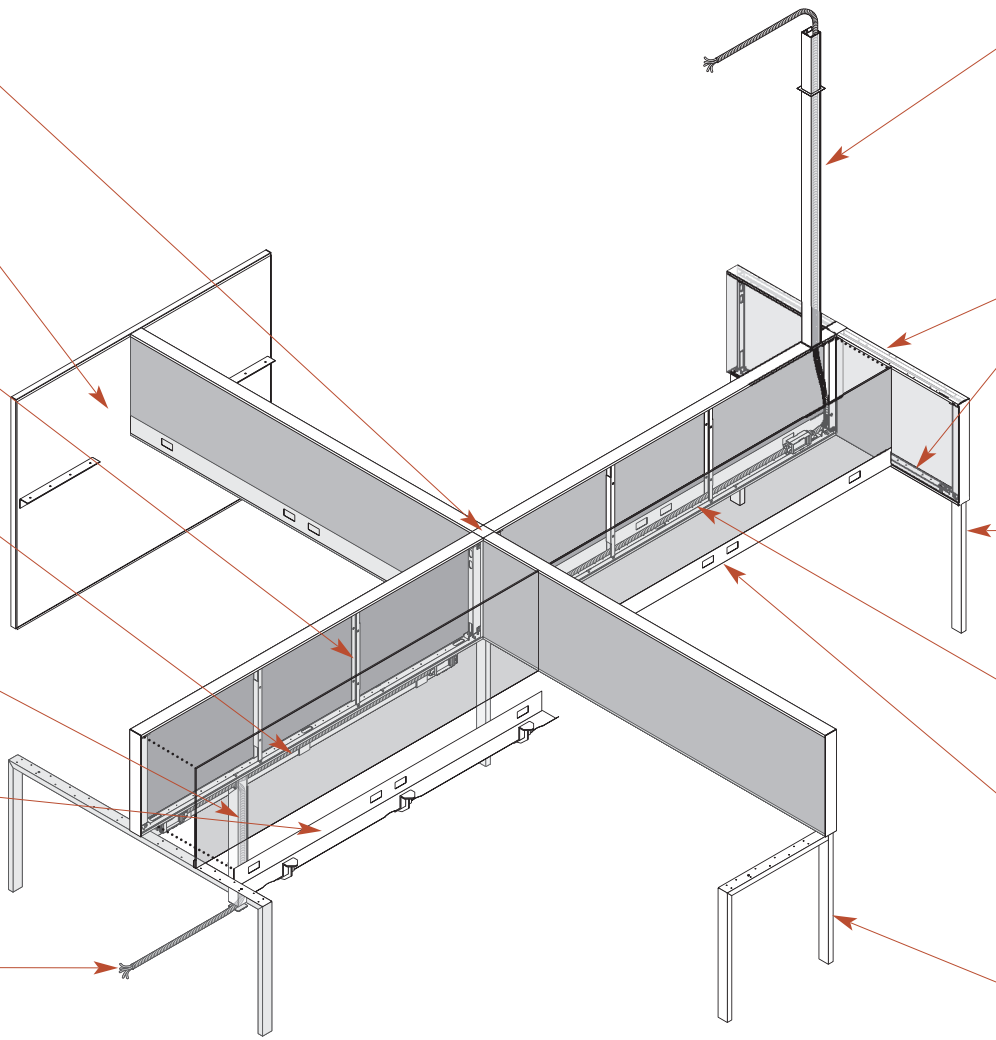
Vertical support rails tie upper and lower crossrails together providing structure rigidity.

Power can be mounted directly underneath the crossrail, and can be accessed below the worksurface in the tech tray.

Power/data in-feed channel allows power and data to be routed from the floor to worksurface height.

Tech trays fit in front of power and data components and provide below-worksurface access through cut-outs in the tray.

Power in-feed models include 8-wire ceiling and floor entry, single-circuit in-feed to plug into a building outlet, New York power entry, and Chicago hardwire components.



Ceiling power/data pole allows power and data to be routed from the ceiling to the station.

End crossrail set can be used to finish a configuration with a wing wall arrangement without a visible T-post.

Support legs combined with end crossrails finish off the end of a structure run.

Power kits and jumpers are available to distribute power above or below the worksurface.

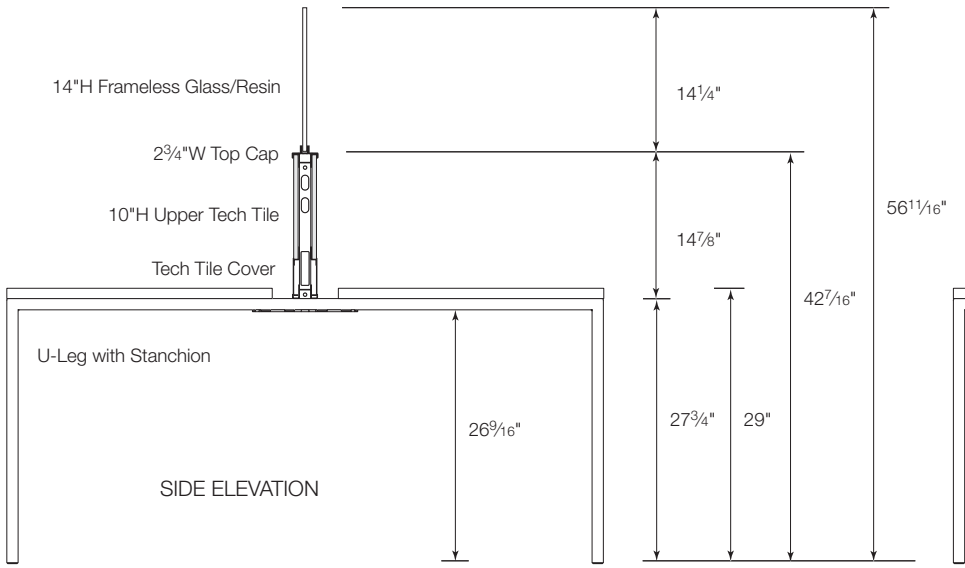
Tech tile and covers provide access to power/data at worksurface height.

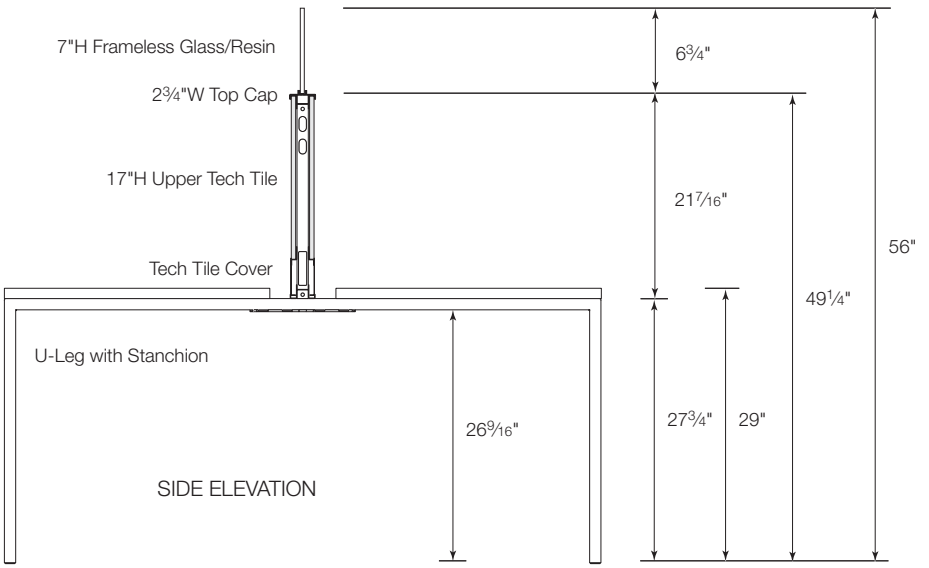
H-legs, when used with crossrails, allow for a single-sided application.

Crossrail Applications

Dimensions

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93





42"H crossrail structure with:
- Wire gap worksurfaces
- 10"H upper tech tile and 4" tech tile cover
- 14"H frameless glass/resin

Note: Above configuration with 7"H frameless glass/resin would have an overall height of 49¼".

If using tech tray, the tech tray bracket would be 23⁹⁄₁₆" off the floor.

50"H crossrail structure with:
- Wire gap worksurfaces
- 17"H upper tech tile and 4" tech tile cover
- 7"H frameless glass/resin

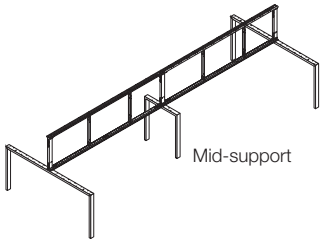
Note: Above configuration with 14"H frameless glass/resin would have an overall height of 63½".

Crossrail Applications

Structure Guidelines

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

U-Leg or U-Leg with Stanchion:

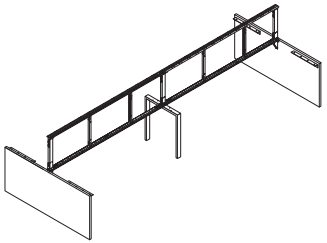


Crossrail structures can span up to 84" from U-leg to U-leg, and can continue to any length of run when all U-legs are full depth.

U-legs can span 84" to mid-support and then 84" to the next U-leg and continue to any length, *so long as alternating U-legs are full depth.*

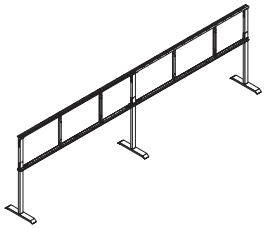
IMPORTANT: Unsupported worksurface spans over 48"W require additional center support.
➤See page 77 for appropriate bracketry.

End Panels:



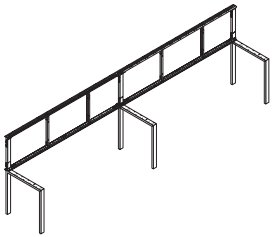
Crossrail structures can span up to 84" from end panel to end panel. Runs can continue indefinitely between two end panels with the use of U-legs with stanchions in between, *so long as alternating U-legs are full depth.*

T-Legs:



Crossrail structures can run indefinitely when a T-leg is placed every 84".

H-Legs:



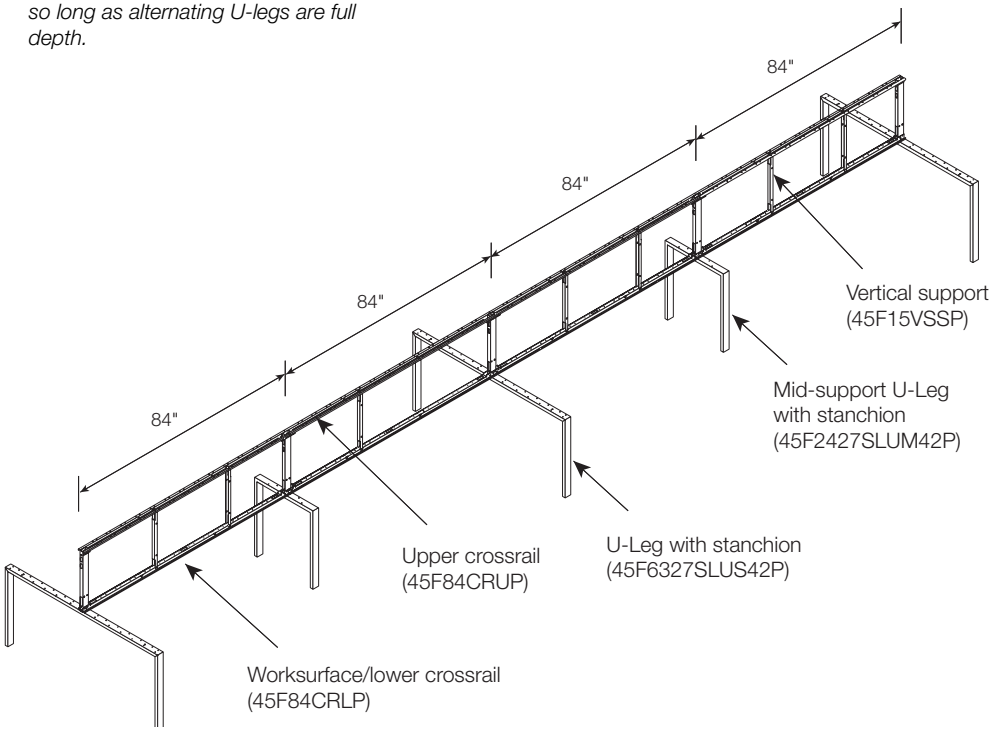
Crossrail structures can run indefinitely when an H-leg is placed every 84". H-legs are for use in single-sided applications.

Tiles are required for both sides of the structure.

Upper tile applications can be used adjacent to extended tile applications.

Open-base tile applications cannot connect to upper or extended tile applications.

Two flat brackets are required when joining main surfaces at support connections.



EXAMPLE:
Continuous run utilizing U-legs with stanchions

Crossrails

For Crossrail Applications

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

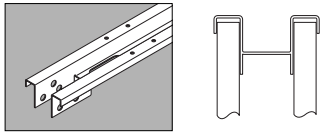
Details

Crossrails are the members that define the structure run and tie legs or connectors together to complete a freestanding 42" or 50"H structure. The same crossrails are used with U-legs, H-legs, U-legs with stanchion, T-legs, end panels, and connectors.

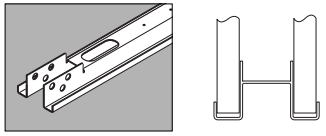
Crossrails hold tiles and top caps for a finished look. Available in 15 widths, crossrails range from 24"–84"W in 6-inch increments.

Four crossrail types are available to support a variety of tile applications:
- Upper crossrail
- Worksurface/lower crossrail
- Extended crossrail
- Single-sided crossrail

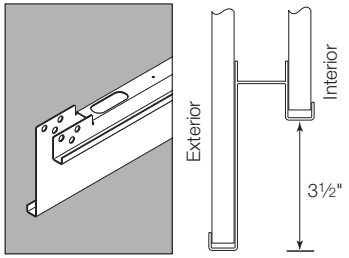
➤See page 43.



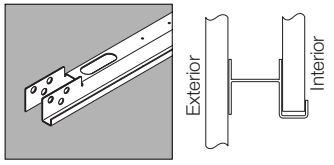
Upper crossrail holds tiles on both sides at the top of the structure at either 42" or 50"H. They work in tandem with any of the lower crossrail models.



Worksurface/lower crossrail provides a groove for the bottom of tiles to sit in on both sides. They may be used at worksurface height to hold upper tiles or attached to legs at 4" above the floor (lower position) for use with open-base tiles.
Note: Upper and worksurface/lower crossrails are identical. The only difference is the orientation when used.



Extended crossrail is for use at worksurface height. It holds an extended upper tile on one side and an upper tile on the other. The extended upper tile will sit 3½" below the worksurface height of the structure (backface or exterior) to conceal an undersurface tech tray. Works in tandem with upper crossrail.



Single-sided crossrail is used when a continuous aesthetic is required on one side, such as an aisle way, with a worksurface on the other side. The single-sided crossrail is positioned at worksurface height to hold the bottom of the upper tile on the worksurface side; the other side is flat to allow full-height open base tiles an unrestricted path from the upper crossrail at 42" or 50"H to the worksurface/lower crossrail at 4" off the floor.

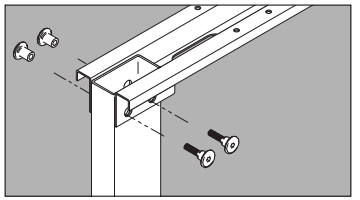
Finishes & Materials

- Crossrails: steel with powdercoat finish

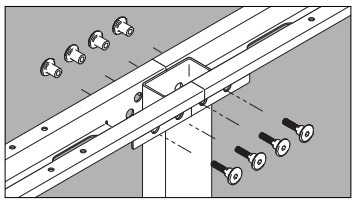
➤See page 199 for standard and metallic finish options.

Connections

Crossrails attach to legs with attachment hardware supplied with the legs.



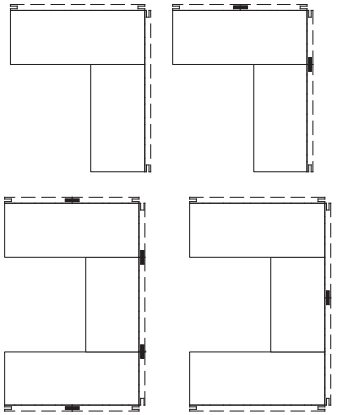
Single-leg application



Shared-leg application

IMPORTANT: All bolts must be installed in all locations. Bolts outbound of the legs help to provide the structural integrity.

Planning Factors



▮ = Crossrail connection with support

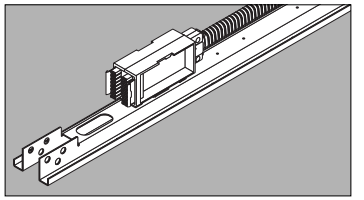
Crossrails can be joined to make a longer run when legs or connectors are used for support at the crossrail intersection. Crossrails connect to legs and or connectors, not to other crossrails.

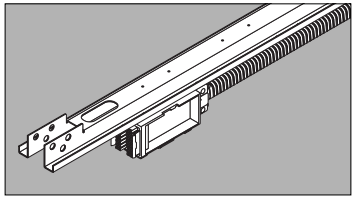
Crossrails may be specified to match the worksurface depth or width but can also span across multiple worksurfaces. Legs or connectors are required where crossrails meet.

Worksurface planning information

➤See page 74.

Power & Data

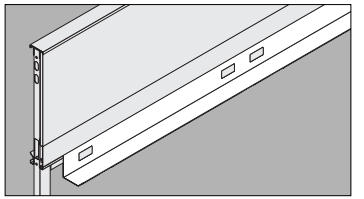




Power and data can be routed above the surface behind tech tiles or below the surface with or without tech trays.

➤See page 53 for tech tiles.
➤See page 63 for tech trays.
➤See page 60 for power & data overview.

Power kits must be the same length as tech tray with cutouts and crossrail.



Undersurface tech tray attaches to crossrail at worksurface height and hangs below the worksurface for routing of power and data.

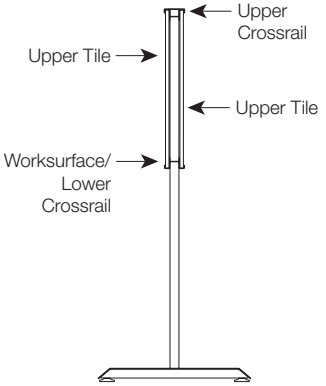
Crossrails

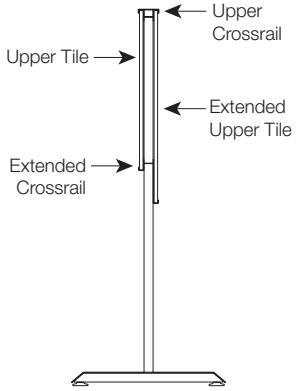
Location Reference

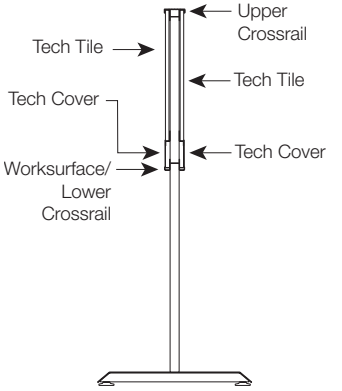
For Crossrail Applications

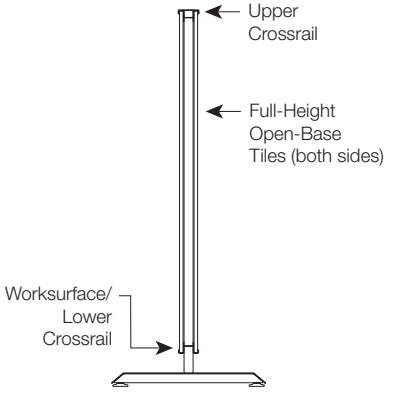
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

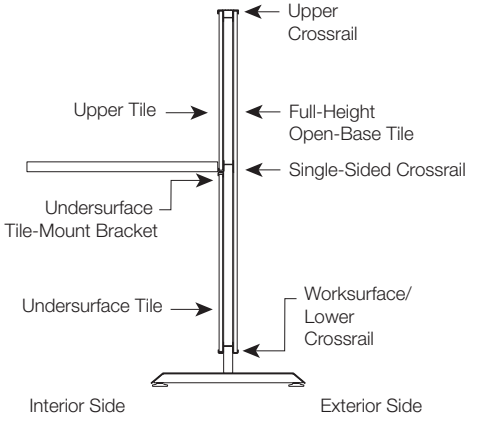
T-Leg application shown; however, crossrail locations are the same for all leg types.

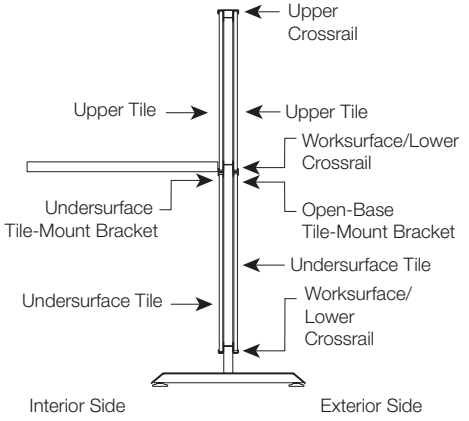










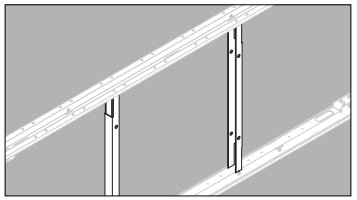


Vertical Support Rails

For Crossrail Applications

Statement of Line ➤See page 7
Typical Configurations 21
Planning Guide 31
Xsede Pricing 93

Details



Vertical support rails tie upper and lower crossrails together and provide structural rigidity to prevent the frame from flexing and tiles from bowing. They are required for structures over 48"W. Cut-outs at top and bottom allow cable routing. Vertical support rails come in sets of two and in four heights.

For use with upper and extended upper tiles:

- 15"H for 42"H structures; runs from the crossrail at worksurface height to the upper crossrail
- 22"H for 50"H structures; runs from the crossrail at worksurface height to the upper crossrail

For use with open-base tiles:

- 38"H for 42"H structures; runs from the crossrail 4" off the floor to the upper crossrail
- 46"H for 50"H structures; runs from the crossrail 4" off the floor to the upper crossrail

Finishes & Materials

- Vertical support rails: steel with powdercoat finish

➤See page 199 for standard and metallic finish options.

Connections

Vertical support rails attach to the upper and lower crossrails with supplied bolts at pre-determined locations.

IMPORTANT: All bolts must be installed in all locations. Bolts outbound of the legs help to provide the structural integrity.

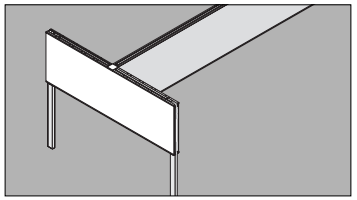
Vertical support rails are required for structures over 48"W. They must be bolted to both the upper and lower crossrails.

End Crossrail Sets

For Crossrail Applications

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

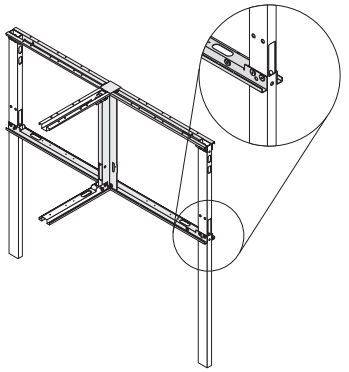
Details



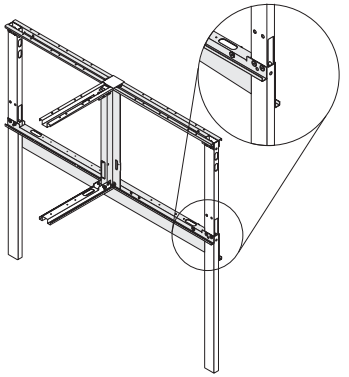
End crossrails sets can be used to finish a configuration with a wing-wall arrangement without exposed T-connectors.

End crossrail sets are available for 42" and 50"H applications and in three widths:
- 50⅝" (for two 24"D worksurfaces back to back)
- 56½" (for 24"D and 30"D worksurfaces back to back)
- 62⅝" (for two 30"D worksurfaces back to back)

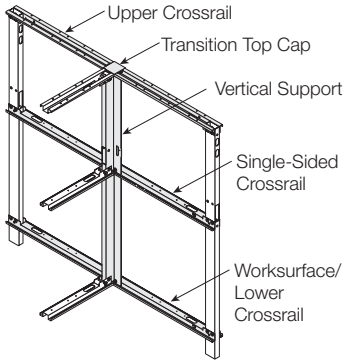
Sets are specified based on the tile application; models available include:
- Upper end crossrail set
- Extended end crossrail set
- Open-base end crossrail set



Upper end crossrail set includes:
- Upper crossrail
- Worksurface/lower crossrail
- Vertical support rail
- Transition top cap
- Attachment hardware



Extended end crossrail set includes:
- Upper crossrail
- Extended lower crossrail
- Vertical support rail
- Transition top cap
- Attachment hardware



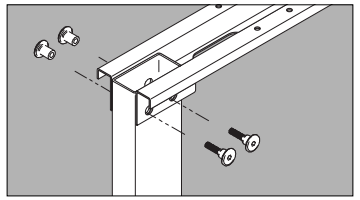
Open-base end crossrail set includes:
- Upper crossrail
- Single-sided crossrail
- Worksurface/lower crossrail for 4" off the floor
- Vertical support rail
- Transition top cap
- Attachment hardware

Finishes & Materials

- Crossrails: steel with powdercoat finish
- Vertical support rails: steel with powdercoat finish
- Top cap: extruded aluminum with powdercoat finish

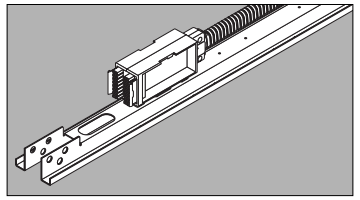
➤See page 199 for standard and metallic finish options.

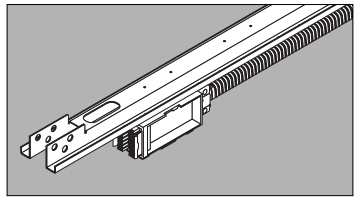
Connections



End crossrail sets attach to support legs, specified separately, on each end using the connector bolts and nuts supplied with the legs.

Power & Data





Power and data can be run above or below crossrail end sets. IMPORTANT Power run above the crossrail cannot be connected to power run below the crossrail; separate power entries would be required.

Planning Factors

End crossrail set can be used in place of a T-connector, U-leg with stanchion, H-leg at the end of run.

IMPORTANT: Support legs and tiles must be ordered separately.

IMPORTANT: End crossrail set must match the tile type to which it connects (e.g., upper crossrail set to upper tiles).

Tiles
➤See page 53.

U-Legs with Stanchions

For Crossrail Applications

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

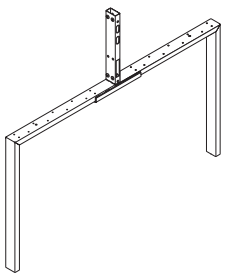
Details

Legs are the foundation of the Xsede structure and are available in six different types for use with crossrail applications:

- U-legs with stanchion
- Mid-support U-legs with stanchion
- Mid-support/return U-legs
- H-legs
- Support legs
- T-legs

➤See page 48 for H-legs.
➤See page 49 for support legs and T-legs.

Continuous-worksurface applications with crossrails require the use of U-legs with stanchions (dual-sided) or H-legs (single-sided).

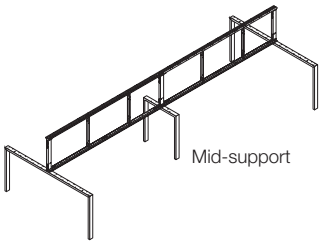


U-legs with stanchions feature a vertical member that, with upper and lower crossrails and a choice of tiles, provide fixed-height space division and a support for worksurfaces. Upper tiles, tech tiles and tech tile covers mount to each side of the stanchion. Posts and stanchions are 1 3/16"D x 2 3/8"W.

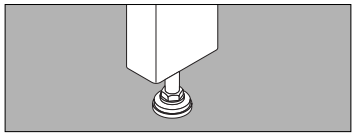
➤See page 55 for tile selection guide.

U-legs with stanchions are available in the two heights—42" and 50"—and in three depths:

- 50 5/8" (for two 24"D worksurfaces back to back)
- 56 1/2" (for 24"D and 30"D worksurfaces back to back)
- 62 5/8" (for two 30"D worksurfaces back to back)



Mid-support U-leg with stanchion ties two smaller structure runs together that, when combined, can span 168".



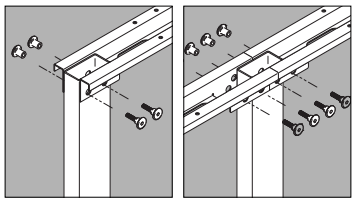
Floor glides are standard on all legs. Glides provide 2 3/4" height adjustment.

Finishes & Materials

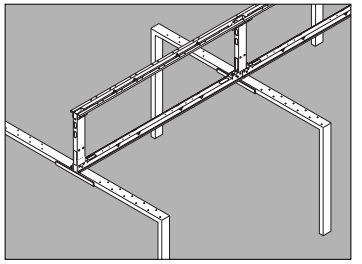
- 14-gauge steel with powdercoat finish

➤See page 199 for standard and metallic finish options.

Connections



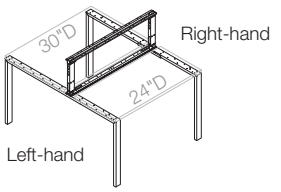
Bolts, standard with legs, are used to connect legs to upper and lower crossrails providing consistent alignment, strength, and rigidity to the run.



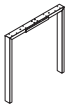
U-legs with stanchions are connected to each other with an upper crossrail at the top of the stanchion and with a worksurface/lower crossrail at worksurface height. These legs can be used at the end of a run or shared between two worksurfaces.

Planning Factors

Structures created using U-legs with stanchions can span from 24" to 84". The run can continue further if a full-depth U-leg with stanchion is used every 168" and a mid-support U-leg with stanchion is used every 84".



When ordering a 56 1/2"D U-leg with stanchion for a 24" worksurface and a 30" worksurface, specify one left-hand model and one right-hand model.



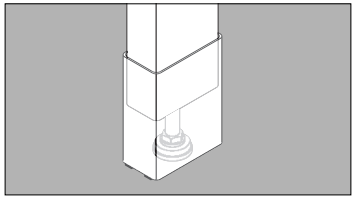
Mid-support/return U-leg without a stanchion can be used as mid-support between U-legs with stanchions and to support returns extending from the main run.

➤See page 47.

Worksurface planning

➤See page 74.

Related Products



4"H glide cover provides a cosmetic leg sleeve that can be added to all legs (except for the T-legs) to hide extended leveling glides. If used with legs that have a power slot, glide cover will cover most of the power slot opening. Glide cover is made of aluminum and can be painted same color as the leg.

Crossrails

➤See page 42.

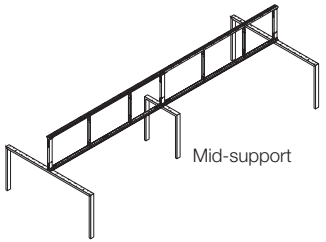
Mid-Support U-Legs

For Crossrail Applications

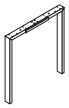
With and Without Stanchions

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details



Mid-support U-leg with stanchion are similar in construction to U-legs with stanchion and can be used to tie two smaller structure runs together that, when combined, can span 168".

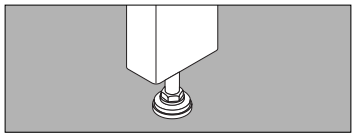


Mid-support/return U-leg without a stanchion can be used as center support for back-to-back crossrail applications (shared between two worksurfaces) and to support returns extending from the main run.

- 24"D models can be used with 51"D U-legs with stanchions.
- 30" or 36"D models can be used with 57" and 63"D U-legs with stanchions.

Mid-support/return U-legs can be used in return applications with other Kimball Office products.

➤See page 41 for structure run guidelines.



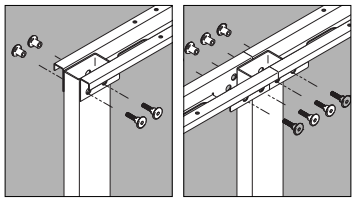
Floor glides are standard on all legs. Glides provide 2¾" height adjustment.

Finishes & Materials

- 14-gauge steel with powdercoat finish

➤See page 199 for standard and metallic finish options.

Connections



Bolts, standard with legs, are used to connect legs to upper and lower crossrails providing consistent alignment, strength, and rigidity to the run.

U-legs with stanchions and mid-support U-legs are connected to each other with an upper crossrail at the top of the stanchion and with a worksurface/lower crossrail at worksurface height. Mid-supports can be used at the end of a run or shared between two worksurfaces.

Planning Factors

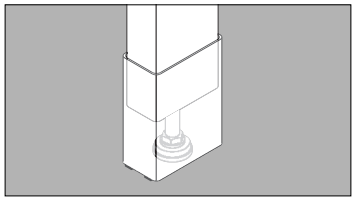
Structures created using U-legs with stanchions can span from 24" to 84". The run can continue further if a full-depth U-leg with stanchion is used every 168" and a mid-support U-leg with stanchion or mid-support/return U-leg is used every 84".

Depth of mid-supports must be half the depth of the surface or dual-sided structure. Mid-support/return U-leg without a stanchion may be inset up to half the depth of the surface.

Worksurface planning

➤See page 74.

Related Products



4"H glide cover provides a cosmetic leg sleeve that can be added to U-legs to hide extended leveling glides. Glide cover is made of aluminum and can be painted same color as the leg.

Crossrails

➤See page 42.

H-Legs

For Crossrail Applications

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

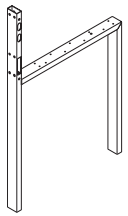
Details

Legs are the foundation of the Xsede structure and are available in six different types for use with crossrail applications:

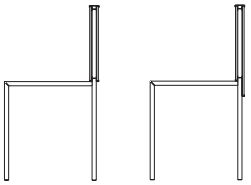
- U-legs with stanchion
- Mid-support U-legs with stanchion
- Mid-support/return U-legs
- H-legs
- Support legs
- T-legs

➤See page 46 for U-legs with stanchions.
➤See page 49 for support legs and T-legs.

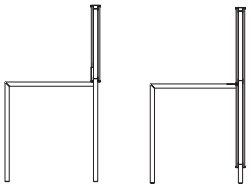
Continuous-worksurface applications with crossrails require the use of U-legs with stanchions (dual-sided) or H-legs (single-sided).



H-legs are for use with single-sided crossrail applications and are perfect along an aisle or at the end of a run. They are available for 24" and 30"D worksurfaces and 42" or 50"H tile applications.



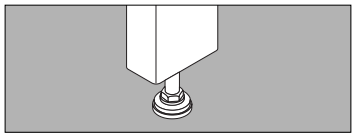
Upper Tile | Extended Upper Tile



Tech Tile | Open-Base

H-legs may be used with upper tiles, tech tiles and cover, extended upper tiles, or open-base tiles.

➤See page 55 for tile selection guide.



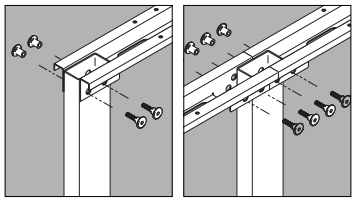
Floor glides are standard on all legs. Glides provide 2¾" height adjustment.

Finishes & Materials

- 14-gauge steel with powdercoat finish

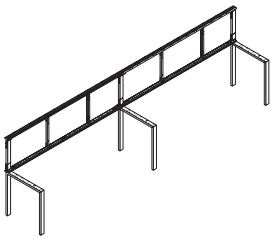
➤See page 199 for standard and metallic finish options.

Connections



Bolts, standard with legs, are used to connect legs to upper and lower crossrails providing consistent alignment, strength, and rigidity to the run.

Tile-mount bracket is required for undersurface open-base applications with H-legs. Additionally, a notch will need to be made in the field to facilitate fitting the tile to the H-leg.



H-legs are connected to each other with an upper crossrail at the top of the stanchion and with an extended crossrail or single-sided crossrail at worksurface height.

Planning Factors

Structures created using H-legs can span from 24" to 84". A support leg (not a mid-support) is needed at least every 84".

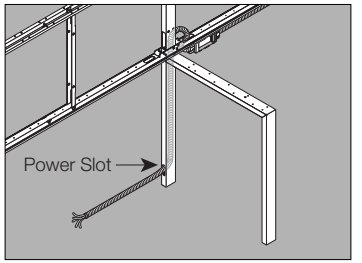
➤See page 41 for structure guidelines.

H-legs are non-handed.

Worksurface planning

➤See page 74.

Power and Data

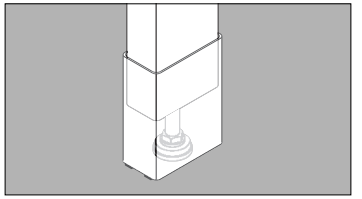


Power slots are available on H-legs for use with upper and extended upper tiles for routing cables within the leg. Power slot is located on the left side of the back leg.

8-wire floor/ceiling power entry can be routed in one leg. Data cables should be routed in a separate leg.

Power slots in leg do not accommodate a circuit 1 power entry.

Related Products



4"H glide cover provides a cosmetic leg sleeve that can be added to all legs (except for the T-legs) to hide extended leveling glides. If used with legs that have a power slot, glide cover will cover most of the power slot opening. Glide cover is made of aluminum and can be painted same color as the leg.

Crossrails

➤See page 42.

Support Legs and T-Legs

For Crossrail Applications

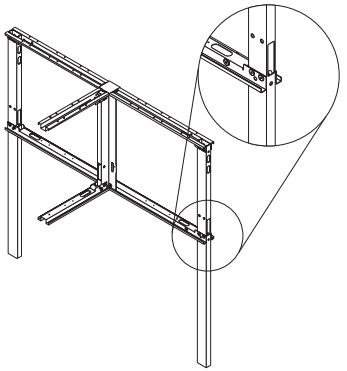
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details

Legs are the foundation of the Xsede structure and are available in six different types for use with crossrail applications:

- U-legs with stanchion
- Mid-support U-legs with stanchion
- Mid-support/return U-legs
- H-legs
- Support legs
- T-legs

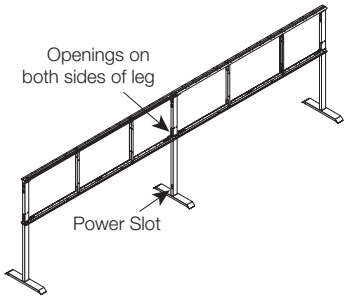
➤See page 46 for U-legs with stanchions.
➤See page 48 for H-legs.



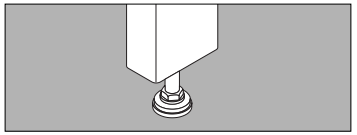
Support legs are available in 42" and 50" heights. They are for use:

- With end crossrail set (shown above)
- In conjunction with T-connectors supporting wing walls up to 30"W
- As center spine support when used with appropriate additional support

Support legs cannot be used as an individual leg to terminate the end of a run over 30"W.



T-legs are available in 42" and 50" heights. They are designed to free span an infinite width, providing space division.



Floor glides are standard on all legs. Glides on H-legs and support legs provide 2¾" height adjustment (shown); glides on T-legs provide ¾" height adjustment.

Support legs and T-legs are available in models for use with upper or extended upper tiles and open-base tiles. Models for use with upper and extended upper tiles can be specified with power slot for routing cables within the leg.

Finishes & Materials

H-legs and support legs

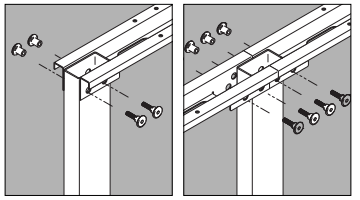
- 14-gauge steel with powdercoat finish

T-legs

- Post: 14-gauge steel with powdercoat finish
- Base: 8-gauge steel with powdercoat finish
- Cap: 12-gauge steel with powdercoat finish

➤See page 199 for standard and metallic finish options.

Connections

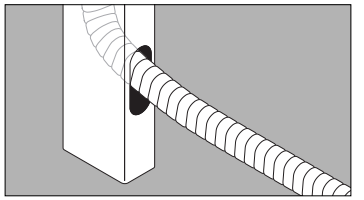


Bolts, standard with legs, are used to connect legs with upper and lower crossrails, providing consistent alignment, strength, and rigidity to the run.

Tile-mount bracket is required for undersurface open-base applications with support legs or T-legs when a worksurface is being installed.

Open-base tile-mount bracket should be used where no surface will be installed, but separate tiles will be installed above and below the worksurface/lower rail on the exterior side. Bracket should be the same length as the crossrail.

Power & Data



Models with power slots allow power or data to be routed from the floor to above the worksurface within the leg. Physical separation of power and data is achieved by bringing power through one leg and data through another.

➤See page 53 for tech tiles.
➤See page 63 for tech trays.
➤See page 60 for power & data overview.

8-wire floor/ceiling power entry can be routed in one leg. Data cables should be routed in a separate leg.

Power slots in leg do not accommodate a circuit 1 power entry.

Open-base models do not feature a power slot option. Use a power/data in-feed channel to bring power and data to the structure.

Planning Factors

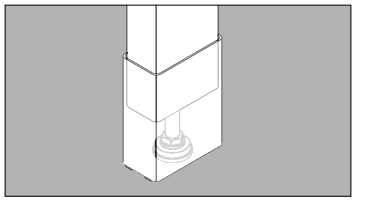
Structures created with H-legs or support legs can span from 24" to 84". The run can continue further if a shared support leg (not a mid-support) is provided at least every 84"

Runs with mobile tables require T-legs. There is no limit to run length.

Worksurface planning

➤See page 74.

Related Products



4"H glide cover provides a cosmetic leg sleeve that can be added to all legs (except for the T-legs) to hide extended leveling glides. If used with legs that have a power slot, glide cover will cover most of the power slot opening. Glide cover is made of aluminum and can be painted same color as the leg.

Crossrails

➤See page 42.

Undersurface Support Legs

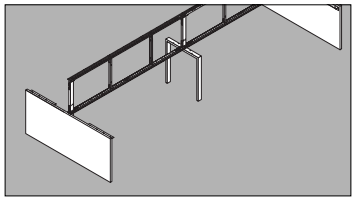
➤See page 76.

End Panels

For Crossrail Applications

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

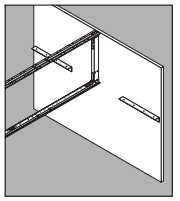
Details



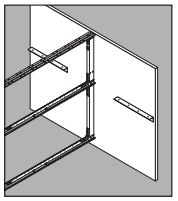
Laminate end panels provide an option for an uninterrupted, clean aesthetic in end-of-run applications without visible connectors in configurations created with U-legs with stanchions or H-legs.

End panel depths are designed to match the depths of U-legs with stanchions (50½", 56½", and 62½"D) or H-legs (25¾" or 31¾"). They take the place of a U-leg with stanchion or an H-leg at the end of a run.

Glides are standard on all end panels and provide 1" height adjustment.

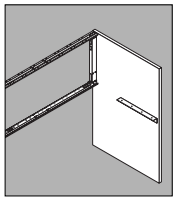


Upper-tile applications

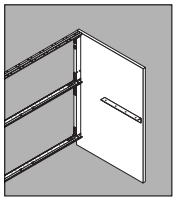


Open-base-tile applications

Full-height end panels for use in dual-sided applications are available in 42" or 50"H for upper applications or open-base tile applications, providing the appropriate bracketry for attachment of crossrails and worksurfaces.

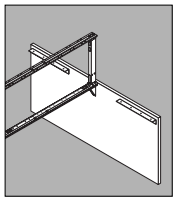


Upper-tile applications

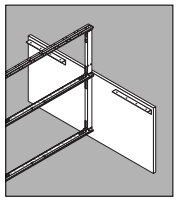


Open-base-tile applications

Full-height end panels for use in single-sided applications are available in 42" or 50"H for upper tile applications or open-base tile applications, providing the appropriate bracketry for attachment of crossrails and worksurfaces.



Upper-tile applications



Open-base-tile applications

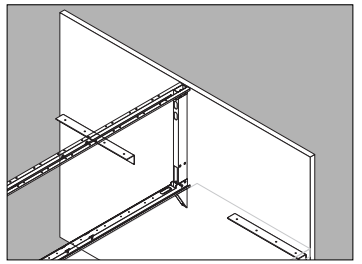
Worksurface-height end panels for use in dual-sided applications provide 42" or 50"H stanchion for the connection of upper crossrail, worksurface/lower crossrail, and worksurfaces.

PVC ⅛" (3mm) edge banding finishes all edges; available in colors to match or complement laminate colors.

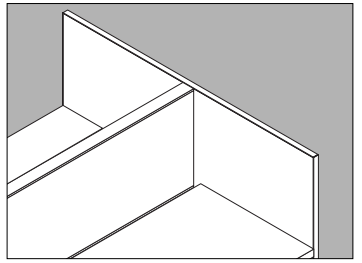
Finishes & Materials

- End panels: particle board with high-pressure laminate (HPL) on both sides with PVC ⅛" (3mm) edge banding
  Note: Different laminate colors may be specified for the inside or aisle side.
- ➤See page 197 for laminate color choices.
- ➤See page 201 for PVC color choices.

Connections



Brackets on the back side of end panels connect to crossrails and worksurfaces.



Top cap on the perpendicular structure aligns with the top of the end panel for a clean aesthetic.

Power & Data

End panels conceal power and data within adjacent structures. Power and data are not applicable to end panels.

Planning Factors

IMPORTANT: End panels are for use in end-of-run applications only; they are not for use in accessory rail applications.

Grain direction on laminate end panels runs horizontally.

Left and right hand models are available to correspond to 24"D and 30"D dual-sided worksurface combinations.

Two single-sided end panels are not intended to create a dual-sided application.

Crossrails
➤See page 42.

Connectors

For Crossrail Applications

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

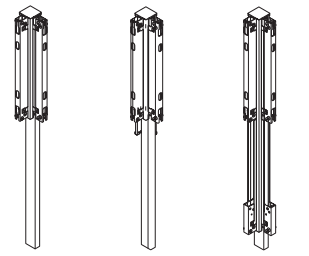
Details

Connectors provide the ability for the structure to turn a corner for a change of direction. Connectors are available in two heights—42" and 50"—and four directional styles:

- L (2-way 90°)
- T (3-way 90°)
- X (4-way 90°)
- Y (3-way 120°/120°/120°)

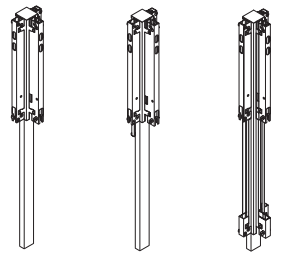
Each connector model includes**:**

- Two-piece leg assembly consisting of a lower leg that is 1 3/16" x 2 3/8" tubular steel and an extruded aluminum upper column
- Fabric on upper column on L- and T-connectors
- Transition top cap
- Attachment hardware consisting of connector bolts and nuts



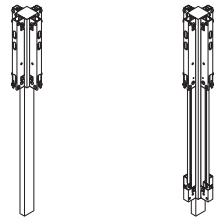
For Upper Tiles | For Extended Upper Tiles | For Open-Base Tiles

L-connectors are available in models for use with upper, extended upper, and open-base tiles. Models for use with upper or extended upper tiles can be specified with power slots for routing cables within the leg to above worksurface height. L-connectors are specified as left or right handed.



For Upper Tiles | For Extended Upper Tiles | For Open-Base Tiles

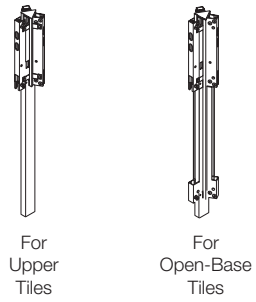
T-connectors are available in models for use with upper, extended upper, and open-base tiles. Models for use with upper or extended models can be specified with a power slot for routing cables within the leg to above worksurface height.



For Upper Tiles | For Open-Base Tiles

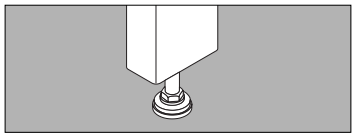
X-connectors are available for use with upper and open-base tiles; upper-tile models are available with or without a power slot.

Note: X- and Y-connectors do not have extended model options because they are not on the outside of the structure.



For Upper Tiles | For Open-Base Tiles

Y-connectors are available for use with upper and open-base tiles; models are available with or without a power slot.



Floor glides are standard on all connectors. Glides on connectors provide 2¾" height adjustment.

Finishes & Materials

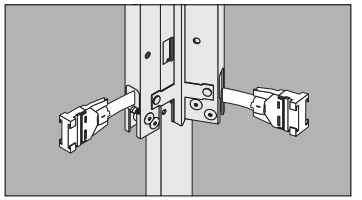
- Lower leg: 14-gauge steel with painted finish
- Upper column: extruded aluminum
- Top cap: aluminum with same painted finish and lower leg

➤See page 199 for standard and metallic finish options.

Connections

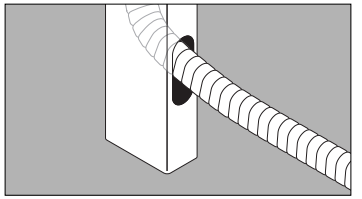
Bolts, standard with each model, are used to connect legs with upper and lower crossrails for consistent alignment, strength, and rigidity to the run.

Power & Data



Cut-outs allow electrical and data cabling to be routed through the top of the connector and into the space behind tiles. These cut-outs allow pass through at 42"H or 50"H for a continuous flow.

Electrical jumpers, when making a turn in above-surface applications, must be installed through a connector prior to assembling the connector.



Models with power slots allow power or data to be routed from the floor to above the worksurface within the leg. Physical separation of power and data is achieved by bringing power through one leg and data through another.

8-wire floor/ceiling power entry can be routed in one leg. Data cables should be routed in a separate leg.

Power slots in leg do not accommodate a circuit 1 power entry.

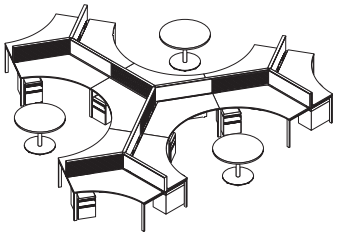
Planning Factors

Connectors can be used in conjunction with U-legs with stanchions, H-legs, support legs, and T-legs.

Connectors cannot be used for hi-lo applications.

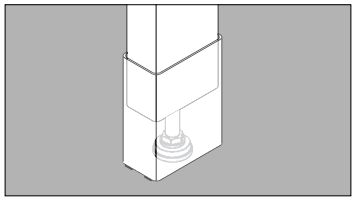
Specify appropriate connectors based on the application:

- L (2-way)
- T (3-way)
- X (4-way)



- Y (3-way); shown above

Related Products



4"H glide cover provides a cosmetic leg sleeve that can be added to hide extended leveling glides. If used with legs that have a power slot, glide cover will cover most of the power slot opening. Glide cover is made of aluminum and can be painted same color as the leg.

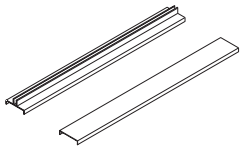
Trim

For Crossrail Applications

Top Caps and End Trim

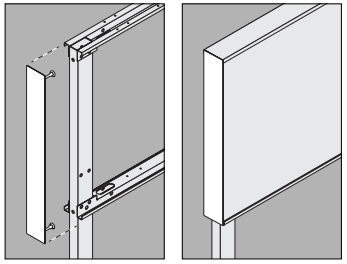
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details

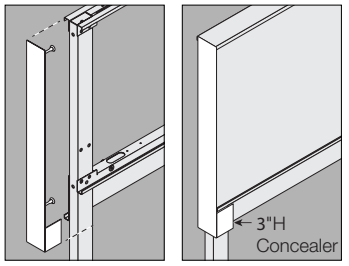


Top caps complete the top of the structure and conceal crossrails. They are made of extruded aluminum with a powdercoat finish. Top caps are available in flat profile or frameless glass or resin models, which come in widths 18"–96"; both are 2¾"D and sit down over the crossrail ½".

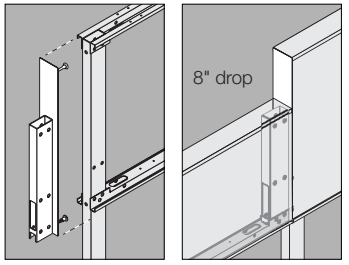
End trim conceals the legs at the end of the runs and is bolted to the stanchion for a finished look. End trim is constructed of 12-gauge sheet metal and is available in all paint colors. Attachment bolts are standard. End trim is available for 42"H and 50"H applications.



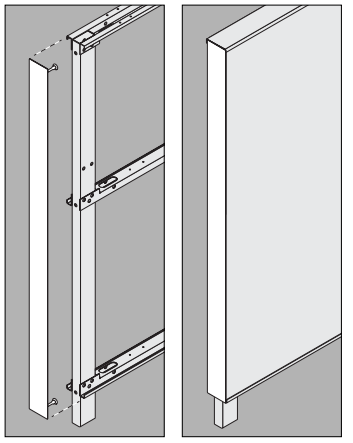
14" and 22"H end trims are for use with upper tiles of the same heights.



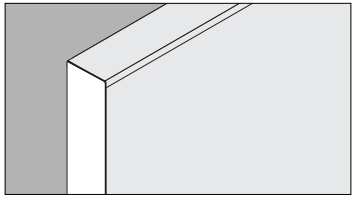
19" and 26"H end trims for use with extended upper tiles feature a 3" metal concealer on the interior side, making them either left- or right-handed. 19"H model works with 17" extended upper tile (exterior) and 14" upper tile (interior) on 42"H structure; 26"H model works with 25"H extended upper tile (exterior) and 21" upper tile (interior) on a 50"H structure.



Hi-lo end trim is available to complete the in-line transition from 50" to 42". Hi-lo end trims are bolted onto the adjacent structure.



37" and 41"H end trims are for use with open-base tiles of the same height or on 42" and 50"H structures.



End trim covers the exposed edges of the crossrails, tile edge, and top cap.

Finishes & Materials

- Top cap: extruded aluminum with powdercoat finish
- End trim: 12-gauge sheet metal

➤See page 199 for standard and metallic finish options.

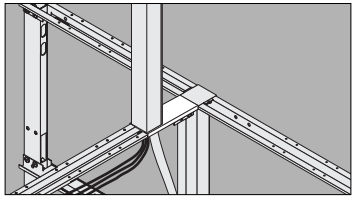
Connections

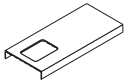
Flat profile top caps fit securely onto crossrails using a pressure-fit attachment method.

Top caps for frameless glass or resin are held in place with nylon retainer clips and through-bolts that ship with the frameless glass or resin.

Planning Factors

Top caps are designed to span the width of the structure up to 84" for a seamless aesthetic. 90" and 96"W top caps can be used in continuous spans within a run. For example, a 90"W top cap can be used to cover three 30" spans and a 96"W top cap can be used to cover two 48" spans.





6" top cap with cut-out for ceiling power/data pole attachment ships with the power/data pole. Subtract 6" from the adjacent top cap. For example, use the 18"W top cap for 24"W structure and ceiling power/data pole.

Related Products

Crossrails

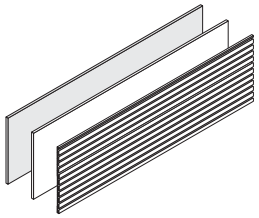
➤See page 42.

Tiles

For Crossrail Applications

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details



Xsede tiles provide visual separation and define the boundaries of the work-space. Tiles are available in sizes up to 96"W and in three material options to meet different user work needs:

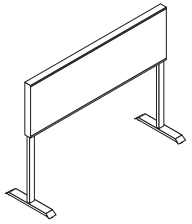
- Tackable Fabric
- Markerboard
- Slat

➤See pricing pages for available sizes by size and application.

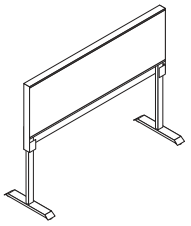
Tile height options include:

- Upper tiles
- Extended upper tiles
- Open-base tiles
- Tech tiles

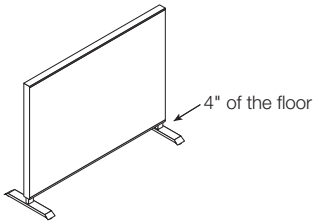
➤See pages 55–58 for selection guide.



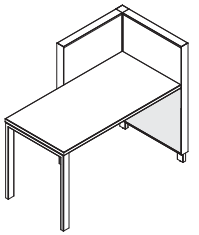
Upper tiles are 17"H for use on 42"H crossrail structures or 21"H for use on 50"H crossrail structures. Upper tiles install flush with the bottom of the surface and extend above the worksurfaces.



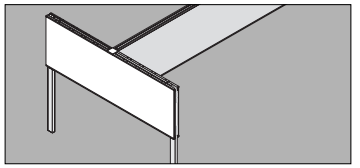
Extended upper tiles are used on the outside (as shown above) of 42" and 50"H single-sided structures and extend below the worksurfaces 3½" to conceal tech tray. They can be used with extended end crossrail sets to conceal tech trays on the spine run for a clean visual.



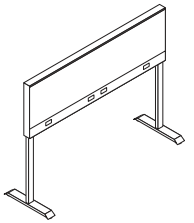
Open-base tiles sit at 4" off the floor and are available for 42"H and 50"H applications, as well as undersurface applications with or without a tech tray.



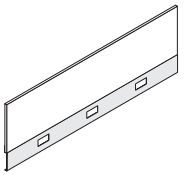
Open-base tiles can be used to create privacy at workstations.



End-of-run models are available for upper, extended upper, and open-base tile height applications.



Tech tiles, available in fabric, marker, and slat models, are for use above the worksurface as an upper tile on 42" and 50"H crossrail structures. They are 4" shorter than standard upper tiles to accommodate a tech tile cover below.
IMPORTANT: Tech tile covers must be specified separately.



Tech tile covers are 4"H attach directly to legs and are painted steel. They are available in widths from 24"–84" and may be specified with cut-outs to provide options that match the users needs or without cut-outs (blank). Covers have 2 to 6 cutouts depending on the width of the cover to accommodate duplex receptacles and/or data ports. There are basic and expanded options to match the configurations outlined in the power and data section of this price list.
➤See page 62 for additional information.

Finishes & Materials

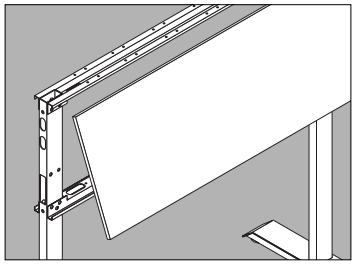
- Fabric tiles: panel fabrics (railroaded)

➤See page 203 fabric colorways.

- Markerboard tiles: Icey White or Off White laminate with edge banding all 4 sides
- Slat tiles: aluminum
- Tech tile covers: Painted steel

➤See page 199 for standard and metallic finish options.

Connections



Tiles fit into the grooves of upper and worksurface/lower crossrails. Upper tile application shown above.

Power & Data

Power and data can be routed horizontally and vertically behind the tiles in the structure's interior.
➤See page 60.

Power and data kits are available, specified separately, for use with tech tile covers.
➤See page 66.

➤Continued on next page.

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Planning Factors

IMPORTANT: Specify tiles for both sides of the crossrail structure.

90"W and 96"W tiles can be used in a continuous span of multiple legs and crossrails that equal these widths (e.g., a 90"W tile can cover three 30"W spans).

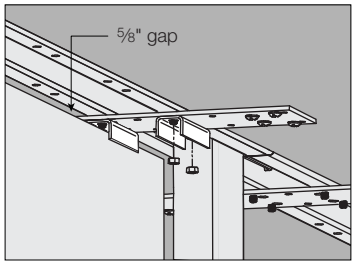
Tech tiles must match the tech tile cover width; however, they can be comprised of multiple tiles (e.g., Two 48"W tiles can be used with a 96"W tech tile cover.

Tech tile covers must match the crossrail width.

Tech tile cover can be used in single-sided application or may be placed back to back for shared power/data for optimum component utilization.

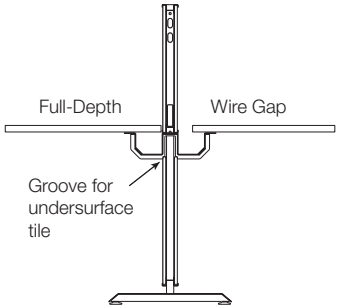
Tech tile covers without cut-outs must be specified where pass-thru jumpers are used. Covers without cut-outs may also be used with nothing routed behind it for a consistent appearance.

Undersurface tiles in open-base applications without a tech tray require an undersurface tile-mount bracket; specified separately. Bracket mounts directly to the worksurface bracket as shown below.

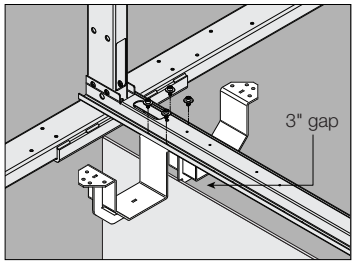


When undersurface tile is installed using a tile-mount bracket, a 5⁄8" gap is created allowing cables to pass over the tile to the opposite side.

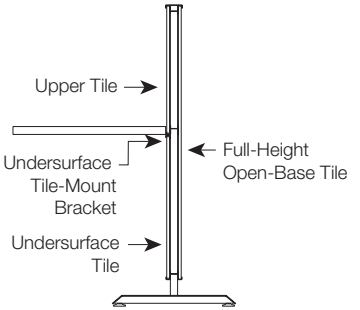
IMPORTANT: Power cannot be mounted underneath the crossrail in open-base tile applications without a tech tray due to interference with undersurface tiles. Specify above-surface power.

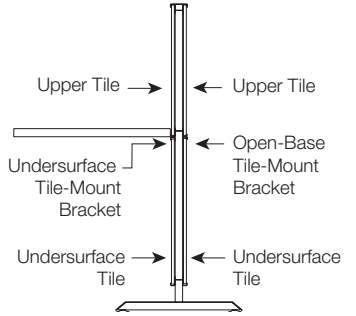


Undersurface tiles in open-base applications with a tech tray fit into the groove of the tech tray surface bracket.



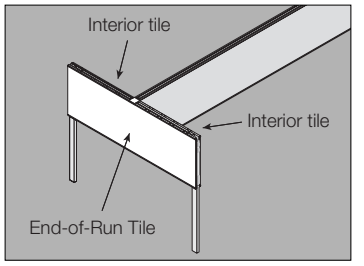
Undersurface tiles used in this application are 3" shorter in height than tiles used in applications without a tech tray.





Single-side open-base applications consist of an upper tile and undersurface tile on the interior, and a full-height open-base tile (top illustration) or an upper tile and an undersurface tile (bottom illustration) on the exterior.

Open-base tile-mount bracket is required where no surface will be installed, but separate tiles will be installed above and below the worksurface/lower rail on the exterior side. Bracket should be the same length as the crossrail.



Specify fabric end-of-run tiles, plus two additional upper tiles for the interior side, along with end crossrail sets to create a wingwall arrangement. End-of-run tile will be 3" wider than the combined width of the interior tiles to account for the width of the perpendicular structure (e.g., 51"W end-of-run tile pairs with two 24"W tiles for the interior side).
➤See page 58.

Related Products

Hole cover plates, specified separately (10 per package), are recommended to cover unused cut-outs in tech tile cover.

Data plates with adapter kit are required for access to data at worksurface height.
➤See page 69.

Perks work tools are compatible with Xsede slat tiles.
➤See the Perks Price List.

Crossrails
➤See page 42.

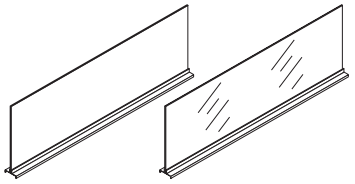
Screens

For Accessory Rail and Crossrail Applications

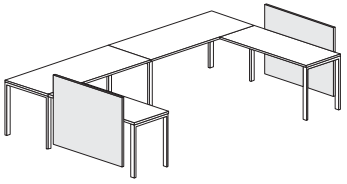
Frameless Resin or Glass and Privacy Screens

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

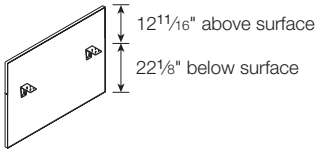
Details



Frameless resin or glass provide space division without impacting or compromising the open feel and the access to daylight views. Quarter-inch-thick resin or glass panes are available in 7" and 14" heights; glass is tempered for safety.



Privacy screens provide upper and lower privacy specifically where it is required.



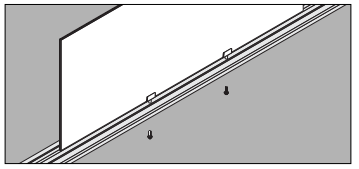
Privacy screens 36"H and extend 12 11/16" above the worksurface and 22⅛" below the worksurface. These fabric screens are available in widths from 24"–60". Screens are tackable and have a painted metal frame surround.

Finishes & Materials

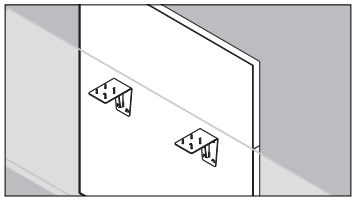
- Resin: mist
- Glass: clear, tempered float glass with a high-polish aris edge
- Screens: painted frame surround with panel fabric on both sides (railroaded)

➤See page 203 fabric colorways.

Connections

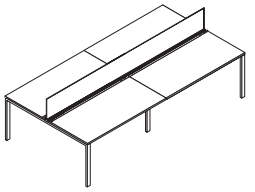


Frameless glass and resin are held in place in the top cap or accessory rail with nylon retainer clips (shown above), included as standard.

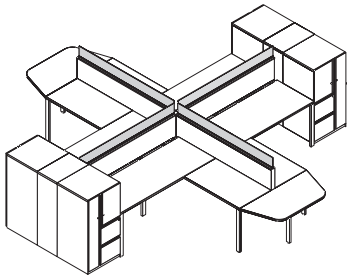


Privacy screens attach to the underside of the worksurface with two “L” brackets that ship standard with the screens.

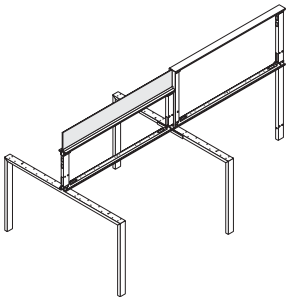
Planning Factors



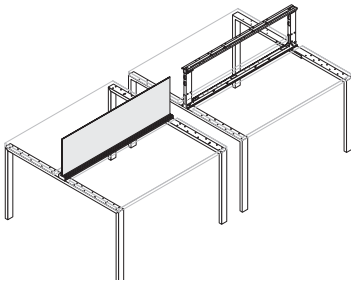
Frameless resin and glass is designed to span the width of the structure up to 84" for a seamless appearance. 90" and 96"W frameless resin or glass will span multiple structures in a run, as shown above. For example, a 96"W model can be used to span two 48"W crossrails or accessory rails.



Frameless glass and resin can mount into top cap for this application to add additional layer of visual separation. Frameless glass and resin do not come together, but sit flush with each other at the connector.



7"H frameless resin or glass, when mounted on top of a 42" high structure, will line-up with a 50"H structure.



14"H frameless resin or glass, when mounted in an accessory tool rail, will line-up with the 42"H crossrail structure.

Frameless glass cannot be scribed in the field, nor is it loadbearing. Components or accessories cannot hang on frameless glass.

Power & Data Overview

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Xsede offers several ways to power Xsede structures, utilizing the same componentry in both accessory rail and crossrail applications.

Many options are available for power and data so that specific needs can be addressed and reconfigured as the requirements evolve.

Xsede offers two power entry options:

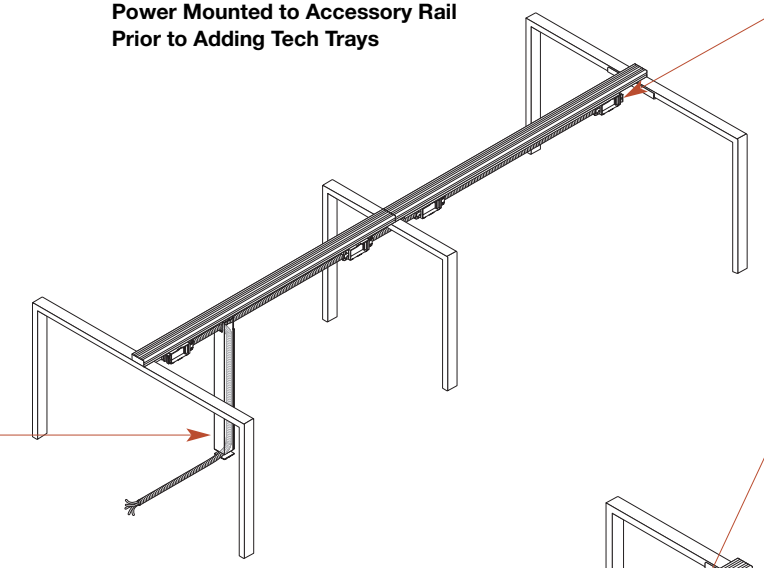
- 8-wire floor/ceiling, 4-circuit (3+1 or 2+2) to accommodate 15- or 20-amp duplex receptacles
- Circuit-1 only, which must plug into a 20-amp building receptacle, to accommodate 15 or 20-amp receptacles

Xsede is approved to accept Chicago and New York electrical.

The building's power capability should be determined before power is configured and components are specified.

In accessory rail applications, power kits are mounted to the underneath side of the accessory rail and are recommended for use with a tech tray.
➤See next page for crossrail applications.

Power Mounted to Accessory Rail Prior to Adding Tech Trays



Power kits are available in basic and expanded models to accommodate the user's receptacle needs.

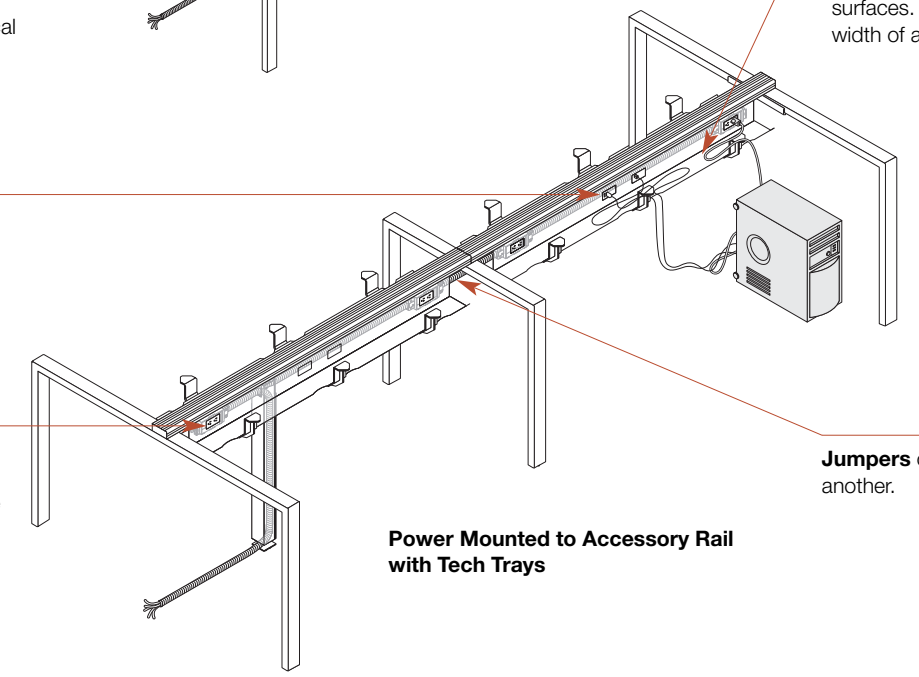
Note: If using power kits without a tech tray, the power kits and components will be visible under the accessory rail.

Power/data infeed channel is used to bring power to the system. It can also accommodate data with physical separation from power. Channel is non-supporting.

Tech trays provide a trough for cable, cover power kits, and provide access to power/data through tray cut-outs when used with wire gap work-surfaces. Tech trays must match the width of accessory rail or crossrail.

Cat5, Cat6A, fiber optics, and powered USB have been designed into the Xsede capability.

Power and data is available below the surface in accessory rail applications. Duplex receptacles are rated at 15 or 20 amps.



Jumpers connect one power kit to another.

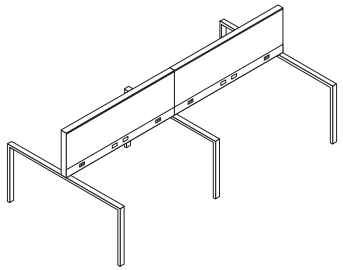
Power Mounted to Accessory Rail with Tech Trays

Power & Data Overview

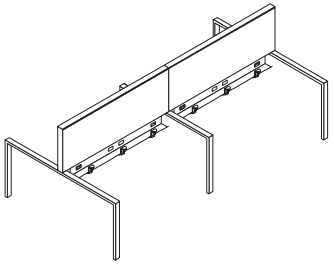
continued

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

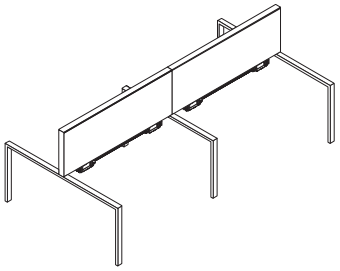
In crossrail applications, power kits can be mounted above or below the worksurface:



- Mounted on top of the crossrail at worksurface height behind a tech tile cover.



- Mounted directly underneath the crossrail behind a tech tray

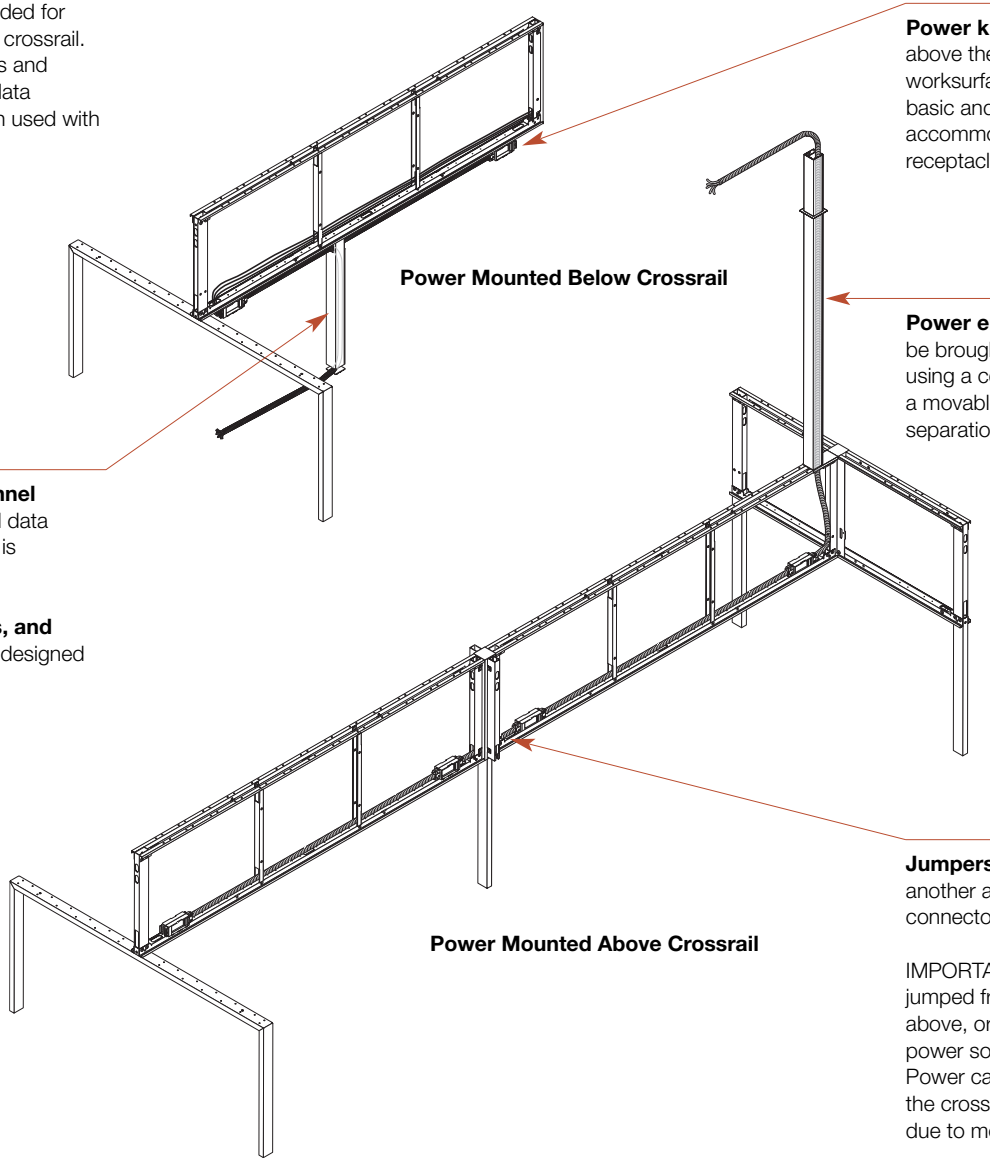


- Mounted directly underneath the crossrail without a tech tray; power kits will be visible.

Tech trays are recommended for power mounted below the crossrail. Tech trays cover power kits and provide access to power/data through tray cut-outs when used with wire gap worksurfaces.

Power/data in-feed channel accommodates power and data with physical separation. It is non-supporting.

Cat5, Cat6A, fiber optics, and powered USB have been designed into the Xsede capability.



Power Mounted Below Crossrail

Power Mounted Above Crossrail

Power kits are available for either above the surface or below the worksurface (shown). Select from basic and expanded power kits to accommodate the number of receptacle needed.

Power entry and data cabling can be brought to the crossrail structure using a ceiling pole. The pole includes a movable divider to provide separation between power and data.

Jumpers connect one power kit to another and can be routed through a connector.

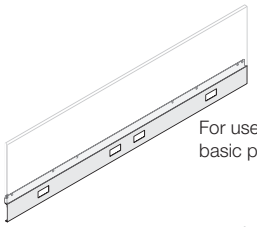
IMPORTANT: Power cannot be jumped from below the surface to above, or vice versa. A separate power source is required for each. Power cannot be installed both below the crossrail and in a tech tile above due to mounting bracket interference.

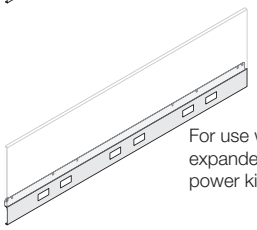
Tech Tile Covers

For Crossrail Applications

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details





Tech tile covers provide easy access to power and data at worksurface height; specified separately from tech tiles.

Available in widths from 24"–84", tech tile cover cutouts can be specified to coordinate with expanded power kits that provide four duplex receptacles or basic power kits that provide two duplex receptacles.

Tech tile covers are 4"H painted steel, and attach directly to legs.

Covers for use with basic power kits have 2 to 4 cutouts depending on the width of the cover to accommodate:

- Two duplex receptacles, one on each end; and
- One or two data/blank openings; each opening can accommodate two data ports.

➤See chart at right.

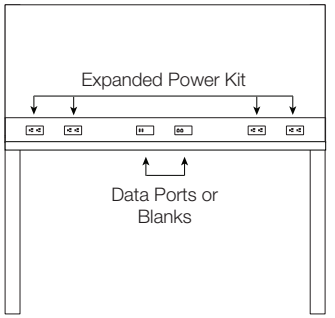
Covers for use with expanded power kits have 5 to 6 cutouts depending on the width of the cover to accommodate:

- Four duplex receptacles, two on each end; and
- One or two data/blank openings; each opening can accommodate two data ports.

➤See chart below, right.

Cut-out locations are the same as tech trays.

Planning Factors



Receptacles and data are easily accessible above the worksurface.

Tech tile cover can be used in single-sided application or may be placed back to back for shared power/data for optimum component utilization.

Tech tile covers without cut-outs must be specified where pass-thru jumpers are used. Covers without cut-outs may also be used with nothing routed behind it for a consistent appearance.

Tech tile covers must match the width of the crossrail for attachment to vertical structure.

When using dual-sided power kits, the tech tile covers must be the same on both sides of the structure.

Data can be placed in a receptacle opening if no power kit is installed.

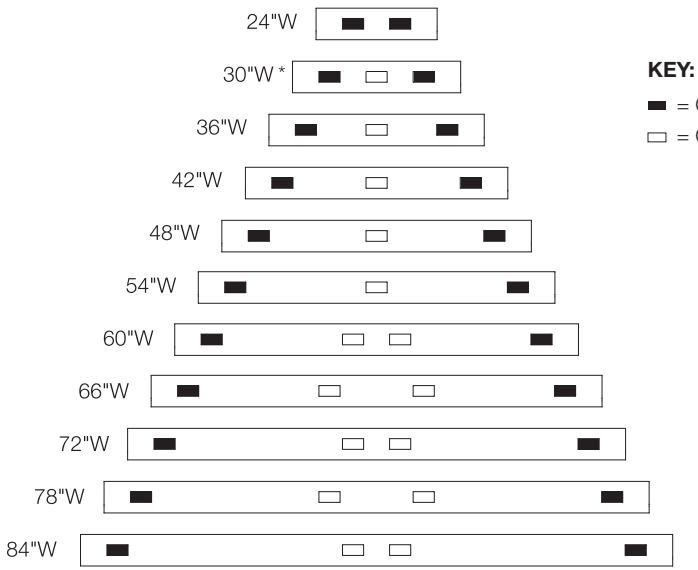
Related Products

Hole cover plates, specified separately (10 per package), are recommended to cover unused cut-outs in tech tile cover.

Data plates with adapter kit are required for access to data at worksurface height.

For Use with Basic Power Kits

Dual-Sided



KEY:

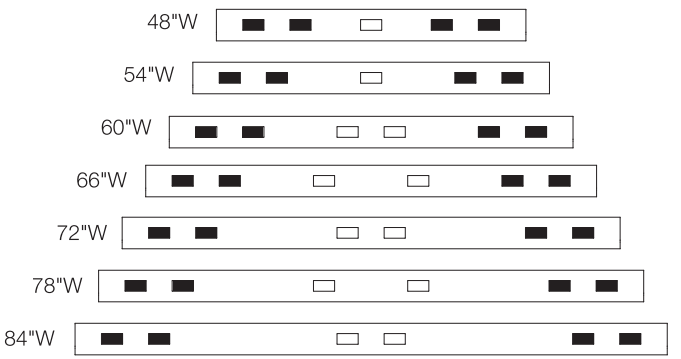
▭ = Opening for 2 Data Ports or Blank

For Use with Expanded Power Kits

Single- or Dual-Sided

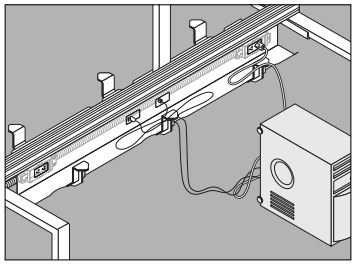


Tech Trays

For Accessory Rail or Crossrail Applications

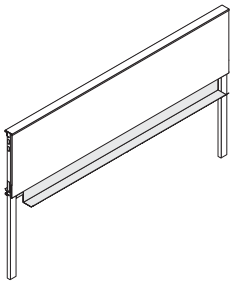
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details



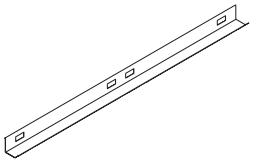
Tech trays provide access to power and data attached to accessory rail or crossrails and a trough for cords and cables under the worksurface. Trays are specified to match the width of the crossrails or accessory rails to which they attach up to 84"W.

Tech trays are suspended from accessory rail or crossrails, and are supported by tech tray brackets, specified separately.



Tech trays are available with or without cut-outs. Trays can be used for single- or dual-sided applications. Tech trays with cut-outs for basic or expanded options must match power kit configurations.

➤See page 66 for power kits.



Tech tray for use with basic power kits have 2 to 4 cutouts depending on the width of the cover to accommodate:

- Two duplex receptacles, one on each end; and
- One or two data/blank openings; each opening can accommodate two data ports.

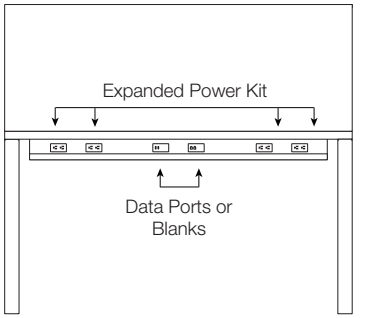
➤See chart below.

Tech trays for use with expanded power kits have 5 to 6 cutouts depending on the width of the cover to accommodate:

- Four duplex receptacles, two on each end; and
- One or two data/blank openings; each opening can accommodate two data ports.

➤See chart below, right.

Cut-out locations are the same as tech tile covers.



Finishes & Materials

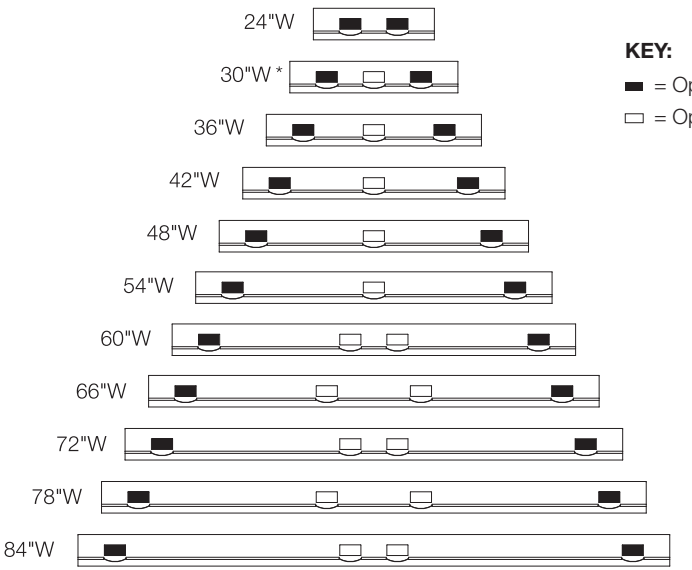
- Tray: 20-gauge painted steel

➤See page 199 for standard and metallic finish options.

- Data plates: powder-coated steel
- Cover plates: steel

For Use with Basic Power Kits

Dual-Sided



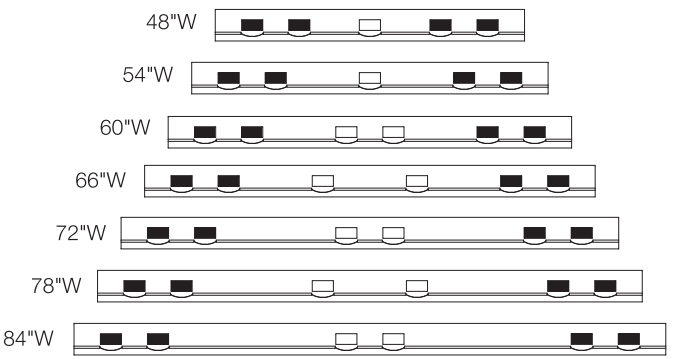
KEY:

▬ = Opening for 1 Duplex Power Receptacle

▭ = Opening for 2 Data Ports or Blank

For Use with Expanded Power Kits

Single- or Dual-Sided



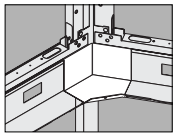
Tech Trays

For Accessory Rail or Crossrail Applications

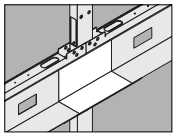
continued

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

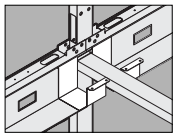
Connections



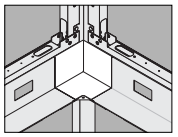
120°



Spanner

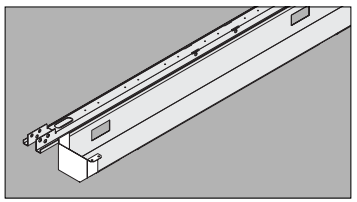


Extended (set of 2)

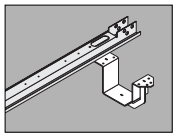


90°

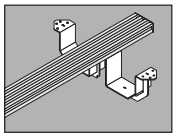
Connector brackets are recommended for use to hold and transition one tray to another and around corners. Specify separately according to the application: 120°, spanner, extended, or 90°. Spanner bracket connects two side-by-side trays; extended bracket (set of 2) connects two trays with a leg between.



Tray end caps and extended end caps provide a finished look. End caps are right or left handed. Extended end caps are only used when multiple accessory rails are used with a shared leg in the center. End caps are optional.

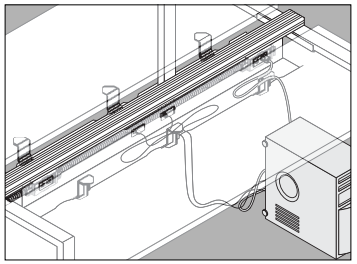


Single-sided

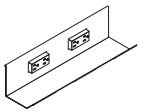


Dual-sided

Tech tray surface bracket attaches to crossrails or accessory rails and supports the back edge of worksurfaces. Use two tech tray brackets for surfaces up to 60"; use three tech tray brackets for surfaces over 60".



When using wire-gap worksurfaces, tech trays can be used under the worksurface for power and data access. Data ports and USB receptacles in the tech tray allow easy accesss to communications.



Power and data kits are used with the tech tray.
➤See page 66.

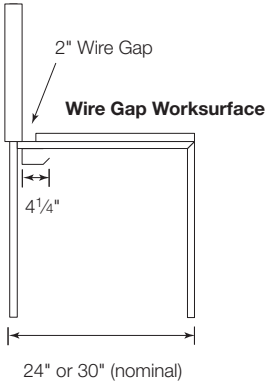
Connector brackets are recommended when jumping power from one tray to another.

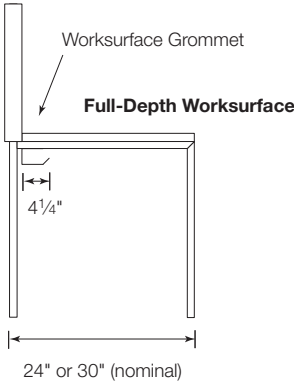
Planning Factors

Data can be placed in a receptacle opening if no power kit is installed.

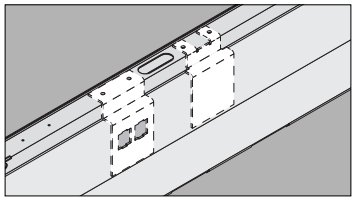
Tech trays can be added to both sides of the crossrail or accessory rail in a dual-sided application to provide maximum capacity for power and data cabling.

Specify wire gap worksurfaces or worksurface grommets in full-depth worksurfaces for access to the tech tray below.

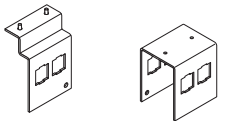




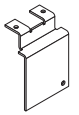
Related Products

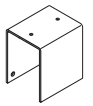


Data plates and cover plates for undersurface applications are available. Plates sit behind the tech tray and are affixed to the underside of the crossrail.



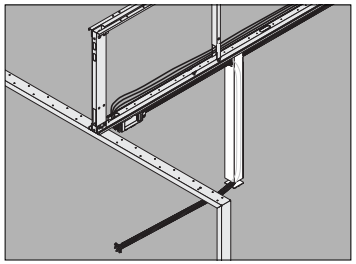
Data plates, which include an adapter kit, are available in single-sided and dual-sided models.





Cover plates are available in single-sided and dual-sided models to conceal unused openings.

Specify a single-sided cover plate for every undersurface hardwire box utilized.



Power/data in-feed channel (non-supporting) for bringing in power or data from the floor.

Power Entries

and Related Products

For Accessory Rail or Crossrail Applications

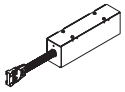
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details

8-wire floor/ceiling power entry is 12' long. Connection is made by snapping into the end of a power kit. Can be used with:
- Legs with power slot
- Ceiling power/data pole
- Power/data in-feed channel

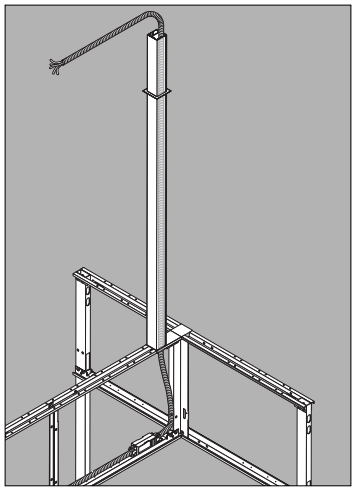
Circuit-1-only power entry is 10' long and can be a quick solution for a maximum of 12 receptacles.

IMPORTANT: Circuit-1-only power entry must be used with a power/data in-feed channel. Includes a 20-amp plug, which must plug into a 20-amp building outlet.

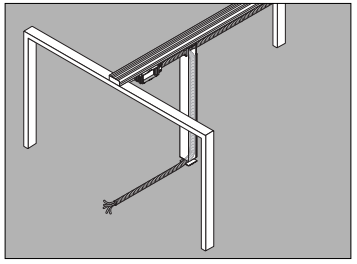


New York power entry allows hard-wiring to comply with local codes.

Hardwire box allows hardwiring of power to comply with local codes. Choose the hardwire box that fits the application, either above or below surface. Hardwire boxes allow one receptacle per box.

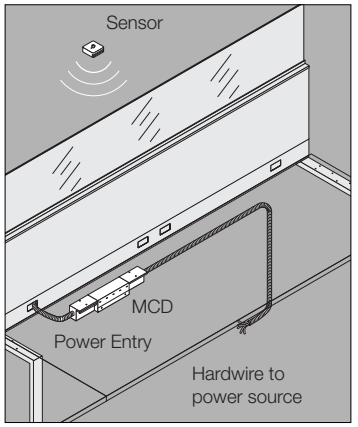


Ceiling power/data pole, for use in crossrail applications, is 66"H and features a snap-on cover that can be oriented in four different directions relative to the crossrail structure. Power pole features a moveable divider inside that can create physical separation between power and data. Ships standard with a 6" top cap.



Power/data in-feed channel can be placed anywhere under the accessory rail or the crossrail to bring below-surface power and data to the workspace. For above-surface power in crossrail applications, the in-feed channel should align with crossrail cut-outs.

IMPORTANT: The power/data infeed channel does not provide structure or support, but does provide physical separation of power and data, and is specific to Xsede applications.



Electrical management system can be added to meet the compliant criteria of ASHRAE 90.1-2010 and California Title 24. The system consists of:
- Monitor control device (MCD)
- Sensor that signals the MCD to shut off the power when no activity is present.

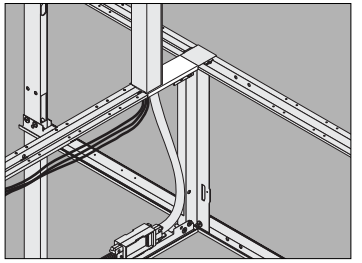
MCD must be installed by a licensed electrician between the building power and the power entry. MCD mounts to underside of the worksurface. This system can also be used with Xsite, Cetra, and Interworks 8-wire applications.
➤See assembly instructions.

Finishes & Materials

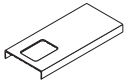
- Electrical components: metal conduit and PVC-free plastic

Planning Factors

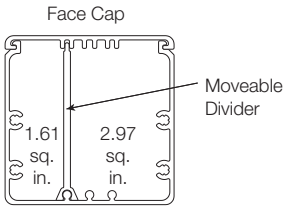
Both 8-wire and circuit-1-only systems utilize the same electrical components, except for the power entries.



When using a ceiling power/data pole, the top cap must be 6" shorter than the structure. For example, use the 18"W top cap for 24" structure and power pole.



Topcap for use with ceiling power entry ships with the power pole.



Interior of ceiling power/data pole dimensions are 2⅜" x 2⅜". A moveable divider allows separation of data and power.

Related Products

Flexchain cable manager or expandable cable manager can be used to route power or data to accessory rail or crossrail.
➤See the Perks Price List.

Power Kits

For Accessory Rail or Crossrail Applications

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details

Power kits are used with tech tile covers above the worksurface and with tech trays below the worksurface. Power kits utilize an 8-wire, 4-circuit electrical system or circuit-1-only (single circuit) power entry.

Three types of power kits are available:

Dual-sided—
- Basic
- Expanded

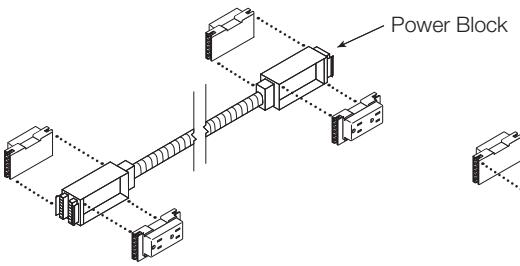
Single-sided—
- Expanded

Dual-sided basic power kit provides two dual-sided power blocks, one on each end of the harness. Each power block accepts two duplex receptacles, *one on each side,* for a total of four per kit. They are available in widths 24" to 84" in 6" increments.

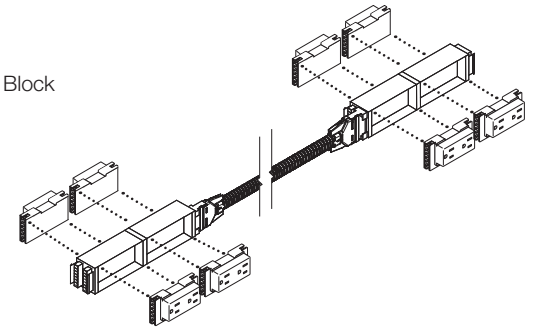
Dual-sided expanded power kit provides four dual-sided power blocks, two on each end of the harness. Each power block accepts two duplex receptacles, *one on each side,* for a total of eight per kit. They are available in widths 48" to 84" in 6" increments.

Single-sided expanded power kit provides four single-sided power blocks, two on each end of the harness. Each power block accepts one duplex receptacle for a total of four per kit. They are available in widths 48" to 84" in 6" increments.

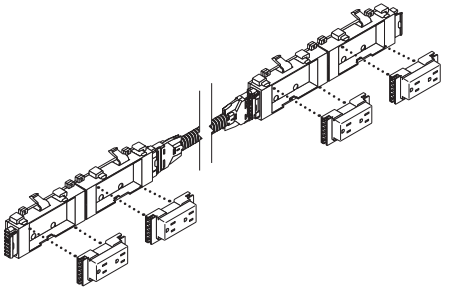
IMPORTANT: Receptacles are specified separately.



Dual-Sided Basic Power Kit
Accepts 4 duplex receptacles
(2 per side)



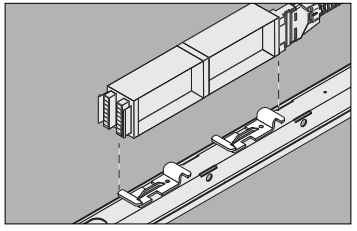
Dual-Sided Expanded Power Kit
Accepts 8 duplex receptacles
(4 per side)



Single-Side Expanded Power Kit
Accepts 4 duplex receptacles

Power kits are specified by application and include the appropriate components, which include:
- Power blocks
- Mounting brackets and hardware
- Harnesses

Note: 30" kits consist of a 7" male-to-male connector instead of a harness.



Mounting brackets hold power blocks and are standard with the kit. Also included is attachment hardware to install the mounting brackets to pre-drilled holes in the crossrail or to the accessory rail. (Above-surface crossrail application shown above.)

Finishes & Materials

- Electrical components: metal conduit and PVC-free plastic
- Mounting brackets and hardwire Boxes: formed steel

Connections

8 wire electrical can tie to the building in-feed either at the base or at the ceiling entry.

Circuit-1-only power entry is applicable for a maximum of 12 circuit-1 15 or 20-amp duplex receptacles and can be plugged into an existing building outlet. Building outlet must be 20-amp to accept this power entry plug. Power entry is not for use with legs with power slots.

Planning Factors

Specify the power kit to match the width of the accessory rail or crossrail. *Note: Power kits for below surface with accessory rail or above surface with tech tiles are the same. Power kits for below surface on crossrail are different due the attachment brackets.*

Same arrangement of duplex receptacles and data should be used on both sides.

Accessory rail applications offer power access below the worksurface only.

Crossrail applications offer power access either above or below the worksurface.

Jumpers must be specified for power-kit-to-power-kit, power-kit-to-connector-to-power-kit, and tech-tile-to-tech-tile connections.

Power cannot be jumped from below-surface-mounted power kit to an above-surface-mounted power kit.

Related Products

Tech trays
➤See page 63.

Tech tiles and covers
➤See page 53.

Crossrails for mounting of the power kits feature pre-drilled holes for ease of securing mounting brackets.
➤See page 42.

Accessory rails

Receptacles
➤See page 69.

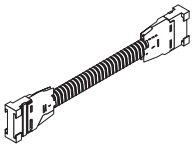
Jumper Kits

For Accessory Rail or Crossrail Applications

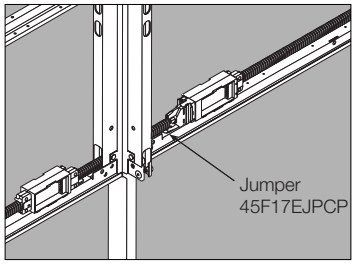
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details

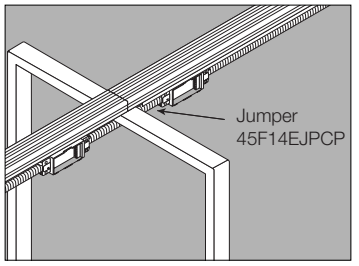
Jumpers connect power kits through vertical supports and structure.



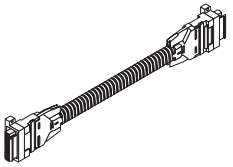
Power-kit-to-power-kit and power-kit-to-connector-to-power-kit jumpers connect one power kit to another.



Power-kit-to-connector-to-power-kit jumpers route power from one power kit through a connector to the next power kit.
➤See page 68 for jumper selection guide.



Power-kit-to-to-power-kit jumpers route power from one power kit to the next power kit in accessory rail applications. They are 14"W.

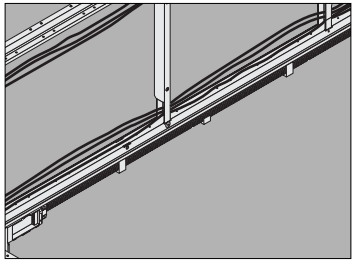


Pass-thru jumpers kits are used to continue the flow of electricity between power kits within a workstation. Pass-thru jumper kits replace power kits where receptacles are not needed. Kits must equal the length of the accessory rail or crossrail.

Finishes & Materials

- Electrical components: metal conduit and PVC-free plastic

Connections



Undersurface J-hook brackets are used to hold the conduit of the power kit or the pass-thru jumper kit and are installed in alternate directions to hold power or data in place.

- Can be used to route communications cabling below accessory rails or crossrails.
- Two brackets are recommended for power kits 48"–84"W.
- Two brackets are recommended for pass-thru jumper kits 24"–42"W.
- Four brackets are recommended for pass-thru jumper kits 48"–84"W.
- Two brackets are recommended for New York City power entry.
- Accommodates sixteen (16) ¼"-diameter data cables in a single run when secured with cable ties.

Planning Factors

Jumpers must be specified for power-kit-to-power-kit and tech-cover-to-tech-cover connections, as well as for going through a connector.

When jumping from a power kit through a connector to another power kit, the model selection is dependent upon the type of power kit power is being jumped from—single-sided or dual-sided; basic or expanded, the type of connector the jumper is going through (X, L, Y, or T)—and the type of power kit to which it is connecting.

Jumpers must be routed through connectors when making a turn in above-surface applications before the connector is assembled and attached to the crossrails.

Power cannot be jumped (routed) from below surface to above or vice versa. A separate power source is required for each.

Power-kit-to-power-kit jumper, specified separately, is required to connect pass-thru jumper to an adjacent power kit.

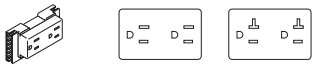
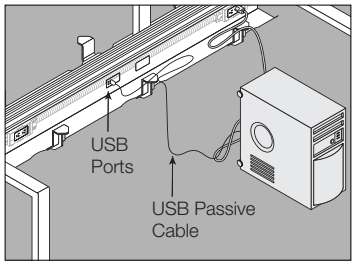
Details

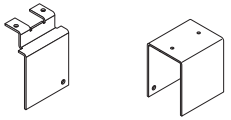


Duplex receptacles are rated at 15 or 20 amps. 20-amp models are required for some large equipment applications and have a keyed-slot on the Hot side of the receptacle. Duplex receptacles are available in black or white and the designated/dedicated models have a **Δ** imprinted on them for use as a visual aid.

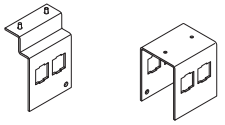
Universal serial bus (USB) powered receptacles are 2-amp, circuit-1-only. They can be used anywhere a circuit-1-only receptacle is used. Each receptacle provides two powered USB ports to provide charging/power capabilities for peripheral devices.



USB passive cable is 72" long. One end plugs into a powered USB port on a receptacle or computer and the other is used to connect to another device, such as a printer. USB passive cable will provide charging capabilities for cell phones, digital cameras, or other devices when plugged into a USB power source.



Tech tray cover plates, specified separately, are recommended to cover unused power blocks or where a cut-out is not being used for data in the tech tray in below-surface applications.

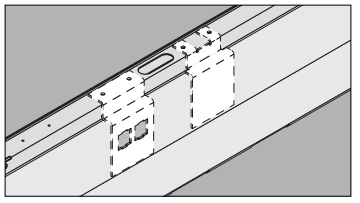


Tech tray data plates, specified separately, have two openings and come with a voice/data adapter kit to accommodate couplers/jacks from multiple suppliers. Two of each style of adapter are standard in the kit. They are for use in tech tray in below-surface applications.

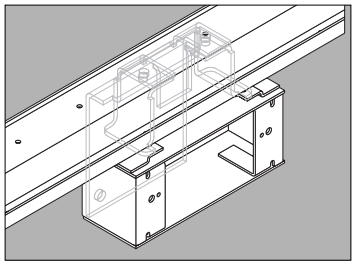
Tech tile cover plates, specified separately, are recommended to cover unused power blocks or where a cut-out is not being used for data in the tech tile cover in above-surface crossrail applications.

Tech tile data plates, specified separately, have two openings and come with a voice/data adapter kit to accommodate couplers/jacks from multiple suppliers. Two of each style of adapter are standard in the kit. They are for use in tech tile cover in above-surface applications.

Connections



Data plates and cover plates sit behind the tech tray and are affixed to the underside of the crossrail.



Chicago electrical requirements can be accommodated with the use of a hardwire box and cover plate. Above- and below-surface hardwire boxes are available.

Finishes & Materials

- Electrical components: metal conduit and PVC-free plastic (excluding USB)
- Cover plates: all standard paint colors
- Data plates: white or black adapters
- Tech trays: powder-coated metal

Related Products

Tech trays, available with or without cut-outs, provide quick access to power supplies and manage cables. ➤See page 63.

Tech tile covers are available with or without cut-outs. ➤See page 53.

Cable Management

for Power and Data

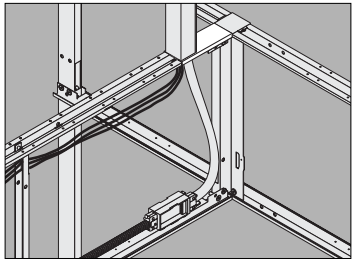
For Accessory Rail or Crossrail Applications

Statement of Line ➤See page 7
Typical Configurations 21
Planning Guide 31
Xsede Pricing 93

Cables may enter the crossrail structure through a:
- Power/data in-feed channel (non-supporting)
- H-leg, T-leg, or support leg with power slot,
- Ceiling power/data pole.

Cables may be routed to below the accessory rail using a power/data in-feed channel only.

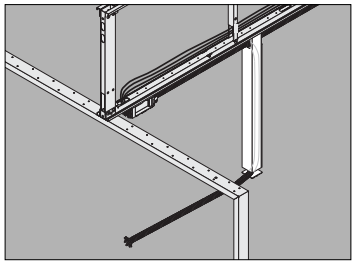
Ceiling Entry:



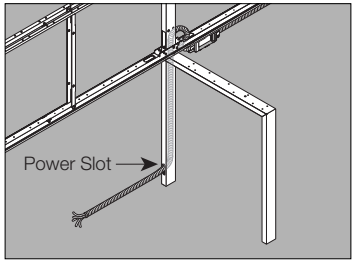
In crossrail applications, power entry may be brought to the system through a ceiling power/data pole. Pole features an adjustable divider to separate power and data cabling. Cables are routed behind the tiles and can be accessed in a tech tile above the surface or can drop down below the crossrails to be accessed in the tech tray.

Accessory rail applications do not accommodate power entry from above the surface.

Floor Entry:



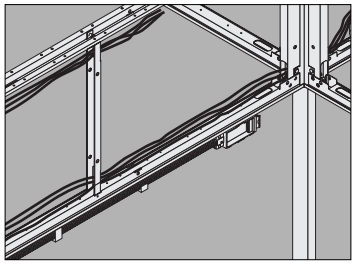
In accessory rail and crossrail applications, power may enter through a power/data in-feed channel and routed to the bottom of an accessory rail or crossrail.



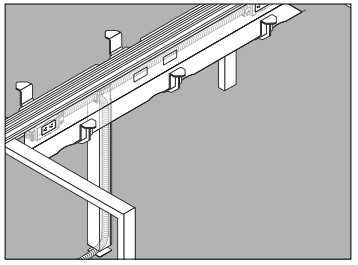
In crossrail applications, cables may enter through optional power slots available in applicable T-leg, H-leg, or support leg models. Power or data are routed up to below-surface power kits or to the area behind tech tiles and tech tile covers for above-surface access. Power slot is located on the left side of the leg.

Power and data should be routed in separate legs. Power slots in legs do not accommodate a circuit-1-only power entry.

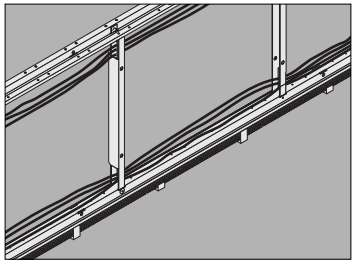
Horizonal Routing:



Cables may be routed through the crossrail structure behind tiles above the surface. Vertical support rails help route cables behind tiles.



Cables may be routed behind the tech tray in accessory rail or crossrail applications.



Undersurface J-hook brackets attach to the crossrail or accessory rail to allow cables to run horizontally below the surface.

Cable Capacities:

	40% Fill
Power/Data In-Feed Leg	12
Power/Data Pole –with Power –without Power	 28 32
Power Slots in Legs	16
Between back of tray and leg	13
Between back-to-back tech trays	18

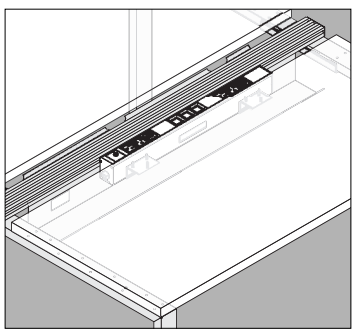
Worksurface-Mounted Components

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

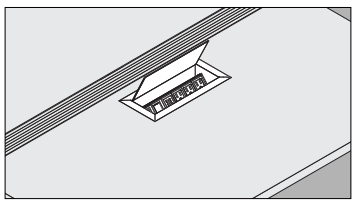
Details

Worksurface-mounted components offer another option for power and data to customize a workspace for an individual or to meet the needs of a group. Options of trim finish color and wiring configurations make these components a well-rounded choice for changing layout requirements. All components ship with data adapter kits.



Power/data bar mounts flush to the back edge of the worksurface in the 2" wire gap with provided brackets. Power/data bar comes standard with two powered USB, four outlets, and three openings for data. Wiring options include single-circuit, hardwire, and 8-wire electrical. 8-wire model connects directly to power kit.

Power/data center sits flush with the worksurface inside a G27 factory cutout. Power/data grommet features three spill-proof outlets, one powered USB outlet, and two data openings. Wiring options include single-circuit, hardwire, and 8-wire electrical.



Power/data center is recessed in the worksurface in a G28 factory cutout. The lid sits flush with the worksurface top. Inside features three outlets, one powered USB, and two data openings. Wiring options include single-circuit, hardwire, and 8-wire electrical.

Finishes & Materials

- Power/data bar trim: anodized aluminum or anodized black
- Power/data grommet trim: black or white
- Power/data center trim: anodized aluminum or anodized black

Planning Factors

When using circuit-1-only power entry, you must utilize circuit-1-only components. The in-feed plug is 20-amp and must plug into a 20-amp outlet; however, 15-amp receptacles and jumpers can be utilized.

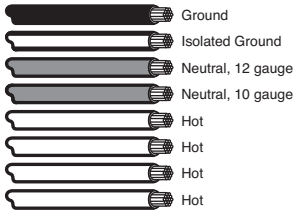
Related Products

Additional power/data options

➤See the Perks Price List.

8-Wire Circuit Electrical Configurations

Statement of Line ➤See page 7
Typical Configurations 21
Planning Guide 31
Xsede Pricing 93



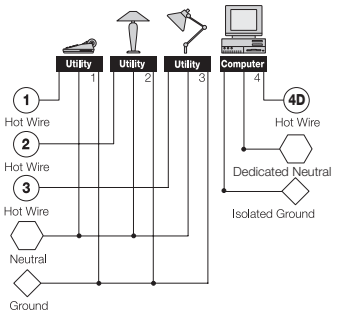
8-wire power entry allows power to enter from the floor, ceiling, wall, or column. Power can be distributed either above or below worksurfaces. If power is required above and below, two separate power entries are required. 8-wire systems accommodate up to 13 duplex receptacles per circuit and include four 12-gauge hot wires, one 12-gauge neutral wire, one 10-gauge shared neutral wire, and two 12 gauge ground wires.
➤See wiring configurations at right and wiring diagrams on the next page.

Xsede's electrical system is rated for 20-amp service. To support the usage, 15-amp convenience receptacles can be placed anywhere along the leg of the electrical connection. In the event that an appliance, such as a larger printer/copier/plotter needs to have a 20-amp receptacle, it is recommended to use a dedicated circuit with a 20-amp receptacle. Using 15-amp convenience receptacles will aid in ensuring that no one leg of the system can pull too much current, which could potentially cause the system to trip out and lose power across the entire system.

IMPORTANT: Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided here is intended to assist specifiers.

IMPORTANT: Xsede electrical components are UL listed under the Xsede name and are not inter-changeable with other Kimball Office series.

3 and 1 (8-wire):

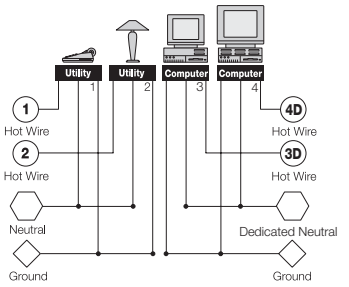


Circuits 1, 2, and 3 share a neutral and common ground, providing circuits for general electrical needs. Customarily, one or more of the circuits are reserved for lighting or other everyday uses, which allows control by central or master switching.

Circuit 4 consists of three separate conductors (hot, neutral, and ground) and meets the BIFMA/ANSI definition for a dedicated circuit.

Cir.	*15-amp Model*	*20-amp Model*
1	45FER1815	45FER1820
2	45FER2815	45FER2820
3	45FER3815	45FER3820
4	45FER4D815	45FER4D820

2 and 2 (8-wire):



Circuits 1 and 2 provide a pair of designated circuits for general electrical needs.

Circuits 3 and 4 provide a pair of designated circuits for computer applications.

Cir.	*15-amp Model*	*20-amp Model*
1*	45FER1815	45FER1820

120/240V 1 Phase Shared Neutral
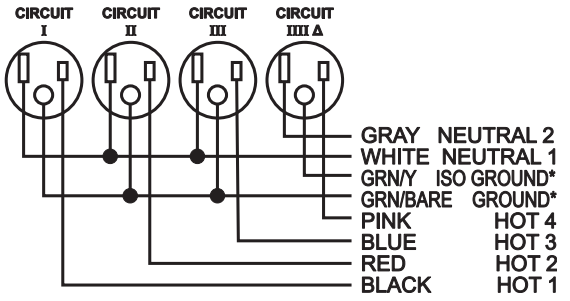
Receptacles: 1, 2, 3, 4Δ



Worksurfaces

For Accessory Rail and Crossrail Applications

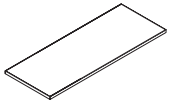
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details

Xsede worksurfaces are 1 3/16" thick high-pressure laminate (HPL) or 1 1/8" thick thermally-fused laminate (TFL); both laminate options feature a PVC 1/8" (3mm) rim on all four sides. For easy planning the rectangular surfaces come in widths of 30" to 84" in 6" increments.

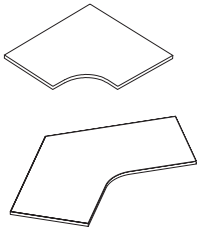
IMPORTANT: Footprint worksurfaces are slightly undersized and are not intended for use with Xsede.

Six shapes are available**:**
- Rectangular
- Curved corner
- Boomerang
- U-shaped
- Taper
- Touchdown



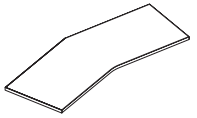
Rectangular worksurfaces are available in full-depth (24" and 30"D) and wire-gap depth (22" and 28"D) models. The gap is used for:
- Dropping cables behind the worksurface
- Access to the below-surface tech trays
- Mounting of the power/data bar that sits flush with the worksurface

➤See page 71.

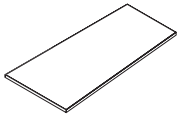


90° and 120° curved corner worksurface are available in full-depth and wire gap models. Full-depth models are available 24"D, 30"D or combination of 24"/30" returns or 30"/24" returns; wire-gap models offer 22"D, 28"D or combination 22"/28" or 28"/22" returns.

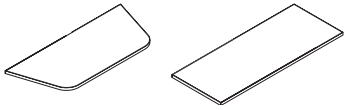
U-shaped worksurfaces are 30"D and in 48"–72" widths in 6" increments.



Boomerang worksurfaces are available as 24"D or 30"D return. Full-depth only.



Taper worksurfaces are 30"D on one side and 24"D on the other. They are available 60", 66", and 72"W and in left- and right-handed models; full-depth only.



Touchdown worksurfaces are available in 24" and 30"D and 30", 56", and 62"W, in trapezoid or rectangular shapes. Touchdown worksurfaces are for placement at the end of a dual-sided run for quick meeting or shared surface. The 56"W HPL touchdown surfaces feature the same laminate on the top and bottom, so they can be flipped based on the application so that the end trim notch doesn't make the surface handed.

Finishes & Materials

- Worksurface: solid core with HPL or TFL

➤See page 197 for laminate colors.

- Rim: 1/8" (3mm) PVC rim in matching/complementary solid colors

➤See page 201 for color choices.

Connections

Worksurfaces attach to each other with flat steel brackets and to lower crossrails with worksurface mounting brackets.

➤See page 75.

Touchdown worksurfaces attach to the end of a dual-sided run with a touchdown worksurface mounting kit, specified separately.

When U legs, U-legs with stanchions, H legs, support legs, and undersurface storage are used, the worksurface is screwed to the leg or storage.

Undersurface support can be accomplished with a number of options:
- Undersurface support rails

➤See page 75.

- Legs and end panels

➤See pages 37, 46–50.

- Undersurface support legs

➤See page 76.

- Footprint undersurface storage

➤See page 83.

- Priority storage

➤See page 91 for planning information; see the Priority Price List to specify and for additional information.

Power & Data

Power and data can be dropped into the undersurface tech tray or accessed with the power data centers.

Planning Factors

Worksurfaces should match the width of the structure. Combined width must match the structure. If combined widths are used, mid-supports and flat brackets are required.

Worksurface Support

For Accessory Rail and Crossrail Applications

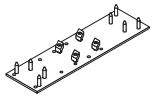
Brackets and Undersurface Support Rails

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details

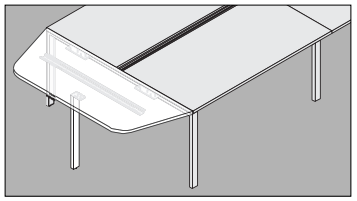
IMPORTANT: Brackets are specified separately for attaching worksurfaces to the structure and to each other.

Flat brackets are used to connect two adjacent worksurfaces together at a worksurface joint. One flat bracket is required when joining two main worksurfaces; two flat brackets are required in a return application.



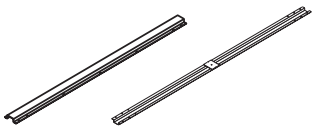
Worksurface brackets are used to connect worksurfaces to the crossrail structure or accessory rail where there is no tech tray. Bracket can be used with H-legs (single-sided application/ worksurface on one side), U-legs with stanchions (dual-sided applications/ worksurfaces on both sides), or with U-legs with an accessory rail.

Undersurface tile-mount bracket holds open-base undersurface tiles in place when there is no tech tray below the surface. Two brackets are required for tiles up to 60"W; three brackets are required for 66"–96"W tiles.



Mounting kit for touchdown surfaces includes:

- Two mounting brackets for adjacent surfaces
- Support leg
- Undersurface support rail



Undersurface support rails are ¾"H and can be used underneath the worksurface to provide support for up to 72" of unsupported span.

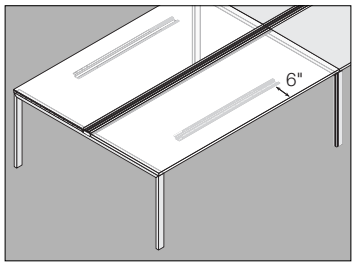
For unsupported span of 54"–60"W, use undersurface support rail model 45W48WSSR.

For unsupported span of 66"–72"W, use undersurface support rail model 45W72WSSR, which features a tension adjustment.

Over 72" of unsupported span requires the use of a support leg.

U-legs can also be used for additional support.

Undersurface support rails can be used on other Kimball Office surfaces as well.



IMPORTANT: Additional support is required where the unsupported span is greater than 48"W. If using an undersurface support rail for additional support, it should be centered in the open span 6" off the user edge of the worksurface. U-legs can also be used for support.
➤See page 47.

Finishes & Materials

- Flat brackets: 13-gauge galvanized steel
- Undersurface support rails: 16-gauge sheet metal with a Cinder powdercoat finish

➤See page 199 for standard and metallic finish options.

Connections

Attachment screws ship with all bracket and undersurface support rail models.

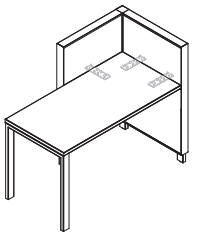
Planning Factors

Use two worksurface brackets on the end of each worksurface when attached to end crossrail sets.

Use one worksurface bracket per surface, plus one shared between surfaces, when ends are supported by connectors and crossrails.

Use one tile-mount bracket per worksurface bracket specified to hold open-base undersurface tiles where there is no tech tray.
➤See page 77 for worksurface bracket and support guidelines.

If specifying undersurface support rail, keep in mind any interference from undersurface-mounted items such as center drawers.



For this configuration, use three worksurface brackets (two on the wing panel and one on the approach panel) to connect crossrails and surfaces.

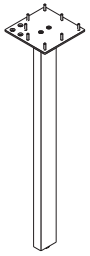
Worksurface Support

For Accessory Rail and Crossrail Applications

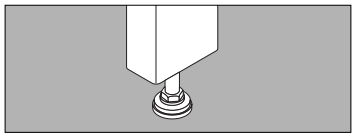
Undersurface Support Legs

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details



Undersurface support legs are 27½" tall and are used to support the center of worksurfaces in unsupported spans over 60"W. Plate on top of leg can be repositioned in the field based on installation needs.



Floor glides are standard on all legs. Glides on support legs provide 2¾" height adjustment.

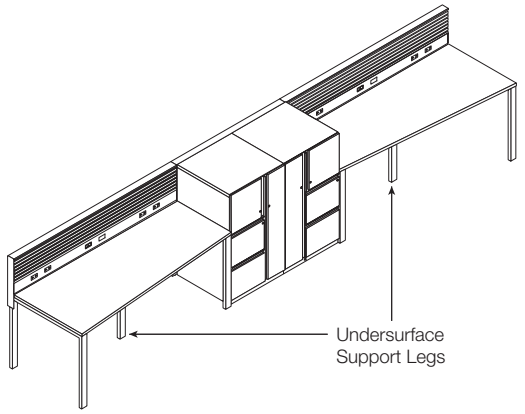
Finishes & Materials

- 14-gauge steel with powdercoat finish

➤See page 199 for standard and metallic finish options.

Connections

Undersurface support leg is screwed to the underneath side of a worksurface providing additional support.



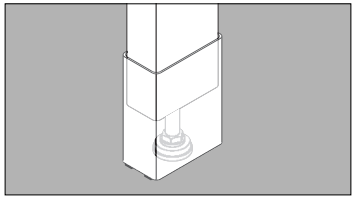
Planning Factors

Undersurface support legs are recommended for U-tops when used as a return. If storage is required, it is recommended that mobile storage be used.

Boomerang worksurfaces are used as returns. The end can be supported with a U-leg or two undersurface support legs.

Touchdown worksurfaces attach to the end of a dual-sided station with the touchdown worksurface mounting kit, specified separately. Touchdown mounting kit includes a support leg, support rail, and two attachment brackets.

Related Products



4"H glide cover provides a cosmetic leg sleeve that can be added to all legs to hide extended leveling glides. Glide cover is made of aluminum and can be painted same color as the leg.

Cord Management

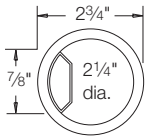
For Accessory Rail and Crossrail Applications

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

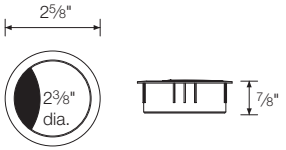
Xsede provides several flexible options for routing and concealing cords and cables. These include:
- Factory-installed worksurface grommet options (G1 and G19)
- Factory-installed G27 and G28 cut-out for power/data centers
- Undersurface tech trays with or without cutouts for power and data
- Wire-gap worksurfaces

Factory-installed grommets and cutouts are available as an option on all full-depth worksurfaces (except touchdown) in pre-determined locations:
- Left
- Right
- Left and right
- Left, right, and center

Exception: Touchdown surfaces feature an optional centered grommet only.



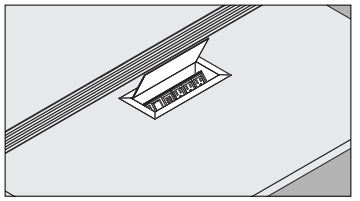
G1 plastic grommet is a two-piece unit with snap-in lid. Lid cutout slides open to route cables or can be closed when not in use. Matte black.



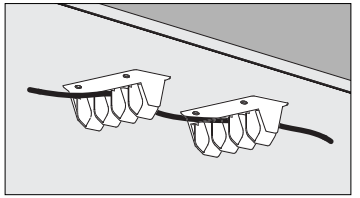
G19 metal grommet is a two-piece unit with black brush access. Top locks in place. Powdercoat finish in the following colors:
405 Designer White
501 Platinum Metallic
514 Carbon Metallic
490 Polished Chrome
487 Brushed Nickel
544 Silver Pearl

Grommets for field installation are also available (models 99KG7MB, 99KG7PL, 99KG19PL, 99KG19DW, 99K19CM, 99KB19490, and 99KG19487).
IMPORTANT: Note the location of support legs to ensure they do not interfere with grommet locations.
➤See the Perks Price List.

G27 cut-outs are designed to accept surface-mount power/data grommets (models 45A0307PDG8, 45A0307PDGS, and 45A0307PDGH), specified separately, for applications where connections are required at the worksurface.
➤See page 160.

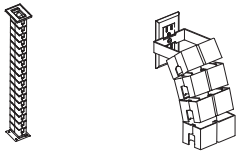


G28 cut-outs are designed to accept surface-mount power/data centers (models (45APDC8, 45APDCS, and 45APDCH), specified separately, for applications where connections are required at the worksurface.
➤See page 160.

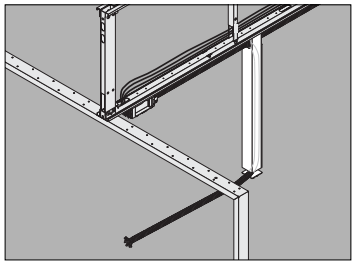


Perks undersurface cable managers (set of 6) are available to manage cords and cables under the worksurface. Cables pressure fit between individual loops, which can be removed to expand individual capacity. Cable managers can be placed up to 18" apart.
➤See the Perks Price List.

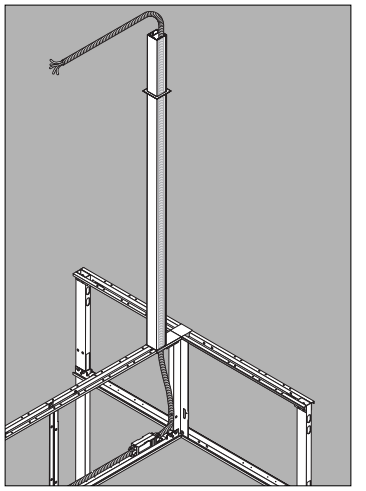
Expandable cable manager provides cable management from under the worksurface to the floor.
➤See the Perks Price List.



Perks flexchain cable manager connects to surface to route cables and power-in feeds to the floor. Flexchain U-bracket, specified separately, mounts to a standard wall outlet to manage cords from the outlet to under the surface.
➤See the Perks Price List.



Power/data in-feed channel manages power-in-feeds and cables from the floor to under the worksurface and includes a divider for separation of power and data. Power/data in-feed channel does not provide support.
➤See page 65.



Ceiling power/data pole manages power and cables from the ceiling to the upper crossrail and includes a divider for separation of power and data.
➤See page 65.

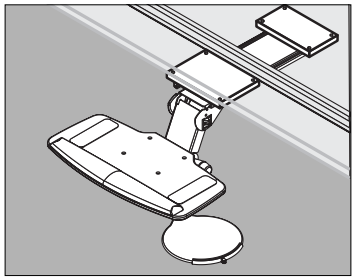
Accessories

For Accessory Rail and Crossrail Applications

Keyboard Kits and Perks® Monitor Arms

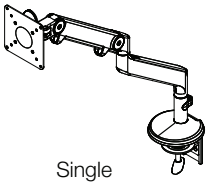
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details

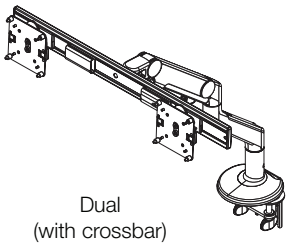


Keyboard kits are available specific to Xsede. Includes:

- Adjustable (manual or intuitive) black arm
- Black foam, gel wrist rest
- Mouse tray (can be mounted on either side)
- Blocks for use when attaching the keyboard tray to worksurfaces with support rails to provide clearance



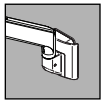
Single



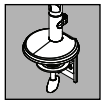
Dual
(with crossbar)

Perks monitor arms, featuring 4D adjustment, can be used with Xsede. ➤See the Perks Price List for additional information and to specify.

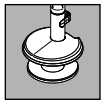
Accessory Rail



Slat

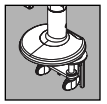


Clamp

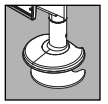


Grommet

Single-monitor arms are available in slat-mount, clamp-mount, grommet/bolt-through, and Xsede accessory rail models.



Clamp

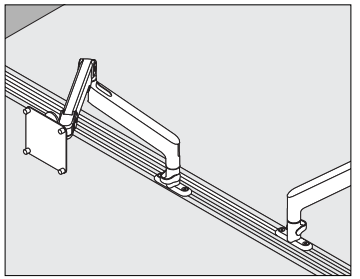


Grommet

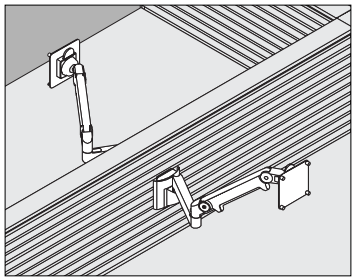
Dual-monitor arms are available in clamp-mount and grommet/bolt-through models.

Connections

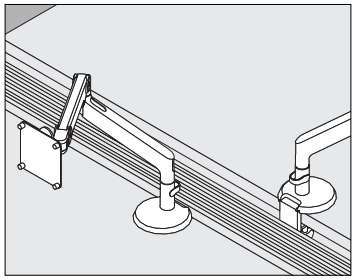
For grommet/bolt-through mount models, note the location of support and tech trays to ensure there is no interference.



Accessory rail-mount monitor arms can be used on both sides of the rail as shown above. If using a monitor arm on the same side of the rail, the arms should be placed at least 42" apart. This type of mount does not interfere with tech tray installation.



Slat tiles can accommodate two single monitor arms in dual-sided applications as shown above. If two single monitor arms are required on the same side of the tile, space the arms at least 24" apart.



Clamp-mount single-monitor arms can be used with Xsede wire gap worksurface where no tech tray is installed or along returns or other areas where legs, accessory rails, or crossrails don't prevent its use. Specify non-Xsede-specific clamp-mount model 99KSMAM2CMS.

Clamp-mount dual-monitor arms can be used with Xsede wire gap worksurface with or without a tech tray. Specify Xsede-specific clamp-mount model 99KSMACBM8LCMS.

Grommet/bolt-through single- or dual-mount monitor arms (models 99KSMACBM8GMS or 99KSMAM2GMS) can be field installed on Xsede surfaces without interfering with the tech tray.

Storage for Xsede

For Accessory Rail and Crossrail Applications

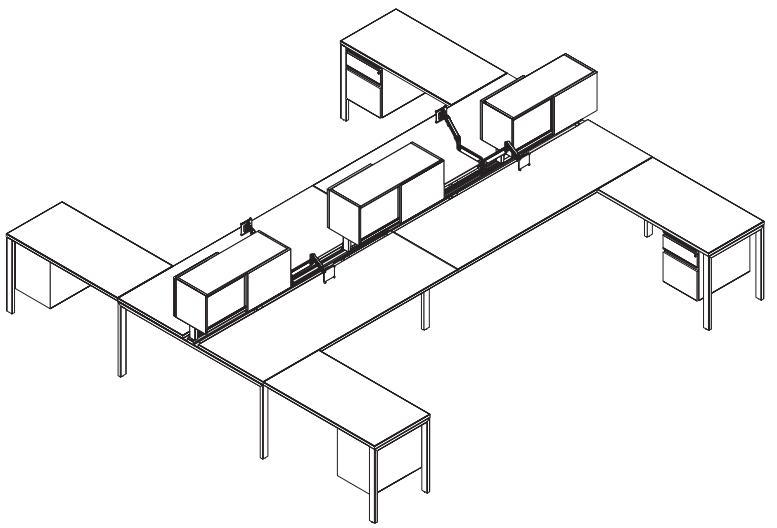
Overview

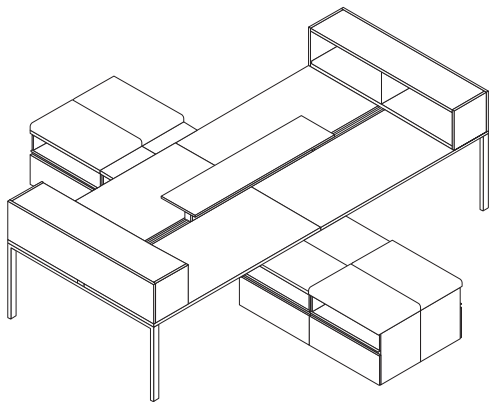
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Footprint Storage Pricing	163

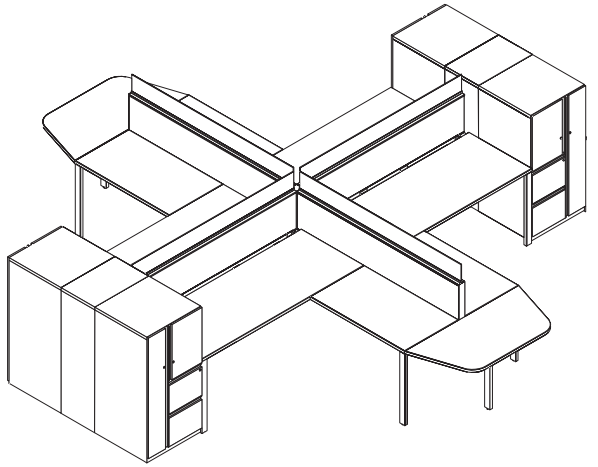
This section includes information on flat profile metal storage that is compatible with Xsede, including:

- Undersurface storage
- Low storage
- Set-on-surface cabinets
- Suspended storage
- Overheads
- Vertical storage

➤See the Systems Price List for additional information including locking, filing capabilities, and finish selections.







Undersurface Storage

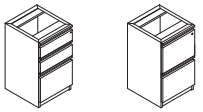
For Accessory Rail and Crossrail Applications

Flat Profile

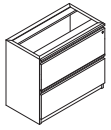
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Footprint Storage Pricing	163

Details

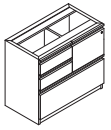
Flat profile undersurface storage features a drawer-front-over-case design. Flat profile storage is available in all metal or with metal chassis and wood fronts, as noted.



Box/box/file and file/file pedestals are 15"W. Box and file drawer suspensions allow full extension. File drawers accommodate front-to-back filing by suspending hanging files from the drawer sides. For side-to-side filing, additional file bars are required.
➤See the Perks Price List.

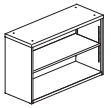


Lateral files includes two side-to-side file bar per drawer for letter filing. Front-to-back file bars are specified separately.
➤See the Perks Price List.



File center consists of box, file, and lateral file drawers. Box drawers can be specified in either the left or right drawer locations. One lock secures all drawers.

Mobile pedestals are finished on all sides and are available with painted or cushion top. Cushion-top pedestal seated capacity is 225 lbs.



Bookcases feature an enclosed back and include one adjustable shelf. Shelf adjusts in ½" increments.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Tops are not enclosed. Worksurfaces attach directly to the horizontal frame.

Backs and sides are finished.

Locks are standard on undersurface storage. They are black and located on front of cabinet. For silver lock cores, select key specific option and specify lock cores separately.
➤See the Systems Price List for keying options.

Glides provide 1" of adjustment.

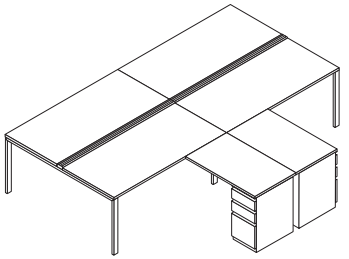
Finishes & Materials

Flat Profile Storage
- Metal: all paints
- Wood fronts: all wood finishes

➤See the Systems Price List.

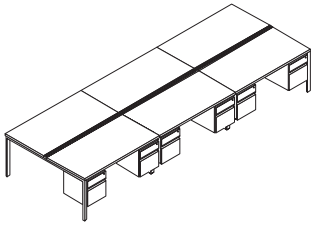
Connections

Footprint undersurface storage, excluding mobile pedestals, provides support for 29"H worksurfaces. They are not intended for use as freestanding units.



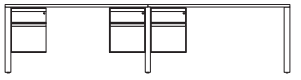
Footprint undersurface storage can replace an Xsede U-leg without stanchion as support in a return application only. Footprint undersurface storage is dimensionally different in depth than Xsede worksurfaces; gaps will occur when used together.
IMPORTANT: Footprint undersurface storage cannot replace Xsede support legs where an accessory rail or crossrail is used in a main structure.

Mobile pedestals, suspended pedestals, or low storage units are recommended for use with accessory rail and crossrail applications where storage is required under the main structure.



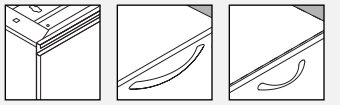
Suspended box/file pedestals mount to the underside of the worksurface. Suspended peds are non-supporting and must attach to worksurfaces that meet all application guidelines.

Suspended pedestal, model 12S1915PUBFM, is intended for use with Xsede 22"D wire gap surfaces with tech trays. This model features spacers to allow the ped to fit around an undersurface support rail which is required if the unsupported span is over 48".

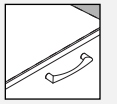


Suspended pedestals must be placed next to Xsede support legs (U-legs without stanchions, U-legs with stanchions, T-legs, or H-legs).

Drawer Pull Options:



Extended (metal only) Arc Dome



Span

Drawer Pull Designators:

E = Extended (not available on wood-front models)
ARC462 = Arc, cinder
ARC485 = Arc, dark chocolate
ARC501 = Arc, platinum
ARC503 = Arc, satin nickel
ARC505 = Arc, satin bronze metallic
ARC514 = Arc, carbon metallic
65CM = Dome, carbon metallic
65MB = Dome, matte black
65PL = Dome, platinum
65PA = Dome, polished argent
65SN = Dome, satin nickel
66CM = Span, carbon metallic

66PL = Span, platinum
66PA = Span, polished argent
66SN = Span, satin nickel

IMPORTANT: Upcharge of +$16 applies for Arc, Dome, and Span pulls specified on all-metal models; no upcharge on wood-front models.

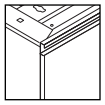
Low Storage

For Accessory Rail and Crossrail Applications

Flat Profile

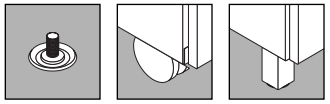
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Footprint Storage Pricing	163

Details



Flat profile undersurface storage features a drawer-front-over-case design, with fronts flush to the bottom of the case. Units are is available in all metal or with metal chassis and laminate front.

Pedestals are available in 15", 30", 36", or 42" widths. Units are available with an open top or metal tops. Models with open top require 18"D or 24"D tops (worksurfaces), specified separately.



Glides Casters 4" legs

Floor glides are standard and provide 3/8" of adjustment. Casters and 4" legs are available as an option; upcharge applies. Legs provide 7/8" of adjustment.
Note: Illustration of glides enlarged to show detail as compared to the relative size of the casters and legs.

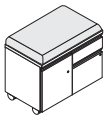
File drawers accommodate front-to-back filing by suspending hanging files from the drawer sides. For side-to-side filing, additional file bars are required.
➤See the Perks Price List.

Box and file drawer suspensions allow full extension.

Lateral files includes two side-to-side file bar per drawer for letter filing. Front-to-back file bars are specified separately.
➤See the Perks Price List.

Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.

Backs and sides are finished.



Cushion tops are available separately for low storage pedestals. Cushion tops with anti-skid back can be added to metal-top models or open-top models with a laminate top. Seated capacity is 225 lbs.

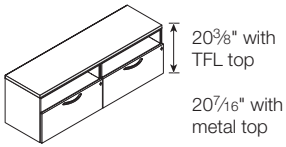
Locks are optional; they are available in black or silver finish options.
➤See the Systems Price List for keying options.

A variety of pull options are available.
➤See page 86.

Finishes & Materials

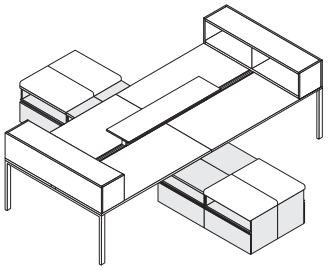
Flat Profile Storage
- Metal: all paints
- Laminate fronts: TFL

Connections



Units may be ganged together facing the same direction or reversed to one another. A single top may be added to open-top or metal top models and, may span multiple units. Tops are specified separately.

Planning Factors



Footprint low storage can be used along with Footprint set-on-surface cabinets and Priority center-mount shelves to create unique Xsede configurations.

If using Xsede T-legs in an application with low storage with 4" legs, confirm that there will no interference.

Xsede tech tray brackets are 23 9/16" off the floor. Keep this dimension in mind when planning low storage to span underneath the tech tray.

Related Product

Footprint 18"D tops are available.
➤See page 175.

Xsede 24"D tops are available as part of the Xsede worksurfaces offering and may be used with Footprint low storage units.
➤See page 154.

Cushion tops are available.

Overhead Storage

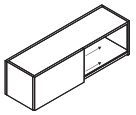
For Accessory Rail Applications

Center-Mount Sliding-Door Cabinets and Open Cabinets

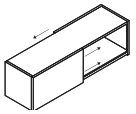
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Footprint Storage Pricing	163

Details

Sliding-door overheads feature a metal chassis with metal, laminate or wood front. Units are available with one-sided or two-sided access. Units ship fully assembled.

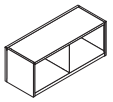


One-sided sliding-door models have one sliding door. A center panel divides the space; one compartment will be open at all times. Door can lock in either position.

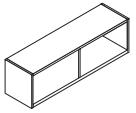


Two-sided sliding-door models for use in center-mount applications only; they feature one-sliding door on each side. Center panel divides the space and each compartment features a fully finished back panel. Both sides can be locked independently on locking models; they must feature the same keying option.

Locks are optional on sliding-door models; they are located on the bottom of the cabinet. Consider lock access when placing the overhead above other storage units or worksurfaces.



One-sided open cabinets feature a finished back and center panel that divides space. They are available in center-mount models for use with Xsede accessory rail. Set-on-surface models and suspended models can be used at the end of worksurface.



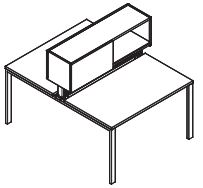
Two-sided open cabinets are for center mounting only on Xsede accessory rail. A center panel divides the space; each compartment features a finished back panel.

Finishes & Materials

Flat Profile Overhead Storage

- Metal chassis/metal door
- Metal chassis/laminate door
- Metal chassis/wood door

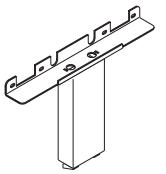
Connections



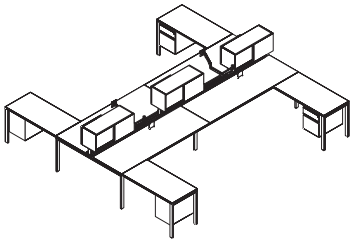
Sliding-door overheads can be center-mounted on Xsede accessory rails. Stanchion mounting brackets are specified separately.

IMPORTANT: Sliding-door overheads cannot be mounted on top of Xsede crossrail applications.

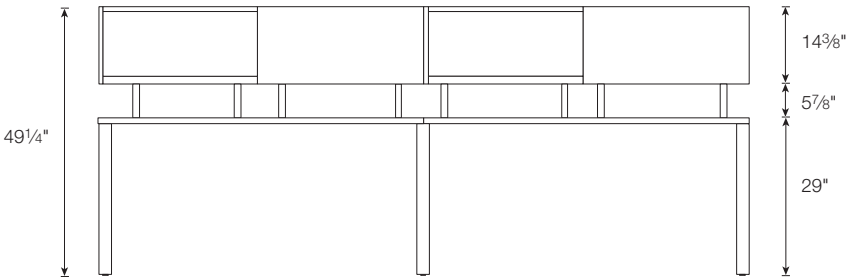
Planning Factors



Mounting stanchion brackets, set of 2, must be specified separately. Each overhead requires two stanchion brackets.



Utilize smaller-width overheads with accessory rail-mounted monitor arms.



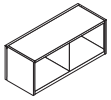
Overhead Storage

For Accessory Rail and Crossrail Applications

Set-on-Surface and Suspended Cabinets

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Footprint Storage Pricing	163

Details



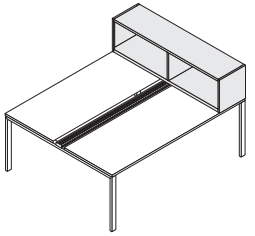
One-sided open cabinets feature a finished back and center panel that divides space. Set-on-surface models and suspended models can be used at the end of worksurface.

Finishes & Materials

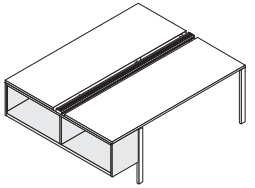
Flat Profile Open Cabinet

- Metal chassis/metal divider

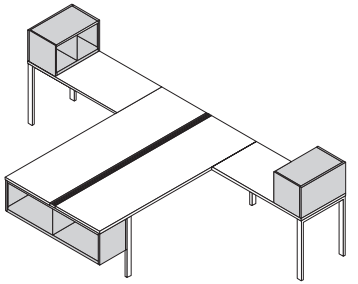
Connections



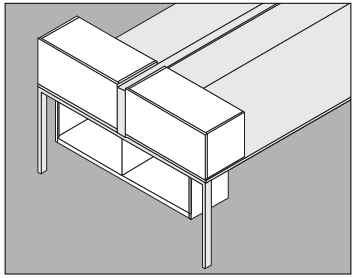
Set-on-surface open cabinets are intended for mounting on top of the worksurface at the end of a run. 51", 57", and 63"W units can span back-to-back worksurfaces in accessory rail applications.



Suspended open cabinets mount below the end of a run in crossrail and accessory rail applications. Worksurface supports will need to be inset approximately 15" which impacts kneespace clearance.



24" and 30"W units can be used on 24" and 30"W surfaces in a return application.



24" and 30"W set-on-surface cabinets can be used at the end of a surface and specified to align with 51", 57", or 63"W suspended storage below in a crossrail application.

Planning Factors

Consider the depth of the suspended storage cabinets if using tech trays in the same run.

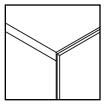
Vertical Storage

For Accessory Rail and Crossrail Applications

Flat Profile 12S and 14S Models

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Footprint Storage Pricing	163

Details



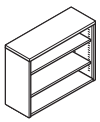
Flat profile 12S vertical storage units are available in all metal or with a metal chassis and wood fronts.

Flat profile 14S vertical storage units are available in all metal or with metal chassis and laminate (TFL) fronts.

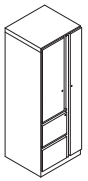
File drawers are designed to accommodate hanging files suspended from the drawer sides.

Non-locking is standard on all 14S units. Locking options are available; upcharge applies.

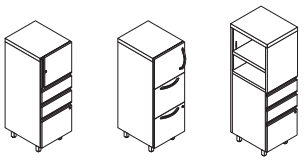
Drawer bottoms are not intended to be used as the main support for storing items. It is recommended that all items be stored in hanging file folders to utilize strength of the drawer sides.



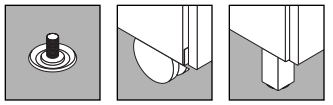
Bookcases include enclosed back and factory installed shelves. Shelves adjust in ½" increments.



12S storage towers include file/file cabinet, wardrobe/storage section, and/or open shelves. Sections have individual locks and can be keyed alike by selecting the key specific option.
➤See the Systems Price List for keying options.



14S storage towers include box/box/file or file/file and with hinged-door storage or open shelves.

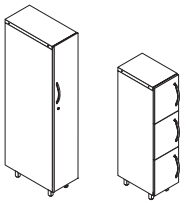


Glides Casters 4" legs

Floor glides are standard on 12S and 14S models and provide ⅜" of adjustment.

Casters and 4" legs are available as an option on 14S models; upcharge applies. Legs provide ⅞" of adjustment.
Note: Illustration of glides enlarged to show detail as compared to the relative size of the casters and legs.

A variety of pull options are available.
➤See page 90.



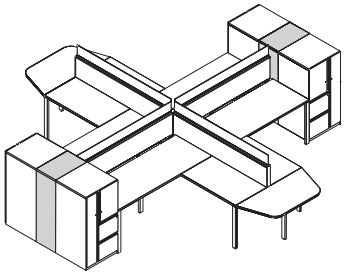
14S wardrobe and personal storage lockers are available.

Wardrobe doors may be specified on the left or right of the unit.

Wardrobe hooks are included and installed on the left side of 14S 18"D units.

Coat rod and adjustable metal shelves are available separately for 14S models. Coat rod is galvanized metal and used in 24"D wardrobes.

Wardrobe shelf is cinder with ½" adjustability.



12S and 14S storage tower spacers are metal. They fill the space between back to back 24"D and/or 30"D storage towers used at the end of an Xsede workstation.

Finishes & Materials

Flat Profile Vertical Storage
- Metal: paint
- Wood fronts: all wood finishes

Planning Factors

12S 42 1/16"H models will align with 42"H Xsede structures.

12S 49 1/16"H models will align with 50"H Xsede structures.

14S 42 1/16"H models with casters or 4" legs will align with 42"H Xsede structures.

14S 49 1/16"H models with casters or 4" legs will align with 50"H Xsede structures.

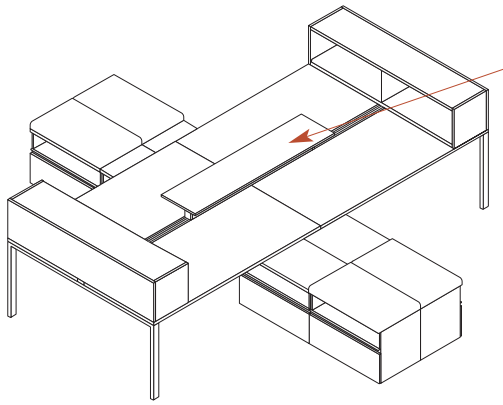
Storage and Adjustable-Height Tables for Xsede

Overview

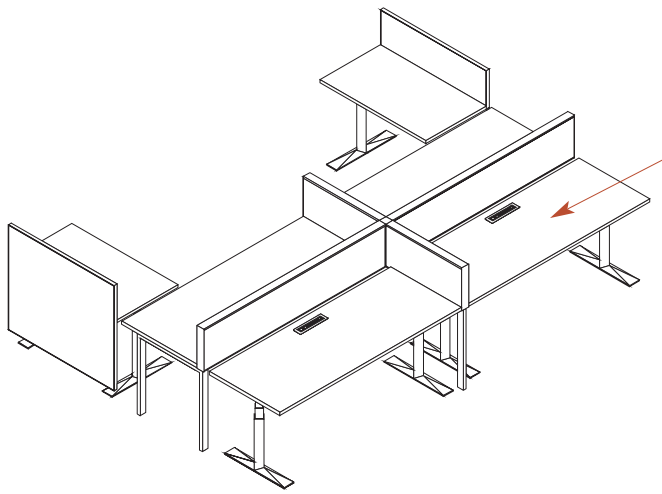
Statement of Line ➤See page 7
Typical Configurations 21
Planning Guide 31
Xsede Pricing 93

This section includes information on Priority center-mount storage and height-adjustable tables that are compatible with Xsede.



Priority center-mount shelf, which is banded on all sides, can be attached to Xsede accessory rail using stanchion mounting brackets.

Priority center-mount overheads can also be attached to Xsede accessory rail using stanchion mounting brackets.



Priority height-adjustable tables can be used in conjuction with Xsede crossrail applications.

Wire gap worksurfaces are recommended to allow clearance between the tiles and the table, if the worksurface is wrapped on two sides as shown. If table is wrapped on three sides, specify Footprint worksurfaces sized 2" less in depth and 1" less in width (e.g., instead of a 24" x 72" surface, specify a 22"D x 71"W).

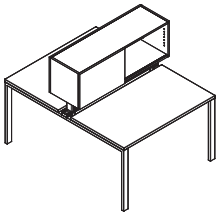
Worksurface-mounted power/data is recommended. Power & data in a tech tile cover could interfere with the raising of the table.

Overhead Storage

For Accessory Rail Applications

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Details



Priority center-mount overhead cabinets and shelves can be used in conjunction with stanchion brackets to mount onto the Xsede accessory rail.

Center-mount overhead cabinets are available in 30"–72"W (in 6" increments) with hinged doors or sliding door. Units are finished on all sides; flat bottom.

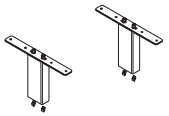
Hinged wood four-door models feature one set of grain pattern matching doors; laminate models feature two sets of two-doors that match in grain pattern.

Sliding-door units feature one door and center divider panel. These units accept five ¾"-thick interior shelves spaced 1¼" apart. Shelves intended for use on the open side of the sliding door unit, specified separately.

Writable glass models features thin aluminum frame finished in silver satin metallic.

Center-mount shelves are available in 30"–96"W (in 6" increments). Units have a finished top and bottom and feature a softened rim on all four sides of the shelf.

Connections



Center-mount storage can be mounted to Xsede accessory rail using an Xsede stanchion kit (set of 2). Overhead can be any width.

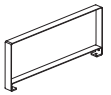
Multiple units can be ganged and then connected at the stanchion intersection. For example, two 36"W center-mount overheads can be ganged in opposite directions above a 72"W surface, and then connected to the stanchions as an assembled unit.

Stanchion kit (two brackets) is required for all overhead cabinets and shelves, even if ganged together. Stanchion brackets are inset 3" from the end of the overhead for proper support.

On laminate units 60"W and greater, the grain on the back panel runs horizontal.

Related Products

Interior shelves may be specified separately.



Shelf divider Shelf divider provides further organization to shared materials stored on center-mount shelves. Shelf divider, made of powder-coated metal, slides onto the center-mount shelf and attaches to the underside of shelf.

Expo or Expo2 dry-erase markers are recommended for use on writable glass doors.

Vertical Support Rails (set of 2)				
For Use with 37"H Open-Base Tile on 42"H Structure				
1 3/16"	1"	38 1/16"	**45F38VSOBSP**	$108
For Use with 45"H Open-Base Tile on 50"H Structure				
1 3/16"	1"	44 7/8"	**45F46VSOBSP**	$128

IMPORTANT: Configurations with a full-height open-base tile on one side and an upper tile and an undersurface open-base tile on the other will require three crossrails. Specify upper crossrail, a single-sided crossrail for placement at worksurface height, plus a worksurface/lower crossrail for placement at 4" off the floor.

Vertical support rails are required between upper and single-sided crossrails over 48"W.

Standard Includes

- Crossrail: paint
- Vertical support rails: paint
- Attachment hardware

How to Specify

❶ Model
② Finish group:
STD = Group 1
STDM = Group M (+10%)
③ Finish designator

Available Finishes

G1 Grommets:
MB Matte Black

G19 Grommets:
405 Designer White
487 Brushed Nickel
490 Polished Chrome
501 Platinum Metallic
514 Carbon Metallic
544 Silver Pearl

➤See page 81 for complete description of G1 and G19 grommets.

How to Specify

① Insert the location *and* finish designator into model number sequence as indicated on the pricing page.

Note: Specify grommet location and finish together in one step without a space between the location and the finish designators. For example:
G1LMB = G1 grommet, left, matte black
G19R501 = G19 grommet, right, platinum metallic

IMPORTANT: Only the grommet locations shown in the matrix at left with a designator and price are available as standard.

17"	28½"	6"	**45A1706KK2**	*-15° to +15°*	*1¼"*	*5⅞"*	*360°*	$741
Intuitive Adjustment								
7"	28½"	6"	**45A1706KK1**	*-15° to +10°*	*1"*	*6⅛"*	*360°*	$878

Planning Factors

22"D adjustable keyboard kits can be used in corner-mount applications.

Width of keyboard kits includes mouse tray. Mouse tray is non-handed and can be mounted on the left or right.

Manual and intuitive adjustable keyboard kits slide in and out under the surface.

Keyboard kits will not be flush with the worksurface edge (when in the stored, recessed position). It extends past the front edge approximately 2" in the recessed position. Rotate under surface to store completely.

Adjustable keyboard kit models comply with ANSI/HFES Method 2.

Standard Includes

- Keyboard arm: black
- Foam gel wrist rest: black
- High-density polyethylene tray and ABS mouse tray: black
- Mounting block

* Depth dimension listed represents storage unit with TFL front; metal-front models are 1/16" less deep.

Optional legs are shown on the illustrations above. Units are standard with glides.

42 1/16"H models will align with 42"H Xsede structures.

49 1/16"H models will align with 50"H Xsede structures.

Tower Spacers
➤See page 194.

Standard Includes

- Chassis: metal
- Doors: metal or TFL
- Floor glides

How to Specify

❶ Model
❷ Front material (omit for metal front):
LL = TFL front
③ Pull option:
➤See page 90 for designators.
④ Lock option:
X = Non-locking
KRB = Key random, black (+$71 per lock)
KRS = Key random, silver (+$71 per lock)
KSB = Key specific, black (+$50 per lock)
KSS = Key specific, silver (+$50 per lock)
Note: Specify lock core(s) separately for key specific.
⑤ Metal finish price group:
STD = Group 1
STDM = Group M (+10%)
⑥ Metal finish designator
⑦ Laminate finish price group (omit for metal-front models):
STD = Group 1
⑧ Laminate finish designator (omit for metal-front models)
⑨ Support option:
G = Floor glides
4LA = 4" legs, anodized (+$70)
4LP = 4" legs, painted (+$70)

Optional legs are shown on the illustrations above. Units are standard with glides.

42 1/16"H models will align with 42"H Xsede structures.

49 1/16"H models will align with 50"H Xsede structures.

IMPORTANT: These models are for use with 14S vertical storage only. Height of tower spacer must match the height and width of the two vertical storage models being placed back to back.

Standard Includes

- Tower spacer: metal

How to Specify

❶ Model
② Metal finish price group:
STD = Group 1
STDM = Group M (+10%)
③ Metal finish designator
④ Support option (include for 14 5/8"D models only):
G = Floor glides
4LA = 4" legs, anodized (+$70)
4LP = 4" legs, painted (+$70)

FINISHES & MATERIALS

Samples:

Samples of Kimball Office materials are available upon request. Samples are to be used as guidelines only. Slight variations within commercial tolerance may occur between samples and finished products. Kimball Office carefully selects all materials used in every product, ensuring a commercially acceptable color and finish.

To order samples:

- Visit the Partner web site at www.kimballoffice.com to order materials electronically
- Contact your Kimball Office Sales Representative or the nearest Kimball Office Showroom

Program Overview

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Fabric Collection:

Our collection of fabrics offers a wide variety of materials that include both timeless classics, as well as a selection of trendy colors and patterns to keep the offering fresh and current.

The classic patterns are perfect for establishing new standard color palettes, while the trendy patterns are great for adding accents and pops of color to make a statement and to show that you are in tune with the pulse of today's fast-paced world.

The fabric collection was developed with an international flare to make it easy for global companies to standardize in all locations. It contains both standard in-line and alliance patterns. Our alliance partners are chosen with great care to give us the best selections and service in the industry.

You will find that colors were developed to coordinate very well between the in-line and alliance offerings, as well as between the seating and panel fabric offerings.

The fabric collection will provide options for the discerning client for many years to come.

Wood Collection:

Our wood finishes offer fresh options that provide natural-looking finishes to meet today's design expectations. From the lightest Brighton Maple to the darkness of Urban Walnut, these finishes were chosen with great attention to offer a complete range of color options making it simple to specify the look you want. You can achieve contemporary or transitional looks, or choose to update your traditional style by selecting one of the newer walnut or cherry finishes.

Kimball Office carefully selects veneers and solid woods to provide high quality wood furniture. Variations in color, grain, and texture occur naturally in all wood species, but are most apparent in lighter colored woods, and especially in natural finishes.

The wood collection offers a number of light finishes that will not hide or mask the natural characteristics of wood. Mineral streaks, pitch pockets, and color variations from piece to piece are all characteristics that occur in natural veneers and are what make each piece unique. While the finishing process is identical for all pieces, each finished piece accepts the stain differently to create its own individual beauty. These characteristics are part of the inherent natural beauty of wood and are not considered defects.

Darker finishes can be selected to hide more of the veneer's characteristics. Several beautiful coordinating woodgrain laminate options are also available for the customer who wants complete color and grain consistency throughout.

Two surfaces with grain directions that are at different angles to a light source will reflect the light differently and look a slightly different color. This natural phenomenon is called flip. This can happen within a single piece as alternating veneer leaves are placed side by side or from piece to piece. Flip is often noticed on worksurfaces installed at a 90° angle to each other.

Two premium veneers—Sapele and Zebrawood—are part of the standard offering to provide options for high impact styles without having to quote custom veneers. Premium veneers could receive extended lead times based on supplier availability at the time the order is placed.

Discontinuation Policy:

Kimball Office strives to give all business partners advanced notification of surface materials that are scheduled for discontinuation. Efforts will be made to support discontinued materials as specified in the deletion announcement. Pricing cannot be guaranteed. Extended leadtimes and minimum order requirements may apply.

Disclaimer:

Kimball Office will make every reasonable effort to maintain our commitments. If surface material changes must occur due to unforeseen circumstances, we will work with you on an alternative recommendation. Kimball Office reserves the right to cancel or make changes to standard products and surface materials.

Woodgrain:

Woodgrain laminate is a commercially compatible match to the wood finish of the same name and designator with consideration for the most common application—laminate surfaces on a wood chassis. When laminate and wood are mixed in other applications, the flip that occurs naturally in veneer may influence the overall match from piece to piece.

CSL:

➤See page 198 for customer-specified laminate.

Customer-Specified Laminate

GSA Non-Contract

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Customer-specified laminate (CSL) is available on select products.
➤See page 197.

Kimball Office reserves the right to decline a customer specified laminate which may not be suitable for application.

Kimball Office assumes no responsibility for the durability, consistent coloration or any other performance characteristic of a customer specified laminate.

Metal, embossed, specialty, and supplier discontinued laminates must be custom quoted.
➤Contact ***By Design*** at 800.482.1616, extension 6001.

Kimball Office orders and procures all customer specified laminates.

Laminate sheen level must not exceed 60° for maximum durability of worksurfaces.

Lead times may vary for certain laminates. Minimum order quantities may apply.

Upcharges:

A **20%** upcharge per line item (model) for CSL orders for supplier standard laminates applies. Upcharge is calculated on the base price, before other option upcharges are added.

How to Specify

① **Model:** Build the complete model specification (excluding the finish type and finish designator) by following the How to Specify on the appropriate pricing page for the product that is to receive the special finish.

② **Finish type:** For the “Finish type” step, insert a special finish code (in place of STD).
ZFMA1 = Formica
ZLMT1 = Lamin-Art
ZLTC1 = Lamitech
ZNEV1 = Nevamar
ZPTE1 = Pionite
ZWST1 = Wilsonart

③ **Finish designator:** For the “Finish designator” step, insert the laminate designator (color number) of the laminate to be applied to the product.

Metallic:

10% upcharge applies for price group M metallic finishes.

IMPORTANT: Due to the reflective qualities of metallic paints, variations in color may occur.

CSP:

➤See page 200 for customer-specified paint.

Customer-Specified Paint

GSA Non-Contract

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Customer-specified paint (CSP) is available on select products.
➤See page 199.

Pricing:

A **one-time fee of $300** (net) will be billed for the development of each new custom (customer-specified) paint. This fee covers all Kimball Office product lines on which the paint may be used. Models receiving a custom paint will also be assessed an upcharge.

A **10% upcharge per line item** (model) for customer-specified non-metallic paint applies. Upcharge is calculated on the base price, before other option upcharges are added.

A **20% upcharge per line item** (model) for customer-specified metallic paint applies. Upcharge is calculated on the base price, before other option upcharges are added.

The process:

① Send desired paint sample (no smaller than 3" x 5") to Customer Service along with a complete list of the products to which the custom paint is to be applied. **Include dealer name, contact, and project reference.**
② Custom paints will generally require at least a week for a matched sample. Samples sent to the customer will advise of any restrictions that may apply.
③ Customer signs off on the sample and returns the approval form to Customer Service. Approval is required prior to order entry.

IMPORTANT: Kimball Office reserves the right to decline the opportunity to match a paint color.

How to Specify:

① **Model:**
Build the complete model specification (excluding finish type and finish designator) by following the "How to Specify" on the appropriate pricing page for the product that is to receive the custom paint.
② **Finish type:**
For the “Finish type” step, insert a special paint code (in place of STD):
ZPNT1 = Special non-metallic paint
ZPNTM1 = Special metallic paint
③ **Finish designator:**
For the “Finish designator” step, insert the designator provided to you by Customer Service.

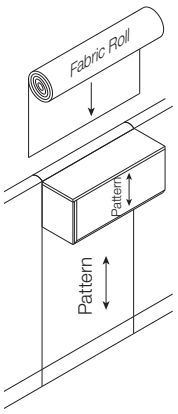
Fabric

Fabric Application

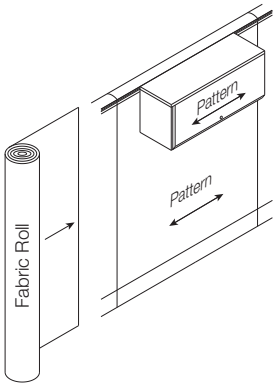
Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Standard Application:



Directional fabrics are “cut up the roll” for standard application unless specified differently.

Railroad Application:



All fabrics will be applied in railroad (horizontal) fashion to:

- Xsite tiles
- Xsede tiles
- Priority tiles
- Stow wallpanels
- Tackboards greater than 48"W when using a seating fabric or greater than 60"W when using a panel fabric

When viewing swatch cards or memo samples, turn 90° to get an accurate indication of how the fabric will appear on when railroaded.

Railroad application of Kimball Office panel fabrics and COM for all products that are not listed above or do not have railroading listed as an option in the price list requires a custom quote.
➤Please contact ***By Design.***

Alliance Fabrics:

Kimball Office has formed partnerships with top textile companies in the industry to provide a broad range of design-oriented fabrics. These fabrics can be specified using our standard ordering process, eliminating the need for additional expense and efforts required for COMs.

IMPORTANT: Orders cannot be cancelled for alliance program fabrics.

Lead times for alliance fabrics are based on supplier availability. Pre-planning orders can help facilitate arrival of products as needed. Each supplier reserves the right to discontinue patterns or colors. Kimball Office will not be held responsible for supplying discontinued patterns/colors or when minimum order quantities apply.
➤Contact Customer Service for availability before finalizing orders.

The information provided in this section is the most current information available at the time this price list was printed.

Application of Alliance Program upholstery will be as depicted on the swatch card unless otherwise instructed on the order.

For memo samples of Alliance fabrics, contact our alliance partners directly.

COM Policy:

While Kimball Office inspects fabrics for mill imperfections, some are difficult to recognize. Kimball Office is solely responsible for upholstery workmanship and cannot assume responsibility or liability for the durability, tailoring, appearance, or other qualities such as color inaccuracies, dye lot variations, and other such flaws or defects of customer furnished coverings.

Customers are responsible for ordering COM fabrics and expediting delivery of the material to Kimball Office.

IMPORTANT: Kimball Office reserves the right to decline a fabric that may not be suitable for application to product.

COM Application Testing:

Application testing on product for non-preapproved fabrics is required. ➤Contact your Customer Service Team for the appropriate forms to initiate application testing.

The application test will render your fabric either:
- Approved
- Not recommended
- Restricted

A "not recommended" result is usually due to questionable construction of the material or pattern that is difficult to align. You will be required to sign a waiver to use any "not recommended" COM.

U.L. Listing/Flammability:

COM must be U.L. listed for use on Xsede, Cetra, Xsite, and Interworks EQ panels before Kimball Office accepts and enters an order which will have COM fabrics. All COM testing and processing costs are the responsibility of the customer. A minimum of 2 yards of production run yardage is required for U.L. testing and flammability testing. Approval of a COM fabric may result in extended lead times. For cost estimates, yardage requirements and project lead times, consult your Customer Service Team.

Yardage/Measurements

Directional and non-directional yardage requirements have been calculated based on 66"W panel fabrics for Tiles, Panels, Overheads, Highback Organizers, and Tackboards. Directional and non-directional yardage requirements have also been calculated based on 54"W seating fabric for Overheads, Highback Organizers, and Tackboards.

If your fabric is less than 66"W, some size restrictions may apply.

COM yardage listed in the Resource section of the price list reflects the amount of fabric required to upholster one panel. Additional yardage may be required if patterns require matching.

Shipment of COM

After the fabric has passed the approval process described, Kimball Office will enter the product order and send an acknowledgement of the tentative ship date. A notification will be sent giving the date the COM must be received. If it is not received by the specified date, your ship date will be reassigned.

Where to ship COM:

Applies to:
- Xsede Tiles
- Cetra panels
- Tackboards compatible with Cetra
- Cable managers compatible with Cetra or Xsite
- Tiles compatible with Cetra
- Tiles compatible with Xsite

Kimball Office, Jasper
COM Department—Kimball Office
Dock 5
1037 East 15th Street
Jasper, IN 47549

Applies to:
- Interworks EQ panels
- Interworks EQ or Conferencing Solutions
- Tackboards compatible with Interworks EQ
- Cable managers compatible with Interworks EQ
- Flat profile cushion-top pedestals
- Bevel profile overheads
- Bevel profile highback organizers
- Bevel profile highback tackboards

Kimball Office, Post Falls
COM Department—Kimball Office
1881 West Seltice Way
Post Falls, ID 83854

Production of Order:

When COM production yardage is received, COM is cut for the order and inspected for flaws. If flaws are found, you will be notified of the additional fabric required.

A return tag (e.g. COD shipment, UPS call tag) is required from the specifier within 45 days of the acknowledged ship date or all excess COM yardage will be discarded.

Preapproved COM:

➤Contact your Customer Service Team to obtain information on preapproved COMs.

Checklist:

When ordering COM for Kimball Office products, please make sure you have done the following:
- Supplied vendor name, fabric name, color name and number.
- Supplied arrival date of COM to Kimball Office.
- Received application testing approval before sending purchase order (or signed waiver if not approved for application).
- Received U.L. listing before sending purchase order.

Yardage Requirements

GSA Non-Contract

Statement of Line	➤See page 7
Typical Configurations	21
Planning Guide	31
Xsede Pricing	93

Kimball Office has analyzed each model to most accurately reflect the yardage requirements.

The yardage requirement for each model is listed for 66"W directional, 66"W non-directional, and 54"W directional, where applicable.

How to Use this Table

① Locate the model number
② Select yardage from the appropriate column for non-directional or repeat. For fabrics with nap, use the 1"–4" repeat column.

If you specify different panel fabrics for opposite sides of a panel, additional yardage may be required. ➤Contact Customer Care.

If COM fabric is to be "railroaded," contact Customer Care for yardage requirements.

➤See page 206 for COM policy and additional information.

How to Use this Table

① Locate the model number
② Select yardage from the appropriate column for non-directional or repeat. For fabrics with nap, use the 1"–4" repeat column.

If you specify different panel fabrics for opposite sides of a panel, additional yardage may be required. ➤Contact Customer Care.

If COM fabric is to be "railroaded," contact Customer Care for yardage requirements.

➤See page 206 for COM policy and additional information.

The table at right lists the operating load capacities (functional load) of various Kimball Office components. All components meet or exceed the ANSI/BIFMA Functional and Proof Loading requirements X5.6 2010 Panel System Test, X5.5 2008 Desk/Tables Products Test, and X5.9 2012 Storage Unit Test. The Operating Load Capacities listed represent the BIFMA functional loads which are equivalent to loads that can be expected in normal use of the component.

BIFMA

MEMBER
THE BUSINESS AND INSTITUTIONAL FURNITURE MANUFACTURER'S ASSOCIATION

Component	**Operating Load Capacity**	**Examples** (total weight [t.w.])
Worksurface	200 lbs. over 12" diameter area, concentrated loading 1.5 lb. per inch of perimeter, distributive loading	24"D x 72"W = 288 lbs. t.w.
Transaction counter	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	12"D x 60"W = 147 lbs. t.w.
Round and rectangular tables	1.5 lb. per inch of perimeter, distributive loading	36" dia. = 170 lbs. t.w. 36"D x 60"W = 288 lbs. t.w.
Pedestal drawer	.017 lb. per cubic inch of drawer interior filing space (hanging load on file hangers)	24"D x 18"W x 12"H wood = 88 lbs. t.w. 24"D x 15"W x 12"H metal = 73 lbs. t.w.
Pedestal shelves	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	22"D x 30"W = 134 lbs. t.w
Center-mount cabinet	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	36"W x 12"H metal = 163.5 lbs. t.w
Flipper door cabinet	Top shelf—NO load	
	Bottom shelf—.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading*	36"W x 16"H metal = 117 lbs. t.w. 36"W x 19"H wood = 140 lbs. t.w.
Open shelves	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	36"W x 8"H metal = 59 lbs. t.w. 36"W x 19"H wood = 140 lbs. t.w.
Lateral file drawers	.017 lb. per cubic inch of drawer interior filing space (hanging load on file hangers)	30"W x 18"D x 12"H metal = 110 lbs. t.w. 30"W x 24"D x 12"H wood = 147 lbs. t.w.
Bookcase and wardrobe shelves	.017 lb. per cubic inch above surface (not to exceed 12"H), distributive loading	36"W x 8"D metal = 59 lbs. t.w. 36"W x 12"D wood = 88 lbs. t.w.

Cubic inches should be calculated using this formula:
Surface length x surface depth x height of available storage above the surface (limited to 12 inches above the surface)

U.L. Information:

Only Underwriters' Laboratory (U.L.) listed electrical components are used in electrical devices and are so labeled. Xsede complies and is listed to U.L. 1286.

The customer is responsible for the proper application of products to the local codes under which installation must be made. Further specifications are available on request.
